4. That is, the different historical forms of art.

5. An unknown block of stone may symbolize the Divine, but it does not represent it. Its natural

shape has no connection with the Divine and is therefore external to it and not an embodiment of it. When shaping begins, the shapes produced are symbols, perhaps, but in themselves are fantastic and monstrous [Hegel's note].

aspect according to which they are capable of representing a universal meaning. But since a complete correspondence is not yet possible, this relation can concern only an *abstract* characteristic, as when, for example, in a lion strength is meant.

On the other hand, the abstractness of this relation brings home to consciousness even so the foreignness of the Idea to natural phenomena, and the Idea, which has no other reality to express it, launches out in all these shapes, seeks itself in them in their unrest and extravagance, but yet does not find them adequate to itself. So now the Idea exaggerates natural shapes and the phenomena of reality itself into indefiniteness and extravagance; it staggers round in them, it bubbles and ferments in them, does violence to them, distorts and stretches them unnaturally, and tries to elevate their phenomenal appearance to the Idea by the diffuseness, immensity, and splendour of the formations employed. For the Idea is here still more or less indeterminate and unshapable, while the natural objects are thoroughly determinate in their shape.

In the incompatibility of the two sides to one another, the relation of the Idea to the objective world therefore becomes a *negative* one, since the Idea, as something inward, is itself unsatisfied by such externality, and, as the inner universal substance thereof, it persists *sublime* above all this multiplicity of shapes which do not correspond with it. In the light of this sublimity, the natural phenomena and human forms and events are accepted, it is true, and left as they are, but yet they are recognized at the same time as incompatible with their meaning which is raised far above all mundane content.

These aspects constitute in general the character of the early artistic pantheism of the East, which on the one hand ascribes absolute meaning to even the most worthless objects, and, on the other, violently coerces the phenomena to express its view of the world whereby it becomes bizarre, grotesque, and tasteless, or turns the infinite but abstract freedom of the substance [i.e. the one Lord] disdainfully against all phenomena as being null and evanescent. By this means the meaning cannot be completely pictured in the expression and, despite all striving and endeavour, the incompatibility of Idea and shape still remains unconquered.—This may be taken to be the first form of art, the symbolic form with its quest, its fermentation, its mysteriousness, and its sublimity.

(b) In the *second* form of art which we will call the *classical*, the double defect of the symbolic form is extinguished. The symbolic shape is imperfect because, (i) in it the Idea is presented to consciousness only as indeterminate or determined *abstractly*, and, (ii) for this reason the correspondence of meaning and shape is always defective and must itself remain purely abstract. The classical art-form clears up this double defect; it is the free and adequate embodiment of the Idea in the shape peculiarly appropriate to the Idea itself in its essential nature. With this shape, therefore, the Idea is able to come into free and complete harmony. Thus the classical art-form is the first to afford the production and vision of the completed Ideal and to present it as actualized in fact.

Nevertheless, the conformity of concept and reality in classical art must not be taken in the purely *formal* sense of a correspondence between a content and its external configuration, any more than this could be the case with the Idea itself. Otherwise every portrayal of nature, every cast of features, every

neighbourhood, flower, scene, etc., which constitutes the end and content of the representation, would at once be classical on the strength of such congruity between content and form. On the contrary, in classical art the peculiarity of the content consists in its being itself the concrete Idea, and as such the concretely spiritual, for it is the spiritual alone which is the truly inner [self]. Consequently, to suit such a content we must try to find out what in nature belongs to the spiritual in and for itself. The *original* Concept itself it must be which *invented* the shape for concrete spirit, so that now the *subjective* Concept—here the spirit of art—has merely *found* this shape and made it, as a natural shaped existent, appropriate to free individual spirituality. This shape, which the Idea as spiritual—indeed as individually determinate spirituality—assumes when it is to proceed out into a temporal manifestation, is the human form. Of course personification and anthropomorphism have often been maligned as a degradation of the spiritual, but in so far as art's task is to bring the spiritual before our eyes in a sensuous manner, it must get involved in this anthropomorphism, since spirit appears sensuously in a satisfying way only in its body. The transmigration of souls⁶ is in this respect an abstract idea, and physiology should have made it one of its chief propositions that life in its development had necessarily to proceed to the human form as the one and only sensuous appearance appropriate to spirit.

But the human body in its forms counts in classical art no longer as a merely sensuous existent, but only as the existence and natural shape of the spirit, and it must therefore be exempt from all the deficiency of the purely sensuous and from the contingent finitude of the phenomenal world. While in this way the shape is purified in order to express in itself a content adequate to itself, on the other hand, if the correspondence of meaning and shape is to be perfect, the spirituality, which is the content, must be of such a kind that it can express itself completely in the natural human form, without towering beyond and above this expression in sensuous and bodily terms. Therefore here the spirit is at once determined as particular and human, not as purely absolute and eternal, since in this latter sense it can proclaim and express itself only as spirituality.

This last point in its turn is the defect which brings about the dissolution of the classical art-form and demands a transition to a higher form, the *third*, namely the *romantic*.

(c) The romantic form of art cancels again the completed unification of the Idea and its reality, and reverts, even if in a higher way, to that difference and opposition of the two sides which in symbolic art remained unconquered. The classical form of art has attained the pinnacle of what illustration by art could achieve, and if there is something defective in it, the defect is just art itself and the restrictedness of the sphere of art. This restrictedness lies in the fact that art in general takes as its subject-matter the spirit (i.e. the *universal*, infinite and concrete in its nature) in a *sensuously* concrete form, and classical art presents the complete unification of spiritual and sensuous existence as the *correspondence* of the two. But in this blending of the two, spirit is not in fact represented in its *true nature*. For spirit is the infinite subjectivity of the Idea, which as absolute inward-

6. Reincarnation, belief in which was widespread in Greek antiquity; it began with Greek Orphic cults and followers of the pre-Socratic philosopher Pythagoras (6th c. B.C.E.).

ness cannot freely and truly shape itself outwardly on condition of remaining moulded into a bodily existence as the one appropriate to it.⁷

Abandoning this [classical] principle, the romantic form of art cancels the undivided unity of classical art because it has won a content which goes beyond and above the classical form of art and its mode of expression. This content—to recall familiar ideas—coincides with what Christianity asserts of God as a spirit, in distinction from the Greek religion which is the essential and most appropriate content for classical art. In classical art the concrete content is *implicitly* the unity of the divine nature with the human, a unity which, just because it is only immediate and implicit, is adequately manifested also in an immediate and sensuous way. The Greek god is the object of naïve intuition and sensuous imagination, and therefore his shape is the bodily shape of man. The range of his power and his being is individual and particular. Contrasted with the individual he is a substance and power with which the individual's inner being is only implicitly at one but without itself possessing this oneness as inward subjective knowledge. Now the higher state is the *knowledge* of that *implicit* unity which is the content of the classical art-form and is capable of perfect presentation in bodily shape. But this elevation of the implicit into self-conscious knowledge introduces a tremendous difference. It is the infinite difference which, for example, separates man from animals. Man is an animal, but even in his animal functions, he is not confined to the implicit, as the animal is; he becomes conscious of them, recognizes them, and lifts them, as, for instance, the process of digestion, into self-conscious science. In this way man breaks the barrier of his implicit and immediate character, so that precisely because he *knows* that he is an animal, he ceases to be an animal and attains knowledge of himself as spirit.

Now if in this way what was implicit at the previous stage, the unity of divine and human nature, is raised from an *immediate* to a *known* unity, the *true* element for the realization of this content is no longer the sensuous immediate existence of the spiritual in the bodily form of man, but instead the *inwardness of self-consciousness*. Now Christianity brings God before our imagination as spirit, not as an individual, particular spirit, but as absolute in spirit and in truth. For this reason it retreats from the sensuousness of imagination into spiritual inwardness and makes this, and not the body, the medium and the existence of truth's content. Thus the unity of divine and human nature is a known unity, one to be realized only by *spiritual* knowing and *in spirit*. The new content, thus won, is on this account not tied to sensuous presentation, as if that corresponded to it, but is freed from this immediate existence which must be set down as negative, overcome, and reflected into the spiritual unity. In this way romantic art is the self-transcendence of art but within its own sphere and in the form of art itself.

We may, therefore, in short, adhere to the view that at this third stage the subject-matter of art is *free concrete spirituality*, which is to be manifested as *spirituality* to the spirituality inward. In conformity with this subject-matter, art cannot work for sensuous intuition. Instead it must, on the one hand, work for the inwardness which coalesces with its object simply as if with

7. In other words, thought is "inwardness" in the sense that thoughts are not outside one another in the way that parts of a body are. That is why

the spirit cannot find an adequate embodiment in things but only in thoughts, or at least only in the inner life [Hegel's note].

itself, for subjective inner depth, for reflective emotion, for feeling which, as spiritual, strives for freedom in itself and seeks and finds its reconciliation only in the inner spirit. This *inner* world constitutes the content of the romantic sphere and must therefore be represented as this inwardness and in the pure appearance of this depth of feeling. Inwardness celebrates its triumph over the external and manifests its victory in and on the external itself, whereby what is apparent to the senses alone sinks into worthlessness.

On the other hand, however, this romantic form too, like all art, needs an external medium for its expression. Now since spirituality has withdrawn into itself out of the external world and immediate unity therewith, the sensuous externality of shape is for this reason accepted and represented, as in symbolic art, as something inessential and transient; and the same is true of the subjective finite spirit and will, right down to the particularity and caprice of individuality, character, action, etc., of incident, plot, etc. The aspect of external existence is consigned to contingency and abandoned to the adventures devised by an imagination whose caprice can mirror what is present to it, *exactly as it is*, just as readily as it can jumble the shapes of the external world and distort them grotesquely. For this external medium has its essence and meaning no longer, as in classical art, in itself and its own sphere, but in the heart which finds its manifestation in itself instead of in the external world and *its* form of reality, and this reconciliation with itself it can preserve or regain in every chance, in every accident that takes independent shape, in all misfortune and grief, and indeed even in crime.

Thereby the separation of Idea and shape, their indifference and inadequacy to each other, come to the fore again, as in symbolic art, but with this essential difference, that, in romantic art, the Idea, the deficiency of which in the symbol brought with it deficiency of shape, now has to appear *perfected* in itself as spirit and heart. Because of this higher perfection, it is not susceptible of an adequate union with the external, since its true reality and manifestation it can seek and achieve only within itself.

This we take to be the general character of the symbolic, classical, and romantic forms of art, as the three relations of the Idea to its shape in the sphere of art. They consist in the striving for, the attainment, and the transcendence of the Ideal as the true Idea of beauty.

1835–38

WILLIAM WORDSWORTH

1770–1850

"I am not a critic," William Wordsworth stated in 1830, "and set little value upon the art. The preface which I wrote long ago to my own Poems I was put upon to write by the urgent entreaties of a friend, and heartily regret I ever had anything to do with it; though I do not reckon the principles then advanced erroneous." Wordsworth defined himself as a poet above all, and he is less prolific and gifted as a

literary theorist and critic than his friend SAMUEL TAYLOR COLERIDGE. Nevertheless, the preface that he wrote for the second edition of their book *Lyrical Ballads* (1800) is one of the most important documents in English criticism.

Wordsworth was born in Cockermouth, Cumberland, in the English Lake District. His mother died when he was eight; his father, an attorney, died less than six years later. Wordsworth was educated first at Hawkshead Grammar School, Westmorland, a boarding school noted for its training in mathematics and classics, and then at Cambridge University (1787–91), spending July–October 1790 on a walking tour of Europe. In France he was caught up in the excitement that followed the fall of the Bastille on July 14, 1789, and he became a fervent republican sympathizer.

Wordsworth's guardians wanted him to become an Anglican minister, but he persuaded them to support another twelve months of residence in France. When he was forced to return home in December 1792 by the threat of war between France and England, Wordsworth left behind the pregnant Annette Vallon; he supported her and their daughter in later years.

In 1793 Wordsworth's first works of poetry were published, *Descriptive Sketches* and *An Evening Walk*. In 1795 a legacy of £900 from a friend gave him the freedom to pursue a career as a poet. At this time he was living with his sister Dorothy; in 1797 they moved to Alfoxden in Somerset, with Coleridge (whom the poet had met in September 1795) a short distance away. There Wordsworth began to write the lyric and dramatic poems that many readers judge to be the central achievement of his career. The twentieth-century critic NORTHROP FRYE connects the poet's innovative descriptions to social and political critique: "In Wordsworth the existing social and educational structure is artificial, full of inert custom and hypocrisy. Nature is a better teacher than books, and one finds one's lost identity with nature in moments of feeling in which one is penetrated by the sense of nature's 'huge and mighty forms'" (quoting Wordsworth's *Prelude*, 1.398).

Wordsworth's early compositions, and his creative partnership with Coleridge, resulted in September 1798 in the anonymous publication of *Lyrical Ballads*. The volume opened with Coleridge's "Ancient Mariner" and closed with Wordsworth's "Tintern Abbey"; all but three of the intervening poems were Wordsworth's. A new edition of *Lyrical Ballads*, incorporating Wordsworth's Preface and many new poems, was issued in 1800; this edition gave Wordsworth's name on the title page but not Coleridge's (whose "Ancient Mariner" was moved back to become the penultimate poem in the collection). In the Preface, Wordsworth declared that the book's object was "to choose incidents and situations from common life and to relate or describe them . . . in a selection of language really used by men, . . . tracing in them . . . the primary laws of our nature." Still another edition was published in 1802, and it was reprinted in 1805.

In later decades, Wordsworth not only wrote new poems but also revised (not always for the better) his earlier work. A collected edition, which includes many of his best poems and two critical essays, was published in 1815. His collections culminated in the six-volume edition of 1849–50. In these years the poet enjoyed both personal happiness—marrying Mary Hutchinson in 1802 and winning recognition as a national figure (he was named poet laureate in 1843)—and painful losses, including the death at sea of his favorite brother in 1805, a long and never wholly ended estrangement from Coleridge, the deaths of two of his children in 1812, and the physical and mental decline of his sister Dorothy that began in the 1830s. An even earlier loss was of his liberal ideals, much to the dismay of such younger poets as Byron, Keats, and SHELLEY. Wordsworth was horrified by the bloody aftermath of the French Revolution and alarmed by the rise of the French military leader and emperor Napoleon; he became increasingly orthodox in his political, social, and religious beliefs.

The critic HAROLD BLOOM has said that in dramatizing the movements of the individual consciousness, Wordsworth made "the poet's own subjectivity" the "prevalent subject" of poetry. Wordsworth spurred writers to break free from the author-

ity of neoclassical rules and conventions and to find inspiration instead in the emotions, experiences, and speech of ordinary persons. In valuing naturalness and spontaneity, Wordsworth was proposing not that poets abandon literary craft but that poetry should begin with acts of self-expression and self-exploration. There is much truth in the familiar generalization that Romantic poets are visionary, evocative describers of nature—its scenes, settings, landscapes. But the movement outward into the natural world is one dimension of an interior journey or quest into what Wordsworth called “the hiding-places of man’s power.” M. H. Abrams concisely explains this fundamental change, in his classic study *The Mirror and the Lamp: Romantic Theory and the Critical Tradition* (1953):

The paramount cause of poetry is not, as in Aristotle, a formal cause, determined primarily by the human actions and qualities imitated; nor, as in neoclassic criticism, a final cause, the effect intended upon the audience; but instead an efficient cause—the impulse within the poet of feelings and desires seeking expression, or the compulsion of the “creative” imagination which, like God the creator, has its internal source of motion.

A number of the formulations in the preface have become widely known and are permanently linked to Wordsworth’s name—for example, that the modern poems included in *Lyrical Ballads* fit to “metrical arrangement a selection of the real language of men in a state of vivid sensation,” and that “good poetry is the spontaneous overflow of powerful feelings,” “tak[ing] its origin from emotion recollected in tranquillity.” Yet, as W. J. B. Owen and other scholars have noted, Wordsworth is less original than his bold tone and manner suggest; much of what he says about figurative language, poetic diction, and the relationship between poetry and prose draws on an array of eighteenth-century English writings on emotion, knowledge, and aesthetic theory. That we remember Wordsworth’s words, not those of his sources, testifies both to the eloquence of his prose and to its association with a magnificent series of poems.

In his criticism, and in the Preface especially, Wordsworth seeks to explain and defend his own literary practice; in this respect, he is akin to fellow poets JOHN DRYDEN and T. S. ELIOT and the novelist HENRY JAMES, whose criticism fabricates frameworks through which their creative endeavors should be understood and appreciated. Like them, Wordsworth possesses a sharp sense of literary history and tradition; where he differs is in his refusal or failure to make the interpretation and evaluation of writers and texts an integral part of his literary project and identity. Overall his criticism—found in prefaces for his books of poems, a few essays, sentences and paragraphs in letters, and tossed-off opinions and asides in conversations with friends and acquaintances—is not impressive, nor are his judgments compelling. He misunderstood and devalued ALEXANDER POPE, SAMUEL JOHNSON, Goethe, and Byron and failed to perceive the genius of Thomas Carlyle and RALPH WALDO EMERSON. As he admitted himself, he was not much interested in the writing of his contemporaries; he cared little for novels, despite living in a period when the novel as a genre was coming to a new prominence. Instead, Wordsworth’s mission is to return to basic, timeless truths—and thus he raises and confronts such questions as “What is a Poet?” and “To whom does he address himself?”

Like many important theoretical works by creative writers, Wordsworth’s Preface is not always in accord with his actual practice. In the *Biographia Literaria* (1817), Coleridge makes exactly this point and states further that Wordsworth asserts without proof that the language of rural folk has a richer reality than that of city dwellers. There are other overemphases, ambiguities, and contradictions in Wordsworth’s arguments as well. He stresses that poetry heals and restores the feelings of persons; but when one reviews his poetry and prose as a whole, particularly that of his later career, his point becomes hard to grasp: does Wordsworth mean that poetry will lead to a regenerated society, or that it will accommodate readers to their

society as it is? Despite Wordsworth's insistence that the poet engage and employ the language "really used by men," and that such language is best located among those living a "low and rustic life," two of his own greatest literary heroes, as the scholar René Wellek has pointed out, were Spenser and Milton—"the most learned, even bookish poets of the English tradition."

The Preface is to some extent a political text as well as a literary position paper. Wordsworth's desire to select "incidents and situations from common life" blends into poetry the democratic sentiments that the French Revolution had inspired in him in the early 1790s. By advocating "the real language of men," Wordsworth cuts against the neoclassical view that the language of poetry must be more elevated than everyday speech. The rebelliousness in this stance helps us understand why the Romantic critic and essayist William Hazlitt connected Wordsworth's verse with "the revolutionary movement of our age": "His Muse," Hazlitt said, "is a levelling one." By directing attention to ballads, folklore, and other materials usually deemed nonliterary or unpoetical, Wordsworth expands the range of subjects for poetry. He honors children and common men and women, and even criminals and idiots: his poetry does not bestow dignity on them but expresses the dignity they already possess.

Wordsworth was actively concerned about the pressures that impinge on the lives of those living in newly industrialized cities, the pressures that threaten to reduce the mind "to a state of almost savage torpor" and that lead individuals to immerse themselves in reports and stories of sensational incidents. Here he looks forward to the opposition between high and mass or popular cultures that modern critics such as RAYMOND WILLIAMS later explored. Insofar as the Preface establishes the writer as an adversary to popular culture and the always-accelerating trends in social and cultural life, Wordsworth anticipates themes articulated by writers ranging from Shelley to D. H. Lawrence. The poet, he maintains in an important appendix added in 1802, "is the rock of defense of human nature; an upholder and preserver, carrying everywhere with him relationship and love." Moreover, as he discusses in some detail, poets in the future will be obliged to defend the worth of their activity against that of the scientists. This is a struggle to which MATTHEW ARNOLD, later in the nineteenth century, and I. A. Richards and the New Critics, in the twentieth century, return with even greater urgency.

Preface to *Lyrical Ballads, with Pastoral and Other Poems* Keywords: Aesthetics, Language, Literary History, Poetry, Romantic Theory, Vernacular Language

Preface to *Lyrical Ballads, with Pastoral and Other Poems* (1802)¹

The first Volume of these Poems has already been submitted to general perusal. It was published, as an experiment, which, I hoped, might be of some use to ascertain, how far, by fitting to metrical arrangement a selection of the real language of men in a state of vivid sensation, that sort of pleasure and that quantity of pleasure may be imparted, which a Poet may rationally endeavour to impart.

I had formed no very inaccurate estimate of the probable effect of those Poems: I flattered myself that they who should be pleased with them would

1. This preface first appeared in the second edition of *Lyrical Ballads*, expanded to two volumes and dated 1800. For an edition published in 1802, Wordsworth revised the preface (he made

more revisions for subsequent editions) and added an appendix; the important additions to the 1800 text are here given in brackets.

read them with more than common pleasure: and, on the other hand, I was well aware, that by those who should dislike them they would be read with more than common dislike. The result has differed from my expectation in this only, that I have pleased a greater number, than I ventured to hope I should please.

For the sake of variety, and from a consciousness of my own weakness, I was induced to request the assistance of a Friend,² who furnished me with the Poems of the ANCIENT MARINER, the FOSTER-MOTHER'S TALE, the NIGHT-INGALE, and the Poem entitled LOVE. I should not, however, have requested this assistance, had I not believed that the Poems of my Friend would in a great measure have the same tendency as my own, and that, though there would be found a difference, there would be found no discordance in the colours of our style; as our opinions on the subject of poetry do almost entirely coincide.

Several of my Friends are anxious for the success of these Poems from a belief, that, if the views with which they were composed were indeed realized, a class of Poetry would be produced, well adapted to interest mankind permanently, and not unimportant in the multiplicity, and in the quality of its moral relations: and on this account they have advised me to prefix a systematic defence of the theory, upon which the poems were written. But I was unwilling to undertake the task, because I knew that on this occasion the Reader would look coldly upon my arguments, since I might be suspected of having been principally influenced by the selfish and foolish hope of *reasoning* him into an approbation of these particular Poems: and I was still more unwilling to undertake the task, because, adequately to display my opinions, and fully to enforce my arguments, would require a space wholly disproportionate to the nature of a preface. For to treat the subject with the clearness and coherence, of which I believe it susceptible, it would be necessary to give a full account of the present state of the public taste in this country, and to determine how far this taste is healthy or depraved; which, again, would not be determined, without pointing out, in what manner language and the human mind act and re-act on each other, and without retracing the revolutions, not of literature alone, but likewise of society itself. I have therefore altogether declined to enter regularly upon this defence; yet I am sensible, that there would be some impropriety in abruptly obtruding upon the Public, without a few words of introduction, Poems so materially different from those, upon which general approbation is at present bestowed.

It is supposed, that by the act of writing in verse an Author makes a formal engagement that he will gratify certain known habits of association; that he not only thus apprizes the Reader that certain classes of ideas and expressions will be found in his book, but that others will be carefully excluded. This exponent or symbol held forth by metrical language must in different areas of literature have excited very different expectations: for example, in the age of Catullus, Terence and Lucretius, and that of Statius or Claudian;³ and in our own country, in the age of Shakespeare and

2. SAMUEL TAYLOR COLERIDGE (1772–1834), English poet and critic.

3. Wordsworth names Roman poets in different genres, before and after the common era (and thus writing in “Golden” vs. “Silver” Latin): Catullus (84–54 B.C.E.), lyric poet; Terence (ca. 190–159

B.C.E.), comic dramatist; Lucretius (ca. 94–55 B.C.E.), didactic poet; Statius (45–96 C.E.), epic poet; and Claudian (d. ca. 404 C.E.), an Alexandrian whose Latin poetry represents the end of the classical tradition.

Beaumont and Fletcher, and that of Donne and Cowley, or Dryden, or Pope.⁴ I will not take upon me to determine the exact import of the promise which by the act of writing in verse an Author, in the present day, makes to his Reader; but I am certain, it will appear to many persons that I have not fulfilled the terms of an engagement thus voluntarily contracted. [They who have been accustomed to the gaudiness and inane phraseology of many modern writers, if they persist in reading this book to its conclusion, will, no doubt, frequently have to struggle with feelings of strangeness and awkwardness: they will look round for poetry, and will be induced to inquire by what species of courtesy these attempts can be permitted to assume that title.] I hope therefore the Reader will not censure me, if I attempt to state what I have proposed to myself to perform; and also, (as far as the limits of a preface will permit) to explain some of the chief reasons which have determined me in the choice of my purpose: that at least he may be spared any unpleasant feeling of disappointment, and that I myself may be protected from the most dishonourable accusation which can be brought against an Author, namely, that of an indolence which prevents him from endeavouring to ascertain what is his duty, or, when his duty is ascertained, prevents him from performing it.

The principal object, then, which I proposed to myself in these Poems was to [chuse incidents and situations from common life, and to relate or describe them, throughout, as far as was possible, in a selection of language really used by men; and, at the same time, to throw over them a certain colouring of imagination, whereby ordinary things should be presented to the mind in an unusual way; and, further, and above all, to make these incidents and situations interesting] by tracing in them, truly though not ostentatiously, the primary laws of our nature: chiefly, as far as regards the manner in which we associate ideas in a state of excitement. Low and rustic life was generally chosen, because in that condition, the essential passions of the heart find a better soil in which they can attain their maturity, are less under restraint, and speak a plainer and more emphatic language; because in that condition of life our elementary feelings co-exist in a state of greater simplicity, and, consequently, may be more accurately contemplated, and more forcibly communicated; because the manners of rural life germinate from those elementary feelings; and, from the necessary character of rural occupations, are more easily comprehended; and are more durable; and lastly, because in that condition the passions of men are incorporated with the beautiful and permanent forms of nature. The language, too, of these men is adopted (purified indeed from what appear to be its real defects, from all lasting and rational causes of dislike or disgust) because such men hourly communicate with the best objects from which the best part of language is originally derived; and because, from their rank in society and the sameness and narrow circle of their intercourse, being less under the influence of social vanity they convey their feelings and notions in simple and unelaborated expressions. Accordingly, such a language, arising out of repeated experience and regular feelings, is a more permanent, and a far

4. Wordsworth names three English dramatists—Shakespeare (1564–1616), Francis Beaumont (ca. 1584–1616), and John Fletcher (1579–1625); and four poets—John Donne (1572–1631), Abra-

ham Cowley (1618–1667), JOHN DRYDEN (1631–1700), and ALEXANDER POPE (1688–1744). As their dates suggest, he focuses here less on chronology than on style.

more philosophical language, than that which is frequently substituted for it by Poets, who think that they are conferring honour upon themselves and their art, in proportion as they separate themselves from the sympathies of men, and indulge in arbitrary and capricious habits of expression, in order to furnish food for fickle tastes, and fickle appetites, of their own creation.⁵

I cannot, however, be insensible of the present outcry against the triviality and meanness both of thought and language, which some of my contemporaries have occasionally introduced into their metrical compositions; and I acknowledge that this defect, where it exists, is more dishonourable to the Writer's own character than false refinement or arbitrary innovation, though I should contend at the same time that it is far less pernicious in the sum of its consequences. From such verses the Poems in these volumes will be found distinguished at least by one mark of difference, that each of them has a worthy *purpose*. Not that I mean to say, that I always began to write with a distinct purpose formally conceived; but I believe that my habits of meditation have so formed my feelings, as that my descriptions of such objects as strongly excite those feelings, will be found to carry along with them a *purpose*. If in this opinion I am mistaken, I can have little right to the name of a Poet. For all good poetry is the spontaneous overflow of powerful feelings: but though this be true, Poems to which any value can be attached, were never produced on any variety of subjects but by a man, who being possessed of more than usual organic sensibility, had also thought long and deeply. For our continued influxes of feeling are modified and directed by our thoughts, which are indeed the representatives of all our past feelings; and, as by contemplating the relation of these general representatives to each other we discover what is really important to men, so, by the repetition and continuance of this act, our feelings will be connected with important subjects, till at length, if we be originally possessed of much sensibility, such habits of mind will be produced, that, by obeying blindly and mechanically the impulses of those habits, we shall describe objects, and utter sentiments, of such a nature and in such connection with each other, that the understanding of the being to whom we address ourselves, if he be in a healthful state of association, must necessarily be in some degree enlightened, and his affections ameliorated.

I have said that each of these poems has a purpose. I have also informed my Reader what this purpose will be found principally to be: namely, to illustrate the manner in which our feelings and ideas are associated in a state of excitement. But, speaking in language somewhat more appropriate, it is to follow the fluxes and refluxes of the mind when agitated by the great and simple affections of our nature. This object I have endeavoured in these short essays to attain by various means; by tracing the maternal passion through many of its more subtle windings, as in the poems of the *IDIOT BOY* and the *MAD MOTHER*; by accompanying the last struggles of a human being, at the approach of death, cleaving in solitude to life and society, as in the Poem of the *FORSAKEN INDIAN*; by showing, as in the Stanzas entitled *WE ARE SEVEN*, the perplexity and obscurity which in childhood attend our

5. It is worth while here to observe that the affecting parts of Chaucer [ca. 1343–1400] are almost always expressed in language pure and universally intelligible even to this day [Wordsworth's note].

notion of death, or rather our utter inability to admit that notion; or by displaying the strength of fraternal, or to speak more philosophically, of moral attachment when early associated with the great and beautiful objects of nature, as in *THE BROTHERS*; or, as in the Incident of *SIMON LEE*, by placing my Reader in the way of receiving from ordinary moral sensations another and more salutary impression than we are accustomed to receive from them. It has also been part of my general purpose to attempt to sketch characters under the influence of less impassioned feelings, as in the *TWO APRIL MORNINGS*, *THE FOUNTAIN*, *THE OLD MAN TRAVELLING*, *THE TWO THIEVES*, &c. characters of which the elements are simple, belonging rather to nature than to manners, such as exist now, and will probably always exist, and which from their constitution may be distinctly and profitably contemplated. I will not abuse the indulgence of my Reader by dwelling longer upon this subject; but it is proper that I should mention one other circumstance which distinguishes these Poems from the popular Poetry of the day; it is this, that the feeling therein developed gives importance to the action and situation, and not the action and situation to the feeling. My meaning will be rendered perfectly intelligible by referring my Reader to the Poems entitled *POOR SUSAN* and the *CHILDLESS FATHER*, particularly to the last Stanza of the latter Poem.

I will not suffer a sense of false modesty to prevent me from asserting, that I point my Reader's attention to this mark of distinction, far less for the sake of these particular Poems than from the general importance of the subject. The subject is indeed important! For the human mind is capable of being excited without the application of gross and violent stimulants; and he must have a very faint perception of its beauty and dignity who does not know this, and who does not further know, that one being is elevated above another, in proportion as he possesses this capability. It has therefore appeared to me, that to endeavour to produce or enlarge this capability is one of the best services in which, at any period, a Writer can be engaged; but this service, excellent at all times, is especially so at the present day. For a multitude of causes, unknown to former times, are now acting with a combined force to blunt the discriminating powers of the mind, and unfitting it for all voluntary exertion to reduce it to a state of almost savage torpor. The most effective of these causes are the great national events which are daily taking place,⁶ and the encreasing accumulation of men in cities, where the uniformity of their occupations produces a craving for extraordinary incident, which the rapid communication of intelligence⁷ hourly gratifies. To this tendency of life and manners the literature and theatrical exhibitions of the country have conformed themselves. The invaluable works of our elder writers, I had almost said the works of Shakespeare and Milton, are driven into neglect by frantic novels, sickly and stupid German Tragedies,⁸ and deluges of idle and extravagant stories in verse.—When I

6. The French Revolution and the Napoleonic Wars, primarily between France and Great Britain (1799–1815), that grew out of it and out of the rise to power of the French general Napoléon Bonaparte (1769–1821), later emperor (1804–15).

7. Information, news (daily newspapers were spreading rapidly in England).

8. German melodramas by authors such as

August von Kotzebue (1761–1819); in Jane Austen's novel *Mansfield Park* (1814), the Bertram family performs Elizabeth Inchbald's *Lovers' Vows*, which is based on von Kotzebue's *Das kind der Liebe*. "Frantic novels": Gothic novels, such as *The Mysteries of Udolpho* (1794) by Ann Radcliffe and *The Monk* (1796) by M. G. Lewis.

think upon this degrading thirst after outrageous stimulation, I am almost ashamed to have spoken of the feeble effort with which I have endeavoured to counteract it; and, reflecting upon the magnitude of the general evil, I should be oppressed with no dishonorable melancholy, had I not a deep impression of certain inherent and indestructible qualities of the human mind, and likewise of certain powers in the great and permanent objects that act upon it, which are equally inherent and indestructible; and did I not further add to this impression a belief, that the time is approaching when the evil will be systematically opposed, by men of greater powers, and with far more distinguished success.

Having dwelt thus long on the subjects and aim of these Poems, I shall request the Reader's permission to apprise him of a few circumstances relating to their *style*, in order, among other reasons, that I may not be censured for not having performed what I never attempted. [The Reader will find that personifications of abstract ideas rarely occur in these volumes; and, I hope, are utterly rejected as an ordinary device to elevate the style, and raise it above prose. I have proposed to myself to imitate, and, as far as is possible, to adopt the very language of men; and assuredly such personifications do not make any natural or regular part of that language. They are, indeed, a figure of speech occasionally prompted by passion, and I have made use of them as such; but I have endeavoured utterly to reject them as a mechanical device of style, or as a family language which Writers in metre seem to lay claim to by prescription.] I have wished to keep my Reader in the company of flesh and blood, persuaded that by so doing I shall interest him. I am, however, well aware that others who pursue a different track may interest him likewise; I do not interfere with their claim, I only wish to prefer a different claim of my own. There will also be found in these volumes little of what is usually called poetic diction; I have taken as much pains to avoid it as others ordinarily take to produce it; this I have done for the reason already alleged, to bring my language near to the language of men, and further, because the pleasure which I have proposed to myself to impart is of a kind very different from that which is supposed by many persons to be the proper object of poetry. I do not know how, without being culpably particular, I can give my Reader a more exact notion of the style in which I wished these poems to be written than by informing him that I have at all times endeavoured to look steadily at my subject, consequently, I hope that there is in these Poems little falsehood of description, and that my ideas are expressed in language fitted to their respective importance. Something I must have gained by this practice, as it is friendly to one property of all good poetry, namely good sense; but it has necessarily cut me off from a large portion of phrases and figures of speech which from father to son have long been regarded as the common inheritance of Poets. I have also thought it expedient to restrict myself still further, having abstained from the use of many expressions, in themselves proper and beautiful, but which have been foolishly repeated by bad Poets, till such feelings of disgust are connected with them as it is scarcely possible by any art of association to overpower.

If in a Poem there should be found a series of lines, or even a single line, in which the language, though naturally arranged, and according to the strict laws of metre, does not differ from that of prose, there is a numerous class of critics, who, when they stumble upon these prosaisms, as they call

them, imagine that they have made a notable discovery, and exult over the Poet as over a man ignorant of his own profession. Now these men would establish a canon of criticism which the Reader will conclude he must utterly reject, if he wishes to be pleased with these volumes. And it would be a most easy task to prove to him, that not only the language of a large portion of every good poem, even of the most elevated character, must necessarily, except with reference to the metre, in no respect differ from that of good prose, but likewise that some of the most interesting parts of the best poems will be found to be strictly the language of prose, when prose is well written. The truth of this assertion might be demonstrated by innumerable passages from almost all the poetical writings, even of Milton himself. I have not space for much quotation; but, to illustrate the subject in a general manner, I will here adduce a short composition of Gray,⁹ who was at the head of those who, by their reasonings, have attempted to widen the space of separation betwixt Prose and Metrical composition, and was more than any other man curiously elaborate in the structure of his own poetic diction.

In vain to me the smiling mornings shine,
 And reddening Phoebus¹ lifts his golden fire:
 The birds in vain their amorous descant join,
 Or chearful fields resume their green attire.
 These ears, alas! for other notes repine;
A different object do these eyes require;
My lonely anguish melts no heart but mine;
And in my breast the imperfect joys expire;
 Yet morning smiles the busy race to cheer,
 And new-born pleasure brings to happier men;
 The fields to all their wonted tribute bear;
 To warm their little loves the birds complain.
I fruitless mourn to him that cannot hear,
And weep the more because I weep in vain.

It will easily be perceived that the only part of this Sonnet which is of any value is the lines printed in Italics: it is equally obvious, that, except in the rhyme, and in the use of the single word 'fruitless' for fruitlessly, which is so far a defect, the language of these lines does in no respect differ from that of prose.

[By the foregoing quotation I have shewn that the language of Prose may yet be well adapted to Poetry; and I have previously asserted that a large portion of the language of every good poem can in no respect differ from that of good Prose. I will go further. I do not doubt that it may be safely affirmed, that there neither is, nor can be, any essential difference between the language of prose and metrical composition.] We are fond of tracing the resemblance between Poetry and Painting,² and, accordingly, we call them Sisters: but where shall we find bonds of connection sufficiently strict to

9. Thomas Gray (1716–1771); the poem quoted is "Sonnet on the Death of Richard West" (1775; West was a friend of Gray's at Eton). Gray, in a letter to West, had maintained that "the language of the age is never the language of poetry."

1. Apollo, Roman and Greek god of the sun, here identified with the sun.

2. A topic examined, for example, by the poets and critics HORACE, *Ars Poetica* (ca. 10 B.C.E.); Dryden, *A Parallel of Poetry and Painting* (1695); SIR PHILIP SIDNEY, *The Defence of Poesy* (1595); Pope, *An Essay on Criticism* (1711); GOTTHOLD EPHRAIM LESSING, *Laocöon* (1766); and SAMUEL JOHNSON, *Idler*, no. 34 (1758).

typify the affinity betwixt metrical and prose composition? They both speak by and to the same organs; the bodies in which both of them are clothed may be said to be of the same substance, their affections are kindred, and almost identical, not necessarily differing even in degree; Poetry³ sheds no tears 'such as Angels weep,'⁴ but natural and human tears; she can boast of no celestial Ichor⁵ that distinguishes her vital juices from those of prose; the same human blood circulates through the veins of them both.

If it be affirmed that rhyme and metrical arrangement of themselves constitute a distinction which overturns what I have been saying on the strict affinity of metrical language with that of prose, and paves the way for other artificial distinctions which the mind voluntarily admits,⁶ [I answer that the language of such Poetry as I am recommending is, as far as is possible, a selection of the language really spoken by men; that this selection, wherever it is made with true taste and feeling, will of itself form a distinction far greater than would at first be imagined, and will entirely separate the composition from the vulgarity and meanness of ordinary life; and, if metre be superadded thereto, I believe that a dissimilitude will be produced altogether sufficient for the gratification of a rational mind. What other distinction would we have? Whence is it to come? And where is it to exist? Not, surely, where the Poet speaks through the mouths of his characters: it cannot be necessary here, either for elevation of style, or any of its supposed ornaments; for, if the Poet's subject be judiciously chosen, it will naturally, and upon fit occasion, lead him to passions the language of which, if selected truly and judiciously, must necessarily be dignified and variegated, and alive with metaphors and figures. I forbear to speak of an incongruity which would shock the intelligent Reader, should the Poet interweave any foreign splendour of his own with that which the passion naturally suggests: it is sufficient to say that such addition is unnecessary. And, surely, it is more probable that those passages, which with propriety abound with metaphors and figures, will have their due effect, if, upon other occasions where the passions are of a milder character, the style also be subdued and temperate.

But, as the pleasure which I hope to give by the Poems I now present to the Reader must depend entirely on just notions upon this subject, and, as it is in itself of the highest importance to our taste and moral feelings, I cannot content myself with these detached remarks. And if, in what I am about to say, it shall appear to some that my labour is unnecessary, and that I am like a man fighting a battle without enemies, I would remind such persons that, whatever may be the language outwardly holden⁷ by men, a practical faith in the opinions which I am wishing to establish is almost unknown. If my conclusions are admitted, and carried as far as they must be carried if admitted at all, our judgments concerning the works of the greatest Poets both ancient and modern will be far different from what they

3. I here use the word "Poetry" (though against my own judgment) as opposed to the word Prose, and synonymous with metrical composition. But much confusion has been introduced into criticism by this contradistinction of Poetry and Prose, instead of the more philosophical one of Poetry and Matter of Fact, or Science. The only strict antithesis to Prose is Metre; nor is this, in truth, a *strict* antithesis; because lines and pas-

sages of metre so naturally occur in writing prose, that it would be scarcely possible to avoid them, even if it were desirable [Wordsworth's note].

4. From John Milton, *Paradise Lost* (1667), 1.620.

5. In Greek mythology, the fluid that flows in the veins of the gods.

7. Held.

are at present, both when we praise, and when we censure: and our moral feelings influencing, and influenced by these judgments will, I believe, be corrected and purified.

Taking up the subject, then, upon general grounds, I ask what is meant by the word Poet? What is a Poet? To whom does he address himself? And what language is to be expected from him? He is a man speaking to men: a man, it is true, endued with more lively sensibility, more enthusiasm and tenderness, who has a greater knowledge of human nature, and a more comprehensive soul, than are supposed to be common among mankind; a man pleased with his own passions and volitions, and who rejoices more than other men in the spirit of life that is in him; delighting to contemplate similar volitions and passions as manifested in the goings-on of the Universe, and habitually impelled to create them where he does not find them. To these qualities he has added a disposition to be affected more than other men by absent things as if they were present; an ability of conjuring up in himself passions, which are indeed far from being the same as those produced by real events, yet (especially in those parts of the general sympathy which are pleasing and delightful) do more nearly resemble the passions produced by real events, than any thing which, from the motions of their own minds merely, other men are accustomed to feel in themselves; whence, and from practice, he has acquired a greater readiness and power in expressing what he thinks and feels, and especially those thoughts and feelings which, by his own choice, or from the structure of his own mind, arise in him without immediate external excitement.

But, whatever portion of this faculty we may suppose even the greatest Poet to possess, there cannot be a doubt but that the language which it will suggest to him, must, in liveliness and truth, fall far short of that which is uttered by men in real life, under the actual pressure of those passions, certain shadows of which the Poet thus produces, or feels to be produced, in himself. However exalted a notion we would wish to cherish of the character of a Poet, it is obvious, that, while he describes and imitates passions, his situation is altogether slavish and mechanical, compared with the freedom and power of real and substantial action and suffering. So that it will be the wish of the Poet to bring his feelings near to those of the persons whose feelings he describes, nay, for short spaces of time perhaps, to let himself slip into an entire delusion, and even confound and identify his own feelings with theirs; modifying only the language which is thus suggested to him, by a consideration that he describes for a particular purpose, that of giving pleasure. Here, then, he will apply the principle on which I have so much insisted, namely, that of selection; on this he will depend for removing what would otherwise be painful or disgusting in the passion; he will feel that there is no necessity to trick out or elevate nature: and, the more industriously he applies this principle, the deeper will be his faith that no words, which his fancy or imagination can suggest, will be to be compared with those which are in the emanations of reality and truth.

But it may be said by those who do not object to the general spirit of these remarks, that, as it is impossible for the Poet to produce upon all occasions language as exquisitely fitted for the passion as that which the real passion itself suggests, it is proper that he should consider himself as in the situation of a translator, who deems himself justified when he substitutes excellences

of another kind for those which are unattainable by him; and endeavours occasionally to surpass his original, in order to make some amends for the general inferiority to which he feels that he must submit. But this would be to encourage idleness and unmanly despair. Further, it is the language of men who speak of what they do not understand; who talk of Poetry as of a matter of amusement and idle pleasure; who will converse with us as gravely about a *taste* for Poetry, as they express it, as if it were a thing as indifferent as a taste for Rope-dancing, or Frontiniac⁸ or Sherry. Aristotle, I have been told, hath said, that Poetry is the most philosophic of all writing;⁹ it is so: its object is truth, not individual and local, but general, and operative; not standing upon external testimony, but carried alive into the heart by passion; truth which is its own testimony, which gives strength and divinity to the tribunal to which it appeals, and receives them from the same tribunal. Poetry is the image of man and nature. The obstacles which stand in the way of the fidelity of the Biographer and Historian, and of their consequent utility, are incalculably greater than those which are to be encountered by the Poet who has an adequate notion of the dignity of his art. The Poet writes under one restriction only, namely, that of the necessity of giving immediate pleasure to a human Being possessed of that information which may be expected from him, not as a lawyer, a physician, a mariner, an astronomer or a natural philosopher, but as a Man. Except this one restriction, there is no object standing between the Poet and the image of things; between this, and the Biographer and Historian there are a thousand.

Nor let this necessity of producing immediate pleasure be considered as a degradation of the Poet's art. It is far otherwise. It is an acknowledgment of the beauty of the universe, an acknowledgment the more sincere, because it is not formal, but indirect; it is a task light and easy to him who looks at the world in the spirit of love: further, it is a homage paid to the native and naked dignity of man, to the grand elementary principle of pleasure, by which he knows, and feels, and lives, and moves.¹ We have no sympathy but what is propagated by pleasure: I would not be misunderstood; but wherever we sympathize with pain it will be found that the sympathy is produced and carried on by subtle combinations with pleasure. We have no knowledge, that is, no general principles drawn from the contemplation of particular facts, but what has been built up by pleasure, and exists in us by pleasure alone. The Man of Science,² the Chemist and Mathematician, whatever difficulties and disgusts they may have had to struggle with, know and feel this. However painful may be the objects with which the Anatomist's knowledge is connected, he feels that his knowledge is pleasure; and where he has no pleasure he has no knowledge. What then does the Poet? He considers man and the objects that surround him as acting and re-acting upon each other, so as to produce an infinite complexity of pain and pleasure; he considers man in his own nature and in his ordinary life as contemplating this with a certain quantity of immediate knowledge, with certain convictions, intuitions, and deductions which by habit become of the nature of intuitions; he

8. A sweet wine.

9. See ARISTOTLE, *Poetics* 9, 1451b: "Poetry, therefore is a more philosophical and a higher thing than history, in that poetry tends rather to express the universal, history rather the particular fact."

1. Compare St. Paul's declaration that in God "we

live, and move, and have our being" (Acts 17.28).

2. Wordsworth may have had in mind in particular the English chemist Humphrey Davy (1778–1829), who had lectured at the Royal Institution in London on January 21, 1802.

considers him as looking upon this complex scene of ideas and sensations, and finding every where objects that immediately excite in him sympathies which, from the necessities of his nature, are accompanied by an overbalance of enjoyment.

To this knowledge which all men carry about with them, and to these sympathies in which without any other discipline than that of our daily life we are fitted to take delight, the Poet principally directs his attention. He considers man and nature as essentially adapted to each other, and the mind of man as naturally the mirror of the fairest and most interesting qualities of nature. And thus the Poet, prompted by this feeling of pleasure which accompanies him through the whole course of his studies, converses with general nature with affections akin to those, which, through labour and length of time, the Man of Science has raised up in himself, by conversing with those particular parts of nature which are the objects of his studies. The knowledge both of the Poet and the Man of Science is pleasure; but the knowledge of the one cleaves to us as a necessary part of our existence, our natural and unalienable inheritance; the other is a personal and individual acquisition, slow to come to us, and by no habitual and direct sympathy connecting us with our fellow-beings. The Man of Science seeks truth as a remote and unknown benefactor; he cherishes and loves it in his solitude: the Poet, singing a song in which all human beings join with him, rejoices in the presence of truth as our visible friend and hourly companion. Poetry is the breath and finer spirit of all knowledge; it is the impassioned expression which is in the countenance of all Science. Emphatically may it be said of the Poet, as Shakespeare hath said of man, 'that he looks before and after.'³ He is the rock of defence of human nature; an upholder and preserver, carrying every where with him relationship and love. In spite of difference of soil and climate, of language and manners, of laws and customs, in spite of things silently gone out of mind and things violently destroyed, the Poet binds together by passion and knowledge the vast empire of human society, as it is spread over the whole earth, and over all time. The objects of the Poet's thoughts are every where; though the eyes and senses of man are, it is true, his favorite guides, yet he will follow wheresoever he can find an atmosphere of sensation in which to move his wings. Poetry is the first and last of all knowledge—it is as immortal as the heart of man. If the labours of Men of Science should ever create any material revolution, direct or indirect, in our condition, and in the impressions which we habitually receive, the Poet will sleep then no more than at present, but he will be ready to follow the steps of the Man of Science, not only in those general indirect effects, but he will be at his side, carrying sensation into the midst of the objects of the Science itself. The remotest discoveries of the Chemist, the Botanist, or Mineralogist, will be as proper objects of the Poet's art as any upon which it can be employed, if the time should ever come when these things shall be familiar to us, and the relations under which they are contemplated by the followers of these respective Sciences shall be manifestly and palpably material to us as enjoying and suffering beings. If the time should ever come when what is now called Science, thus familiarized to men, shall be ready to put on, as it were, a form of flesh and blood, the Poet will lend his divine

3. *Hamlet* (ca. 1600), 4.4.36 ("Looking before and after").

spirit to aid the transfiguration, and will welcome the Being thus produced, as a dear and genuine inmate of the household of man.—It is not, then, to be supposed that any one, who holds that sublime notion of Poetry which I have attempted to convey, will break in upon the sanctity and truth of his pictures by transitory and accidental ornaments, and endeavour to excite admiration of himself by arts, the necessity of which must manifestly depend upon the assumed meanness of his subject.

What I have thus far said applies to Poetry in general; but especially to those parts of composition where the Poet speaks through the mouths of his characters; and upon this point it appears to have such weight that I will conclude, there are few persons of good sense, who would not allow that the dramatic parts of composition are defective, in proportion as they deviate from the real language of nature, and are coloured by a diction of the Poet's own, either peculiar to him as an individual Poet, or belonging simply to Poets in general, to a body of men who, from the circumstance of their compositions being in metre, it is expected will employ a particular language.

It is not, then, in the dramatic parts of composition that we look for this distinction of language; but still it may be proper and necessary where the Poet speaks to us in his own person and character. To this I answer by referring my Reader to the description which I have before given of a Poet. Among the qualities which I have enumerated as principally conducing to form a Poet, is implied nothing differing in kind from other men, but only in degree. The sum of what I have there said is, that the Poet is chiefly distinguished from other men by a greater promptness to think and feel without immediate external excitement, and a greater power in expressing such thoughts and feelings as are produced in him in that manner. But these passions and thoughts and feelings are the general passions and thoughts and feelings of men. And with what are they connected? Undoubtedly with our moral sentiments and animal sensations, and with the causes which excite these; with the operations of the elements and the appearances of the visible universe; with storm and sun-shine, with the revolutions of the seasons, with cold and heat, with loss of friends and kindred, with injuries and resentments, gratitude and hope, with fear and sorrow. These, and the like, are the sensations and objects which the Poet describes, as they are the sensations of other men, and the objects which interest them. The Poet thinks and feels in the spirit of the passions of men. How, then, can his language differ in any material degree from that of all other men who feel vividly and see clearly? It might be *proved* that it is impossible. But supposing that this were not the case, the Poet might then be allowed to use a peculiar language when expressing his feelings for his own gratification, or that of men like himself. But Poets do not write for Poets alone, but for men. Unless therefore we are advocates for that admiration which depends upon ignorance, and that pleasure which arises from hearing what we do not understand, the Poet must descend from this supposed height, and, in order to excite rational sympathy, he must express himself as other men express themselves. To this it may be added, that while he is only selecting from the real language of men, or, which amounts to the same thing, composing accurately in the spirit of such selection, he is treading upon safe ground, and we know what we are to expect from him. Our feelings are the same with respect to metre; for, as it may be proper to remind the Reader,] the distinction of metre is

regular and uniform, and not like that which is produced by what is usually called poetic diction, arbitrary, and subject to infinite caprices upon which no calculation whatever can be made. In the one case, the Reader is utterly at the mercy of the Poet respecting what imagery or diction he may choose to connect with the passion, whereas, in the other, the metre obeys certain laws, to which the Poet and Reader both willingly submit because they are certain, and because no interference is made by them with the passion but such as the concurring testimony of ages has shown to heighten and improve the pleasure which co-exists with it.

It will now be proper to answer an obvious question, namely, Why, professing these opinions, have I written in verse? To this, in addition to such answer as is included in what I have already said, I reply in the first place, because, however I may have restricted myself, there is still left open to me what confessedly constitutes the most valuable object of all writing, whether in prose or verse, the great and universal passions of men, the most general and interesting of their occupations, and the entire world of nature, from which I am at liberty to supply myself with endless combinations of forms and imagery. Now, supposing for a moment that whatever is interesting in these objects may be as vividly described in prose, why am I to be condemned, if to such description I have endeavoured to superadd the charm which, by the consent of all nations, is acknowledged to exist in metrical language? To this, by such as are unconvinced by what I have already said, it may be answered, that a very small part of the pleasure given by Poetry depends upon the metre, and that it is injudicious to write in metre, unless it be accompanied with the other artificial distinctions of style with which metre is usually accompanied, and that by such deviation more will be lost from the shock which will be thereby given to the Reader's associations, than will be counterbalanced by any pleasure which he can derive from the general power of numbers.⁴ In answer to those who still contend for the necessity of accompanying metre with certain appropriate colours of style in order to the accomplishment of its appropriate end, and who also, in my opinion, greatly under-rate the power of metre in itself, it might perhaps, as far as relates to these Poems, have been almost sufficient to observe, that poems are extant, written upon more humble subjects, and in a more naked and simple style than I have aimed at, which poems have continued to give pleasure from generation to generation. Now, if nakedness and simplicity be a defect, the fact here mentioned affords a strong presumption that poems somewhat less naked and simple are capable of affording pleasure at the present day; and, what I wished *chiefly* to attempt, at present, was to justify myself for having written under the impression of this belief.

But I might point out various causes why, when the style is manly, and the subject of some importance, words metrically arranged will long continue to impart such a pleasure to mankind as he who is sensible of the extent of that pleasure will be desirous to impart. The end of Poetry is to produce excitement in co-existence with an over-balance of pleasure. Now, by the supposition, excitement is an unusual and irregular state of the mind; ideas and feelings do not in that state succeed each other in accustomed order. But, if the words by which this excitement is produced are in themselves

4. Metrical language.

powerful, or the images and feelings have an undue proportion of pain connected with them, there is some danger that the excitement may be carried beyond its proper bounds. Now the co-presence of something regular, something to which the mind has been accustomed in various moods and in a less excited state, cannot but have great efficacy in tempering and restraining the passion by an intertexture of ordinary feeling, [and of feeling not strictly and necessarily connected with the passion. This is unquestionably true, and hence, though the opinion will at first appear paradoxical, from the tendency of metre to divest language in a certain degree of its reality, and thus to throw a sort of half consciousness of unsubstantial existence over the whole composition, there can be little doubt but that more pathetic situations and sentiments, that is, those which have a greater proportion of pain connected with them, may be endured in metrical composition, especially in rhyme, than in prose. The metre of the old Ballads is very artless; yet they contain many passages which would illustrate this opinion, and, I hope, if the following Poems be attentively perused, similar instances will be found in them.] This opinion may be further illustrated by appealing to the Reader's own experience of the reluctance with which he comes to the re-perusal of the distressful parts of *Clarissa Harlowe*, or the *Gamester*.⁵ While Shakespeare's writings, in the most pathetic scenes, never act upon us as pathetic beyond the bounds of pleasure—an effect which, in a much greater degree than might at first be imagined, is to be ascribed to small, but continual and regular impulses of pleasurable surprise from the metrical arrangement.—On the other hand (what it must be allowed will much more frequently happen) if the Poet's words should be incommensurate with the passion, and inadequate to raise the Reader to a height of desirable excitement, then, (unless the Poet's choice of his metre has been grossly injudicious) in the feelings of pleasure which the Reader has been accustomed to connect with metre in general, and in the feeling, whether chearful or melancholy, which he has been accustomed to connect with that particular movement of metre, there will be found something which will greatly contribute to impart passion to the words, and to effect the complex end which the Poet proposes to himself.

If I had undertaken a systematic defence of the theory upon which these poems are written, it would have been my duty to develop the various causes upon which the pleasure received from metrical language depends. Among the chief of these causes is to be reckoned a principle which must be well known to those who have made any of the Arts the object of accurate reflection; I mean the pleasure which the mind derives from the perception of similitude in dissimilitude. This principle is the great spring of the activity of our minds, and their chief feeder. From this principle the direction of the sexual appetite, and all the passions connected with it, take their origin: it is the life of our ordinary conversation; and upon the accuracy with which similitude in dissimilitude, and dissimilitude in similitude are perceived, depend our taste and our moral feelings. It would not have been a useless employment to have applied this principle to the consideration of metre, and to have shown that metre is hence enabled to afford much pleasure, and

5. *The Gamester* (1753), a tragedy by Edward Moore (1712–1757) about gambling. *Clarissa Harlowe*: an epistolary novel (1747–48) by Samuel

Richardson (1689–1761); the title character is abducted and raped, and she dies of grief.

to have pointed out in what manner that pleasure is produced. But my limits will not permit me to enter upon this subject, and I must content myself with a general summary.

I have said that Poetry is the spontaneous overflow of powerful feelings: it takes its origin from emotion recollected in tranquillity: the emotion is contemplated till by a species of reaction the tranquillity disappears, and an emotion, kindred to that which was before the subject of contemplation, is gradually produced, and does itself actually exist in the mind. In this mood successful composition generally begins, and in a mood similar to this it is carried on; but the emotion, of whatever kind and in whatever degree, from various causes is qualified by various pleasures, so that in describing any passions whatsoever, which are voluntarily described, the mind will upon the whole be in a state of enjoyment. Now, if Nature be thus cautious in preserving in a state of enjoyment a being thus employed, the Poet ought to profit by the lesson thus held forth to him, and ought especially to take care, that whatever passions he communicates to his Reader, those passions, if his Reader's mind be sound and vigorous, should always be accompanied with an overbalance of pleasure. Now the music of harmonious metrical language, the sense of difficulty overcome, and the blind association of pleasure which has been previously received from works of rhyme or metre of the same or similar construction, an indistinct perception perpetually renewed of language closely resembling that of real life, and yet, in the circumstance of metre, differing from it so widely, all these imperceptibly make up a complex feeling of delight, which is of the most important use in tempering the painful feeling which will always be found intermingled with powerful descriptions of the deeper passions. This effect is always produced in pathetic and impassioned poetry; while, in lighter compositions, the ease and gracefulness with which the Poet manages his numbers are themselves confessedly a principal source of the gratification of the Reader. I might perhaps include all which it is *necessary* to say upon this subject by affirming, what few persons will deny, that, of two descriptions, either of passions, manners, or characters, each of them equally well executed, the one in prose and the other in verse, the verse will be read a hundred times where the prose is read once. We see that Pope, by the power of verse alone, has contrived to render the plainest common sense interesting, and even frequently to invest it with the appearance of passion. In consequence of these convictions I related in metre the Tale of GOODY BLAKE AND HARRY GILL, which is one of the rudest of this collection. I wished to draw attention to the truth, that the power of the human imagination is sufficient to produce such changes even in our physical nature as might almost appear miraculous. The truth is an important one; the fact (for it is a *fact*) is a valuable illustration of it. And I have the satisfaction of knowing that it has been communicated to many hundreds of people who would never have heard of it, had it not been narrated as a Ballad, and in a more impressive metre than is usual in Ballads.

Having thus explained a few of the reasons why I have written in verse, and why I have chosen subjects from common life, and endeavoured to bring my language near to the real language of men, if I have been too minute in pleading my own cause, I have at the same time been treating a subject of general interest; and it is for this reason that I request the Reader's

permission to add a few words with reference solely to these particular poems, and to some defects which will probably be found in them. I am sensible that my associations must have sometimes been particular instead of general, and that, consequently, giving to things a false importance, sometimes from diseased impulses I may have written upon unworthy subjects; but I am less apprehensive on this account, than that my language may frequently have suffered from those arbitrary connections of feelings and ideas with particular words and phrases, from which no man can altogether protect himself. Hence I have no doubt, that, in some instances, feelings even of the ludicrous may be given to my Readers by expressions which appeared to me tender and pathetic. Such faulty expressions, were I convinced they were faulty at present, and that they must necessarily continue to be so, I would willingly take all reasonable pains to correct. But it is dangerous to make these alterations on the simple authority of a few individuals, or even of certain classes of men; for where the understanding of an Author is not convinced, or his feelings altered, this cannot be done without great injury to himself: for his own feelings are his stay and support, and, if he sets them aside in one instance, he may be induced to repeat this act till his mind loses all confidence in itself, and becomes utterly debilitated. To this it may be added, that the Reader ought never to forget that he is himself exposed to the same errors as the Poet, and perhaps in a much greater degree: for there can be no presumption in saying, that it is not probable he will be so well acquainted with the various stages of meaning through which words have passed, or with the fickleness or stability of the relations of particular ideas to each other; and above all, since he is so much less interested in the subject, he may decide lightly and carelessly.

Long as I have detained my Reader, I hope he will permit me to caution him against a mode of false criticism which has been applied to Poetry in which the language closely resembles that of life and nature. Such verses have been triumphed over in parodies of which Dr. Johnson's stanza is a fair specimen.

‘I put my hat upon my head,
And walk’d into the Strand,
And there I met another man
Whose hat was in his hand.’⁶

Immediately under these lines I will place one of the most justly admired stanzas of the ‘*Babes in the Wood*.’⁷

‘These pretty Babes with hand in hand
Went wandering up and down;
But never more they saw the Man
Approaching from the Town.’

In both these stanzas the words, and the order of the words, in no respect differ from the most unimpassioned conversation. There are words in both,

6. Printed in the *London Magazine*, April 1785, parodying the ballad *The Hermit of Warkworth* (1771), by Thomas Percy. The Strand: a business street in central London.

7. A popular name for the old ballad “The Chil-

dren in the Wood,” which tells of two children cruelly treated by a wicked uncle. It is included in Thomas Percy’s collection *Reliques of Ancient English Poetry* (3 vols., 1765), which Wordsworth valued highly.

for example, 'the Strand,' and 'the Town,' connected with none but the most familiar ideas; yet the one stanza we admit as admirable, and the other as a fair example of the superlatively contemptible. Whence arises this difference? Not from the metre, not from the language, not from the order of the words; but the *matter* expressed in Dr. Johnson's stanza is contemptible. The proper method of treating trivial and simple verses, to which Dr. Johnson's stanza would be a fair parallelism, is not to say, This is a bad kind of poetry, or This is not poetry; but This wants sense; it is neither interesting in itself, nor can *lead* to any thing interesting; the images neither originate in that sane state of feeling which arises out of thought, nor can excite thought or feeling in the Reader. This is the only sensible manner of dealing with such verses. Why trouble yourself about the species till you have previously decided upon the genus? Why take pains to prove that an ape is not a Newton,⁸ when it is self-evident that he is not a man?

I have one request to make of my Reader, which is, that in judging these Poems he would decide by his own feelings genuinely, and not by reflection upon what will probably be the judgment of others. How common is it to hear a person say, 'I myself do not object to this style of composition, or this or that expression, but to such and such classes of people it will appear mean or ludicrous.' This mode of criticism, so destructive of all sound unadulterated judgment, is almost universal: I have therefore to request, that the Reader would abide independently by his own feelings, and that if he finds himself affected he would not suffer such conjectures to interfere with his pleasure.

If an Author by any single composition has impressed us with respect for his talents, it is useful to consider this as affording a presumption, that, on other occasions where we have been displeased, he nevertheless may not have written ill or absurdly; and, further, to give him so much credit for this one composition as may induce us to review what has displeased us with more care than we should otherwise have bestowed upon it. This is not only an act of justice, but, in our decisions upon poetry especially, may conduce in a high degree to the improvement of our own taste: for an *accurate* taste in poetry, and in all the other arts, as Sir Joshua Reynolds⁹ has observed, is an *acquired* talent, which can only be produced by thought, and a long continued intercourse with the best models of composition. This is mentioned, not with so ridiculous a purpose as to prevent the most inexperienced Reader from judging for himself, (I have already said that I wish him to judge for himself;) but merely to temper the rashness of decision, and to suggest, that, if Poetry be a subject on which much time has not been bestowed, the judgment may be erroneous; and that in many cases it necessarily will be so.

I know that nothing would have so effectually contributed to further the end which I have in view, as to have shewn of what kind the pleasure is, and how that pleasure is produced, which is confessedly produced by metrical composition essentially different from that which I have here endeavoured to recommend: for the Reader will say that he has been pleased by such composition; and what can I do more for him? The power of any art is lim-

8. Sir Isaac Newton (1642–1727), English scientist and mathematician.

9. Portrait painter, essayist, and lecturer (1723–1792), author of annual *Discourses* (1769–90) on the arts delivered to students at the Royal Academy

in London. See *Discourse* XII: "The habit of contemplating and brooding over the ideas of great geniuses, till you find yourself warmed by the contact, is the true method of forming an artist-like mind."

ited; and he will suspect, that, if I propose to furnish him with new friends, it is only upon condition of his abandoning his old friends. Besides, as I have said, the Reader is himself conscious of the pleasure which he has received from such composition, composition to which he has peculiarly attached the endearing name of Poetry; and all men feel an habitual gratitude, and something of an honorable bigotry for the objects which have long continued to please them; we not only wish to be pleased, but to be pleased in that particular way in which we have been accustomed to be pleased. There is a host of arguments in these feelings; and I should be the less able to combat them successfully, as I am willing to allow, that, in order entirely to enjoy the Poetry which I am recommending, it would be necessary to give up much of what is ordinarily enjoyed. But, would my limits have permitted me to point out how this pleasure is produced, I might have removed many obstacles, and assisted my Reader in perceiving that the powers of language are not so limited as he may suppose; and that it is possible that poetry may give other enjoyments, of a purer, more lasting, and more exquisite nature. This part of my subject I have not altogether neglected; but it has been less my present aim to prove, that the interest excited by some other kinds of poetry is less vivid, and less worthy of the nobler powers of the mind, than to offer reasons for presuming, that, if the object which I have proposed to myself were adequately attained, a species of poetry would be produced, which is genuine poetry; in its nature well adapted to interest mankind permanently, and likewise important in the multiplicity and quality of its moral relations.

From what has been said, and from a perusal of the Poems, the Reader will be able clearly to perceive the object which I have proposed to myself: he will determine how far I have attained this object; and, what is a much more important question, whether it be worth attaining: and upon the decision of these two questions will rest my claim to the approbation of the public.

Appendix to the Preface (1802)

As perhaps I have no right to expect from a Reader of an Introduction to a volume of Poems that attentive perusal without which it is impossible, imperfectly as I have been compelled to express my meaning, that what I have said in the Preface should throughout be fully understood, I am the more anxious to give an exact notion of the sense in which I use the phrase *poetic diction*; and for this purpose I will here add a few words concerning the origin of the phraseology which I have condemned under that name.—The earliest Poets of all nations generally wrote from passion excited by real events; they wrote naturally, and as men: feeling powerfully as they did, their language was daring, and figurative. In succeeding times, Poets, and men ambitious of the fame of Poets, perceiving the influence of such language, and desirous of producing the same effect, without having the same animating passion, set themselves to a mechanical adoption of those figures of speech, and made use of them, sometimes with propriety, but much more frequently applied them to feelings and ideas with which they had no natural connection whatsoever. A language was thus insensibly produced, differing materially from the real language of men in *any situation*. The Reader or Hearer of this distorted language found himself in a perturbed and unusual state of mind: when affected by the genuine language of passion he had been in a

perturbed and unusual state of mind also: in both cases he was willing that his common judgment and understanding should be laid asleep, and he had no instinctive and infallible perception of the true to make him reject the false; the one served as a passport for the other. The agitation and confusion of mind were in both cases delightful, and no wonder if he confounded the one with the other, and believed them both to be produced by the same, or similar causes. Besides, the Poet spake to him in the character of a man to be looked up to, a man of genius and authority. Thus, and from a variety of other causes, this distorted language was received with admiration; and Poets, it is probable, who had before contented themselves for the most part with misapplying only expressions which at first had been dictated by real passion, carried the abuse still further, and introduced phrases composed apparently in the spirit of the original figurative language of passion, yet altogether of their own invention, and distinguished by various degrees of wanton deviation from good sense and nature.

It is indeed true that the language of the earliest Poets was felt to differ materially from ordinary language, because it was the language of extraordinary occasions; but it was really spoken by men, language which the Poet himself had uttered when he had been affected by the events which he described, or which he had heard uttered by those around him. To this language it is probable that metre of some sort or other was early superadded. This separated the genuine language of Poetry still further from common life, so that whoever read or heard the poems of these earliest Poets felt himself moved in a way in which he had not been accustomed to be moved in real life, and by causes manifestly different from those which acted upon him in real life. This was the great temptation to all the corruptions which have followed: under the protection of this feeling succeeding Poets constructed a phraseology which had one thing, it is true, in common with the genuine language of poetry, namely, that it was not heard in ordinary conversation; that it was unusual. But the first Poets, as I have said, spake a language which, though unusual, was still the language of men. This circumstance, however, was disregarded by their successors; they found that they could please by easier means: they became proud of a language which they themselves had invented, and which was uttered only by themselves; and, with the spirit of a fraternity, they arrogated it to themselves as their own. In process of time metre became a symbol or promise of this unusual language, and whoever took upon him to write in metre, according as he possessed more or less of true poetic genius, introduced less or more of this adulterated phraseology into his compositions, and the true and the false became so inseparably interwoven that the taste of men was gradually perverted; and this language was received as a natural language; and at length, by the influence of books upon men, did to a certain degree really become so. Abuses of this kind were imported from one nation to another, and with the progress of refinement this diction became daily more and more corrupt, thrusting out of sight the plain humanities of nature by a motley masquerade of tricks, quaintnesses, hieroglyphics, and enigmas.

It would be highly interesting to point out the causes of the pleasure given by this extravagant and absurd language: but this is not the place; it depends upon a great variety of causes, but upon none perhaps more than its influence in impressing a notion of the peculiarity and exaltation of the Poet's character,

and in flattering the Reader's self-love by bringing him nearer to a sympathy with that character; an effect which is accomplished by unsettling ordinary habits of thinking, and thus assisting the Reader to approach to that perturbed and dizzy state of mind in which if he does not find himself, he imagines that he is *balked* of a peculiar enjoyment which poetry can, and ought to bestow.

The sonnet which I have quoted from Gray, in the Preface, except the lines printed in Italics, consists of little else but this diction, though not of the worst kind; and indeed, if I may be permitted to say so, it is far too common in the best writers, both antient and modern. Perhaps I can in no way, by positive example, more easily give my Reader a notion of what I mean by the phrase *poetic diction* than by referring him to a comparison between the metrical paraphrases which we have of passages in the old and new Testament, and those passages as they exist in our common Translation. See Pope's 'Messiah' throughout, Prior's 'Did sweeter sounds adorn my flowing tongue,'¹ &c. &c. 'Though I speak with the tongues of men and of angels,' &c. &c. See 1st Corinthians, chapter 13th. By way of immediate example, take the following of Dr. Johnson:²

'Turn on the prudent Ant thy heedless eyes,
Observe her labours, Sluggard, and be wise;
No stern command, no monitory voice,
Prescribes her duties, or directs her choice;
Yet, timely provident, she hastes away
To snatch the blessings of a plenteous day;
When fruitful Summer loads the teeming plain,
She crops the harvest and she stores the grain.
How long shall sloth usurp thy useless hours,
Unnerve thy vigour, and enchain thy powers?
While artful shades thy downy couch enclose,
And soft solicitation courts repose,
Amidst the drowsy charms of dull delight,
Year chases year with unremitted flight,
Till want now following, fraudulent and slow,
Shall spring to seize thee, like an ambushed foe.'

From this hubbub of words pass to the original. 'Go to the Ant, thou Sluggard, consider her ways, and be wise: which having no guide, overseer, or ruler, provideth her meat in the summer, and gathereth her food in the harvest. How long wilt thou sleep, O Sluggard? when wilt thou arise out of thy sleep? Yet a little sleep, a little slumber, a little folding of the hands to sleep. So shall thy poverty come as one that travaileth, and thy want as an armed man.' Proverbs, chap. 6th.

One more quotation and I have done. It is from Cowper's verses³ supposed to be written by Alexander Selkirk:

1. "Charity. A Paraphrase on the Thirteenth Chapter of the First Epistle to the Corinthians" (1703), by Matthew Prior (1664–1721). "Messiah": a "sacred eclogue" (1712), imitating Virgil's Latin *Eclogue* 4 (ca. 37 B.C.E.).
2. "The Ant" (1766).

3. "Verses Supposed to be Written by Alexander Selkirk" (1782), stanzas 4–5, by William Cowper (1731–1800). Selkirk (1676–1721), a Scottish sailor who lived from 1704 to 1709 on an uninhabited island off the coast of Chile.

'Religion! what treasure untold
 Resides in that heavenly word!
 More precious than silver and gold,
 Or all that this earth can afford.
 But the sound of the church-going bell
 These valleys and rocks never heard,
 Ne'er sighed at the sound of a knell,
 Or smiled when a sabbath appear'd.

Ye winds, that have made me your sport,
 Convey to this desolate shore
 Some cordial endearing report
 Of a land I must visit no more.
 My Friends, do they now and then send
 A wish or a thought after me?
 O tell me I yet have a friend,
 Though a friend I am never to see.'

I have quoted this passage as an instance of three different styles of composition. The first four lines are poorly expressed; some Critics would call the language prosaic; the fact is, it would be bad prose, so bad, that it is scarcely worse in metre. The epithet 'church-going' applied to a bell, and that by so chaste⁴ a writer as Cowper, is an instance of the strange abuses which Poets have introduced into their language till they and their Readers take them as matters of course, if they do not single them out expressly as objects of admiration. The two lines 'Ne'er sighed at the sound,' &c. are, in my opinion, an instance of the language of passion wrested from its proper use, and, from the mere circumstance of the composition being in metre, applied upon an occasion that does not justify such violent expressions; and I should condemn the passage, though perhaps few Readers will agree with me, as vicious poetic diction. The last stanza is throughout admirably expressed: it would be equally good whether in prose or verse, except that the Reader has an exquisite pleasure in seeing such natural language so naturally connected with metre. The beauty of this stanza tempts me here to add a sentiment which ought to be the pervading spirit of a system, detached parts of which have been imperfectly explained in the Preface,—namely, that in proportion as ideas and feelings are valuable, whether the composition be in prose or in verse, they require and exact one and the same language.

1800, 1802

4. Austere, ornament-free.

SAMUEL TAYLOR COLERIDGE

1772–1834

Samuel Taylor Coleridge has been praised as the premier English literary intellectual of his era and as the first modern critic, a writer who sought to integrate literary analysis with the insights of other disciplines and who labored (with less than complete success) to give literary criticism a philosophical foundation. But he has also been dismissed and derided in hostile tones rarely found in academic commentary. Was Coleridge a great original thinker? He drew on many eighteenth-century and contemporary authors, particularly German idealist and Romantic philosophers and critics, including IMMANUEL KANT, FRIEDRICH VON SCHILLER, Friedrich and A. W. Schlegel, and Friedrich von Schelling—and some scholars have commended him for introducing the best of German thought to an English readership. Less charitably, though with some reason, others have termed these literary debts, references, and borrowings to be nothing more than plagiarisms.

Coleridge has also been rebuked and mocked for the ambitious projects he proposed, launched, but left undone: an eight- to ten-volume history of literature, an epic poem on the origin of evil, and so on. He had extraordinary literary gifts, but was an undisciplined author who failed to make full use of his exceptional talents—as he himself knew well. Coleridge wrote in his copy of his book *The Statesman's Manual* (1816) that while he had produced a number of significant works, he stood in the world's eyes as “the wild eccentric Genius that has published nothing but fragments & splendid Tirades.” With the possible exception of the *Biographia Literaria* (1817) and a handful of poems, none of his works holds together as an effective whole. Yet as a writer, and as a speaker (we have ample records of his conversations and lectures), he was, and still is, brilliantly impressive and stimulating.

Coleridge was born the son of the vicar of Ottery St. Mary, a small town in south-west England; but at age nine, following the death of his father, he was sent to school in London, attending Christ's Hospital as a charity student. In 1791 he enrolled in Jesus College, Cambridge University; two years later, plagued by debts, he enlisted in the Fifteenth Light Dragoons under the alias Silas Tomkyn Comberbach (S.T.C.). He was soon rescued from this mistake by his family and returned to the university, but he left in December 1794 without completing his degree.

In June 1794, while on a walking tour, Coleridge met the poet Robert Southey at Oxford, and the two concocted a plan for a “pantisocracy” (a society ruled by equals). They decided on a location (in Pennsylvania) and on the twelve men who, with their wives, would create this agricultural commune; but the only action taken was Coleridge's engagement (made necessary by the scheme) to Sara Fricker, the sister of Southey's fiancée. Though the plan collapsed, he married her in 1795.

In late 1794 Coleridge's first published poetry appeared—sonnets addressed to contemporary political radicals such as William Godwin and Joseph Priestley. In 1795 he worked as a journalist and lectured in Bristol on politics, religion, and history. Most scholars believe that he there first met WILLIAM WORDSWORTH, beginning an intense friendship that soon led to the most significant collaboration in English literary history. By May 1796 Coleridge was calling Wordsworth “a very dear friend of mine, who is in my opinion the best poet of the age,” and his own first collection of poetry, *Poems on Various Subjects*, had just been published. In December, Coleridge and his wife Sara settled in Nether Stowey, and soon thereafter Wordsworth and his sister Dorothy moved nearby, to Alfoxden. Beginning in mid-1797 Coleridge and Wordsworth worked together on *Lyrical Ballads*, which they published anonymously in September 1798. Among the works of this period, Coleridge's high point as a poet, are “This Lime-Tree Bower My Prison,” “The Rime

of the Ancient Mariner," "Frost at Midnight," "Fears in Solitude," "The Nightingale," part I of "Christabel," and probably the fragment "Kubla Khan" as well.

Leaving his wife and two children behind, Coleridge accompanied the Wordsworths to Germany in September 1798, where he read and absorbed the philosophical and literary speculations of Kant, Schelling, the Schlegels, and Schiller (whose work he later translated).

On his return to England in mid-1799, Coleridge wrote political articles and made plans (unrealized) for a biography of the German critic and dramatist GOTTHOLD EPHRAIM LESSING and for a major book on Romantic metaphysics. The Coleridges followed the Wordsworths to the Lake District in 1800; and although the second edition of *Lyrical Ballads* (1800) appeared with only Wordsworth's name on the title page and with a long preface by Wordsworth that ignored Coleridge's poems, the men remained close. But Coleridge's personal life was in disarray. Already indifferent to his wife, he had fallen in love with Sara Hutchinson, whose sister, Mary, Wordsworth would marry in 1802; even worse, he had become dependent on laudanum (opium dissolved in alcohol, widely used to treat a number of disorders). Leaving his family behind, Coleridge spent two years traveling the Mediterranean and working in Malta; but he returned to England in 1806 still an addict. He lived for some months with the Wordsworths, and the relationship grew strained; the men finally broke on bitter terms in 1810.

Under the circumstances, Coleridge was surprisingly productive. In 1809 and 1810, he wrote and published *The Friend*, a periodical that ran for twenty-eight issues; and between 1808 and 1819, he lectured frequently on politics, religion, education, philosophy, and literature, offering especially incisive commentaries on Shakespeare and Milton. During the period from June to September 1815, he focused on the *Biographia Literaria*, which he dictated rather than wrote. From spring 1816 until his death in 1834, Coleridge lived in Highgate, a northern suburb of London, with and under the care of Dr. James Gillman, who helped control his drug addiction.

By this time known as the "Sage of Highgate," Coleridge published *Christabel and Other Poems* (1816); the first volume of his collected poems, *Sibylline Leaves* (1817; expanded 1828, 1834); and his *Poetical Works* (3 vols., 1828; 2d ed., 1829; 3d ed., 1834). His major prose works are *Lay Sermons* (1816, 1817), essays on national education and the structure of an organic society; *Biographia Literaria* (1817); "Treatise on Method" (included in the three-volume edition of *The Friend*, 1818); *Aids to Reflection* (1825; 2d ed., 1831); and *On the Constitution of the Church and State* (1829; 2d ed., 1830), in which he proposed the establishment of teachers, scholars, and priests as an independent estate of the realm, "the clerisy." In addition, *Table Talk* (edited by his nephew Henry Coleridge, 1836), which displays his skills in conversation; *Literary Remains* (1836), which contains an account of his 1818–19 lectures on "the history of philosophy" and the "general course of literature"; and *Anima Poetae* (1895), selections from his notebooks, all appeared after his death.

Coleridge frequently professed a commitment to system, logic, and method, but his own practice resists global theories and highly elaborated schemes and structures. It is the penetrating phrase or sentence, the powerful paragraph of speculation, and the shrewd, suggestive judgment that reveal Coleridge at his best. Still, for English and American critics in the early twentieth century, especially I. A. Richards, CLEANTH BROOKS, and other New Critics, the central Coleridge text is *Biographia Literaria*, where they found and built on Coleridge's theory of the imagination, his exposition of organic unity, and his treatment of poetry as the reconciliation of opposites.

Biographia Literaria, a hastily assembled work, mixes modes and genres. It includes autobiography, philosophy, literary theory, and analytical literary criticism, as well as a memoir of Wordsworth, a study of his poems, and a critique of his theory of poetic diction. At the center of Coleridge's project is his inquiry into and defense of the imagination. Coleridge's account, distinguishing between "fancy" and

"imagination," lacks the splendor and breadth of PERCY BYSSHE SHELLEY's tribute to the imagination in *A Defence of Poetry* (written 1821; see below) as "the great instrument of moral good," but it has exercised a greater influence on later literary theory and criticism. Coleridge speaks first of the "primary" imagination: the "living power" of God, in the eternal act of creation, it is also the power of creation in each person. The "secondary" imagination echoes the primary; in conjunction with the will and understanding, it dissolves in order to re-create, making whole and harmonizing as a "synthetic and magical power." Fancy, in contrast, merely associates "fixities and definites."

This is an intriguing, if elusive, theory, over which commentators have puzzled. But the real importance of Coleridge's words is their departure from eighteenth-century neoclassical theory. SAMUEL JOHNSON, in his *Dictionary* (1765), offers "fancy" as one of the definitions of "imagination"; that Coleridge makes a distinction between the two has important implications for his conception of the poet and the poem. Neoclassical critics such as ALEXANDER POPE and Johnson could exempt only a great genius like Shakespeare from external rules of literary decorum, insisting that others rely on deliberate craft; but for Coleridge the creative work of every poet springs from an imaginative power at once available for analysis yet mysterious in its sources. He sees a poem as *organic*, true to itself, acquiring its shape like a plant from a seed and thereby growing according to its own internal law of development.

Coleridge's theory of the primary and secondary imagination honors the creative capacity of persons while remaining steadfast to the primacy of God; even more, Coleridge implies that each re-creative act that a poet performs is an act of worship. As modern scholars have pointed out, Coleridge was the most devout of all the major Romantic writers; his Christian faith is central to all his work. He sees "a similar union of the universal and the individual" in religion and in the fine arts. Yet implicit in Coleridge's theory of the imagination are both difficulty and failure, which take on added bleakness in this context. When he sets the imagination in contrast to a world of "essentially fixed and dead objects," does he mean that God has made a world that is dead—at least until awakened or renewed by a creative act?

Coleridge makes a similar distinction in his commentaries on allegory and symbol in *The Statesman's Manual*. Allegory, he indicates, is mechanical and formulaic, part of the larger problem of our degenerate age of triumphant "mechanic" philosophy; but symbol is organically unified, fusing the particular and the general, the temporal and the eternal. This distinction is crucial for Coleridge, yet, as PAUL DE MAN argues in "The Rhetoric of Temporality" (1969), his arguments do not sustain it: the more that Coleridge explores the distinction, the more he complicates and blurs its terms. Some of his best-known poetry ("The Rime of the Ancient Mariner," "Kubla Khan," "Christabel") has invited allegorical interpretation.

Coleridge's emphasis on the power of the imagination is at odds with much contemporary theory and historical and cultural criticism, which is suspicious of claims that appear to give certain individuals the power to create new worlds out of nothing but their imagination. The New Historicist STEPHEN GREENBLATT speaks, for example, not of the imaginative power and prowess of the author but of "social energy"; and it is true that Coleridge pays little attention to the social networks of signification in which an author's work takes shape. But recent theorists, reacting perhaps too sweepingly against the idea of the author as a Romantic genius, have tended to undervalue the creative power of the individual author, the agent of the imagination who, as Coleridge says of Shakespeare, demonstrates his authority and skill "not only in the general construction, but in all the detail."

FROM CHAPTER 1

* * *

As the result of all my reading and meditation, I abstracted two critical aphorisms, deeming them to comprize the conditions and criteria of poetic style; first, that not the poem which we have *read*, but that to which we *return*, with the greatest pleasure, possesses the genuine power, and claims the name of *essential poetry*. Second, that whatever lines can be translated into other words of the same language, without diminution of their significance, either in sense, or association, or in any worthy feeling, are so far vicious² in their diction. Be it however observed, that I excluded from the list of worthy feelings, the pleasure derived from mere novelty, in the reader, and the desire of exciting wonderment at his powers in the author. Oftentimes since then, in perusing French tragedies, I have fancied two marks of admiration at the end of each line, as hieroglyphics of the author's own admiration at his own cleverness. Our genuine admiration of a great poet is a continuous *under-current* of feeling; it is every where present, but seldom any where as a separate excitement. I was wont boldly to affirm, that it would be scarcely more difficult to push a stone out from the pyramids with the bare hand, than to alter a word, or the position of a word, in Milton or Shakespeare, (in their most important works at least) without making the author say something else, or something worse, than he does say. One great distinction, I appeared to myself to see plainly, between, even the characteristic faults of our elder poets, and the false beauty of the moderns. In the former, from DONNE to COWLEY,³ we find the most fantastic out-of-the-way thoughts, but in the most pure and genuine mother English; in the latter, the most obvious thoughts, in language the most fantastic and arbitrary. Our faulty elder poets sacrificed the passion, and passionate flow of poetry, to the subtleties of intellect, and to the starts of wit; the moderns to the glare and glitter of a perpetual, yet broken and heterogeneous imagery, or rather to an amphibious something, made up, half of image, and half of abstract meaning. The one sacrificed the heart to the head; the other both heart and head to point and drapery.

2. Defective.

3. Abraham Cowley (1618–1667), English satirist, poet, and essayist. John Donne (1572–1631), English poet. Both wrote so-called metaphysical poetry, reliant on complex metaphors and images.

FROM CHAPTER 4

* * *

This excellence,⁴ which in all Mr. Wordsworth's writings is more or less predominant, and which constitutes the character of his mind, I no sooner felt, than I sought to understand. Repeated meditations led me first to suspect, (and a more intimate analysis of the human faculties, their appropriate marks, functions, and effects matured my conjecture into full conviction) that fancy and imagination were two distinct and widely different faculties, instead of being, according to the general belief, either two names with one meaning, or at furthest, the lower and higher degree of one and the same power. It is not, I own, easy to conceive a more opposite translation of the Greek *Phantasia*, than the Latin *Imaginatio*; but it is equally true that in all societies there exists an instinct of growth, a certain collective, unconscious good sense working progressively to desynonymize⁵ those words originally of the same meaning, which the conflux of dialects had supplied to the more homogeneous languages, as the Greek and German: and which the same cause, joined with accidents of translation from original works of different countries, occasion in mixt languages like our own. The first and most important point to be proved is, that two conceptions perfectly distinct are confused under one and the same word, and (this done) to appropriate that word exclusively to one meaning, and the synonyme (should there be one) to the other. But if (as will be often the case in the arts and sciences) no synonyme exists, we must either invent or borrow a word. In the present instance the appropriation had already begun, and been legitimated in the derivative adjective: Milton had a highly *imaginative*, Cowley a very *fanciful* mind.⁶ If therefore I should succeed in establishing the actual existences of two faculties generally different, the nomenclature would be at once determined. To the faculty by which I had characterized Milton, we should confine the term *imagination*; while the other would be contra-distinguished as *fancy*. Now were it once fully ascertained, that this division is no less grounded in nature, than that of delirium from mania, or Otway's

Lutes, lobsters, seas of milk, and ships of amber,⁷

from Shakespeare's

What! have his daughters brought him to this pass?⁸

or from the preceding apostrophe to the elements;⁹ the theory of the fine arts, and of poetry in particular, could not, I thought, but derive some additional and important light. It would in its immediate effects furnish a torch

4. Coleridge has just claimed that it is the mark of genius "to represent familiar objects so as to awaken in the minds of others a kindred feeling concerning them." A considerable portion of the *Biographia Literaria* is devoted to a critical analysis of the English poet WILLIAM WORDSWORTH (1770–1850), Coleridge's friend and collaborator.

5. To differentiate in meaning words previously synonymous (so defined by the *Oxford English Dictionary*, which gives this as the first use of the

word).

6. John Milton (1608–1674) was a contemporary of but far greater poet than Cowley.

7. *Venice Preserved* (1682), 5.2.151, by Thomas Otway (1652–1685). Coleridge uses the word "lobsters" where Otway had written "laurels."

8. *King Lear* (ca. 1604–05), 3.4.61 (Shakespeare begins the line "What, has").

9. That is, Lear's address to the storm, 3.2.1–9, 13–23.

of guidance to the philosophical critic; and ultimately to the poet himself. In energetic minds, truth soon changes by domestication into power; and from directing in the discrimination and appraisal of the product, becomes influence in the production. To admire on principle, is the only way to imitate without loss of originality.

* * *

FROM CHAPTER 13

* * *

The IMAGINATION then I consider either as primary, or secondary. The primary IMAGINATION I hold to be the living Power and prime Agent of all human Perception, and as a repetition in the finite mind of the eternal act of creation in the infinite I AM.¹ The secondary I consider as an echo of the former, co-existing with the conscious will, yet still as identical with the primary in the *kind* of its agency, and differing only in *degree*, and in the *mode* of its operation. It dissolves, diffuses, dissipates, in order to re-create; or where this process is rendered impossible, yet still at all events it struggles to idealize and to unify. It is essentially *vital*, even as all objects (*as* objects) are essentially fixed and dead.

FANCY, on the contrary, has no other counters to play with, but fixities and definites. The Fancy is indeed no other than a mode of Memory emancipated from the order of time and space; and blended with, and modified by that empirical phenomenon of the will, which we express by the word CHOICE. But equally with the ordinary memory it must receive all its materials ready made from the law of association.

* * *

From *Volume 2*

CHAPTER 14

During the first year that Mr. Wordsworth and I were neighbours,² our conversations turned frequently on the two cardinal points of poetry, the power of exciting the sympathy of the reader by a faithful adherence to the truth of nature, and the power of giving the interest of novelty by the modifying colours of imagination. The sudden charm, which accidents of light and shade, which moon-light or sun-set diffused over a known and familiar landscape, appeared to represent the practicability of combining both. These are the poetry of nature. The thought suggested itself (to which of us I do not recollect) that a series of poems might be composed of two sorts. In the one, the incidents and agents were to be, in part at least, supernatural; and the excellence aimed at was to consist in the interesting of the affections by the dramatic truth of such emotions, as would naturally accom-

1. See Exodus 3.14: "And God said unto Moses, I Am That I Am."

2. In 1797–98 Coleridge was living at Nether

Stowey, and Wordsworth was nearby at Alfoxden, in southwest England.

pany such situations, supposing them real. And real in *this* sense they have been to every human being who, from whatever source of delusion, has at any time believed himself under supernatural agency. For the second class, subjects were to be chosen from ordinary life; the characters and incidents were to be such, as will be found in every village and its vicinity, where there is a meditative and feeling mind to seek after them, or to notice them, when they present themselves.

In this idea originated the plan of the "Lyrical Ballads;" in which it was agreed, that my endeavours should be directed to persons and characters supernatural, or at least romantic: yet so as to transfer from our inward nature a human interest and a semblance of truth sufficient to procure for these shadows of imagination that willing suspension of disbelief for the moment, which constitutes poetic faith. Mr. Wordsworth, on the other hand, was to propose to himself as his object, to give the charm of novelty to things of every day, and to excite a feeling analogous to the supernatural, by awakening the mind's attention from the lethargy of custom, and directing it to the loveliness and the wonders of the world before us; an inexhaustible treasure, but for which in consequence of the film of familiarity and selfish solicitude we have eyes, yet see not, ears that hear not, and hearts that neither feel nor understand.³

With this view I wrote the "Ancient Mariner," and was preparing among other poems, the "Dark Ladie," and the "Christabel," in which I should have more nearly realized my ideal, than I had done in my first attempt. But Mr. Wordsworth's industry had proved so much more successful⁴ and the number of his poems so much greater, that my compositions, instead of forming a balance, appeared rather an interpolation of heterogeneous matter. Mr. Wordsworth added two or three poems written in his own character, in the impassioned, lofty, and sustained diction, which is characteristic of his genius. In this form the "Lyrical Ballads" were published; and were presented by him, as an *experiment*,⁵ whether subjects, which from their nature rejected the usual ornaments and extra-colloquial style of poems in general, might not be so managed in the language of ordinary life as to produce the pleasureable interest, which it is the peculiar business of poetry to impart. To the second edition he added a preface of considerable length; in which notwithstanding some passages of apparently a contrary import, he was understood to contend for the extension of this style to poetry of all kinds, and to reject as vicious and indefensible all phrases and forms of style that were not included in what he (unfortunately, I think, adopting an equivocal expression) called the language of *real* life. From this preface, prefixed to poems in which it was impossible to deny the presence of original genius, however mistaken its direction might be deemed, arose the whole long continued controversy.⁶ For from the conjunction of perceived

3. See Isaiah 6.9–10.

4. Wordsworth wrote 19 of the 23 poems in the first edition of *Lyrical Ballads* (1798).

5. See the brief advertisement to the first edition of *Lyrical Ballads*: "The majority of the following poems are to be considered as experiments. They were written chiefly with a view to ascertain how far the language of conversation in the middle

and lower classes of society is adapted to the purposes of poetic pleasure."

6. That is, the controversy that arose over Wordsworth's theory and practice of poetry, especially in hostile essays by the critic Francis Jeffrey (1773–1850) in the *Edinburgh Review*. For Wordsworth's Preface to *Lyrical Ballads* (1800, 1802), see above.

power with supposed heresy I explain the inveteracy and in some instances, I grieve to say, the acrimonious passions, with which the controversy has been conducted by the assailants.

Had Mr. Wordsworth's poems been the silly, the childish things, which they were for a long time described as being; had they been really distinguished from the compositions of other poets merely by meanness of language and inanity of thought; had they indeed contained nothing more than what is found in the parodies and pretended imitations of them; they must have sunk at once, a dead weight, into the slough⁷ of oblivion, and have dragged the preface along with them. But year after year increased the number of Mr. Wordsworth's admirers. They were found too not in the lower classes of the reading public, but chiefly among young men of strong sensibility and meditative minds; and their admiration (inflamed perhaps in some degree by opposition) was distinguished by its intensity, I might almost say, by its *religious* fervour. These facts, and the intellectual energy of the author, which was more or less consciously felt, where it was outwardly and even boisterously denied, meeting with sentiments of aversion to his opinions, and of alarm at their consequences, produced an eddy of criticism, which would of itself have borne up the poems by the violence, with which it whirled them round and round. With many parts of this preface in the sense attributed to them and which the words undoubtedly seem to authorize, I never concurred; but on the contrary objected to them as erroneous in principle, and as contradictory (in appearance at least) both to other parts of the same preface, and to the author's own practice in the greater number of the poems themselves. Mr. Wordsworth in his recent collection has, I find, degraded this prefatory disquisition to the end of his second volume, to be read or not at the reader's choice.⁸ But he has not, as far as I can discover, announced any change in his poetic creed. At all events, considering it as the source of a controversy, in which I have been honored more, than I deserve, by the frequent conjunction of my name with his, I think it expedient to declare once for all, in what points I coincide with his opinions, and in what points I altogether differ. But in order to render myself intelligible I must previously, in as few words as possible, explain my ideas, first, of a POEM; and secondly, of POETRY itself, in *kind*, and in *essence*.

The office of philosophical *disquisition* consists in just *distinction*; while it is the privilege of the philosopher to preserve himself constantly aware, that distinction is not division. In order to obtain adequate notions of any truth, we must intellectually separate its distinguishable parts; and this is the technical *process* of philosophy. But having so done, we must then restore them in our conceptions to the unity, in which they actually co-exist; and this is the *result* of philosophy. A poem contains the same elements as a prose composition; the difference therefore must consist in a different combination of them, in consequence of a different object proposed. According to the difference of the object will be the difference of the combination. It is possible, that the object may be merely to facilitate the recollection of any given facts or observations by artificial arrangement: and the composition will be a poem, merely because it is distinguished from prose by metre,

7. Soft, muddy ground.

8. For *Poems* (2 vols., 1815), Wordsworth moved

the preface for *Lyrical Ballads* to an appendix and wrote a new preface and "supplementary" essay.

or by rhyme, or by both conjointly. In this, the lowest sense, a man might attribute the name of a poem to the well known enumeration of the days in the several months;

Thirty days hath September,
April, June, and November, &c.

and others of the same class and purpose. And as a particular pleasure is found in anticipating the recurrence of sounds and quantities, all compositions that have this charm superadded, whatever be their contents, *may* be entitled poems.

So much for the superficial *form*. A difference of object and contents supplies an additional ground of distinction. The immediate purpose may be the communication of truths; either of truth absolute and demonstrable, as in works of science; or of facts experienced and recorded, as in history. Pleasure, and that of the highest and most permanent kind, may *result* from the *attainment* of the end; but it is not itself the immediate end. In other works the communication of pleasure may be the immediate purpose; and though truth, either moral or intellectual, ought to be the *ultimate* end, yet this will distinguish the character of the author, not the class to which the work belongs. Blest indeed is that state of society, in which the immediate purpose would be baffled by the perversion of the proper ultimate end; in which no charm of diction or imagery could exempt the Bathyllus even of an Anacreon, or the Alexis of Virgil⁹ from disgust and aversion.

But the communication of pleasure may be the immediate object of a work not metrically composed; and that object may have been in a high degree attained, as in novels and romances. Would then the mere superaddition of metre, with or without rhyme, entitle *these* to the name of poems? The answer is, that nothing can permanently please, which does not contain in itself the reason why it is so, and not otherwise.¹ If metre be superadded, all other parts must be made consonant with it. They must be such, as to justify the perpetual and distinct attention to each part, which an exact correspondent recurrence of accent and sound are calculated to excite. The final definition then, so deduced, may be thus worded. A poem is that species of composition, which is opposed to works of science, by proposing for its *immediate* object pleasure, not truth; and from all other species (having *this* object in common with it) it is discriminated by proposing to itself such delight from the *whole*, as is compatible with a distinct gratification from each component *part*.

Controversy is not seldom excited in consequence of the disputants attaching each a different meaning to the same word; and in few instances has this been more striking, than in disputes concerning the present subject. If a man chooses to call every composition a poem, which is rhyme, or measure, or both, I must leave his opinion uncontroverted. The distinction

9. The Roman poet (70–19 B.C.E.) whose *Eclogue* 2 (ca. 37 B.C.E.) is the shepherd Corydon's lovesick address to the male slave Alexis. Bathyllus: a beautiful boy of Samos to whom several odes of the Greek lyric poet Anacreon (b. ca. 570 B.C.E.) are addressed.

1. Coleridge's editors cite SAMUEL JOHNSON, *Rambler*, no. 154 (1751): "That which hopes to resist the blast of malignity, and stand firm against the attacks of time, must contain in itself some original principle of growth."

is at least competent to characterize the writer's intention. If it were subjoined, that the whole is likewise entertaining or affecting, as a tale, or as a series of interesting reflections, I of course admit this as another fit ingredient of a poem, and an additional merit. But if the definition sought for be that of a *legitimate* poem, I answer, it must be one, the parts of which mutually support and explain each other; all in their proportion harmonizing with, and supporting the purpose and known influences of metrical arrangement. The philosophic critics of all ages coincide with the ultimate judgement of all countries, in equally denying the praises of a just poem, on the one hand, to a series of striking lines or distichs,² each of which absorbing the whole attention of the reader to itself disjoins it from its context, and makes it a separate whole, instead of an harmonizing part; and on the other hand, to an unsustained composition, from which the reader collects rapidly the general result unattracted by the component parts. The reader should be carried forward, not merely or chiefly by the mechanical impulse of curiosity, or by a restless desire to arrive at the final solution; but by the pleasureable activity of mind excited by the attractions of the journey itself. Like the motion of a serpent, which the Egyptians made the emblem of intellectual power; or like the path of sound through the air; at every step he pauses and half recedes, and from the retrogressive movement collects the force which again carries him onward. *Precipitandus est liber spiritus*,³ says Petronius Arbiter most happily. The epithet, *liber*, here balances the preceding verb; and it is not easy to conceive more meaning condensed in fewer words.

But if this should be admitted as a satisfactory character of a poem, we have still to seek for a definition of poetry. The writings of PLATO, and BISHOP TAYLOR, and the *Theoria Sacra* of BURNET,⁴ furnish undeniable proofs that poetry of the highest kind may exist without metre, and even without the contradistinguishing objects of a poem. The first chapter of Isaiah (indeed a very large proportion of the whole book) is poetry in the most emphatic sense; yet it would be not less irrational than strange to assert, that pleasure, and not truth, was the immediate object of the prophet. In short, whatever *specific* import we attach to the word, poetry, there will be found involved in it, as a necessary consequence, that a poem of any length neither can be, or ought to be, all poetry. Yet if an harmonious whole is to be produced, the remaining parts must be preserved *in keeping* with the poetry; and this can be no otherwise effected than by such a studied selection and artificial arrangement, as will partake of *one*, though not a *peculiar*, property of poetry. And this again can be no other than the property of exciting a more continuous and equal attention, than the language of prose aims at, whether colloquial or written.

My own conclusions on the nature of poetry, in the strictest use of the word, have been in part anticipated in the preceding disquisition on the fancy and imagination.⁵ What is poetry? is so nearly the same question with, what

2. Paired lines (in Greek and Latin verse, such couplets do not rhyme).

3. The free spirit must be hurried onward (Latin); from *Satyricon*, section 118, a novel by the Roman writer Petronius Arbiter (1st c. C.E.). *Liber* means "free," and the form of the preceding Latin verb shows necessity or obligation.

4. Thomas Burnet (1635–1735), an English clergyman who wrote *Telluris Theoria Sacra* (1681, *The Sacred Theory of the Earth*). Jeremy Taylor (1613–1667), Anglican religious writer whose sermons Coleridge esteemed. On the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.), see above.

5. In chapter 4.

is a poet? that the answer to the one is involved in the solution of the other. For it is a distinction resulting from the poetic genius itself, which sustains and modifies the images, thoughts, and emotions of the poet's own mind. The poet, described in *ideal* perfection, brings the whole soul of man into activity, with the subordination of its faculties to each other, according to their relative worth and dignity. He diffuses a tone, and spirit of unity, that blends, and (as it were) *fuses*, each into each, by that synthetic and magical power, to which we have exclusively appropriated the name of imagination. This power, first put in action by the will and understanding, and retained under their irremissive,⁶ though gentle and unnoticed, control (*laxis effertur habenis*)⁷ reveals itself in the balance or reconciliation of opposite or discordant qualities: of sameness, with difference; of the general, with the concrete; the idea, with the image; the individual, with the representative; the sense of novelty and freshness, with old and familiar objects; a more than usual state of emotion, with more than usual order; judgement ever awake and steady self-possession, with enthusiasm and feeling profound or vehement; and while it blends and harmonizes the natural and the artificial, still subordinates art to nature; the manner to the matter; and our admiration of the poet to our sympathy with the poetry. "Doubtless," as Sir John Davies⁸ observes of the soul (and his words may with slight alteration be applied, and even more appropriately to the poetic IMAGINATION).

Doubtless this could not be, but that she turns
 Bodies to spirit by sublimation strange,
 As fire converts to fire the things it burns,
 As we our food into our nature change.

From their gross matter she abstracts their forms,
 And draws a kind of quintessence from things;
 Which to her proper nature she transforms
 To bear them light, on her celestial wings.

Thus does she, when from individual states
 She doth abstract the universal kinds;
 Which then re-clothed in divers names and fates
 Steal access through our senses to our minds.

Finally, GOOD SENSE is the BODY of poetic genius, FANCY its DRAPERY, MOTION its LIFE, and IMAGINATION the SOUL that is every where, and in each; and forms all into one graceful and intelligent whole.

1817

6. Unremitting.

7. It is carried with loosened reins (Latin).

8. English poet (1569–1626). Coleridge slightly

misquotes his poem *Nosce Teipsum* (1599; the title means "know thyself"), which explores the theme of immortality and the nature of the soul.

PERCY BYSSHE SHELLEY

1792–1822

Like the American poet Walt Whitman, Percy Bysshe Shelley has been revered by many readers for his haunting lyrics and, even more, for the radical views he expresses in both his poetry and prose. But more than any other nineteenth-century poet, he came in for relentless and mean-spirited abuse at the hands of major modernist poets and critics, including T. S. ELIOT, F. R. LEAVIS, JOHN CROWE RANSOM, and Allen Tate. For them, Shelley represented everything that modern poetry was seeking to move beyond, and they pummeled him for (as they saw it) the intersecting weaknesses of his poetry and his character: dreaminess, arrogance, self-absorption, irresponsibility. They judged his personal conduct offensive and his verse marred by muddled imagery and confused symbolism. Writing in 1950, the critic Leslie Fiedler reflected: “The only way to find out if a poet is immortal is to kill him; Milton and Wordsworth slain have risen; Cowley and Shelley are rotting in their tombs.” Shelley seemed no more likely to recover his prestige than did the third-tier metaphysical poet with whom he was paired.

This downgrading of Shelley was already under way in the nineteenth century. In *Essays in Criticism* (1865, 1888), MATTHEW ARNOLD first declared that “the right sphere for Shelley’s genius was the sphere of music, not of poetry,” and later called him a “beautiful and ineffectual angel, beating in the void his luminous wings in vain.” In *Literary Studies* (1884), the editor and essayist Walter Bagehot concluded: “He floats away into an imaginary Elysium or an expected Utopia; beautiful and excellent, of course, but having nothing in common with the absolute laws of the present world.” This tone seemed to be justified by Shelley himself, who, for example, observed to his friend Edward Trelawny: “When my brain gets heated with thought it soon boils and throws off images and words faster than I can skim them off.”

But Shelley’s words to Trelawny bear witness to his creative energy and exhilaration, to his yearning to break free from constraint. Shelley’s commitment to personal and social freedom perhaps provides the best context for understanding and valuing his writing. His poetry and prose attacked social and political tyranny, assailing the ways in which law and religion functioned to support an oppressive state. In phrasing that anticipated RALPH WALDO EMERSON’S in *Nature* (1836), “The American Scholar” (1837), and other seminal American Transcendentalist texts, Shelley declared: “Let us believe in a kind of optimism in which we are our own gods” (letter, 1819). As he once said, he sought to call attention to the “else unfelt oppressions of this earth” (“Julian and Maddalo,” line 450), that is, to make readers feel the nature and depth of human oppression and lift them to a higher conception of possibility. In doing this, he was performing the special office of the poet.

Shelley was born the son of a wealthy squire (and member of Parliament) near Horsham in Sussex, England. He was educated first at Syon House Academy, in Brentford, a western suburb of London, and then at Eton, the largest and most famous of England’s public (i.e., endowed boarding) schools, where he was dubbed “mad Shelley” for his antics and “Eton atheist” for his skeptical views on religion. Imaginative and rebellious, he was already writing prose and poems while in his teens. He entered University College, Oxford University, in 1810; there he read such radical authors as William Godwin, author of the *Enquiry concerning Political Justice* (1793), and Thomas Paine, author of *The Rights of Man* (1791–92) and *The Age of Reason* (1793).

In March 1811, because Shelley had coauthored an empiricist pamphlet, *The Necessity of Atheism*, which he then mailed to the bishops and heads of the colleges at

Oxford, he was expelled from the university. His life became even more scandalous when he eloped to Edinburgh, Scotland, with sixteen-year-old Harriet Westbrook. This action, together with his refusal to renounce the pamphlet, caused a breach with his family that cost Shelley his inheritance.

After their marriage in August 1811, the young couple spent the next three years in England and Ireland, moving often. Shelley corresponded with Godwin, wrote addresses and proposals on such topics as Catholic emancipation, and was kept under watch by the civil authorities. His first important poem, *Queen Mab*, which exhibits his radical views on both religion and conventional morality, was privately printed in 1813. He wrote and lectured on a host of other subjects as well, from freedom of the press to vegetarianism. During this time, Harriet bore two children, but she and Shelley grew estranged.

When Shelley fell in love with Mary Godwin, the sixteen-year-old daughter of William Godwin and the English writer and reformer MARY WOLLSTONECRAFT, he acted according to his views on the primacy of love. Leaving his family behind, in 1814 he traveled to France with Mary (and her fifteen-year-old half-sister, Jane "Claire" Clairmont). After travels in France, Switzerland, and Germany, they returned to London; in spring 1815 Mary gave birth to a daughter who died prematurely, and in 1816 she bore a son, William. In Switzerland, with the Romantic poet Lord Byron as their companion during the summer of 1816, Mary began her famous novel *Frankenstein* while Percy worked on such major philosophical poems as "Hymn to Intellectual Beauty" and "Mont Blanc." They married, despite their objections to the institution of marriage, after Harriet drowned herself in 1816. Harriet's parents quickly secured a decree declaring Shelley unfit to have custody of his and Harriet's children, who were placed in foster care at his expense. In spring 1818 he left England for Italy, where he spent the rest of his life with Mary, their three children (two of whom died, within a nine-month period in 1818–19), Claire Clairmont, and her daughter (whose father was Byron).

While in Pisa, Shelley lived amid a circle of writers and adventurers, including Byron and Edward Trelawny. In April 1822 he moved to the village of Lerici on the Gulf of Spezia, and there he wrote a number of his best lyrics and vivid letters. Caught in a sudden storm while in a boat with his friend Edward Williams, he drowned in July 1822. Shelley left unfinished a political drama and "The Triumph of Life," a dream allegory that has figured significantly in contemporary criticism and theory (e.g., see the essays by HAROLD BLOOM, PAUL DE MAN, JACQUES DERRIDA, and others in *Deconstruction and Criticism*, 1997).

Shelley matters in literary history above all for his poetry, but his prose works are often powerful and remain undervalued. The best (and best-known) of them is *A Defence of Poetry*, which he wrote in response to his friend Thomas Love Peacock's "Four Ages of Poetry" (1820). Peacock presents a satiric, witty survey of the historical rise and decline of poetry that draws a parallel between the classical and modern periods. He traces English poetry's movement from the iron age of song, to the golden age of Shakespeare, then to the silver age of ALEXANDER POPE, and, finally, to the brass age of his Romantic contemporaries, whose work consists, he says, of "rant," "whining," and "cant." In reply, Shelley honors the activity of the poet and emphasizes that poetry has increased, rather than diminished, in importance in the modern era. Many of the ideas he presents are familiar, deriving from PLATO and, especially, from SIR PHILIP SIDNEY's *Defence of Poesy* (1595), which Shelley read as he prepared and planned his own work. Shelley gives them a fervent Romantic cast, particularly in the glowing images and passionate rhythms of his *Defence's* final passages.

Peacock and Shelley had met in 1812, and they visited and corresponded with one another often. After Peacock's "Four Ages" appeared, Shelley wrote in a letter, January 1821, that he planned "an answer" to it: "It is very clever but, I think, very false." On March 21, he sent Peacock the first part of an essay meant to be its "antidote." In

the original plan for the *Defence*, Shelley included a number of references to Peacock, but most of these were omitted when the text was prepared for publication after his death. Originally, too, the *Defence* was to have three parts: a general defense of poetry and its role in society, a survey of the development of English poetry, and a discussion of the literature of the day. Only the first part was completed.

Despite being an incomplete piece that draws on and adapts his own earlier writings—the prefaces to *The Revolt of Islam* and *Prometheus Unbound*, “Discourse on the Manners of the Ancient Greeks” (which prefaced his translation of Plato’s *Symposium*), “Essay on Christianity,” the first two chapters of *A Philosophical View of Reform*, and “Essay on the Devil”—the *Defence* is held together by the force of Shelley’s personality and his literary and political convictions. Poetry, says Shelley, combines wisdom with delight; it is a source of pleasure; and it inculcates virtue, as readers seek to imitate the noble traits of character that Homer portrays in his heroes. Poetry kindles the sympathetic imagination, enabling us to locate ourselves “in the place of another”; it thereby unites individuals by breaking down the differences among them. It is so closely linked to the society from which it rises that its health serves as a barometer of society’s health. It counterbalances the ascendant sciences of calculation and accumulation, which exacerbate inequality and selfishness. It is a universal spiritual force of evanescent inspiration, superseding logic and will and possessing prophetic power. At a memorable moment Shelley even envisions literature as one great poem that all poets have built up since time began.

There are tensions, even contradictions, in Shelley’s text that his powerful prose cannot reconcile or explain. Thus, on the one hand, he presents much historical commentary on ancient Greek and Roman literary genres and on the literature of later periods. But, on the other hand, his highest flights of rhetoric pay tribute to the power of poetry to transcend history. There is a gap between the kind of historical particularity that Shelley provides in his literary and cultural comments and the general function that he assigns to poetry as “something divine” that “enlarges the circumference of the imagination.”

In addition, Shelley’s claims for the special qualities of the poet are problematic in his own terms. In exalting poets as the “best and happiest minds,” the “unacknowledged legislators of the World,” he paradoxically reinvoles the social distinctions, the ranking of persons, the law-giving from on high, that his works challenge. There may be a darker dimension to the vital, vigorous rhetoric that Shelley mobilizes in defense of literature. As RAYMOND WILLIAMS remarks in *Culture and Society* (1958), Shelley means the word *unacknowledged* to imply poets’ importance—their great (albeit almost invisible) sociopolitical work. But the term also carries “the felt helplessness of a generation” as “a culture now dominated by science and industry [fails] to bestow upon poets the ‘acknowledgment’ that they merit.” Williams also points out the mixed implications of Shelley’s language about poets: their special high status both distinguishes and marginalizes them, separating them from the community to which Shelley insists they contribute so much.

The poet, Shelley maintains, is a power working for social and moral transformation—the chief influence in civilizing the community. Yet the poet, he also says, is “a nightingale, who sits in darkness and sings to cheer its own solitude with sweet sounds.” Shelley’s forthright testimonies on behalf of poetry and the tensions and contradictions that his rhetoric attempts to surmount continue to fascinate the *Defence*’s readers.

A Defence of Poetry Keywords: The Canon/Tradition, Epic, Ethics, Language, Literary History, Poetry, Religion, Romantic Theory

*From A Defence of Poetry, or Remarks Suggested by an
Essay Entitled "The Four Ages of Poetry"*¹

* * *

Poetry is ever accompanied with pleasure: all spirits on which it falls, open themselves to receive the wisdom which is mingled with its delight. In the infancy of the world, neither poets themselves nor their auditors are fully aware of the excellence of poetry: for it acts in a divine and unapprehended manner, beyond and above consciousness; and it is reserved for future generations to contemplate and measure the mighty cause and effect in all the strength and splendour of their union.² Even in modern times, no living poet ever arrived at the fulness of his fame; the jury which sits in judgement upon a poet, belonging as he does to all time, must be composed of his peers: it must be impanelled by Time from the selectest of the wise of many generations. A Poet is a nightingale, who sits in darkness and sings to cheer its own solitude with sweet sounds; his auditors are as men entranced by the melody of an unseen musician, who feel that they are moved and softened, yet know not whence or why. The poems of Homer and his contemporaries were the delight of infant Greece; they were the elements of that social system which is the column upon which all succeeding civilization has reposed. Homer embodied the ideal perfection of his age in human character; nor can we doubt that those who read his verses were awakened to an ambition of becoming like to Achilles, Hector and Ulysses:³ the truth and beauty of friendship, patriotism and persevering devotion to an object, were unveiled to the depths in these immortal creations: the sentiments of the auditors must have been refined and enlarged by a sympathy with such great and lovely impersonations, until from admiring they imitated, and from imitation they identified themselves with the objects of their admiration. Nor let it be objected, that these characters are remote from moral perfection, and that they can by no means be considered as edifying patterns for general imitation. Every epoch under names more or less specious has deified its peculiar errors; Revenge is the naked Idol of the worship of a semi-barbarous age; and Self-deceit is the veiled Image of unknown evil before which luxury and satiety lie prostrate. But a poet considers the vices of his contemporaries as the temporary dress in which his creations must be arrayed, and which cover without concealing the eternal proportions of their beauty. An epic or dramatic personage is understood to wear them around his soul, as he may the antient armour or the modern uniform around his body; whilst it is easy to conceive a dress more graceful than either. The beauty of the internal nature cannot be so far concealed by its accidental vesture, but that the spirit of its form shall communicate itself to the very disguise, and indicate the shape it hides from the manner in which

1. "The Four Ages of Poetry" (1820), by Thomas Love Peacock (1785–1866), English writer and satirist.

2. This emphasis on the pleasure given by poetry echoes SIR PHILIP SIDNEY's *Defence of Poesy* (1595). See also WILLIAM WORDSWORTH's Preface to *Lyrical Ballads* (1800): "Nor let this necessity of pro-

ducing immediate pleasure be considered as a degradation of the Poet's art. It is far otherwise."

3. Odysseus, the hero of the *Odyssey*. Achilles and Hector are the greatest warriors (Greek and Trojan, respectively) of the *Iliad*. These poems are the earliest Greek epics (ca. 8th c. B.C.E.).

it is worn. A majestic form and graceful motions will express themselves through the most barbarous and tasteless costume. Few poets of the highest class have chosen to exhibit the beauty of their conceptions in its naked truth and splendour; and it is doubtful whether the alloy of costume, habit, etc., be not necessary to temper this planetary music⁴ for mortal ears.

The whole objection however of the immorality of poetry rests upon a misconception of the manner in which poetry acts to produce the moral improvement of man. Ethical science arranges the elements which poetry has created, and propounds schemes and proposes examples of civil and domestic life: nor is it for want of admirable doctrines that men hate, and despise, and censure, and deceive, and subjugate one another. But Poetry acts in another and diviner manner. It awakens and enlarges the mind itself by rendering it the receptacle of a thousand unapprehended combinations of thought. Poetry lifts the veil from the hidden beauty of the world, and makes familiar objects be as if they were not familiar: it reproduces all that it represents, and the impersonations clothed in its Elysian⁵ light stand thenceforward in the minds of those who have once contemplated them, as memorials of that gentle and exalted content which extends itself over all thoughts and actions with which it coexists. The great secret of morals is Love: or a going out of our own nature, and an identification of ourselves with the beautiful which exists in thought, action, or person, not our own.⁶ A man, to be greatly good, must imagine intensely and comprehensively; he must put himself in the place of another and of many others; the pains and pleasures of his species must become his own. The great instrument of moral good is the imagination; and poetry administers to the effect by acting upon the cause. Poetry enlarges the circumference of the imagination by replenishing it with thoughts of ever new delight, which have the power of attracting and assimilating to their own nature all other thoughts, and which form new intervals and interstices whose void for ever craves fresh food. Poetry strengthens that faculty which is the organ of the moral nature of man, in the same manner as exercise strengthens a limb. A Poet therefore would do ill to embody his own conceptions of right and wrong, which are usually those of his place and time, in his poetical creations, which participate in neither. By this assumption of the inferior office of interpreting the effect, in which perhaps after all he might acquit himself but imperfectly, he would resign the glory in a participation in the cause. There was little danger that Homer, or any of the eternal poets, should have so far misunderstood themselves as to have abdicated this throne of their widest dominion. Those in whom the poetical faculty, though great, is less intense, as Euripides, Lucan, Tasso, Spenser,⁷ have frequently affected a moral aim, and the effect of their poetry is diminished in exact proportion to the degree in which they compel us to advert to this purpose.

4. The music of the spheres: the beautiful sound said to be made by the movements of the planets.

5. Paradisiacal. According to classical mythology, after death the blessed dwell in the Elysian Fields.

6. Editors have noted the influence here of PLATO's *Symposium* (ca. 384 B.C.E.), which Shelley himself translated. He rendered one of its key sentences "Love, therefore, and every thing else that desires

anything, desires that which is absent and beyond his reach, that which it has not, that which is not itself, that which it wants."

7. Edmund Spenser (1552–1599), English poet. Euripides (ca. 485–ca. 406 B.C.E.), Greek tragedian. Lucan (39–65 C.E.), Roman poet. Torquato Tasso (1544–1595), Italian poet.

Homer and the cyclic poets⁸ were followed at a certain interval by the dramatic and lyrical Poets of Athens, who flourished contemporaneously with all that is most perfect in the kindred expressions of the poetical faculty; architecture, painting, music, the dance, sculpture, philosophy, and we may add the forms of civil life. For although the scheme of Athenian society was deformed by many imperfections⁹ which the poetry existing in Chivalry and Christianity have erased from the habits and institutions of modern Europe; yet never at any other period has so much energy, beauty, and virtue, been developed: never was blind strength and stubborn form so disciplined and rendered subject to the will of man, or that will less repugnant to the dictates of the beautiful and the true, as during the century which preceded the death of Socrates.¹ Of no other epoch in the history of our species have we records and fragments stamped so visibly with the image of the divinity in man. But it is Poetry alone, in form, in action, or in language, which has rendered this epoch memorable above all others, and the storehouse of examples to everlasting time. For written poetry existed at the epoch simultaneously with the other arts, and it is an idle enquiry to demand which gave and which received the light, which all as from a common focus have scattered over the darkest periods of succeeding time. We know no more of cause and effect than a constant conjunction of events: Poetry is ever found to coexist with whatever other arts contribute to the happiness and perfection of man. I appeal to what has already been established to distinguish between the cause and the effect.

It was at the period here adverted to, that the Drama had its birth; and however a succeeding writer may have equalled or surpassed those few great specimens of the Athenian drama which have been preserved to us, it is indisputable that the art itself never was understood or practised according to the true philosophy of it, as at Athens. For the Athenians employed language, action, music, painting, the dance, and religious institutions, to produce a common effect in the representation of the highest idealisms of passion and of power; each division in the art was made perfect in its kind by artists of the most consummate skill, and was disciplined into a beautiful proportion and unity one towards another. On the modern stage a few only of the elements capable of expressing the image of the poet's conception are employed at once. We have tragedy without music and dancing; and music and dancing without the highest impersonations of which they are the fit accompaniment, and both without religion and solemnity. Religious institution has indeed been usually banished from the stage. Our system of divesting the actor's face of a mask, on which the many expressions appropriated to his dramatic character might be moulded into one permanent and unchanging expression, is favourable only to a partial and inharmonious effect; it is fit for nothing but a monologue, where all the attention may be directed to some great master of ideal mimicry. The modern practice of blending comedy with tragedy, though liable to great abuse in point of practice, is undoubtedly an extension of the dramatic circle; but the comedy

8. Poets after Homer who filled out the story of the Trojan War.

9. That is, slavery and the second-class status of women (Shelley explicitly names these "imper-

fections" below).

1. That is, the 5th century B.C.E., the golden age of Athenian politics and art (the philosopher Socrates was put to death in 399 B.C.E.).

should be as in *King Lear*, universal, ideal, and sublime. It is perhaps the intervention of this principle which determines the balance in favour of *King Lear* against the *Oedipus Tyrannus* or the *Agamemnon*, or, if you will, the trilogies with which they are connected;² unless the intense power of the choral poetry, especially that of the latter, should be considered as restoring the equilibrium. *King Lear*, if it can sustain this comparison, may be judged to be the most perfect specimen of the dramatic art existing in the world; in spite of the narrow conditions to which the poet was subjected by the ignorance of the philosophy of the Drama which has prevailed in modern Europe. Calderon³ in his religious Autos has attempted to fulfill some of the high conditions of dramatic representation neglected by Shakespeare; such as the establishing a relation between the drama and religion, and the accommodating them to music and dancing; but he omits the observation of conditions still more important, and more is lost than gained by a substitution of the rigidly-defined and ever-repeated idealisms of a distorted superstition for the living impersonations of the truth of human passion.

But we digress.—The Author of the Four Ages of Poetry has prudently omitted to dispute on the effect of the Drama upon life and manners. For, if I know the knight by the device of his shield, I have only to inscribe *Philoctetes*⁴ or *Agamemnon* or *Othello* upon mine to put to flight the giant sophisms which have enchanted him, as the mirror of intolerable light, though on the arm of one of the weakest of the Paladins,⁵ could blind and scatter whole armies of necromancers and pagans. The connexion of scenic exhibitions with the improvement or corruption of the manners of men, has been universally recognized: in other words, the presence or absence of poetry in its most perfect and universal form has been found to be connected with good and evil in conduct and habit. The corruption which has been imputed to the drama as an effect, begins, when the poetry employed in its constitution, ends: I appeal to the history of manners whether the periods of the growth of the one and the decline of the other have not corresponded with an exactness equal to any other example of moral cause and effect.

The drama at Athens, or wheresoever else it may have approached to its perfection, coexisted with the moral and intellectual greatness of the age. The tragedies of the Athenian poets are as mirrors in which the spectator beholds himself, under a thin disguise of circumstance, stript of all but that ideal perfection and energy which every one feels to be the internal type of all that he loves, admires, and would become. The imagination is enlarged by a sympathy with pains and passions so mighty, that they distend in their conception the capacity of that by which they are conceived; the good affections are strengthened by pity, indignation, terror and sorrow;⁶ and an exalted calm is prolonged from the satiety of this high exercise of them into

2. Sophocles' "trilogy" (the plays were not performed together) is *Oedipus Rex* (ca. 430 B.C.E.), *Oedipus Coloneus* (ca. 401), and *Antigone* (ca. 441); Aeschylus's Oresteian trilogy (458) comprises *Agamemnon*, *The Libation Bearers*, and *The Eumenides*. *King Lear* was first performed ca. 1605.

3. Pedro Calderón de la Barca (1600–1681), Spanish dramatist and poet; after he became a priest in 1651, he wrote only *autos sacramentales*, one-act religious dramas (usually allegorical).

4. Greek hero in the Trojan War and the subject of many tragedies; that by Sophocles (ca. 409 B.C.E.) survives.

5. The twelve peers of the court of Charlemagne (742–814), king of the Franks and founder of the first western European empire after the fall of Rome.

6. One interpretation of ARISTOTLE's idea of "catharsis" in tragedy, expressed in *Poetics* 6, 1449b (see above).

the tumult of familiar life; even crime is disarmed of half its horror and all its contagion by being represented as the fatal consequence of the unfathomable agencies of nature; error is thus divested of its wilfulness; men can no longer cherish it as the creation of their choice. In a drama of the highest order there is little food for censure or hatred; it teaches rather self-knowledge and self-respect. Neither the eye nor the mind can see itself, unless reflected upon that which it resembles. The drama, so long as it continues to express poetry, is as a prismatic and many-sided mirror, which collects the brightest rays of human nature and divides and reproduces them from the simplicity of these elementary forms, and touches them with majesty and beauty, and multiplies all that it reflects, and endows it with the power of propagating its like wherever it may fall.

But in periods of the decay of social life, the drama sympathizes with that decay. Tragedy becomes a cold imitation of the form of the great masterpieces of antiquity, divested of all harmonious accompaniment of the kindred arts; and often the very form misunderstood: or a weak attempt to teach certain doctrines, which the writer considers as moral truths; and which are usually no more than specious flatteries of some gross vice or weakness with which the author in common with his auditors are infected. Hence what has been called the classical and domestic drama. Addison's "Cato"⁷ is a specimen of the one; and would it were not superfluous to cite examples of the other! To such purposes Poetry cannot be made subservient. Poetry is a sword of lightning, ever unsheathed, which consumes the scabbard that would contain it. And thus we observe that all dramatic writings of this nature are unimaginative in a singular degree; they affect sentiment and passion: which, divested of imagination, are other names for caprice and appetite. The period in our own history of the grossest degradation of the drama is the reign of Charles II⁸ when all forms in which poetry had been accustomed to be expressed became hymns to the triumph of kingly power over liberty and virtue. Milton⁹ stood alone illuminating an age unworthy of him. At such periods the calculating principle pervades all the forms of dramatic exhibition, and poetry ceases to be expressed upon them. Comedy loses its ideal universality: wit succeeds to humour; we laugh from self-complacency and triumph instead of pleasure; malignity, sarcasm and contempt, succeed to sympathetic merriment; we hardly laugh, but we smile. Obscenity, which is ever blasphemy against the divine beauty in life, becomes, from the very veil which it assumes, more active if less disgusting; it is a monster for which the corruption of society for ever brings forth new food, which it devours in secret.

The drama being that form under which a greater number of modes of expression of poetry are susceptible of being combined than any other, the connexion of poetry and social good is more observable in the drama than in whatever other form: and it is indisputable that the highest perfection of human society has ever corresponded with the highest dramatic excellence; and that the corruption or the extinction of the drama in a nation where it

7. The popular neoclassical tragedy (1713) about the Roman statesman Cato by the English poet and essayist JOSEPH ADDISON (1672–1719).

8. King of England (1630–1685; reigned 1660–85) during the Restoration, a period with a reputa-

tion for dissoluteness and frivolity.

9. The poet John Milton (1608–1674) was a supporter of the Puritan Revolution and a defender of the execution of Charles I (king of England from 1625 to 1649).

has once flourished, is a mark of a corruption of manners, and an extinction of the energies which sustain the soul of social life. But, as Machiavelli¹ says of political institutions, that life may be preserved and renewed, if men should arise capable of bringing back the drama to its principles. And this is true with respect to poetry in its most extended sense: all language, institution and form, require not only to be produced but to be sustained: the office and character of a poet participates in the divine nature as regards providence, no less than as regards creation.

Civil war, the spoils of Asia, and the fatal predominance first of the Macedonian,² and then of the Roman arms were so many symbols of the extinction or suspension of the creative faculty in Greece. The bucolic writers,³ who found patronage under the lettered tyrants of Sicily and Egypt, were the latest representatives of its most glorious reign. Their poetry is intensely melodious: like the odour of the tuberose,⁴ it overcomes and sickens the spirit with excess of sweetness; whilst the poetry of the preceding age was as a meadow-gale of June which mingles the fragrance of all the flowers of the field, and adds a quickening and harmonizing spirit of its own which endows the sense with a power of sustaining its extreme delight. The bucolic and erotic delicacy in written poetry is correlative with that softness in statuary, music, and the kindred arts, and even in manners and institutions which distinguished the epoch to which we now refer. Nor is it the poetical faculty itself, or any misapplication of it, to which this want of harmony is to be imputed. An equal sensibility to the influence of the senses and the affections is to be found in the writings of Homer and Sophocles: the former especially has clothed sensual and pathetic images with irresistible attractions. Their superiority over these succeeding writers consists in the presence of those thoughts which belong to the inner faculties of our nature, not in the absence of those which are connected with the external; their incomparable perfection consists in an harmony of the union of all. It is not what the erotic writers have, but what they have not, in which their imperfection consists. It is not inasmuch as they were Poets, but inasmuch as they were not Poets, that they can be considered with any plausibility as connected with the corruption of their age. Had that corruption availed so as to extinguish in them the sensibility to pleasure, passion and natural scenery, which is imputed to them as an imperfection, the last triumph of evil would have been achieved. For the end of social corruption is to destroy all sensibility to pleasure; and therefore it is corruption. It begins at the imagination and the intellect as at the core, and distributes itself thence as a paralyzing venom, through the affections into the very appetites, until all become a torpid mass in which sense hardly survives. At the approach of such a period, Poetry ever addresses itself to those faculties which are the last to be destroyed, and its voice is heard, like the footsteps of Astræa,⁵ departing from the world. Poetry ever

1. Niccolò Machiavelli (1469–1527), Italian political philosopher; he discusses political institutions in *The Prince* (written 1513; published 1532), and *The Discourses* (ca. 1518).

2. Alexander the Great (356–323 B.C.E.), king of Macedonia, whose conquests extended to Egypt and India.

3. Greek pastoral poets, who wrote of shepherds and country folk; the first was Theocritus (ca. 300–ca. 260 B.C.E.), followed by Moschus (active

ca. 150 B.C.E.) and Bion (active ca. 100 B.C.E.).

4. A plant with grasslike leaves; it is cultivated for its highly fragrant white flowers, which yield an oil formerly used in perfume.

5. The goddess of justice. She dwelled on earth during the Golden Age but was driven into heaven during the Iron Age by humanity's evil ways. See Ovid, *Metamorphoses* (ca. 10 C.E.), 1.149–50; Juvenal, *Satire* 6.19–20 (ca. 116 C.E.).

communicates all the pleasure which men are capable of receiving: it is ever still the light of life; the source of whatever of beautiful, or generous, or true can have place in an evil time. It will readily be confessed that those among the luxurious citizens of Syracuse and Alexandria who were delighted with the poems of Theocritus, were less cold, cruel and sensual than the remnant of their tribe. But corruption must have utterly destroyed the fabric of human society before Poetry can ever cease. The sacred links of that chain have never been entirely disjoined, which descending through the minds of many men is attached to those great minds, whence as from a magnet the invisible effluence is sent forth, which at once connects, animates and sustains the life of all. It is the faculty which contains within itself the seeds at once of its own and of social renovation. And let us not circumscribe the effects of the bucolic and erotic poetry within the limits of the sensibility of those to whom it was addressed. They may have perceived the beauty of those immortal compositions, simply as fragments and isolated portions: those who are more finely organized, or born in a happier age, may recognize them as episodes to that great poem, which all poets, like the co-operating thoughts of one great mind, have built up since the beginning of the world.

The same revolutions within a narrower sphere had place in antient Rome; but the actions and forms of its social life never seem to have been perfectly saturated with the poetical element. The Romans appear to have considered the Greeks as the selectest treasuries of the selectest forms of manners and of nature, and to have abstained from creating in measured language, sculpture, music or architecture, anything which might bear a particular relation to their own condition, whilst it should bear a general one to the universal constitution of the world. But we judge from partial evidence; and we judge perhaps partially. Ennius, Varro, Pacuvius, and Accius,⁶ all great poets, have been lost. Lucretius is in the highest, and Virgil⁷ in a very high sense, a creator. The chosen delicacy of the expressions of the latter is as a mist of light which conceals from us the intense and exceeding truth of his conceptions of nature. Livy⁸ is instinct with poetry. Yet Horace, Catullus, Ovid,⁹ and generally the other great writers of the Virgilian age, saw man and nature in the mirror of Greece. The institutions also and the religion of Rome were less poetical than those of Greece, as the shadow is less vivid than the substance. Hence poetry in Rome, seemed to follow rather than accompany the perfection of political and domestic society. The true Poetry of Rome lived in its institutions; for whatever of beautiful, true and majestic they contained could have sprung only from the faculty which creates the order in which they consist. The life of Camillus, the death of Regulus;¹ the expecta-

6. All pre-Augustan writers, whose work survives only in fragments: Ennius (239–169 B.C.E.), author of tragedies, comedies, prose, and an epic on Roman history, *Annales*; Varro (116–27 B.C.E.), the greatest scholar among the Romans, who wrote or edited hundreds of books (one on the Latin language survives in part, together with a volume of a work on farm management); Pacuvius (220–ca. 130 B.C.E.), author of tragedies and satires; and Accius (170–ca. 90 B.C.E.), author of tragedies and a 9-book poem on the history of literature, *Didascalica*.

7. Author (70–19 B.C.E.) of the *Aeneid*, generally considered the greatest Latin epic. Lucretius

(ca. 94–55 B.C.E.), philosopher and author of a didactic Epicurean poem, *On the Nature of Things*.

8. Roman historian (59 B.C.E.–17 C.E.).

9. Author (43 B.C.E.–17 C.E.) of love poetry, fictional love letters, and the mock-heroic *Metamorphoses*. HORACE (65–8 B.C.E.), author of odes, satires, epistles, and the *Ars Poetica* (see above). Catullus (ca. 84–ca. 54 B.C.E.), author of lyric love poetry and elegy.

1. Marcus Atilius Regulus (d. ca. 249 B.C.E.), Roman general who, though himself held by the Carthaginians, persuaded the Roman Senate not to ransom him and the other soldiers; he

tion of the Senators, in their godlike state, of the victorious Gauls; the refusal of the Republic to make peace with Hannibal after the battle of Cannae,² were not the consequences of a refined calculation of the probable personal advantage to result from such a rhythm and order in the shews of life, to those who were at once the poets and the actors of the immortal dramas. The imagination beholding the beauty of this order, created it out of itself according to its own idea: the consequence was empire, and the reward ever-living fame. These things are not the less poetry, *quia carent vate sacro*.³ They are the episodes of the cyclic poem written by Time upon the memories of men. The Past, like an inspired rhapsodist, fills the theatre of everlasting generations with their harmony.

At length the antient system of religion and manners had fulfilled the circle of its revolution. And the world would have fallen into utter anarchy and darkness, but that there were found poets among the authors of the Christian and Chivalric systems of manners and religion, who created forms of opinion and action never before conceived; which, copied into the imaginations of men, became as generals to the bewildered armies of their thoughts. It is foreign to the present purpose to touch upon the evil produced by these systems: except that we protest, on the ground of the principles already established, that no portion of it can be imputed to the poetry they contain.

It is probable that the astonishing poetry of Moses, Job, David, Solomon and Isaiah⁴ had produced a great effect upon the mind of Jesus and his disciples. The scattered fragments preserved to us by the biographers of this extraordinary person, are all instinct with the most vivid poetry. But his doctrines seem to have been quickly distorted. At a certain period after the prevalence of a system of opinions founded upon those promulgated by him, the three forms into which Plato had distributed the faculties of mind⁵ underwent a sort of apotheosis, and became the object of the worship of the civilized world. Here it is to be confessed that "Light seems to thicken," and

The crow makes wing to the rooky wood,
Good things of day begin to droop and drowse,
And night's black agents to their preys do rouse.⁶

But mark how beautiful an order has sprung from the dust and blood of this fierce chaos! how the World, as from a resurrection, balancing itself on the golden wings of knowledge and of hope, has reassumed its yet unwearied flight into the Heaven of time. Listen to the music, unheard by outward ears, which is as a ceaseless and invisible wind, nourishing its everlasting course with strength and swiftness.

returned to Carthage and died in captivity (perhaps tortured to death; see Horace, *Odes* 3.5). Marcus Furius Camillus (d. ca. 365 B.C.E.), the second founder of Rome, who managed the city's military and political recovery after the Gallic invasion of 387/86 B.C.E.

2. Village in Apulia where in 216 B.C.E. the Romans suffered a major defeat by Hannibal, the great Carthaginian general (247–183/82 B.C.E.); the Romans ultimately won the war, however.

3. Because they lack a sacred poet (Latin); from Horace, *Odes* 4.9.28.

4. Job and Isaiah were once regarded as the authors of the books of the Bible given their names; Moses is traditionally credited with writing the entire Torah (the first five books of the Bible); David was thought to have composed most of the Psalms; Ecclesiastes, Proverbs, and the Song of Solomon were ascribed to Solomon.

5. Plato divided the human soul into three parts: the desiring, the rational, and the spirited (see *Republic* 4.439d–444a).

6. *Macbeth* (ca. 1606), 3.2.51–54, slightly misquoted.

The poetry in the doctrines of Jesus Christ, and the mythology and institutions of the Celtic conquerors of the Roman empire,⁷ outlived the darkness and the convulsions connected with their growth and victory, and blended themselves into a new fabric of manners and opinion. It is an error to impute the ignorance of the dark ages to the Christian doctrines or the predominance of the Celtic nations. Whatever of evil their agencies may have contained sprung from the extinction of the poetical principle, connected with the progress of despotism and superstition. Men, from causes too intricate to be here discussed, had become insensible and selfish: their own will had become feeble, and yet they were its slaves, and thence the slaves of the will of others: lust, fear, avarice, cruelty and fraud, characterised a race amongst whom no one was to be found capable of *creating* in form, language, or institution. The moral anomalies of such a state of society are not justly to be charged upon any class of events immediately connected with them, and those events are most entitled to our approbation which could dissolve it most expeditiously. It is unfortunate for those who cannot distinguish words from thoughts, that many of these anomalies have been incorporated into our popular religion.

It was not until the eleventh century that the effects of the poetry of the Christian and Chivalric systems began to manifest themselves. The principle of equality had been discovered and applied by Plato in his Republic, as the theoretical rule of the mode in which the materials of pleasure and of power produced by the common skill and labour of human beings ought to be distributed among them. The limitations of this rule were asserted by him to be determined only by the sensibility of each, or the utility to result to all. Plato, following the doctrines of Timæus and Pythagoras,⁸ taught also a moral and intellectual system of doctrine comprehending at once the past, the present, and the future condition of man. Jesus Christ divulged the sacred and eternal truths contained in these views to mankind, and Christianity, in its abstract purity, became the exoteric expression of the esoteric doctrines of the poetry and wisdom of antiquity. The incorporation of the Celtic nations with the exhausted population of the South, impressed upon it the figure of the poetry existing in their mythology and institutions. The result was a sum of the action and reaction of all the causes included in it; for it may be assumed as a maxim that no nation or religion can supersede any other without incorporating into itself a portion of that which it supersedes. The abolition of personal and domestic slavery, and the emancipation of women from a great part of the degrading restraints of antiquity were among the consequences of these events.

The abolition of personal slavery is the basis of the highest political hope that it can enter into the mind of man to conceive. The freedom of women produced the poetry of sexual love. Love became a religion, the idols of whose worship were ever present. It was as if the statues of Apollo and the Muses⁹ had been endowed with life and motion and had walked forth among their worshippers; so that earth became peopled by the inhabitants

7. The Germanic tribes of northern Europe.

8. Greek philosopher and mathematician (ca. 6th c. B.C.E.). Timæus: a Pythagorean, perhaps a fictional character, who is the key speaker in Plato's

Timæus.

9. In Greek mythology, 9 daughters of Memory who preside over the arts and all intellectual pursuits. Apollo: Greek and Roman god of poetry.

of a diviner world. The familiar appearance and proceedings of life became wonderful and heavenly; and a paradise was created as out of the wrecks of Eden. And as this creation itself is poetry, so its creators were poets; and language were the instrument of their art: "Galeotto fù il libro, e chi lo scrisse."¹ The Provençal Trouveurs, or inventors, preceded Petrarch,² whose verses are as spells, which unseal the inmost enchanted fountains of the delight which is in the grief of Love. It is impossible to feel them without becoming a portion of that beauty which we contemplate: it were superfluous to explain how the gentleness and the elevation of mind connected with these sacred emotions can render men more amiable, more generous, and wise, and lift them out of the dull vapours of the little world of self. Dante understood the secret things of love even more than Petrarch. His *Vita Nuova*³ is an inexhaustible fountain of purity of sentiment and language: it is the idealized history of that period, and those intervals of his life which were dedicated to love. His apotheosis of Beatrice in Paradise and the gradations of his own love and her loveliness, by which as by steps he feigns himself to have ascended to the throne of the Supreme Cause, is the most glorious imagination of modern poetry. The acutest critics have justly reversed the judgement of the vulgar, and the order of the great acts of the "Divine Drama," in the measure of the admiration which they accord to the Hell, Purgatory and Paradise.⁴ The latter is a perpetual hymn of everlasting love. Love, which found a worthy poet in Plato alone of all the antients, has been celebrated by a chorus of the greatest writers of the renovated world; and the music has penetrated the caverns of society, and its echoes still drown the dissonance of arms and superstition. At successive intervals, Ariosto, Tasso, Shakespeare, Spenser, Calderon, Rousseau,⁵ and the great writers of our own age, have celebrated the dominion of love, planting as it were trophies in the human mind of that sublimest victory over sensuality and force. The true relation borne to each other by the sexes into which human kind is distributed has become less misunderstood; and if the error which confounded diversity with inequality of the powers of the two sexes has become partially recognized in the opinions and institutions of modern Europe, we owe this great benefit to the worship of which Chivalry was the law, and poets the prophets.

The poetry of Dante may be considered as the bridge thrown over the stream of time, which unites the modern and antient world. The distorted notions of invisible things which Dante and his rival Milton have idealized, are merely the mask and the mantle in which these great poets walk through eternity enveloped and disguised. It is a difficult question to determine how far they were conscious of the distinction which must have subsisted in their minds between their own creeds and that of the people. Dante at least appears to wish to mark the full extent of it by placing Riphæus, whom Virgil calls *justissimus unus*, in Paradise,⁶ and observing a most heretical caprice

1. Gallehaut was the book and he who wrote it (Italian). From DANTE ALIGHIERI, *Inferno* (1321), 5.137.

2. Francesco Petrarca (1304–1374), Italian poet and scholar. "Provençal": the language of southern France. The troubadours of the south, 12th- and 13th-century poets, were the first to celebrate chivalric and courtly love.

3. *New Life* (ca. 1293), poetry and prose that tell

of Dante's love for Beatrice.

4. The 3 books of Dante's *Divine Comedy*.

5. Jean-Jacques Rousseau (1712–1778), Swiss-born French philosopher and political theorist. Ludovico Ariosto (1474–1533), Italian epic poet. 6. Dante makes the Trojan warrior Riphæus the only pagan in Paradise (see *Paradiso*, canto 20). *Justissimus unus*: the one most just [who was among the Trojans]; Virgil, *Aeneid* 2.426–27.

in his distribution of rewards and punishments. And Milton's poem contains within itself a philosophical refutation of that system of which, by a strange and natural antithesis, it has been a chief popular support. Nothing can exceed the energy and magnificence of the character of Satan as expressed in *Paradise Lost*.⁷ It is a mistake to suppose that he could ever have been intended for the popular personification of evil. Implacable hate, patient cunning, and a sleepless refinement of device to inflict the extremest anguish on an enemy, these things are evil; and although venial in a slave are not to be forgiven in a tyrant; although redeemed by much that ennoble his defeat in one subdued, are marked by all that dishonours his conquest in the victor. Milton's Devil as a moral being is as far superior to his God as one who perseveres in some purpose which he has conceived to be excellent in spite of adversity and torture, is to one who in the cold security of undoubted triumph inflicts the most horrible revenge upon his enemy, not from any mistaken notion of inducing him to repent of a perseverance in enmity, but with the alleged design of exasperating him to deserve new torments. Milton has so far violated the popular creed (if this shall be judged to be a violation) as to have alleged no superiority of moral virtue to his God over his Devil. And this bold neglect of a direct moral purpose is the most decisive proof of the supremacy of Milton's genius. He mingled as it were the elements of human nature, as colours upon a single pallet, and arranged them into the composition of his great picture according to the laws of epic truth; that is, according to the laws of that principle by which a series of actions of the external universe and of intelligent and ethical beings is calculated to excite the sympathy of succeeding generations of mankind. The *Divina Commedia* and *Paradise Lost* have conferred upon modern mythology a systematic form; and when change and time shall have added one more superstition to the mass of those which have arisen and decayed upon the earth, commentators will be learnedly employed in elucidating the religion of ancestral Europe, only not utterly forgotten because it will have been stamped with the eternity of genius.

Homer was the first, and Dante the second epic poet: that is, the second poet the series of whose creations bore a defined and intelligible relation to the knowledge, and sentiment, and religion, and political conditions of the age in which he lived, and of the ages which followed it, developing itself in correspondence with their development. For Lucretius had limed the wings of his swift spirit in the dregs of the sensible world; and Virgil, with a modesty which ill became his genius, had affected the fame of an imitator even whilst he created anew all that he copied; and none among the flock of mock-birds, though their notes were sweet, Apollonius Rhodius, Quintus Calaber Smyrnæus, Nonnus, Lucan, Statius, or Claudian,⁸ have sought

7. Shelley echoes the Romantic poet William Blake: "The reason Milton wrote in fetters when he wrote of Angels & God, and at liberty when of Devils & Hell, is because he was a true Poet and of the Devils party without knowing it," and "Energy is Eternal Delight" (*The Marriage of Heaven and Hell*, 1790). *Paradise Lost* was published in 1667.

8. Classical epic poets of varying quality, the first three writing in Greek and the others in Latin:

Apollonius (3d c. B.C.E.), author of the *Argonautica*; Quintus Smyrnaeus (4th c. C.E.), author of a sequel to Homer's *Iliad*; Nonnus (5th c. C.E.), author of the 48-book *Dionysiaca*; Lucan, author of the *Civil War*; Statius (ca. 45–96 C.E.), author of the epic *Thebais*; and Claudian (d. 404 C.E.), a Greek-speaking Alexandrian whose poetry, including an unfinished epic, *The Rape of Proserpina*, marked the end of the classical tradition in Latin poetry.

even to fulfil a single condition of epic truth. Milton was the third Epic Poet. For if the title of epic in its highest sense be refused to the *Æneid*, still less can it be conceded to the Orlando Furioso, the Gerusalemme Liberata, the Lusiad, or the Fairy Queen.⁹

Dante and Milton were both deeply penetrated with the antient religion of the civilized world; and its spirit exists in their poetry probably in the same proportion as its forms survived in the unreformed worship of modern Europe. The one preceded and the other followed the Reformation at almost equal intervals. Dante was the first religious reformer, and Luther¹ surpassed him rather in the rudeness and acrimony, than in the boldness of his censures of papal usurpation. Dante was the first awakener of entranced Europe: he created a language in itself music and persuasion out of a chaos of inharmonious barbarisms. He was the congregator of those great spirits who presided over the resurrection of learning; the Lucifer² of that starry flock which in the thirteenth century shone forth from republican Italy, as from a heaven, into the darkness of the benighted world. His very words are instinct with spirit; each is as a spark, a burning atom of inextinguishable thought; and many yet lie covered in the ashes of their birth, and pregnant with a lightning which has yet found no conductor. All high poetry is infinite; it is as the first acorn, which contained all oaks potentially. Veil after veil may be undrawn, and the inmost naked beauty of the meaning never exposed. A great Poem is a fountain for ever overflowing with the waters of wisdom and delight; and after one person and one age has exhausted all its divine effluence which their peculiar relations enable them to share, another and yet another succeeds, and new relations are ever developed, the source of an unforeseen and an unconceived delight.

The age immediately succeeding to that of Dante, Petrarch, and Boccaccio,³ was characterized by a revival of painting, sculpture, music, and architecture. Chaucer⁴ caught the sacred inspiration, and the superstructure of English literature is based upon the materials of Italian invention.

But let us not be betrayed from a defence into a critical history of Poetry and its influence on Society. Be it enough to have pointed out the effects of poets, in the large and true sense of the word, upon their own and all succeeding times and to revert to the partial instances cited as illustrations of an opinion the reverse of that attempted to be established in the Four Ages of Poetry.

But poets have been challenged to resign the civic crown to reasoners and mechanists on another plea. It is admitted that the exercise of the imagination is most delightful, but it is alleged that that of reason is more useful. Let us examine as the grounds of this distinction, what is here meant by Utility.⁵ Pleasure or good in a general sense, is that which the consciousness

9. Shelley names epics by, respectively, Ariosto (1516, 1532), Tasso (1581), the Portuguese Luis Vaz de Camões (1572), and Spenser (1590, 1596).

1. Martin Luther (1483–1546), German theologian and reformer, founder of the Reformation.

2. Literally, "light bearer" (Latin), the morning star. In Milton's *Paradise Lost*, Lucifer is the leader of the revolt of the angels against God, and is called Satan after his fall.

3. GIOVANNI BOCCACCIO (1313–1375), Italian writer and poet.

4. Geoffrey Chaucer (ca. 1343–1400), whose poetry drew strongly on the works of the three

Italians named (especially Boccaccio).

5. Shelley replies here to the followers of Jeremy Bentham (1748–1832), English social reformer and philosopher, the founder of utilitarianism; he claimed that all conduct and legislation should aim at "the greatest happiness of the greatest number," and formulated a calculus of pleasure. Peacock argues in "The Four Ages of Poetry": "[Poetry] can never make a philosopher nor a statesman nor in any class of life a useful or rational man. It cannot claim the slightest share in any one of the comforts or utilities of life."

of a sensitive and intelligent being seeks, and in which when found it acquiesces. There are two kinds of pleasure, one durable, universal, and permanent; the other transitory and particular. Utility may either express the means of producing the former or the latter. In the former sense, whatever strengthens and purifies the affections, enlarges the imagination, and adds spirit to sense, is useful. But the meaning in which the Author of the *Four Ages of Poetry* seems to have employed the word utility is the narrower one of banishing the importunity of the wants of our animal nature, the surrounding men with security of life, the dispersing the grosser delusions of superstition, and the conciliating such a degree of mutual forbearance among men as may consist with the motives of personal advantage.

Undoubtedly the promoters of utility in this limited sense, have their appointed office in society. They follow the footsteps of poets, and copy the sketches of their creations into the book of common life. They make space, and give time. Their exertions are of the highest value so long as they confine their administration of the concerns of the inferior powers of our nature within the limits due to the superior ones. But whilst the sceptic destroys gross superstitions, let him spare to deface, as some of the French writers have defaced, the eternal truths characterised upon the imaginations of men. Whilst the mechanist abridges, and the political œconomist combines, labour, let them beware that their speculations, for want of correspondence with those first principles which belong to the imagination, do not tend, as they have in modern England, to exasperate at once the extremes of luxury and want. They have exemplified the saying, "To him that hath, more shall be given; and from him that hath not, the little that he hath shall be taken away."⁶ The rich have become richer, and the poor have become poorer; and the vessel of the state is driven between the Scylla and Charybdis⁷ of anarchy and despotism. Such are the effects which must ever flow from an unmitigated exercise of the calculating faculty.

It is difficult to define pleasure in its highest sense; the definition involving a number of apparent paradoxes. For, from an inexplicable defect of harmony in the constitution of human nature, the pain of the inferior is frequently connected with the pleasures of the superior portions of our being. Sorrow, terror, anguish, despair itself are often the chosen expressions of an approximation to the highest good. Our sympathy in tragic fiction depends on this principle; tragedy delights by affording a shadow of the pleasure which exists in pain. This is the source also of the melancholy which is inseparable from the sweetest melody. The pleasure that is in sorrow is sweeter than the pleasure of pleasure itself. And hence the saying, "It is better to go to the house of mourning, than to the house of mirth."⁸ Not that this highest species of pleasure is necessarily linked with pain. The delight of love and friendship, the ecstasy of the admiration of nature, the joy of the perception and still more of the creation of poetry is often wholly unalloyed.

The production and assurance of pleasure in this highest sense is true utility. Those who produce and preserve this pleasure are Poets or poetical philosophers.

6. Mark 4.25.

7. That is, two equal dangers. In Greek mythology, Scylla and Charybdis are two monsters

(who become a rock and whirlpool, respectively) that endanger sailors between Sicily and Italy.
8. Ecclesiastes 7.2.

The exertions of Locke, Hume, Gibbon, Voltaire, Rousseau,⁹ and their disciples, in favour of oppressed and deluded humanity, are entitled to the gratitude of mankind. Yet it is easy to calculate the degree of moral and intellectual improvement which the world would have exhibited, had they never lived. A little more nonsense would have been talked for a century or two; and perhaps a few more men, women, and children, burnt as heretics. We might not at this moment have been congratulating each other on the abolition of the Inquisition in Spain.¹ But it exceeds all imagination to conceive what would have been the moral condition of the world if neither Dante, Petrarch, Boccaccio, Chaucer, Shakespeare, Calderon, Lord Bacon, nor Milton, had ever existed; if Raphael and Michael Angelo² had never been born; if the Hebrew poetry had never been translated; if a revival of the study of Greek literature had never taken place; if no monuments of antient sculpture had been handed down to us; and if the poetry of the religion of the antient world had been extinguished together with its belief. The human mind could never, except by the intervention of these excitements, have been awakened to the invention of the grosser sciences, and that application of analytical reasoning to the aberrations of society, which it is now attempted to exalt over the direct expression of the inventive and creative faculty itself.

We have more moral, political and historical wisdom, than we know how to reduce into practise; we have more scientific and æconomical knowledge than can be accommodated to the just distribution of the produce which it multiplies. The poetry in these systems of thought, is concealed by the accumulation of facts and calculating processes. There is no want of knowledge respecting what is wisest and best in morals, government, and political æconomy, or at least, what is wiser and better than what men now practise and endure. But we let "*I dare not wait upon I would*, like the poor cat i' the adage."³ We want⁴ the creative faculty to imagine that which we know; we want the generous impulse to act that which we imagine; we want the poetry of life: our calculations have outrun conception; we have eaten more than we can digest. The cultivation of those sciences which have enlarged the limits of the empire of man over the external world, has, for want of the poetical faculty, proportionally circumscribed those of the internal world; and man, having enslaved the elements, remains himself a slave. To what but a cultivation of the mechanical arts in a degree disproportioned to the presence of the creative faculty, which is the basis of all knowledge, is to be attributed the abuse of all invention for abridging and combining labour, to the exasperation of the inequality of mankind? From

9. I follow the classification adopted by the author of the *Four Ages of Poetry*. But Rousseau was essentially a poet. The others, even Voltaire, were mere reasoners [Shelley's note]. John Locke (1632–1704), English philosopher. DAVID HUME (1711–1776), Scottish empiricist philosopher, historian, and economist. Edward Gibbon (1737–1794), English historian best known as the author of *The History of the Decline and Fall of the Roman Empire* (6 vols., 1776–88). Voltaire: pen name of François-Marie Arouet (1694–1778), French writer and philosopher. These figures are apparently linked by their opposition, in different

degrees, to Christianity.

1. The Spanish Inquisition, the harsh Roman Catholic tribunal for suppressing heresy, was established in 1478; it was not definitively abolished until the 1820 revolution led by reformist army officers.

2. Michelangelo [Buonarroti] (1475–1564), Italian Renaissance sculptor, painter, and architect. Francis Bacon (1561–1626), English philosopher and essayist. Raphael: Raffaello Sanzio (1483–1520), master painter of the Italian Renaissance.

3. *Macbeth*, 1.7.44–45.

4. Lack.

what other cause has it arisen that the discoveries which should have lightened, have added a weight to the curse imposed on Adam?⁵ Poetry, and the principle of Self, of which money is the visible incarnation, are the God and the Mammon⁶ of the world.

The functions of the poetical faculty are two-fold; by one it creates new materials of knowledge, and power and pleasure; by the other it engenders in the mind a desire to reproduce and arrange them according to a certain rhythm and order which may be called the beautiful and the good. The cultivation of poetry is never more to be desired than at periods when, from an excess of the selfish and calculating principle, the accumulation of the materials of external life exceed the quantity of the power of assimilating them to the internal laws of human nature. The body has then become too unwieldy for that which animates it.

Poetry is indeed something divine.⁷ It is at once the centre and circumference of knowledge; it is that which comprehends all science, and that to which all science must be referred. It is at the same time the root and blossom of all other systems of thought; it is that from which all spring, and that which adorns all; and that which, if blighted, denies the fruit and the seed, and withholds from the barren world the nourishment and the succession of the scions⁸ of the tree of life. It is the perfect and consummate surface and bloom of things; it is as the odour and the colour of the rose to the texture of the elements which compose it, as the form and the splendour of unfaded beauty to the secrets of anatomy and corruption. What were Virtue, Love, Patriotism, Friendship &c.—what were the scenery of this beautiful Universe which we inhabit—what were our consolations on this side of the grave—and what were our aspirations beyond it—if Poetry did not ascend to bring light and fire from those eternal regions where the owl-winged faculty of calculation dare not ever soar? Poetry is not like reasoning, a power to be exerted according to the determination of the will. A man cannot say, “I will compose poetry.” The greatest poet even cannot say it: for the mind in creation is as a fading coal which some invisible influence, like an inconstant wind, awakens to transitory brightness: this power arises from within, like the colour of a flower which fades and changes as it is developed, and the conscious portions of our natures are unprophetic either of its approach or its departure. Could this influence be durable in its original purity and force, it is impossible to predict the greatness of the results; but when composition begins, inspiration is already on the decline, and the most glorious poetry that has ever been communicated to the world is probably a feeble shadow of the original conception of the poet. I appeal to the greatest Poets of the present day, whether it be not an error to assert that the finest passages of poetry are produced by labour and study. The toil and the delay recommended by critics can be justly interpreted to mean no more than a careful observation of the inspired moments, and an artificial connexion of the

5. That is, the need to labor for a living; imposed on Adam because he and Eve ate the forbidden fruit of the tree of knowledge: “In the sweat of thy face shalt thou eat bread, till thou return unto the ground” (Genesis 3.19).

6. The personification of avarice and lust for worldly gain; according to Matthew 6.24 and

Luke 16.13, it is impossible to serve both God and Mammon.

7. Compare Sidney’s reference, in *The Defence of Poesy*, to poetry as “a divine gift.”

8. Young shoots or twigs of a plant, especially those cut for grafting or rooting.

spaces between their suggestions by the intertexture of conventional expressions; a necessity only imposed by a limitedness of the poetical faculty itself. For Milton conceived the *Paradise Lost* as a whole before he executed it in portions. We have his own authority also for the Muse having “dictated” to him the “unpremeditated song,”⁹ and let this be an answer to those who would allege the fifty-six various readings of the first line of the *Orlando Furioso*. Compositions so produced are to poetry what mosaic is to painting. This instinct and intuition of the poetical faculty is still more observable in the plastic and pictorial arts: a great statue or picture grows under the power of the artist as a child in the mother’s womb, and the very mind which directs the hands in formation is incapable of accounting to itself for the origin, the gradations, or the media of the process.

Poetry is the record of the best and happiest moments of the happiest and best minds. We are aware of evanescent visitations of thought and feeling sometimes associated with place or person, sometimes regarding our own mind alone, and always arising unforeseen and departing unbidden, but elevating and delightful beyond all expression; so that even in the desire and the regret they leave, there cannot but be pleasure, participating as it does in the nature of its object. It is as it were the interpenetration of a diviner nature through our own; but its footsteps are like those of a wind over a sea, which the coming calm erases, and whose traces remain only as on the wrinkled sand which paves it. These and corresponding conditions of being are experienced principally by those of the most delicate sensibility and the most enlarged imagination; and the state of mind produced by them is at war with every base desire. The enthusiasm of virtue, love, patriotism, and friendship is essentially linked with these emotions; and whilst they last, self appears as what it is, an atom to a Universe. Poets are not only subject to these experiences as spirits of the most refined organization, but they can colour all that they combine with the evanescent hues of this ethereal world; a word, a trait in the representation of a scene or a passion, will touch the enchanted chord, and reanimate, in those who have ever experienced these emotions, the sleeping, the cold, the buried image of the past. Poetry thus makes immortal all that is best and most beautiful in the world; it arrests the vanishing apparitions which haunt the interlunations¹ of life, and veiling them or in language or in form sends them forth among mankind, bearing sweet news of kindred joy to those with whom their sisters abide—abide, because there is no portal of expression from the caverns of the spirit which they inhabit into the universe of things. Poetry redeems from decay the visitations of the divinity in man.

Poetry turns all things to loveliness; it exalts the beauty of that which is most beautiful, and it adds beauty to that which is most deformed: it marries exultation and horror, grief and pleasure, eternity and change; it subdues to union under its light yoke all irreconcilable things. It transmutes all that it touches, and every form moving within the radiance of its presence is changed by wondrous sympathy to an incarnation of the spirit which it breathes; its secret alchemy turns to potable gold the poisonous waters which flow from death through life; it strips the veil of familiarity from the world, and lays bare the naked and sleeping beauty which is the spirit of its forms.

9. *Paradise Lost* 9.20–24.

1. Dark intervals.

All things exist as they are perceived: at least in relation to the percipient. "The mind is its own place, and of itself can make a heaven of hell, a hell of heaven."² But poetry defeats the curse which binds us to be subjected to the accident of surrounding impressions. And whether it spreads its own figured curtain or withdraws life's dark veil from before the scene of things, it equally creates for us a being within our being. It makes us the inhabitants of a world to which the familiar world is a chaos. It reproduces the common universe of which we are portions and percipients, and it purges from our inward sight the film of familiarity which obscures from us the wonder of our being.³ It compels us to feel that which we perceive, and to imagine that which we know. It creates anew the universe after it has been annihilated in our minds by the recurrence of impressions blunted by reiteration. It justifies that bold and true word of Tasso—*Non merita nome di creatore, se non Iddio ed il Poeta*.⁴

A Poet, as he is the author to others of the highest wisdom, pleasure, virtue and glory, so he ought personally to be the happiest, the best, the wisest, and the most illustrious of men. As to his glory, let Time be challenged to declare whether the fame of any other institutor of human life be comparable to that of a poet. That he is the wisest, the happiest, and the best, inasmuch as he is a poet, is equally incontrovertible: the greatest poets have been men of the most spotless virtue, of the most consummate prudence, and, if we could look into the interior of their lives, the most fortunate of men: and the exceptions, as they regard those who possessed the poetic faculty in a high yet inferior degree, will be found on consideration to confirm rather than destroy the rule. Let us for a moment stoop to the arbitration of popular breath, and usurping and uniting in our own persons the incompatible characters of accuser, witness, judge and executioner, let us decide without trial, testimony, or form, that certain motives of those who are "there sitting where we dare not soar"⁵ are reprehensible. Let us assume that Homer was a drunkard, that Virgil was a flatterer, that Horace was a coward, that Tasso was a madman, that Lord Bacon was a peculator,⁶ that Raphael was a libertine, that Spenser was a poet laureate. It is inconsistent with this division of our subject to cite living poets, but Posterity has done ample justice to the great names now referred to. Their errors have been weighed and found to have been dust in the balance; if their sins "were as scarlet, they are now white as snow"; they have been washed in the blood of the mediator and the redeemer Time. Observe in what a ludicrous chaos the imputations of real or fictitious crime have been confused in the contemporary calumnies against poetry and poets; consider how little is, as it appears—or appears, as it is: look to your own motives, and judge not, lest ye be judged.⁷

2. Satan's defiant assertion in *Paradise Lost* 1.254–55, slightly misquoted.

3. Shelley echoes SAMUEL TAYLOR COLERIDGE in *Biographia Literaria* (1817), chap. 14, which describes Wordsworth's method as "awakening the mind's attention from the lethargy of custom, and directing it to the loveliness and the wonders of the world before us; an inexhaustible treasure, but for which in consequence of the film of familiarity and selfish solicitude we have eyes, yet see not, ears that hear not, and hearts that neither feel nor understand."

4. No one deserves the name of creator except God and the Poet (Italian). From Pierantonio Serassi's *Life of Torquato Tasso* (1785).

5. *Paradise Lost* 4.829, slightly misquoted.

6. Embezzler.

7. Shelley repeatedly echoes the Bible in this passage. Their errors have been weighed in the balance: Daniel 5.27; dust of the balance: Isaiah 40.15; were as scarlet: Isaiah 1.18; washed in the blood: Revelation 7.14; the mediator: Hebrews 9.15, 12.24; judge not: Matthew 7.1.

Poetry, as has been said, in this respect differs from logic, that it is not subject to the controul of the active powers of the mind, and that its birth and recurrence has no necessary connexion with consciousness or will. It is presumptuous to determine that these are the necessary conditions of all mental causation, when mental effects are experienced insusceptible of being referred to them. The frequent recurrence of the poetical power, it is obvious to suppose, may produce in the mind an habit of order and harmony correlative with its own nature and with its effects upon other minds. But in the intervals of inspiration, and they may be frequent without being durable, a poet becomes a man, and is abandoned to the sudden reflux of the influences under which others habitually live. But as he is more delicately organized than other men, and sensible to pain and pleasure, both his own and that of others, in a degree unknown to them, he will avoid the one and pursue the other with an ardour proportioned to this difference. And he renders himself obnoxious to calumny, when he neglects to observe the circumstances under which these objects of universal pursuit and flight have disguised themselves in one another's garments.

But there is nothing necessarily evil in this error, and thus cruelty, envy, revenge, avarice, and the passions purely evil, have never formed any portion of the popular imputations on the lives of poets.

I have thought it most favourable to the cause of truth to set down these remarks according to the order in which they were suggested to my mind by a consideration of the subject itself, instead of following that of the treatise that excited me to make them public. Thus although devoid of the formality of a polemical reply; if the view they contain be just, they will be found to involve a refutation of the Four Ages of Poetry, so far at least as regards the first division of the subject. I can readily conjecture what should have moved the gall of the learned and intelligent author of that paper; I confess myself like him unwilling to be stunned by the *Theseids* of the hoarse Codri⁸ of the day. Bavius and Mævius⁹ undoubtedly are, as they ever were, insufferable persons. But it belongs to a philosophical critic to distinguish rather than confound.

The first part of these remarks has related to Poetry in its elements and principles; and it has been shewn, as well as the narrow limits assigned them would permit, that what is called poetry, in a restricted sense, has a common source with all other forms of order and of beauty according to which the materials of human life are susceptible of being arranged, and which is poetry in an universal sense.

The second part will have for its object an application of these principles to the present state of the cultivation of Poetry, and a defence of the attempt to idealize the modern forms of manners and opinion, and compel them into a subordination to the imaginative and creative faculty. For the literature of England, an energetic development of which has ever preceded or accompanied a great and free development of the national will, has arisen as it were from a new birth. In spite of the low-thoughted envy which would under-

8. Juvenal begins *Satire* 1 by complaining about the *Theseid* (i.e., an epic poem on Theseus, the chief hero of Attica in ancient Greek legend) of "hoarse Codrus." Roman poets applied the name Codrus to bad writers fond of reading their work

aloud.

9. Mediocre Latin poets (1st c. B.C.E.) satirized by Virgil (*Eclogue* 3); Horace's *Epode* 10 is an attack on Mævius.

value contemporary merit, our own will be a memorable age in intellectual achievements, and we live among such philosophers and poets as surpass beyond comparison any who have appeared since the last national struggle for civil and religious liberty.¹ The most unfailing herald, companion, and follower of the awakening of a great people to work a beneficial change in opinion or institution, is Poetry. At such periods there is an accumulation of the power of communicating and receiving intense and impassioned conceptions respecting man and nature. The persons in whom this power resides, may often, as far as regards many portions of their nature, have little apparent correspondence with that spirit of good of which they are the ministers. But even whilst they deny and abjure, they are yet compelled to serve, the Power which is seated upon the throne of their own soul. It is impossible to read the compositions of the most celebrated writers of the present day without being startled with the electric life which burns within their words. They measure the circumference and sound the depths of human nature with a comprehensive and all-penetrating spirit, and they are themselves perhaps the most sincerely astonished at its manifestations, for it is less their spirit than the spirit of the age. Poets are the hierophants² of an unapprehended inspiration, the mirrors of the gigantic shadows which futurity casts upon the present, the words which express what they understand not; the trumpets which sing to battle, and feel not what they inspire: the influence which is moved not, but moves. Poets are the unacknowledged legislators of the World.

RALPH WALDO EMERSON

1803–1882

“Emerson is God,” declared the literary theorist HAROLD BLOOM in an interview in 1993, in perhaps the most extravagant testimony yet to Emerson’s impact on American literature and culture. Lecturer, poet, and essayist, and the leading exponent of New England Transcendentalism, Emerson’s advocacy of self-reliance and nonconformity inspired American writers of his own time—notably, Henry David Thoreau, Margaret Fuller, Emily Dickinson, and Walt Whitman—and later. Emerson was significant as well for English and European intellectuals and philosophers, including George Eliot (1819–1880) and FRIEDRICH NIETZSCHE (1844–1900), and for the American philosophers William James (1842–1910) and John Dewey (1859–1952). A radical thinker and a shaper of striking sentences and aphorisms, Emerson made claims for himself (and, by extension, for readers) as daring as Bloom makes for Emerson. “The simplest person who in his integrity worships God,” Emerson affirms in his essay “The Over-Soul” (1841), “becomes God.”

In *Nature* (1836), the lecture “The American Scholar” (1837), the address before the Harvard Divinity School (1838), and two volumes of *Essays* (1841, 1844), Emerson

announced and articulated nearly all of the central themes of Transcendentalism and, at the same time, subjected them to critique. He encouraged readers and audiences to feel the exaltation of their highest potential, to trust instinct and intuition (the signs of God's presence in persons), and to perceive Nature as a rich realm of truths more profound than any that human social orders made available. He expressed these themes in provocative, allusive prose, which proceeds with a rich if frequently discontinuous rhythm. At the same time, with regular self-questioning he maintained that there was no Transcendentalist party and no "pure" Transcendentalism at all.

Emerson attended the Boston Latin School and Harvard College (1817–21). While at Harvard, he began keeping a journal, and its stock of allusions, commentaries on his reading, and reflections on persons and events became the "Savings Bank"—annotated, cross-referenced, indexed—for his lectures, essays, and books. After graduation, Emerson taught school and then entered the Harvard Divinity School to prepare for the ministry, taking up a position at Boston's Second Unitarian Church in 1829. In September 1829 Emerson married the seventeen-year-old Ellen Louisa Tucker, but her health was poor, and she died from tuberculosis in February 1831.

Biographers have suggested that Emerson's grief led him to question his Unitarian faith, but his doubts about conventional Christian beliefs and his "antiquated" profession had been present in his journals and sermons for years. Later, he remarked that if his teachers at the Harvard Divinity School had been aware of his true thoughts and feelings, they would not have allowed him to graduate. In October 1832, saying he could no longer administer the sacrament of the Lord's Supper, Emerson resigned as minister of his Boston church. He explained, "It is my desire to do nothing which I cannot do with my whole heart."

In December 1832, Emerson traveled to Europe, and during his nine months abroad he met WILLIAM WORDSWORTH, SAMUEL TAYLOR COLERIDGE, and the Scottish-born essayist and historian Thomas Carlyle, with whom he corresponded for half a century. After returning to the United States, he lectured on natural history, biography, and history; settled in Concord, Massachusetts; remarried (Lydia Jackson in 1835); and worked on his first book, *Nature*, published anonymously (and at his own expense) in September 1836. Other important texts of this decade include "The American Scholar" and the Divinity School address, in which Emerson attacked religious tradition, doctrine, and the ministry for denying men and women the possibility for authentic self-discovery and religious fulfillment. "I think no man can go with his thoughts about him into one of our churches," he contended in the address, "without feeling that what hold the public worship had on men is gone, or going."

In the 1830s Emerson said, "I am a poet. . . . That is my nature & vocation," and he produced a number of difficult, gnomic poems that were collected in *Poems* (1847). But his real distinction lay in essays, journals, and books of cultural criticism and philosophy. Most scholars now agree that Emerson's best work is in the *Essays*, pointing especially to "History," "Self-Reliance," "The Over-Soul," "Circles," "The Poet," and "Experience." He followed the lectures and essays of the 1830s and 1840s with a series of books: *Representative Men* (1850), which contains studies of PLATO, Goethe, and others; *English Traits* (1856), a shrewd work of social criticism in which Emerson examines English life, tradition, and culture; and *The Conduct of Life* (1860), based on lectures he had presented in 1851 and including three major philosophical pieces—"Fate," "Power," and "Illusions."

Emerson played an active role in the meetings of the Transcendental Club, which the Unitarian clergyman F. H. Hedge organized in 1836 for the "exchange of thought among those interested in the new views in philosophy, theology, and literature." Like the other Transcendentalists, Emerson believed that all of creation is one, that men and women are inherently good, that intuition is the source of truth,

and that individual perception illuminates and structures the world. "Nothing is at last sacred but the integrity of your own mind," Emerson professed, and this view led him to criticize the traditions, beliefs, and practices of the past that restricted the intellectual and moral development of persons in the present. God dwells within, according to Emerson, and thus each person should, he said early and late, establish an "original relation to the universe."

In his *Essay Concerning Human Understanding* (1690), John Locke had argued that the senses produce a register of impressions of the physical world on the blank tablet (the *tabula rasa*) of the mind; the understanding transforms them into abstractions and complex ideas. Emerson disagreed. Drawing on the writings of IMMANUEL KANT and, even more, Coleridge (the *Biographia Literaria*, 1817, and the religious and philosophical treatise *Aids to Reflection*, 1825), Emerson made "understanding"—the process by which the mind gathers the evidence of the senses and converts it into knowledge of the external world—subordinate to "reason," which he defined as the intuitive perception of truth. In *Nature*, Emerson affirmed, "I become a transparent eyeball; I am nothing; the currents of the Universal Being circulate through me; I am part or particle of God."

Emerson's reference to "Universal Being" points to the American version of Neoplatonism that he espoused. Each person must seek to regain communion with "Universal Being" or (Emerson's terms vary) Nature or Spirit. When it is lost, human beings view themselves as (and behave as if they were) isolated, powerless, alienated, corrupt. When it is restored, they sense their wholeness and enjoy a thrilling power and independence. This ecstatic feeling, Emerson suggests, is precious and precarious, astonishing and invigorating yet difficult for human beings to sustain. His philosophy is one of constant striving, of working to perfect and empower the self. Those (including HENRY JAMES) who take it for easy optimism are mistaken. In "Fate," Emerson emphasizes that "Nature is no sentimentalist,—does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman, but swallows your ship like a grain of dust." In "The Poet," he pictures the imaginative seer as liberating us from ordinary life, which is characterized as miserable and prisonlike.

Our selections demonstrate Emerson's centrality for literary theory, philosophy (especially American pragmatism), and cultural criticism. The first, an excerpt from "The American Scholar," presents Emerson's mobile, and somewhat unnerving, account of the reading process. Truth, he suggests, does not lie in great books waiting for readers to extract it. "Creative reading," the right kind of reading, is instead the result of the truth that readers bring with them—a claim that would reemerge in the reader-response criticism of the 1970s and 1980s (without crediting Emerson). Reading should inspire us, Emerson states; but the genuine scholar, he implies, is occupied with reading only when there is nothing better to do. He is more concerned with writing, arguing that "each age must write its own books. . . . The books of an older period will not fit this." Emerson calls for truth-seekers—persons who look within themselves rather than in books for truth and who bear witness to their spiritual discoveries in books of their own.

As Emerson makes clear in "The Poet" (1844), our second selection, the writer reports passionately on personal experiences that will stimulate readers embarked on their own spiritual and intellectual journeys. All experience is meaningful; no "sensual fact" (that is, nothing that is perceived by the senses) lacks spiritual significance. The special office of the "poet" (i.e., the imaginative writer) is to be alert to the meanings that saturate all of existence; all persons have the potential to be poets (which is one way in which the poet is "representative"), but those who actually become poet-geniuses are "sovereign": they are potentates, emperors, liberating gods. Though Emerson found PERCY BYSSHE SHELLEY "wholly unaffecting," his grand vision of the poet's powers is akin to Shelley's in *A Defence of Poetry* (written

1821; see above). In Emerson's view, the more faithful the poet is to Nature, to Nature's harmonies, the better will be his or her art. Overall, he pays little attention to craft, style, technique. For Emerson, a poem is defined by a thought that is "passionately alive," not by its pattern of rhyme or meter or structure; he explicitly puts content before form.

Through most of the essay, Emerson speaks in universal terms; but toward its end, his commitment to literary and cultural nationalism becomes clear. He beckons for American poets who will take as a basis for their verse the facts, the experiences, and the sweep of the land itself. Though he honors the great writers of the past and of other lands, he emphasizes that present-day citizens of the new nation cannot find inspiration in them. He admits, however, "I look in vain for the poet whom I describe."

Emerson appeals for a literature that is American and modern, and at moments he anticipates major twentieth-century theorists and practitioners of literary modernism. T. S. ELIOT and Ezra Pound, for example, would seem to share Emerson's belief that the poet makes things new: "The poet, by an ulterior intellectual perception, gives them a power which makes their old use forgotten, and puts eyes and a tongue into every dumb and inanimate object." But the Romantic cast of Emerson's arguments ultimately made him more a foe than a friend for the modernists, with important exceptions (such as Gertrude Stein and Robert Frost). Eliot, in particularly strong terms, rejected the concept of the poet as inspired sage or spiritual seer and reaffirmed the sobering significance of tradition (see "Tradition and the Individual Talent," 1919; below). The immersion in the literature of the past that Eliot believed necessary for poets in order for them to find the stimulus for literary work of their own would have struck Emerson as a postponement of the individual's direct endeavor to hearken to the voice within, to the inner light (a phrase that Eliot despised).

For Emerson, what counts is who the poet is, which suggests why as a reader he preferred biography and history to poetry and fiction. He valued books that recounted a gifted individual's quest for freedom, power, and great achievement. Writing in his journal on January 10, 1832, he noted: "The difficulty is that we do not make a world of our own but fall into institutions already made & have to accommodate ourselves to them to be useful at all." Harold Bloom exaggerated when he called Emerson "God," but some critics have proposed, without exaggeration, that there was no truly American writing before Emerson, and that his presence has influenced everything written since.

"The Poet" Keywords: Aesthetics, Nationhood, Poetry, Religion, Romantic Theory, Subjectivity, Vernacular Language

*From The American Scholar*¹

* * *

The next great influence into the spirit of the scholar is the mind of the Past,—in whatever form, whether of literature, of art, of institutions, that mind is inscribed. Books are the best type of the influence of the past, and

1. First published as a pamphlet, with the title *An Oration, Delivered before the Phi Beta Society, at Cambridge, August 31, 1837*. Emerson chose the

title "The American Scholar" when it was republished in *Nature, Addresses, and Lectures* (1849).

perhaps we shall get at the truth,—learn the amount of this influence more conveniently,—by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him life; it went out from him truth. It came to him short-lived actions; it went out from him immortal thoughts. It came to him business; it went from him poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation, the act of thought, is transferred to the record. The poet chanting was felt to be a divine man: henceforth the chant is divine also. The writer was a just and wise spirit: henceforward it is settled the book is perfect; as love of the hero corrupts into worship of his statue. Instantly the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking; by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon,² have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate³ with the world and the soul. Hence the restorers of readings, the emendators,⁴ the bibliomaniacs of all degrees.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end which all means go to effect? They are for nothing but to inspire. I had better never see a book than to be warped by its attraction clean out of my own orbit, and made a satellite instead of a system. The one thing in the world, of value, is the active soul. This every man is entitled to; this every man contains within him, although in almost all men

2. Sir Francis Bacon (1561–1626), English statesman and writer, whose works include *The Advancement of Learning* (1605). Cicero (106–43 B.C.E.), Roman orator and statesman. John Locke (1632–1704), English philosopher, author of *An*

Essay Concerning Human Understanding (1690).

3. In prerevolutionary France, the common people (the first estate or political order was the clergy, the second the nobility).

4. Editors of texts.

obstructed and as yet unborn. The soul active sees absolute truth and utters truth, or creates. In this action it is genius; not the privilege of here and there a favorite, but the sound estate of every man. In its essence it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,—let us hold by this. They pin me down. They look backward and not forward. But genius looks forward: the eyes of man are set in his forehead, not in his hindhead: man hopes: genius creates. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;—cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery, and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over-influence. The literature of every nation bears me witness. The English dramatic poets have Shakspearized now for two hundred years.

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must,—when the sun is hid and the stars withdraw their shining,—we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig tree, looking on a fig tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us with the conviction that one nature wrote and the same reads. We read the verses of one of the great English poets, of Chaucer, of Marvell, of Dryden,⁵ with the most modern joy,—with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had well-nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some preëstablished harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know, that as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed who had almost no other information than by the printed page. I only would say that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the

5. JOHN DRYDEN (1631–1700), poet, dramatist, and critic. Geoffrey Chaucer (ca. 1343–1400), author of *The Canterbury Tales*. Andrew Marvell (1621–1678), poet and satirist.

wealth of the Indies, must carry out the wealth of the Indies."⁶ There is then creative reading as well as creative writing. When the mind is braced by labor and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato⁷ or Shakspeare, only that least part,—only the authentic utterances of the oracle;—all the rest he rejects, were it never so many times Plato's and Shakspeare's.

Of course there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,—to teach elements. But they can only highly serve us when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and by the concentrated fires, set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns and pecuniary foundations, though of towns of gold, can never countervail the least sentence or syllable of wit. Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

* * *

1837, 1849

From The Poet

Those who are esteemed umpires of taste are often persons who have acquired some knowledge of admired pictures or sculptures, and have an inclination for whatever is elegant; but if you inquire whether they are beautiful souls, and whether their own acts are like fair pictures, you learn that they are selfish and sensual. Their cultivation is local, as if you should rub a log of dry wood in one spot to produce fire, all the rest remaining cold. Their knowledge of the fine arts is some study of rules and particulars, or some limited judgment of color or form, which is exercised for amusement or for show. It is a proof of the shallowness of the doctrine of beauty as it lies in the minds of our amateurs, that men seem to have lost the perception of the instant dependence of form upon soul. There is no doctrine of forms in our philosophy. We were put into our bodies, as fire is put into a pan to be carried about; but there is no accurate adjustment between the spirit and the organ, much less is the latter the germination of the former. So in regard to other forms, the intellectual men do not believe in any essential dependence of the material world on thought and volition. Theologians think it a pretty air-castle to talk of the spiritual meaning of a ship or a cloud, of a city or a contract, but they prefer to come again to the solid ground of

6. Emerson likely found this proverb in James Boswell's *Life of Samuel Johnson*, LL.D. (1791), in the conversation for April 17, 1778.

7. On the Greek philosopher PLATO (ca. 427—ca. 347 B.C.E.), see above.

historical evidence; and even the poets are contented with a civil and conformed manner of living, and to write poems from the fancy, at a safe distance from their own experience. But the highest minds of the world have never ceased to explore the double meaning, or shall I say the quadruple or the centuple or much more manifold meaning, of every sensuous fact; Orpheus, Empedocles, Heraclitus, Plato, Plutarch, Dante, Swedenborg,¹ and the masters of sculpture, picture and poetry. For we are not pans and barrows,² nor even porters of the fire and torch-bearers, but children of the fire,³ made of it, and only the same divinity transmuted and at two or three removes, when we know least about it. And this hidden truth, that the fountains whence all this river of Time and its creatures floweth are intrinsically ideal and beautiful, draws us to the consideration of the nature and functions of the Poet, or the man of Beauty; to the means and materials he uses, and to the general aspect of the art in the present time.

The breadth of the problem is great, for the poet is representative. He stands among partial men for the complete man, and apprises us not of his wealth, but of the common wealth. The young man reveres men of genius, because, to speak truly, they are more himself than he is. They receive of the soul as he also receives, but they more. Nature enhances her beauty, to the eye of loving men, from their belief that the poet is beholding her shows at the same time. He is isolated among his contemporaries by truth and by his art, but with this consolation in his pursuits, that they will draw all men sooner or later. For all men live by truth and stand in need of expression. In love, in art, in avarice, in politics, in labor, in games, we study to utter our painful secret. The man is only half himself, the other half is his expression.

Notwithstanding this necessity to be published, adequate expression is rare. I know not how it is that we need an interpreter, but the great majority of men seem to be minors, who have not yet come into possession of their own, or mutes, who cannot report the conversation they have had with nature. There is no man who does not anticipate a supersensual utility in the sun and stars, earth and water. These stand and wait⁴ to render him a peculiar service. But there is some obstruction or some excess of phlegm⁵ in our constitution, which does not suffer them to yield the due effect. Too feeble fall the impressions of nature on us to make us artists. Every touch should thrill. Every man should be so much an artist that he could report in conversation what had befallen him. Yet, in our experience, the rays or appulses⁶ have sufficient force to arrive at the senses, but not enough to reach the quick and compel the reproduction of themselves in speech. The poet is the person in whom these powers are in balance, the man without impediment, who sees and handles that which others dream of, traverses the whole scale of experience, and is representative of man, in virtue of being the largest power to receive and to impart.

1. Emanuel Swedenborg (1688–1772), Swedish mystic and scientist. Orpheus: legendary Greek poet to whom hymns and fragments were attributed. Empedocles (ca. 493–ca. 433 B.C.E.), Heraclitus (active ca. 500 B.C.E.), and PLATO (ca. 427–ca. 347 B.C.E.): Greek philosophers. Plutarch (ca. 50–ca. 120 C.E.), Greek biographer and historian. DANTE ALIGHIERI (1265–1321), Italian poet, author of *The Divine Comedy*.
2. Carts for carrying a load. "Pans": containers,

receptacles (e.g., for cooking).

3. A phrase derived from Heraclitus, who used fire to symbolize the process of change.

4. See John Milton, "When I Consider How My Light Is Spent" (written ca. 1652; published 1673): "They also serve who only stand and wait" (line 14).

5. One of the four "humors" of early physiology; said to cause sluggishness and lethargy.

6. Energetic motions toward something.

For the Universe has three children, born at one time, which reappear under different names in every system of thought, whether they be called cause, operation and effect; or, more poetically, Jove, Pluto, Neptune;⁷ or, theologically, the Father, the Spirit and the Son; but which we will call here the Knower, the Doer and the Sayer. These stand respectively for the love of truth, for the love of good, and for the love of beauty. These three are equal. Each is that which he is, essentially, so that he cannot be surmounted or analyzed, and each of these three has the power of the others latent in him and his own, patent.

The poet is the sayer, the namer, and represents beauty. He is a sovereign, and stands on the centre. For the world is not painted or adorned, but is from the beginning beautiful; and God has not made some beautiful things, but Beauty is the creator of the universe. Therefore the poet is not any permissive potentate, but is emperor in his own right. Criticism is infested with a cant of materialism, which assumes that manual skill and activity is the first merit of all men, and disparages such as say and do not, overlooking the fact that some men, namely poets, are natural sayers, sent into the world to the end of expression, and confounds them with those whose province is action but who quit it to imitate the sayers. But Homer's words are as costly and admirable to Homer as Agamemnon's victories are to Agamemnon.⁸ The poet does not wait for the hero or the sage, but, as they act and think primarily, so he writes primarily what will and must be spoken, reckoning the others, though primaries also, yet, in respect to him, secondaries and servants; as sitters or models in the studio of a painter, or as assistants who bring building-materials to an architect.

For poetry was all written before time was, and whenever we are so finely organized that we can penetrate into that region where the air is music, we hear those primal warblings and attempt to write them down, but we lose ever and anon a word or a verse and substitute something of our own, and thus miswrite the poem. The men of more delicate ear write down these cadences more faithfully, and these transcripts, though imperfect, become the songs of the nations. For nature is as truly beautiful as it is good, or as it is reasonable, and must as much appear as it must be done, or be known. Words and deeds are quite indifferent modes of the divine energy. Words are also actions, and actions are a kind of words.

The sign and credentials of the poet are that he announces that which no man foretold. He is the true and only doctor;⁹ he knows and tells; he is the only teller of news, for he was present and privy to the appearance which he describes. He is a beholder of ideas and an utterer of the necessary and causal. For we do not speak now of men of poetical talents, or of industry and skill in metre, but of the true poet. I took part in a conversation the other day concerning a recent writer of lyrics,¹ a man of subtle mind, whose head appeared to be a music-box of delicate tunes and rhythms, and whose skill and command of language we could not sufficiently praise. But when the question arose whether he was not only a lyrist but a poet, we were obliged to confess that he is plainly a contemporary, not an eternal man. He

7. Three Roman gods: king of the gods (Jove), god of the dead and ruler of the underworld (Pluto), and god of the sea (Neptune).

8. Commander of the Greek army in Homer's

epic poem the *Iliad* (ca. 8th c. B.C.E.).

9. Teacher.

1. Perhaps the English poet Alfred, Lord Tennyson (1809–1892).

does not stand out of our low limitations, like a Chimborazo under the line,² running up from a torrid base through all the climates of the globe, with belts of the herbage of every latitude on its high and mottled sides; but this genius is the landscape-garden of a modern house, adorned with fountains and statues, with well-bred men and women standing and sitting in the walks and terraces. We hear, through all the varied music, the ground-tone of conventional life. Our poets are men of talents who sing, and not the children of music. The argument is secondary, the finish of the verses is primary.

For it is not metres, but a metre-making argument that makes a poem,—a thought so passionate and alive that like the spirit of a plant or an animal it has an architecture of its own, and adorns nature with a new thing. The thought and the form are equal in the order of time, but in the order of genesis the thought is prior to the form. The poet has a new thought; he has a whole new experience to unfold; he will tell us how it was with him, and all men will be the richer in his fortune. For the experience of each new age requires a new confession, and the world seems always waiting for its poet. I remember when I was young how much I was moved one morning by tidings that genius had appeared in a youth who sat near me at table. He had left his work and gone rambling none knew whither, and had written hundreds of lines, but could not tell whether that which was in him was therein told; he could tell nothing but that all was changed,—man, beast, heaven, earth and sea. How gladly we listened! how credulous! Society seemed to be compromised. We sat in the aurora of a sunrise which was to put out all the stars. Boston seemed to be at twice the distance it had the night before, or was much farther than that. Rome,—what was Rome? Plutarch and Shakspeare were in the yellow leaf,³ and Homer no more should be heard of. It is much to know that poetry has been written this very day, under this very roof, by your side. What! that wonderful spirit has not expired! These stony moments are still sparkling and animated! I had fancied that the oracles were all silent,⁴ and nature had spent her fires; and behold! all night, from every pore, these fine auroras have been streaming. Every one has some interest in the advent of the poet, and no one knows how much it may concern him. We know that the secret of the world is profound, but who or what shall be our interpreter, we know not. A mountain ramble, a new style of face, a new person, may put the key into our hands. Of course the value of genius to us is in the veracity of its report. Talent may frolic and juggle; genius realizes and adds. Mankind in good earnest have availed so far in understanding themselves and their work, that the foremost watchman on the peak announces his news. It is the truest word ever spoken, and the phrase will be the fittest, most musical, and the unerring voice of the world for that time.

All that we call sacred history attests that the birth of a poet is the principal event in chronology. Man, never so often deceived, still watches for the arrival of a brother who can hold him steady to a truth until he has made it his own. With what joy I begin to read a poem which I confide in as an inspiration! And now my chains are to be broken; I shall mount above these

2. The equator. Chimborazo: a mountain in Ecuador, in the Andes range.

3. See the words of Macbeth, in *Macbeth* (ca. 1606), 5.3.23–24; “My way of life / Is fall’n into the sere, the yellow leaf.” See also George Gordon, Lord Byron, “On This Day I Complete My

Thirty-sixth Year” (1824): “My days are in the yellow leaf” (line 5).

4. See John Milton, “On the Morning of Christ’s Nativity” (1645): “The oracles are dumb” (line 173).

clouds and opaque airs in which I live,—opaque, though they seem transparent,—and from the heaven of truth I shall see and comprehend my relations. That will reconcile me to life and renovate nature, to see trifles animated by a tendency, and to know what I am doing. Life will no more be a noise; now I shall see men and women, and know the signs by which they may be discerned from fools and satans. This day shall be better than my birthday: then I became an animal; now I am invited into the science of the real. Such is the hope, but the fruition is postponed. Oftener it falls that this winged man, who will carry me into the heaven, whirls me into mists, then leaps and frisks about with me as it were from cloud to cloud, still affirming that he is bound heavenward; and I, being myself a novice, am slow in perceiving that he does not know the way into the heavens, and is merely bent that I should admire his skill to rise like a fowl or a flying fish, a little way from the ground or the water; but the all-piercing, all-feeding and ocular air of heaven that man shall never inhabit. I tumble down again soon into my old nooks, and lead the life of exaggerations as before, and have lost my faith in the possibility of any guide who can lead me thither where I would be.

But, leaving these victims of vanity, let us, with new hope, observe how nature, by worthier impulses, has insured the poet's fidelity to his office of announcement and affirming, namely by the beauty of things, which becomes a new and higher beauty when expressed. Nature offers all her creatures to him as a picture-language. Being used as a type, a second wonderful value appears in the object, far better than its old value; as the carpenter's stretched cord, if you hold your ear close enough, is musical in the breeze. "Things more excellent than every image," says Iamblichus,⁵ "are expressed through images." Things admit of being used as symbols because nature is a symbol, in the whole, and in every part. Every line we can draw in the sand has expression; and there is no body without its spirit or genius. All form is an effect of character; all condition, of the quality of the life; all harmony, of health; and for this reason a perception of beauty should be sympathetic, or proper only to the good. The beautiful rests on the foundations of the necessary.

The soul makes the body, as the wise Spenser teaches:—

"So every spirit, as it is more pure,
And hath in it the more of heavenly light,
So it the fairer body doth procure
To habit in, and it more fairly dight,
With cheerful grace and amiable sight.
For, of the soul, the body form doth take,
For soul is form, and doth the body make."⁶

Here we find ourselves suddenly not in a critical speculation but in a holy place, and should go very warily and reverently. We stand before the secret of the world, there where Being passes into Appearance and Unity into Variety.

The Universe is the externization of the soul. Wherever the life is, that bursts into appearance around it. Our science is sensual, and therefore superficial. The earth and the heavenly bodies, physics and chemistry, we

5. Iamblichus (ca. 250—ca. 325 C.E.), Neoplatonic philosopher of Syria; Emerson read his *Life of Pythagoras*.

6. "An Hymne in Honour of Beautie" (1596), lines 127–33, by the English poet Edmund Spenser (1552–1599). "Dight": clothed.

sensually treat, as if they were self-existent; but these are the retinue of that Being we have. "The mighty heaven," said Proclus,⁷ "exhibits, in its transfigurations, clear images of the splendor of intellectual perceptions; being moved in conjunction with the unapparent periods of intellectual natures." Therefore science always goes abreast with the just elevation of the man, keeping step with religion and metaphysics; or the state of science is an index of our self-knowledge. Since every thing in nature answers to a moral power, if any phenomenon remains brute and dark it is because the corresponding faculty in the observer is not yet active.

No wonder then, if these waters be so deep, that we hover over them with a religious regard. The beauty of the fable proves the importance of the sense; to the poet, and to all others; or, if you please, every man is so far a poet as to be susceptible of these enchantments of nature; for all men have the thoughts whereof the universe is the celebration. I find that the fascination resides in the symbol. Who loves nature? Who does not? Is it only poets, and men of leisure and cultivation, who live with her? No; but also hunters, farmers, grooms and butchers, though they express their affection in their choice of life and not in their choice of words. The writer wonders what the coachman or the hunter values in riding, in horses and dogs. It is not superficial qualities. When you talk with him he holds these at as slight a rate as you. His worship is sympathetic; he has no definitions, but he is commanded in nature by the living power which he feels to be there present. No imitation or playing of these things would content him; he loves the earnest of the north wind, of rain, of stone and wood and iron. A beauty not explicable is dearer than a beauty which we can see to the end of. It is nature the symbol, nature certifying the supernatural, body overflowed by life which he worships with coarse but sincere rites.

The inwardness and mystery of this attachment drive men of every class to the use of emblems. The schools of poets and philosophers are not more intoxicated with their symbols than the populace with theirs. In our political parties, compute the power of badges and emblems. See the great ball which they roll from Baltimore to Bunker Hill!⁸ In the political processions, Lowell goes in a loom, and Lynn in a shoe, and Salem in a ship. Witness the cider-barrel, the log-cabin, the hickory-stick, the palmetto,⁹ and all the cognizances of party. See the power of national emblems. Some stars, lilies, leopards, a crescent, a lion, an eagle, or other figure which came into credit God knows how, on an old rag of bunting, blowing in the wind on a fort at the ends of the earth, shall make the blood tingle under the rudest or the most conventional exterior. The people fancy they hate poetry, and they are all poets and mystics!

Beyond this universality of the symbolic language, we are apprised of the divineness of this superior use of things, whereby the world is a temple whose walls are covered with emblems, pictures and commandments of the

7. Greek Neoplatonic philosopher (412–485 C.E.).

8. In the Charlestown section of Boston. This stunt was undertaken by the Whig Party for their candidate William Henry Harrison during the presidential campaign in 1840 to illustrate that year's slogan, "Keep the ball a-rolling." Emerson then associates each Massachusetts town with its major product.

9. Emerson names symbols closely associated with politicians of the 1830s: the cider barrel and log cabin, with William Henry Harrison; the hickory stick, with "Old Hickory," Andrew Jackson (Democratic president, 1829–37); and the palmetto, with John C. Calhoun (Jackson's vice president), who was from South Carolina (the "palmetto state").

Deity,—in this, that there is no fact in nature which does not carry the whole sense of nature; and the distinctions which we make in events and in affairs, of low and high, honest and base, disappear when nature is used as a symbol. Thought makes everything fit for use. The vocabulary of an omniscient man would embrace words and images excluded from polite conversation. What would be base, or even obscene, to the obscene, becomes illustrious, spoken in a new connection of thought. The piety of the Hebrew prophets purges their grossness.¹ The circumcision is an example of the power of poetry to raise the low and offensive. Small and mean things serve as well as great symbols. The meaner the type by which a law is expressed, the more pungent it is, and the more lasting in the memories of men; just as we choose the smallest box or case in which any needful utensil can be carried. Bare lists of words are found suggestive to an imaginative and excited mind as it is related of Lord Chatham that he was accustomed to read in Bailey's² Dictionary when he was preparing to speak in Parliament. The poorest experience is rich enough for all the purposes of expressing thought. Why covet a knowledge of new facts? Day and night, house and garden, a few books, a few actions, serve us as well as would all trades and all spectacles. We are far from having exhausted the significance of the few symbols we use. We can come to use them yet with a terrible simplicity. It does not need that a poem should be long. Every word was once a poem. Every new relation is a new word. Also we use defects and deformities to a sacred purpose, so expressing our sense that the evils of the world are such only to the evil eye. In the old mythology, mythologists observe, defects are ascribed to divine natures, as lameness to Vulcan, blindness to Cupid,³ and the like,—to signify exuberances.

For as it is dislocation and detachment from the life of God that makes things ugly, the poet, who re-attaches things to nature and the Whole,—re-attaching even artificial things and violation of nature, to nature, by a deeper insight,—disposes very easily of the most disagreeable facts. Readers of poetry see the factory-village and the railway, and fancy that the poetry of the landscape is broken up by these; for these works of art are not yet consecrated in their reading; but the poet sees them fall within the great Order not less than the beehive or the spider's geometrical web. Nature adopts them very fast into her vital circles, and the gliding train of cars she loves like her own. Besides, in a centred mind, it signifies nothing how many mechanical inventions you exhibit. Though you add millions, and never so surprising, the fact of mechanics has not gained a grain's weight. The spiritual fact remains unalterable, by many or by few particulars; as no mountain is of any appreciable height to break the curve of the sphere. A shrewd country-boy goes to the city for the first time, and the complacent citizen is not satisfied with his little wonder. It is not that he does not see all the fine houses and know that he never saw such before, but he disposes of them as easily as the poet finds place for the railway. The chief value of the new fact is to enhance the great and constant fact of Life,

1. Emerson may have in mind such passages as Ezekiel's comparison of Jerusalem to a harlot (15) and his description of the city's sins (22).

2. Nathan (or Nathaniel) Bailey (d. 1742), lexicographer and philologist, author of *An Univer-*

sal Etymological English Dictionary (1721). Lord Chatham, William Pitt (1708–1778), English statesman and orator.

3. The Roman god of love, son of Venus. Vulcan: the Roman god of fire and metalworking.

which can dwarf any and every circumstance, and to which the belt of wampum and the commerce of America are alike.

The world being thus put under the mind for verb and noun, the poet is he who can articulate it. For though life is great, and fascinates and absorbs; and though all men are intelligent of⁴ the symbols through which it is named; yet they cannot originally use them. We are symbols and inhabit symbols; workmen, work, and tools, words and things, birth and death, all are emblems; but we sympathize with the symbols, and being infatuated with the economical uses of things, we do not know that they are thoughts. The poet, by an ulterior intellectual perception, gives them a power which makes their old use forgotten, and puts eyes and a tongue into every dumb and inanimate object. He perceives the independence of the thought on the symbol, the stability of the thought, the accidenty and fugacity⁵ of the symbol. As the eyes of Lyncaeus⁶ were said to see through the earth, so the poet turns the world to glass, and shows us all things in their right series and procession. For through that better perception he stands one step nearer to things, and sees the flowing or metamorphosis; perceives that thought is multiform; that within the form of every creature is a force impelling it to ascend into a higher form; and following with his eyes the life, uses the forms which express that life, and so his speech flows with the flowing of nature. All the facts of the animal economy, sex, nutriment, gestation, birth, growth, are symbols of the passage of the world into the soul of man, to suffer there a change and reappear a new and higher fact. He uses forms according to the life, and not according to the form. This is true science. The poet alone knows astronomy, chemistry, vegetation and animation, for he does not stop at these facts, but employs them as signs. He knows why the plain or meadow of space was strown with these flowers we call suns and moons and stars; why the great deep is adorned with animals, with men, and gods; for in every word he speaks he rides on them as the horses of thought.

By virtue of this science the poet is the Namer or Language-maker, naming things sometimes after their appearance, sometimes after their essence, and giving to every one its own name and not another's, thereby rejoicing the intellect, which delights in detachment or boundary. The poets made all the words, and therefore language is the archives of history, and, if we must say it, a sort of tomb of the muses. For though the origin of most of our words is forgotten, each word was at first a stroke of genius, and obtained currency because for the moment it symbolized the world to the first speaker and to the hearer. The etymologist finds the deadeast word to have been once a brilliant picture. Language is fossil poetry. As the limestone of the continent consists of infinite masses of the shells of animalcules, so language is made up of images or tropes, which now, in their secondary use, have long ceased to remind us of their poetic origin. But the poet names the thing because he sees it, or comes one step nearer to it than any other. This expression or naming is not art, but a second nature, grown out of the first, as a leaf out of a tree. What we call nature is a certain self-regulated motion or change; and nature does all things by her own hands,

4. Acquainted with, versed in.

5. Transience, lack of enduring qualities. "Accidency": accidental or chance character.

6. In Greek mythology, the seaman with the

keenest eyesight among those who sailed with Jason in quest of the Golden Fleece. See Apollonius of Rhodes (3d c. B.C.E.), *Argonautica* 1.155.

and does not leave another to baptize her but baptizes herself; and this through the metamorphosis again. I remember that a certain poet⁷ described it to me thus:—

Genius is the activity which repairs the decays of things, whether wholly or partly of a material and finite kind. Nature, through all her kingdoms, insures herself. Nobody cares for planting the poor fungus; so she shakes down from the gills of one agaric countless spores, any one of which, being preserved, transmits new billions of spores to-morrow or next day. The new agaric of this hour has a chance which the old one had not. This atom of seed is thrown into a new place, not subject to the accidents which destroyed its parent two rods off. She makes a man; and having brought him to ripe age, she will no longer run the risk of losing this wonder at a blow, but she detaches from him a new self, that the kind may be safe from accidents to which the individual is exposed. So when the soul of the poet has come to ripeness of thought, she detaches and sends away from it its poems or songs,—a fearless, sleepless, deathless progeny, which is not exposed to the accidents of the weary kingdom of time; a fearless, vivacious offspring, clad with wings (such was the virtue of the soul out of which they came) which carry them fast and far, and infix them irrecoverably into the hearts of men. These wings are the beauty of the poet's soul. The songs, thus flying immortal from their mortal parent, are pursued by clamorous flights of censures, which swarm in far greater numbers and threaten to devour them; but these last are not winged. At the end of a very short leap they fall plump down and rot, having received from the souls out of which they came no beautiful wings. But the melodies of the poet ascend and leap and pierce into the deeps of infinite time.

So far the bard taught me, using his freer speech. But nature has a higher end, in the production of new individuals, than security, namely *ascension*, or the passage of the soul into higher forms. I knew in my younger days the sculptor who made the statue of the youth which stands in the public garden. He was, as I remember, unable to tell directly what made him happy or unhappy, but by wonderful indirections he could tell. He rose one day, according to his habit, before the dawn, and saw the morning break, grand as the eternity out of which it came, and for many days after, he strove to express this tranquillity, and lo! his chisel had fashioned out of marble the form of a beautiful youth, Phosphorus,⁸ whose aspect is such that it is said all persons who look on it become silent. The poet also resigns himself to his mood, and that thought which agitated him is expressed, but *alter idem*,⁹ in a manner totally new. The expression is organic, or the new type which things themselves take when liberated. As, in the sun, objects paint their images on the retina of the eye, so they, sharing the aspiration of the whole universe, tend to paint a far more delicate copy of their essence in his mind. Like the metamorphosis of things into higher organic forms is their change into melodies. Over everything stands its dæmon or soul, and, as the form of

7. Emerson himself, in his journal, paraphrasing Plato.

8. The Greek personification of the morning star

(literally, "light-bearer"), sometimes represented as a youth bearing a torch.

9. A second self (Latin).

the thing is reflected by the eye, so the soul of the thing is reflected by a melody. The sea, the mountain-ridge, Niagara, and every flower-bed, pre-exist, or super-exist, in pre-cantations,¹ which sail like odors in the air, and when any man goes by with an ear sufficiently fine, he overhears them and endeavors to write down the notes without diluting or depraving them. And herein is the legitimization of criticism, in the mind's faith that the poems are a corrupt version of some text in nature with which they ought to be made to tally. A rhyme in one of our sonnets should not be less pleasing than the iterated nodes of a seashell, or the resembling difference of a group of flowers. The pairing of the birds is an idyl, not tedious as our idyls are; a tempest is a rough ode, without falsehood or rant; a summer, with its harvest sown, reaped and stored, is an epic song, subordinating how many admirably executed parts. Why should not the symmetry and truth that modulate these, glide into our spirits, and we participate the invention of nature?

This insight, which expresses itself by what is called Imagination, is a very high sort of seeing, which does not come by study, but by the intellect being where and what it sees; by sharing the path or circuit of things through forms, and so making them translucent to others. The path of things is silent. Will they suffer a speaker to go with them? A spy they will not suffer; a lover, a poet, is the transcendency of their own nature,—him they will suffer. The condition of true naming, on the poet's part, is his resigning himself to the divine *aura*² which breathes through forms, and accompanying that.

It is a secret which every intellectual man quickly learns, that beyond the energy of his possessed and conscious intellect he is capable of a new energy (as of an intellect doubled on itself), by abandonment to the nature of things; that beside his privacy of power as an individual man, there is a great public power on which he can draw, by unlocking, at all risks, his human doors, and suffering the ethereal tides to roll and circulate through him; then he is caught up into the life of the Universe, his speech is thunder, his thought is law, and his words are universally intelligible as the plants and animals. The poet knows that he speaks adequately then only when he speaks somewhat wildly, or "with the flower of the mind;"³ not with the intellect used as an organ, but with the intellect released from all service and suffered to take its direction from its celestial life; or as the ancients⁴ were wont to express themselves, not with intellect alone but with the intellect inebriated by nectar. As the traveller who has lost his way throws his reins on his horse's neck and trusts to the instinct of the animal to find his road, so must we do with the divine animal who carries us through this world. For if in any manner we can stimulate this instinct, new passages are opened for us into nature; the mind flows into and through things hardest and highest, and the metamorphosis is possible.

This is the reason why bards love wine, mead, narcotics, coffee, tea, opium, the fumes of sandalwood and tobacco, or whatever other procurers of animal exhilaration. All men avail themselves of such means as they

1. Enchantments, foretellings. Niagara: spectacular North American waterfalls.

2. Gentle breeze; intangible quality, atmosphere.

3. A translation of a Greek phrase from the "Chaldean Oracles" (2d c. C.E., though attributed to the Persian religious leader and prophet Zoroaster, ca. 7th c. B.C.E.), selections from

which appeared in the Transcendentalist journal, *The Dial*, in 1844. Others have noted as a source *The True Intellectual System of the Universe* (1678), by the English Neoplatonist Ralph Cudworth (1617–1688).

4. The Neoplatonists Plotinus (ca. 204/5–270 C.E.) and Proclus (412–485 C.E.).

can, to add this extraordinary power to their normal powers; and to this end they prize conversation, music, pictures, sculpture, dancing, theatres, travelling, war, mobs, fires, gaming, politics, or love, or science, or animal intoxication,—which are several coarser or finer *quasi*-mechanical substitutes for the true nectar, which is the ravishment of the intellect by coming nearer to the fact. These are auxiliaries to the centrifugal tendency of a man, to his passage out into free space, and they help him to escape the custody of that body in which he is pent up, and of that jail-yard of individual relations in which he is enclosed. Hence a great number of such as were professionally expressers of Beauty, as painters, poets, musicians and actors, have been more than others wont to lead a life of pleasure and indulgence; all but the few who received the true nectar; and, as it was a spurious mode of attaining freedom, as it was an emancipation not into the heavens but into the freedom of baser places, they were punished for that advantage they won, by a dissipation and deterioration. But never can any advantage be taken of nature by a trick. The spirit of the world, the great calm presence of the Creator, comes not forth to the sorceries of opium or of wine. The sublime vision comes to the pure and simple soul in a clean and chaste body. That is not an inspiration, which we owe to narcotics, but some counterfeit excitement and fury. Milton says⁵ that the lyric poet may drink wine and live generously, but the epic poet, he who shall sing of the gods and their descent unto men, must drink water out of a wooden bowl. For poetry is not 'Devil's wine,' but God's wine. It is with this as it is with toys. We fill the hands and nurseries of our children with all manner of dolls, drums and horses; withdrawing their eyes from the plain face and sufficing objects of nature, the sun and moon, the animals, the water and stones, which should be their toys. So the poet's habit of living should be set on a key so low that the common influences should delight him. His cheerfulness should be the gift of the sunlight; the air should suffice for his inspiration, and he should be tipsy with water. That spirit which suffices quiet hearts, which seems to come forth to such from every dry knoll of sere grass, from every pine stump and half-imbedded stone on which the dull March sun shines, comes forth to the poor and hungry, and such as are of simple taste. If thou fill thy brain with Boston and New York, with fashion and covetousness, and wilt stimulate thy jaded senses with wine and French coffee, thou shalt find no radiance of wisdom in the lonely waste of the pine woods.

If the imagination intoxicates the poet, it is not inactive in other men. The metamorphosis excites in the beholder an emotion of joy. The use of symbols has a certain power of emancipation and exhilaration for all men. We seem to be touched by a wand which makes us dance and run about happily, like children. We are like persons who come out of a cave or cellar into the open air. This is the effect on us of tropes,⁶ fables, oracles and all poetic forms. Poets are thus liberating gods. Men have really got a new sense, and found within their world another world, or nest of worlds; for, the metamorphosis once seen, we divine that it does not stop. I will not now consider how much this makes the charm of algebra and the mathematics, which also have their tropes, but it is felt in every definition; as when Aristotle defines *space* to be an immovable vessel in which things are

5. In *Elegy VI* (1629), lines 55–78.

6. Figures of speech.

contained;⁷—or when Plato defines a *line* to be a flowing point; or *figure* to be a bound of solid;⁸ and many the like. What a joyful sense of freedom we have when Vitruvius⁹ announces the old opinion of artists that no architect can build any house well who does not know something of anatomy. When Socrates, in *Charmides*, tells us that the soul is cured of its maladies by certain incantations, and that these incantations are beautiful reasons, from which temperance is generated in souls; when Plato calls the world an animal, and Timæus affirms that the plants also are animals; or affirms a man to be a heavenly tree, growing with his root, which is his head, upward; and, as George Chapman, following him, writes,

“So in our tree of man, whose nervie root
Ssprings in his top;”—

when Orpheus speaks of hoariness as “that white flower which marks extreme old age;” when Proclus calls the universe the statue of the intellect; when Chaucer, in his praise of ‘Gentilesse,’ compares good blood in mean condition to fire, which, though carried to the darkest house betwixt this and the mount of Caucasus, will yet hold its natural office and burn as bright as if twenty thousand men did it behold; when John saw, in the Apocalypse, the ruin of the world through evil, and the stars fall from heaven as the fig tree casteth her untimely fruit; when Æsop reports the whole catalogue of common daily relations through the masquerade of birds and beasts;¹—we take the cheerful hint of the immortality of our essence and its versatile habit and escapes, as when the gypsies say of themselves “it is in vain to hang them, they cannot die.”²

The poets are thus liberating gods. The ancient British bards had for the title of their order, “Those who are free throughout the world.” They are free, and they make free. An imaginative book renders us much more service at first, by stimulating us through its tropes, than afterward when we arrive at the precise sense of the author. I think nothing is of any value in books excepting the transcendental and extraordinary. If a man is inflamed and carried away by his thought, to that degree that he forgets the authors and the public and heeds only this one dream which holds him like an insanity, let me read his paper, and you may have all the arguments and histories and criticism. All the value which attaches to Pythagoras, Paracelsus, Cornelius Agrippa, Cardan, Kepler, Swedenborg, Schelling, Oken,³ or any other who introduces questionable facts into his cosmogony, as angels, devils, magic, astrology, palmistry, mesmerism, and so on, is the certificate

7. ARISTOTLE (384–322 B.C.E.), *Physics* 4.4, 212a. 8. Plato, *Meno* 76.

9. Roman engineer and architect (1st c. B.C.E.), best known for his work *On Architecture*.

1. In the allusion-filled preceding lines, Emerson’s references to calling the world “an animal” and to “plants also are animals” are taken from Plato’s dialogues *Charmides* (157) and *Timæus* (30, 77); George Chapman (1559–1634), an English poet and translator of Homer, wrote the lines quoted in the dedication to Prince Henry at the beginning of his translation; Chaucer’s praise of “gentilesse” is in “The Wife of Bath’s Tale” (ca. 1400), lines 1139–45; for John’s vision, see Revelation 6.13; Æsop wrote his beast fables in the 6th century

B.C.E.

2. George Borrow, *The Zincali; or, An Account of the Gypsies of Spain* (1841).

3. Lorenz Oken (1779–1851), German naturalist and mystic philosopher. Pythagoras (6th c. B.C.E.), Greek philosopher and mathematician. Paracelsus (1493–1541), German alchemist and writer on occult subjects. Henricus Cornelius Agrippa van Nettesheim (1486–1535), German physician and magician. Girolamo Cardano (1501–1576), Italian physician, astrologer, and mathematician. Johann Kepler (1571–1630), German astronomer. Friedrich Wilhelm Joseph von Schelling (1775–1854), German philosopher.

we have of departure from routine, and that here is a new witness. That also is the best success in conversation, the magic of liberty, which puts the world like a ball in our hands. How cheap even the liberty then seems; how mean to study, when an emotion communicates to the intellect the power to sap and upheave nature; how great the perspective! nations, times, systems, enter and disappear like threads in tapestry of large figure and many colors; dream delivers us to dream, and while the drunkenness lasts we will sell our bed, our philosophy, our religion, in our opulence.

There is good reason why we should prize this liberation. The fate of the poor shepherd, who, blinded and lost in the snow-storm, perishes in a drift within a few feet of his cottage door, is an emblem of the state of man. On the brink of the waters of life and truth, we are miserably dying. The inaccessibleness of every thought but that we are in, is wonderful. What if you come near to it; you are as remote when you are nearest as when you are farthest. Every thought is also a prison; every heaven is also a prison. Therefore we love the poet, the inventor, who in any form, whether in an ode or in an action or in looks and behavior, has yielded us a new thought. He unlocks our chains and admits us to a new scene.

This emancipation is dear to all men, and the power to impart it, as it must come from greater depth and scope of thought, is a measure of intellect. Therefore all books of the imagination endure, all which ascend to that truth that the writer sees nature beneath him, and uses it as his exponent.⁴ Every verse or sentence possessing this virtue will take care of its own immortality. The religions of the world are the ejaculations of a few imaginative men.

But the quality of the imagination is to flow, and not to freeze. The poet did not stop at the color or the form, but read their meaning; neither may he rest in this meaning, but he makes the same objects exponents of his new thought. Here is the difference betwixt the poet and the mystic, that the last nails a symbol to one sense, which was a true sense for a moment, but soon becomes old and false. For all symbols are fluxional; all language is vehicular and transitive, and is good, as ferries and horses are, for conveyance, not as farms and houses are, for homestead. Mysticism consists in the mistake of an accidental and individual symbol for an universal one. The morning-redness happens to be the favorite meteor to the eyes of Jacob Behmen,⁵ and comes to stand to him for truth and faith; and, he believes, should stand for the same realities to every reader. But the first reader prefers as naturally the symbol of a mother and child, or a gardener and his bulb, or a jeweller polishing a gem. Either of these, or of a myriad more, are equally good to the person to whom they are significant. Only they must be held lightly, and be very willingly translated into the equivalent terms which others use. And the mystic must be steadily told,—All that you say is just as true without the tedious use of that symbol as with it. Let us have a little algebra, instead of this trite rhetoric,—universal signs, instead of these village symbols,—and we shall both be gainers. The history of hierarchies seems to show that all religious error consisted in making the symbol too stark and solid, and was at last nothing but an excess of the organ of language.

5. Jakob Böhme (1575–1624), German theosophist

and mystic, author of *Aurora: The Day-Spring, or, Dawning of the Day in the East: or, Morning-Redness in the Rising of the Sun* (1612).

Swedenborg, of all men in the recent ages, stands eminently for the translator of nature into thought. I do not know the man in history to whom things stood so uniformly for words. Before him the metamorphosis continually plays. Everything on which his eye rests, obeys the impulses of moral nature. The figs become grapes whilst he eats them. When some of his angels affirmed a truth, the laurel twig which they held blossomed in their hands. The noise which at a distance appeared like gnashing and thumping, on coming nearer was found to be the voice of disputants. The men in one of his visions, seen in heavenly light, appeared like dragons, and seemed in darkness; but to each other they appeared as men, and when the light from heaven shone into their cabin, they complained of the darkness, and were compelled to shut the window that they might see.

There was this perception in him which makes the poet or seer an object of awe and terror, namely that the same man or society of men may wear one aspect to themselves and their companions, and a different aspect to higher intelligences. Certain priests, whom he describes as conversing very learnedly together, appeared to the children who were at some distance, like dead horses; and many the like misappearances.⁶ And instantly the mind inquires whether these fishes under the bridge, yonder oxen in the pasture, those dogs in the yard, are immutably fishes, oxen and dogs, or only so appear to me, and perchance to themselves appear upright men; and whether I appear as a man to all eyes. The Brahmins⁷ and Pythagoras propounded the same question, and if any poet has witnessed the transformation he doubtless found it in harmony with various experiences. We have all seen changes as considerable in wheat and caterpillars. He is the poet and shall draw us with love and terror, who sees through the flowing vest the firm nature, and can declare it.

I look in vain for the poet whom I describe. We do not with sufficient plainness or sufficient profoundness address ourselves to life, nor dare we chaunt our own times and social circumstance. If we filled the day with bravery, we should not shrink from celebrating it. Time and nature yield us many gifts, but not yet the timely man, the new religion, the reconciler, whom all things await. Dante's praise is that he dared to write his autobiography in colossal cipher, or into universality.⁸ We have yet had no genius in America, with tyrannous eye, which knew the value of our incomparable materials, and saw, in the barbarism and materialism of the times, another carnival of the same gods whose picture he so much admires in Homer; then in the Middle Age; then in Calvinism. Banks and tariffs, the newspaper and caucus, Methodism and Unitarianism, are flat and dull to dull people, but rest on the same foundations of wonder as the town of Troy and the temple of Delphi,⁹ and are as swiftly passing away. Our log-rolling, our stumps and their politics, our fisheries, our Negroes and Indians, our boats and our repudiations,¹ the wrath of rogues and the pusillanimity of honest men, the northern trade, the southern planting, the western clearing, Oregon and Texas, are yet unsung. Yet America is a poem in our eyes; its ample geography dazzles

the imagination, and it will not wait long for metres. If I have not found that excellent combination of gifts in my countrymen which I seek, neither could I aid myself to fix the idea of the poet by reading now and then in Chalmers's collection of five centuries of English poets.² These are wits more than poets, though there have been poets among them. But when we adhere to the ideal of the poet, we have our difficulties even with Milton and Homer. Milton is too literary, and Homer too literal and historical.

But I am not wise enough for a national criticism, and must use the old largeness a little longer, to discharge my errand from the muse to the poet concerning his art.

Art is the path of the creator to his work. The paths or methods are ideal and eternal, though few men ever see them; not the artist himself for years, or for a lifetime, unless he come into the conditions. The painter, the sculptor, the composer, the epic rhapsodist, the orator, all partake one desire, namely to express themselves symmetrically and abundantly, not dwarfishly and fragmentarily. They found or put themselves in certain conditions, as, the painter and sculptor before some impressive human figures; the orator into the assembly of the people; and the others in such scenes as each has found exciting to his intellect; and each presently feels the new desire. He hears a voice, he sees a beckoning. Then he is apprised, with wonder, what herds of dæmons hem him in. He can no more rest; he says, with the old painter, "By God it is in me and must go forth of me." He pursues a beauty, half seen, which flies before him. The poet pours out verses in every solitude. Most of the things he says are conventional, no doubt; but by and by he says something which is original and beautiful. That charms him. He would say nothing else but such things. In our way of talking we say 'That is yours, this is mine;' but the poet knows well that it is not his; that it is as strange and beautiful to him as to you; he would fain hear the like eloquence at length. Once having tasted this immortal ichor,³ he cannot have enough of it, and as an admirable creative power exists in these intellections, it is of the last importance that these things get spoken. What a little of all we know is said! What drops of all the sea of our science are baled⁴ up! and by what accident it is that these are exposed, when so many secrets sleep in nature! Hence the necessity of speech and song; hence these throbs and heart-beatings in the orator, at the door of the assembly, to the end namely that thought may be ejaculated as Logos,⁵ or Word.

Doubt not, O poet, but persist. Say 'It is in me, and shall out.' Stand there, balked and dumb, stuttering and stammering, hissed and hooted, stand and strive, until at last rage draw out of thee that *dream*-power which every night shows thee is thine own; a power transcending all limit and privacy, and by virtue of which a man is the conductor of the whole river of electricity. Nothing walks, or creeps, or grows, or exists, which must not in turn arise and walk before him as exponent of his meaning. Comes he to that power, his genius is no longer exhaustible. All the creatures by pairs and by tribes pour into his mind as into a Noah's ark, to come forth again to people a new

world. This is like the stock of air for our respiration or for the combustion of our fireplace; not a measure of gallons, but the entire atmosphere if wanted. And therefore the rich poets, as Homer, Chaucer, Shakspeare, and Raphael,⁶ have obviously no limits to their works except the limits of their lifetime, and resemble a mirror carried through the street, ready to render an image of every created thing.

O poet! a new nobility is conferred in groves and pastures, and not in castles or by the sword-blade any longer. The conditions are hard, but equal. Thou shalt leave the world, and know the muse only. Thou shalt not know any longer the times, customs, graces, politics, or opinions of men, but shalt take all from the muse. For the time of towns is tolled from the world by funereal chimes, but in nature the universal hours are counted by succeeding tribes of animals and plants, and by growth of joy on joy. God wills also that thou abdicate a manifold and duplex life, and that thou be content that others speak for thee. Others shall be thy gentlemen and shall represent all courtesy and worldly life for thee; others shall do the great and resounding actions also. Thou shalt lie close hid with nature, and canst not be afforded to the Capitol or the Exchange.⁷ The world is full of renunciations and apprenticeships, and this is thine; thou must pass for a fool and a churl for a long season. This is the screen and sheath in which Pan⁸ has protected his well-beloved flower, and thou shalt be known only to thine own, and they shall console thee with tenderest love. And thou shalt not be able to rehearse the names of thy friends in thy verse, for an old shame before the holy ideal. And this is the reward; that the ideal shall be real to thee, and the impressions of the actual world shall fall like summer rain, copious, but not troublesome to thy invulnerable essence. Thou shalt have the whole land for thy park and manor, the sea for thy bath and navigation, without tax and without envy; the woods and the rivers thou shalt own, and thou shalt possess that wherein others are only tenants and boarders. Thou true land-lord! sea-lord! air-lord! Wherever snow falls or water flows or birds fly, wherever day and night meet in twilight, wherever the blue heaven is hung by clouds or sown with stars, wherever are forms with transparent boundaries, wherever are outlets into celestial space, wherever is danger, and awe, and love,—there is Beauty, plenteous as rain, shed for thee, and though thou shouldst walk the world over, thou shalt not be able to find a condition inopportune or ignoble.

EDGAR ALLAN POE

1809–1849

Edgar Allan Poe is a writer most American critics love to hate—or hate to love. In France, on the other hand, Poe has been considered a writer of genius by admirers from Charles Baudelaire to JACQUES LACAN. Is this discrepancy a sign that the French lack the finesse in English that the Americans possess? Or does it say something about two very different concepts of poetic language?

The American poet James Russell Lowell wrote in his *Fable for Critics* (1848):

There comes Poe, with his Raven, like Barnaby Rudge,
Three fifths of him genius and two fifths sheer fudge,
Who talks like a book of iambs and pentameters,
In a way to make people of common sense damn meters,
Who has written some things quite the best of their kind,
But the heart somehow seems all squeezed out by the mind.

For American readers, this view of Poe as excessively calculating exists side by side with a view of Poe as completely lacking control: he is seen as either sick (alcoholic, melancholic, necrophilic, impotent) or dissolute (alcoholic, immoral, untrustworthy, untruthful). Was it precisely this combination of craft and transgression that appealed to a poet like Baudelaire? Lowell was certainly right about one thing: genius or madman, visionary or drunk, seer or trickster, excessively in control or excessively out of control, Edgar Allan Poe was not made to please “people of common sense.”

Born in Boston to the traveling actors David and Elizabeth Arnold Poe, Edgar lost both his father (who disappeared) and his mother (who died) by his third birthday. Edgar Poe was renamed “Edgar Allan” when he entered the home of the childless Frances and John Allan, although they never legally adopted him. As a self-made prosperous merchant in Richmond, Virginia, John Allan had little in common with his brilliant foster child, and the financial support he gave was always fraught and conditional. Edgar entered the University of Virginia in 1826 (a year after classes began at the college founded by Thomas Jefferson); but in an attempt to supplement his insufficient allowance, he gambled, lost money, and, when John Allan refused to make good the debt, left the university. Enlisting in the army in Boston under the name “Edgar A. Perry,” he managed to pursue a double career: as a poet (his first book, *Tamerlane and Other Poems*, was signed “by a Bostonian”) and as a military man. He asked for John Allan’s financial help in attending the West Point military academy (grudgingly given) and in publishing his second book (denied); Edgar no sooner enrolled than deliberately got himself expelled in 1831 for disobeying orders.

Breaking with John Allan, Poe took up residence in Baltimore with the remnants of the Poe family: his father’s mother, his older brother, his paternal aunt Maria Clemm, and her eight-year-old daughter, Virginia (whom he married in 1836, when she was not quite fourteen). He began submitting tales to writing contests and rose through the ranks of the *Southern Literary Messenger*, penning biting book reviews that increased the journal’s circulation. His fierce originality and his desire for an American literary tradition not based on the “puffery” by which reviewers were expected to promote all American authors attracted both notice and misgivings: within two years he became the editor of the journal and then, in 1837, was fired. His would-be Southernness and his resentment of the Northern literary coteries through which writer’s reputations were usually made gave him little tolerance for Northern ideals. He recoiled against literary didacticism in part out of irritation with the self-satisfactions of Northern abolitionist literature.

In 1838, still shy of his thirtieth birthday, Poe wrote and published a novel, *The Narrative of Arthur Gordon Pym*, and collected his *Tales of the Grotesque and Arabesque* a year later. Moving to Philadelphia and then to New York, he was a prolific reviewer for *Graham's Magazine*, the *Broadway Review*, and other journals. He became a popular success for two of his most unlikely feats of writing: his hoax about a balloon journey across the Atlantic and his poem "The Raven." "The Raven" is based on a combination of absurdity and inevitability: a bereaved lover admits a black bird into his chamber on a stormy night and, receiving from the bird an unexpected answer to a question, asks it whether he will ever see his beloved again: the bird can only repeat the same word, "nevermore." The poem was written in 1842; Poe's wife Virginia had just burst a blood vessel while singing and was to die of tuberculosis in 1847. Critics have thus noted the biographical sources of the poem in Poe's anticipated mourning, but Poe tells a very different story about the poem's origins in our selection, "The Philosophy of Composition" (1846).

In demand as a writer and lecturer, Poe attempted to raise money to start a new journal called *The Stylus*, which had been a dream of his since 1843. But he often alienated even those close to him with his intermittent drinking, his nervous depression, his delusions of persecution, and his campaigns against plagiarism (his accusations against Henry Wadsworth Longfellow in particular lost him the friendship of Lowell, for whom Poe's "sheer fudge" probably included false accusations). He died of "congestion of the brain" at age forty.

Fated even beyond the grave to depend on the resources of those who lacked benevolence toward him, Poe owed his negative posthumous reputation to the editorial skills and moral perspectives of his literary executor, Rufus Griswold. Griswold told Poe's story as a cautionary tale fit for a temperance tract: it was a life full of promise, ruined by drink and the lack of a moral compass. With the pathological base of Poe's genius established, the diagnostic strain of American criticism later moved to psychoanalysis: now Poe was not morally bankrupt but mad, a patient etherized upon the table of necrophilia, repetition, and impotence. In 1926 Joseph Wood Krutch published *Edgar Allan Poe: A Study in Genius*, a psychoanalytical study typical of this early phase of Freudian criticism.

But in mid-nineteenth-century France, it was the poets who noticed him. Charles Baudelaire was immediately smitten by the image of a poet rejected and misunderstood in his own country. He translated many of Poe's tales and introduced Poe to a privileged audience quite inclined to find value in whatever the small-minded, puritanical, and mediocre Americans could not understand.

Baudelaire's young admirer the French poet Stéphane Mallarmé, who claimed to have learned English only to read Poe, went on to translate the poems, which Baudelaire had largely left untranslated. Baudelaire and Mallarmé found in Poe a theory of poetry that privileged the aesthetic over the moral, the beautiful over the true, and artistic effect over authorial intention. "The Philosophy of Composition," published shortly after the success of "The Raven," is Poe's account of how he composed the poem "backwards" through sheer calculation. Often considered a mystification when read as a *record* of how Poe actually wrote "The Raven," the essay became for Baudelaire and Mallarmé (and later, for ROMAN JAKOBSON, who inherited Poe through the French symbolists) a superb *analysis* of its poetic language. In Poe's explanations, words and even letters—the signifier, not the signified—take the lead in creating the poetic effect. Like the intentionless repetition of a word by a bird made oracular only by the obsessed listener, the network of relations created by words alone is filled with meaning only by the reader. None of the essay's causal explanations can be taken at face value, but what Poe calls the "air of consequence" created by treating effects as causes situates the author's intention in the poem's design rather than in his own experience or sentiment. Which does not, of course, prevent readers from attributing a morbid state of mourning to the author, whose calculations are seen—perhaps rightly—as covering over raw feeling.

In the Freudian Marie Bonaparte's *Life and Works of Edgar Allan Poe* (1933; trans. 1949), the French poetic tradition met the psychoanalytic interpretation, and the status of Poe's poetry was lifted from symptom to dream. Later, in Jacques Lacan's celebrated "Seminar on 'The Purloined Letter'" (1966), Poe the patient was fully promoted to the position of analyst, ingeniously demonstrating, both in that story and in the mechanical repetitions depicted in "The Raven," an understanding of what FREUD would call the "repetition compulsion."

In a way, the two sides of Poe cannot be dissociated. Exploring the vast gap and tension between the unconscious and the intellect, Poe would never have gone so far if he had not known both madness and fabrication. What is seen as Poe's individual pathology, indeed, is often the revelation of aesthetic drives that are usually explained in another way. When Poe proclaims, in "The Philosophy of Composition," that "the death . . . of a beautiful woman is, unquestionably, the most poetical topic in the world," the generalization sounds pathological—until one remembers the many dead women in poetry whose authors cover up their attraction to the image by seeming only to lament it. In his stress on beauty, originality, and intense emotion, Poe is very much part of Romanticism; but in his emphasis on literary technique and construction; on details of meter, rhyme, and sound effects; and on fine calibration of scene, tone, and suspense, he is very much a forerunner of the modernism and its related formalism to come.

"The Philosophy of Composition" Keywords: Aesthetics, Affect, Authorship, Formalism, Language, Poetry

The Philosophy of Composition

Charles Dickens, in a note now lying before me, alluding to an examination I once made of the mechanism of "Barnaby Rudge,"¹ says—"By the way, are you aware that Godwin wrote his 'Caleb Williams'² backwards? He first involved his hero in a web of difficulties, forming the second volume, and then, for the first, cast about him for some mode of accounting for what had been done."

I cannot think this the *precise* mode of procedure on the part of Godwin—and indeed what he himself acknowledges,³ is not altogether in accordance with Mr. Dickens' idea—but the author of "Caleb Williams" was too good an artist not to perceive the advantage derivable from at least a somewhat similar process. Nothing is more clear than that every plot, worth the name, must be elaborated to its *dénouement* before any thing be attempted with the pen. It is only with the *dénouement* constantly in view that we can give a plot its indispensable air of consequence, or causation, by making the incidents, and especially the tone at all points, tend to the development of the intention.

There is a radical error, I think, in the usual mode of constructing a story. Either history affords a thesis—or one is suggested by an incident of the day—or, at best, the author sets himself to work in the combination of striking events to form merely the basis of his narrative—designing, generally, to

1. An 1841 novel by Dickens (1812–1870), the most popular English novelist of the 19th century. Published serially, it presents a murder mystery whose solution Poe tried to guess from

the early installments.

2. A 1794 novel by the English political theorist William Godwin (1756–1836).

3. In his preface to the 1832 edition.

fill in with description, dialogue, or aural comment, whatever crevices of fact, or action, may, from page to page, render themselves apparent.

I prefer commencing with the consideration of an *effect*. Keeping originality *always* in view—for he is false to himself who ventures to dispense with so obvious and so easily attainable a source of interest—I say to myself, in the first place, “Of the innumerable effects, or impressions, of which the heart, the intellect, or (more generally) the soul is susceptible, what one shall I, on the present occasion, select?” Having chosen a novel, first, and secondly a vivid effect, I consider whether it can best be wrought by incident or tone—whether by ordinary incidents and peculiar tone, or the converse, or by peculiarity both of incident and tone—afterward looking about me (or rather within) for such combinations of event, or tone, as shall best aid me in the construction of the effect.

I have often thought how interesting a magazine paper might be written by any author who would—that is to say, who could—detail, step by step, the processes by which any one of his compositions attained its ultimate point of completion. Why such a paper has never been given to the world, I am much at a loss to say—but, perhaps, the aural vanity has had more to do with the omission than any one other cause. Most writers—poets in especial—prefer having it understood that they compose by a species of fine frenzy—an ecstatic intuition⁴—and would positively shudder at letting the public take a peep behind the scenes, at the elaborate and vacillating crudities of thought—at the true purposes seized only at the last moment—at the innumerable glimpses of idea that arrived not at the maturity of full view—at the fully matured fancies discarded in despair as unmanageable—at the cautious selections and rejections—at the painful erasures and interpolations—in a word, at the wheels and pinions—the tackle for scene-shifting—the step-ladders and demon-traps—the cock’s feathers, the red paint and the black patches, which, in ninety-nine cases out of the hundred, constitute the properties of the literary *histrion*.⁵

I am aware, on the other hand, that the case is by no means common, in which an author is at all in condition to retrace the steps by which his conclusions have been attained. In general, suggestions, having arisen pell-mell, are pursued and forgotten in a similar manner.

For my own part, I have neither sympathy with the repugnance alluded to, nor, at any time, the least difficulty in recalling to mind the progressive steps of any of my compositions; and, since the interest of an analysis, or reconstruction, such as I have considered a *desideratum*, is quite independent of any real or fancied interest in the thing analyzed, it will not be regarded as a breach of decorum on my part to show the *modus operandi* by which some one of my own works was put together. I select “The Raven,”⁶ as the most generally known. It is my design to render it manifest that no one point in its composition is referrible either to accident or intuition—that the work proceeded, step by step, to its completion with the precision and rigid consequence of a mathematical problem.

Let us dismiss, as irrelevant to the poem *per se*, the circumstance—or say the necessity—which, in the first place, gave rise to the intention of composing a poem that should suit at once the popular and the critical taste.

4. A critical allusion to RALPH WALDO EMERSON’S essay “The Poet” (1844; see above).

5. Actor (Latin).

6. Still Poe’s best-known poem (1845).

We commence, then, with this intention.

The initial consideration was that of extent. If any literary work is too long to be read at one sitting, we must be content to dispense with the immensely important effect derivable from unity of impression—for, if two sittings be required, the affairs of the world interfere, and every thing like totality is at once destroyed. But since, *ceteris paribus*, no poet can afford to dispense with *any thing* that may advance his design, it but remains to be seen whether there is, in extent, any advantage to counterbalance the loss of unity which attends it. Here I say no, at once. What we term a long poem is, in fact, merely a succession of brief ones⁷—that is to say, of brief poetical effects. It is needless to demonstrate that a poem is such, only inasmuch as it intensely excites, by elevating, the soul; and all intense excitements are, through a psychal necessity, brief. For this reason, at least one half of the “Paradise Lost”⁸ is essentially prose—a succession of poetical excitements interspersed, *inevitably*, with corresponding depressions—the whole being deprived, through the extremeness of its length, of the vastly important artistic element, totality, or unity, of effect.

It appears evident, then, that there is a distinct limit, as regards length, to all works of literary art—the limit of a single sitting—and that, although in certain classes of prose composition, such as “Robinson Crusoe,”⁹ (demanding no unity,) this limit may be advantageously overpassed, it can never properly be overpassed in a poem. Within this limit, the extent of a poem may be made to bear mathematical relation to its merit—in other words, to the excitement or elevation—again in other words, to the degree of the true poetical effect which it is capable of inducing; for it is clear that the brevity must be in direct ratio of the intensity of the intended effect:—this, with one proviso—that a certain degree of duration is absolutely requisite for the production of any effect at all.

Holding in view these considerations, as well as that degree of excitement which I deemed not above the popular, while not below the critical, taste, I reached at once what I conceived the proper *length* for my intended poem—a length of about one hundred lines. It is, in fact, a hundred and eight.

My next thought concerned the choice of an impression, or effect, to be conveyed; and here I may as well observe that, throughout the construction, I kept steadily in view the design of rendering the work *universally* appreciable. I should be carried too far out of my immediate topic were I to demonstrate a point upon which I have repeatedly insisted, and which, with the poetical, stands not in the slightest need of demonstration—the point, I mean, that Beauty is the sole legitimate province of the poem.¹ A few words, however, in elucidation of my real meaning, which some of my friends have evinced a disposition to misrepresent. That pleasure which is at once the most intense, the most elevating, and the most pure, is, I believe, found in the contemplation of the beautiful. When, indeed, men speak of Beauty, they mean, precisely, not a quality, as is supposed, but an effect—they refer,

7. Poe apparently has in mind the long, didactic poems of Henry Wadsworth Longfellow (1807–1882), an immensely popular American poet.

8. Long Christian epic (1667) by the English poet John Milton.

9. A 1719 novel by the English writer Daniel Defoe; because it is episodic, recounting the “life

and adventures” of the title character, it need not be unified.

1. Poe’s view of Beauty as universally pleasing was loosely derived from the German philosopher IMMANUEL KANT (1724–1804), probably via the English poet and critic SAMUEL TAYLOR COLERIDGE (1772–1834).

in short, just to that intense and pure elevation of *soul*—*not* of intellect, or of heart—upon which I have commented, and which is experienced in consequence of contemplating “the beautiful.” Now I designate Beauty as the province of the poem, merely because it is an obvious rule of Art that effects should be made to spring from direct causes—that objects should be attained through means best adapted for their attainment—no one as yet having been weak enough to deny that the peculiar elevation alluded to, is *most readily* attained in the poem. Now the object, Truth, or the satisfaction of the intellect, and the object, Passion, or the excitement of the heart, are, although attainable, to a certain extent, in poetry, far more readily attainable in prose. Truth, in fact, demands a precision, and Passion, a *homeliness* (the truly passionate will comprehend me) which are absolutely antagonistic to that Beauty which, I maintain, is the excitement, or pleasurable elevation, of the soul. It by no means follows from any thing here said, that passion, or even truth, may not be introduced, and even profitably introduced, into a poem—for they may serve in elucidation, or aid the general effect, as do discords in music, by contrast—but the true artist will always contrive, first, to tone them into proper subservience to the predominant aim, and, secondly, to enveil them, as far as possible, in that Beauty which is the atmosphere and the essence of the poem.

Regarding, then, Beauty as my province, my next question referred to the *tone* of its highest manifestation—and all experience has shown that this tone is one of *sadness*. Beauty of whatever kind, in its supreme development, invariably excites the sensitive soul to tears. Melancholy is thus the most legitimate of all the poetical tones.

The length, the province, and the tone, being thus determined, I betook myself to ordinary induction, with the view of obtaining some artistic piquancy which might serve me as a key-note in the construction of the poem—some pivot upon which the whole structure might turn. In carefully thinking over all the usual artistic effects—or more properly *points*, in the theatrical sense—I did not fail to perceive immediately that no one had been so universally employed as that of the *refrain*. The universality of its employment sufficed to assure me of its intrinsic value, and spared me the necessity of submitting it to analysis. I considered it, however, with regard to its susceptibility of improvement, and soon saw it to be in a primitive condition. As commonly used, the *refrain*, or burden, not only is limited to lyric verse, but depends for its impression upon the force of monotone—both in sound and thought. The pleasure is deduced solely from the sense of identity—of repetition. I resolved to diversify, and so vastly heighten, the effect, by adhering, in general, to the monotone of sound, while I continually varied that of thought: that is to say, I determined to produce continuously novel effects, by the variation of *the application* of the *refrain*—the *refrain* itself remaining, for the most part, unvaried.

These points being settled, I next bethought me of the *nature* of my *refrain*. Since its application was to be repeatedly varied, it was clear that the *refrain* itself must be brief, for there would have been an insurmountable difficulty in frequent variations of application in any sentence of length. In proportion to the brevity of the sentence, would, of course, be the facility of the variation. This led me at once to a single word as the best *refrain*.

The question now arose as to the *character* of the word. Having made up my mind to a *refrain*, the division of the poem into stanzas was, of course, a corollary: the *refrain* forming the close to each stanza. That such a close, to have force, must be sonorous and susceptible of protracted emphasis, admitted no doubt: and these considerations inevitably led me to the long *o* as the most sonorous vowel, in connection with *r* as the most producible consonant.

The sound of the *refrain* being thus determined, it became necessary to select a word embodying this sound, and at the same time in the fullest possible keeping with that melancholy which I had predetermined as the tone of the poem. In such a search it would have been absolutely impossible to overlook the word "Nevermore." In fact, it was the very first which presented itself.

The next *desideratum* was a pretext for the continuous use of the one word "nevermore." In observing the difficulty which I at once found in inventing a sufficiently plausible reason for its continuous repetition, I did not fail to perceive that this difficulty arose solely from the pre-assumption that the word was to be so continuously or monotonously spoken by a *human* being—I did not fail to perceive, in short, that the difficulty lay in the reconciliation of this monotony with the exercise of reason on the part of the creature repeating the word. Here, then, immediately arose the idea of a *non*-reasoning creature capable of speech; and, very naturally, a parrot, in the first instance, suggested itself, but was superseded forthwith by a Raven, as equally capable of speech, and infinitely more in keeping with the intended *tone*.

I had now gone so far as the conception of a Raven—the bird of ill omen—monotonously repeating the one word, "Nevermore," at the conclusion of each stanza, in a poem of melancholy tone, and in length about one hundred lines. Now, never losing sight of the object *supremeness*, or perfection, at all points, I asked myself—"Of all melancholy topics, what, according to the *universal* understanding of mankind, is the *most* melancholy?" Death—was the obvious reply. "And when," I said, "is this most melancholy of topics most poetical?" From what I have already explained at some length, the answer, here also, is obvious—"When it most closely allies itself to *Beauty*: the death, then, of a beautiful woman is, unquestionably, the most poetical topic in the world—and equally is it beyond doubt that the lips best suited for such topic are those of a bereaved lover."

I had now to combine the two ideas; of a lover lamenting his deceased mistress and a Raven continuously repeating the word "Nevermore"—I had to combine these, bearing in mind my design of varying, at every turn, the *application* of the word repeated; but the only intelligible mode of such combination is that of imagining the Raven employing the word in answer to the queries of the lover. And here it was that I saw at once the opportunity afforded for the effect on which I had been depending—that is to say, the effect of the *variation of application*. I saw that I could make the first query propounded by the lover—the first query to which the Raven should reply "Nevermore"—that I could make this first query a commonplace one—the second less so—the third still less, and so on—until at length the lover, startled from his original *nonchalance* by the melancholy character of the word itself—by its frequent repetition—and by a consideration of the ominous reputation of the fowl that uttered it—is at length excited to superstition, and

wildly propounds queries of a far different character—queries whose solution he has passionately at heart—propounds them half in superstition and half in that species of despair which delights in self-torture—propounds them not altogether because he believes in the prophetic or demoniac character of the bird (which, reason assures him, is merely repeating a lesson learned by rote) but because he experiences a phrenzied pleasure in so modeling his questions as to receive from the *expected* “Nevermore” the most delicious because the most intolerable of sorrow. Perceiving the opportunity thus afforded me—or, more strictly, thus forced upon me in the progress of the construction—I first established in mind the climax, or concluding query—that to which “Nevermore” should be in the last place an answer—that in reply to which this word “Nevermore” should involve the utmost conceivable amount of sorrow and despair.

Here then the poem may be said to have its beginning—at the end, where all works of art should begin—for it was here, at this point of my preconsiderations, that I first put pen to paper in the composition of the stanza:

“Prophet,” said I, “thing of evil! prophet still if bird or devil!
By that heaven that bends above us—by that God we both adore,
Tell this soul with sorrow laden, if within the distant Aidenn,²
It shall clasp a sainted maiden whom the angels name Lenore—
Clasp a rare and radiant maiden whom the angels name Lenore.”
Quoth the raven “Nevermore.”

I composed this stanza, at this point, first that, by establishing the climax, I might the better vary and graduate, as regards seriousness and importance, the preceding queries of the lover—and, secondly, that I might definitely settle the rhythm, the metre, and the length and general arrangement of the stanza—as well as graduate the stanzas which were to precede, so that none of them might surpass this in rhythmical effect. Had I been able, in the subsequent composition, to construct more vigorous stanzas, I should, without scruple, have purposely enfeebled them, so as not to interfere with the climacteric effect.

And here I may as well say a few words of the versification. My first object (as usual) was originality. The extent to which this has been neglected, in versification, is one of the most unaccountable things in the world. Admitting that there is little possibility of variety in mere *rhythm*, it is still clear that the possible varieties of metre and stanza are absolutely infinite—and yet, *for centuries, no man, in verse, has ever done, or ever seemed to think of doing, an original thing*. The fact is, originality (unless in minds of very unusual force) is by no means a matter, as some suppose, of impulse or intuition. In general, to be found, it must be elaborately sought, and although a positive merit of the highest class, demands in its attainment less of invention than negation.

Of course, I pretend to no originality in either the rhythm or metre of the “Raven.” The former is trochaic—the latter is octameter acatalectic, alternating with heptameter catalectic³ repeated in the *refrain* of the fifth verse, and terminating with tetrameter catalectic. Less pedantically—the feet

2. Arabic term for paradise, *Adn* (Eden).

3. Lacking a syllable in the last foot (thus a line of 7½ feet, as Poe explains). “Trochaic”: based

on a metrical foot of the pattern long-short, or stressed-unstressed. “Acatalectic”: complete in its syllables (literally, “not catalectic”).

employed throughout (trochees) consist of a long syllable followed by a short: the first line of the stanza consists of eight of these feet—the second of seven and a half (in effect two-thirds)—the third of eight—the fourth of seven and a half—the fifth the same—the sixth three and a half. Now, each of these lines, taken individually, had been employed before, and what originality the “Raven” has, is in their *combination into stanza*; nothing even remotely approaching this combination has ever been attempted. The effect of this originality of combination is aided by other unusual, and some altogether novel effects, arising from an extension of the application of the principles of rhyme and alliteration.

The next point to be considered was the mode of bringing together the lover and the Raven—and the first branch of this consideration was the *locale*. For this the most natural suggestion might seem to be a forest, or the fields—but it has always appeared to me that a close *circumscription of space* is absolutely necessary to the effect of insulated incident:—it has the force of a frame to a picture. It has an indisputable moral power in keeping concentrated the attention, and, of course, must not be confounded with mere unity of place.

I determined, then, to place the lover in his chamber—in a chamber rendered sacred to him by memories of her who had frequented it. The room is represented as richly furnished—this in mere pursuance of the ideas I have already explained on the subject of Beauty, as the sole true poetical thesis.

The *locale* being thus determined, I had now to introduce the bird—and the thought of introducing him through the window, was inevitable. The idea of making the lover suppose, in the first instance, that the flapping of the wings of the bird against the shutter, is a “tapping” at the door, originated in a wish to increase, by prolonging, the reader’s curiosity, and in a desire to admit the incidental effect arising from the lover’s throwing open the door, finding all dark, and thence adopting the half-fancy that it was the spirit of his mistress that knocked.

I made the night tempestuous, first, to account for the Raven’s seeking admission, and secondly, for the effect of contrast with the (physical) serenity within the chamber.

I made the bird alight on the bust of Pallas,⁴ also for the effect of contrast between the marble and the plumage—it being understood that the bust was absolutely *suggested* by the bird—the bust of *Pallas* being chosen, first, as most in keeping with the scholarship of the lover, and, secondly, for the sonorousness of the word, Pallas, itself.

About the middle of the poem, also, I have availed myself of the force of contrast, with a view of deepening the ultimate impression. For example, an air of the fantastic—approaching as nearly to the ludicrous as was admissible—is given to the Raven’s entrance. He comes in “with many a flirt and flutter.”

Not the *least obeisance made he*—not a moment stopped or stayed he,
But with *mien of lord or lady*, perched above my chamber door.

In the two stanzas which follow, the design is more obviously carried out:—

4. A title of Athena, the Greek goddess of wisdom, the arts, and war.

Then this ebony bird beguiling my sad fancy into smiling
 By the grave and stern decorum of the countenance it wore,
 "Though thy crest be shorn and shaven thou," I said, "art sure no craven,
 Ghastly grim and ancient Raven wandering from the nightly shore—
 Tell me what thy lordly name is on the Night's Plutonian⁵ shore!"
 Quoth the Raven "Nevermore."

Much I marvelled *this ungainly fowl* to hear discourse so plainly,
 Though its answer little meaning—little relevancy bore;
 For we cannot help agreeing that no living human being
 Ever yet was blessed with seeing bird above his chamber door—
 Bird or beast upon the sculptured bust above his chamber door,
 With such name as "Nevermore."

The effect of the *dénouement* being thus provided for, I immediately drop the fantastic for a tone of the most profound seriousness:—this tone commencing in the stanza directly following the one last quoted with the line,

But the Raven, sitting lonely on that placid bust, spoke only, etc.

From this epoch the lover no longer jests—no longer sees any thing even of the fantastic in the Raven's demeanor. He speaks of him as a "grim, ungainly, ghastly, gaunt, and ominous bird of yore," and feels the "fiery eyes" burning into his "bosom's core." This revolution of thought, or fancy, on the lover's part, is intended to induce a similar one on the part of the reader—to bring the mind into a proper frame for the *dénouement*—which is now brought about as rapidly and as *directly* as possible.

With the *dénouement* proper—with the Raven's reply, "Nevermore," to the lover's final demand if he shall meet his mistress in another world—the poem, in its obvious phase, that of a simple narrative, may be said to have its completion. So far, every thing is within the limits of the accountable—of the real. A raven, having learned by rote the single word "Nevermore," and having escaped from the custody of its owner, is driven, at midnight, through the violence of a storm, to seek admission at a window from which a light still gleams—the chamber-window of a student, occupied half in poring over a volume, half in dreaming of a beloved mistress deceased. The casement being thrown open at the fluttering of the bird's wings, the bird itself perches on the most convenient seat out of the immediate reach of the student, who, amused by the incident and the oddity of the visitor's demeanor, demands of it, in jest and without looking for a reply, its name. The raven addressed, answers with its customary word, "Nevermore"—a word which finds immediate echo in the melancholy heart of the student, who, giving utterance aloud to certain thoughts suggested by the occasion, is again startled by the fowl's repetition of "Nevermore." The student now guesses the state of the case, but is impelled, as I have before explained, by the human thirst for self-torture, and in part by superstition, to propound such queries to the bird as will bring him, the lover, the most of the luxury of sorrow, through the anticipated answer "Nevermore." With the indulgence, to the utmost extreme, of

5. Of or pertaining to Pluto, Roman god of the underworld.

this self-torture, the narration, in what I have termed its first or obvious phase, has a natural termination, and so far there has been no overstepping of the limits of the real.

But in subjects so handled, however skilfully, or with however vivid an array of incident, there is always a certain hardness or nakedness, which repels the artistical eye. Two things are invariably required—first, some amount of complexity, or more properly, adaptation; and, secondly, some amount of suggestiveness—some under current, however indefinite of meaning. It is this latter, in especial, which imparts to a work of art so much of that *richness* (to borrow from colloquy a forcible term) which we are too fond of confounding with *the ideal*. It is the *excess* of the suggested meaning—it is the rendering this the upper instead of the under current of the theme—which turns into prose (and that of the very flattest kind) the so called poetry of the so called transcendentalists.⁶

Holding these opinions, I added the two concluding stanzas of the poem—their suggestiveness being thus made to pervade all the narrative which has preceded them. The under current of meaning is rendered first apparent in the lines—

“Take thy beak from out *my heart*, and take thy form from off my door!”
Quoth the Raven “Nevermore!”

It will be observed that the words, “from out my heart,” involve the first metaphorical expression in the poem. They, with the answer, “Nevermore,” dispose the mind to seek a moral in all that has been previously narrated. The reader begins now to regard the Raven as emblematical—but it is not until the very last line of the very last stanza, that the intention of making him emblematical of *Mournful and Never-ending Remembrance* is permitted distinctly to be seen:

And the Raven, never flitting, still is sitting, still is sitting,
On the pallid bust of Pallas just above my chamber door;
And his eyes have all the seeming of a demon’s that is dreaming,
And the lamplight o’er him streaming throws his shadow on the floor;
And my soul *from out that shadow* that lies floating on the floor
Shall be lifted—nevermore.

1846

6. A group of 19th-century writers and philosophers in New England; they viewed the individual soul as corresponding directly with the universe (thus eliminating language) and they located the

truest source of knowledge in intuition, not experience. Emerson was one of the foremost Transcendentalists.

KARL MARX
1818–1883

FRIEDRICH ENGELS
1820–1895

Karl Marx and Friedrich Engels are central figures in the history of literary criticism and theory and in the development of cultural studies, though neither produced a body of literary-critical work. The young Marx wrote lyrics, attempted drama and fiction, and read deeply in eighteenth- and nineteenth-century German philosophy and aesthetics, and the writings of Marx and Engels often refer to and quote literature from classical Greek drama to the novels of Charles Dickens. But as economic historians, social theorists, and revolutionaries seeking to change the world, their main work lay elsewhere, and their direct contributions to literary criticism are scattered and uneven. Yet perhaps this incompleteness makes their comments and observations about literature and criticism all the more suggestive, giving a long line of twentieth-century writers—including GYÖRGY LUKÁCS, Bertolt Brecht, WALTER BENJAMIN, GAYATRI CHAKRAVORTY SPIVAK, and FREDRIC JAMESON—much speculative and interpretive leeway in developing their own Marxist theories of literature.

To many it may seem perverse to study Marxist theory today, given the collapse between 1989 and 1991 of Communist governments in the Soviet Union and in the nations of Eastern Europe. But we must clearly distinguish between Marx and Engels as social theorists, philosophers, historians, and cultural critics and as revolutionaries—or, more accurately, as revolutionaries under whose name Communist leaders and parties seized power. The fall of particular regimes, “Marxist” more in name than in ideas, does little to lessen the impact of Marx’s relentless, fascinated, shocked (and shocking) examination of capitalism and its costs to the men and women caught in its grasp. In brilliant passages such as our selection from *Capital* (1867) on the working day, his skillfully modulated prose can be powerfully moving.

For literary and cultural criticism, the seminal passage by Marx appears in his preface to *A Contribution to the Critique of Political Economy* (1858–59, excerpted below). Here, Marx emphasizes that he is concerned primarily with the “material conditions of life,” the “economic structure of society.” On this “foundation . . . rises a legal and political superstructure”; moreover, “The mode of production of material life conditions the social, political and intellectual life process in general. It is not the consciousness of men that determines their being, but, on the contrary, their social being that determines their consciousness.” This formulation raises a number of questions: To what *degree* is consciousness socially and economically “determined”? What is the role of human agency? How closely connected are the base and the superstructure, and can the latter—which includes intellectual work and cultural institutions—affect the former? In the twentieth century, both LOUIS ALTHUSSER and RAYMOND WILLIAMS were later to wrestle directly with these questions.

The answers of Marx and Engels waver. As a famous passage (excerpted below) from the *Grundrisse* (1857–58, *Foundations or Outlines*) suggests, Marx found it difficult to explain the relationship between Greek art and the society within which it arose. Engels, too, recognized the limitations of the base / superstructure model. In a letter to Joseph Bloch (our final selection), Engels maintains that “According to the materialist conception of history, the *ultimately* determining element in history is the production and reproduction of real life,” insisting that economics is not the only determinant and leaving room for the influence of “human minds.”

Marx was born in Trier, Prussia (a region now part of Germany), the son of a Jewish lawyer who had converted to Protestantism to protect his job. Marx studied at

the universities of Bonn, Berlin, and Jena, receiving his doctorate in April 1841 for a thesis on the Greek philosophers Democritus and Epicurus. In 1842 he edited a radical newspaper in Cologne, but the German authorities, angered by his criticisms, forced him to resign in 1843. He then traveled to Paris, where he and Engels, whom he had met in Cologne, began their collaboration. Engels, born in Barmen, in western Germany, was the son of a wealthy textile manufacturer; in the 1840s, he managed a factory in England that his father owned, and his horror at the harsh economic and social conditions in Manchester led him to write *The Condition of the Working Class in England in 1844* (1845). Engels later said that as he and Marx worked together in Paris, their “agreement in all theoretical fields became obvious.”

Marx and Engels's joint work in the 1840s includes *The Holy Family* (1845) and *The German Ideology* (not published until 1932). In these texts, and in Marx's polemical pamphlet *The Poverty of Philosophy* (1847), they sought to prove that economic and social forces shape human consciousness. This materialism was meant to displace the idealist view that human consciousness shapes economic and social forces and forms. They based their interpretation of reality on *dialectical* materialism, believing that all change results from the constant conflict arising from the oppositions inherent in all ideas, movements, and events. They further argued that the internal tensions and contradictions in capitalism would lead inevitably to its demise.

Also important are Marx's writings collected in *Economic and Philosophic Manuscripts of 1844* (1932; trans. 1959), which contain much of his most passionate, incisive thinking about industrial conditions and the nature of consciousness under capitalism and present an excellent entry point into Marxist cultural analysis. Building on the work of the German philosopher Ludwig Feuerbach, author of *The Essence of Christianity* (1841), Marx is especially concerned here with the origin and impact of alienation. The industrial capitalist economy, says Marx, “alienates” individuals from the work that they do; unable to control their own labor, which they must “give” (sell) to another, they lack control and knowledge of themselves and never achieve their full human potential. However much they resent their situation, they believe—that is, they are conditioned to believe—that it cannot be changed, and that ultimately they have only themselves to blame for their discontent and failures.

Marx and Engels's most significant publication of the decade appeared in London in 1848: *Manifesto of the Communist Party* (soon known by and reprinted with the shorter title *The Communist Manifesto*). In this intense pamphlet Marx (who did the bulk of the writing) describes the triumphs of capitalism; the creation of a world market, world literature, and cosmopolitanism; the misery that capitalism imposes on the masses; the class struggle between the exploiters (owners) and the exploited (workers); the connection of people primarily via cash; the inevitability of revolution; and the dawn of a new, class-free society. Though specifically commissioned to state the principles and objectives of the Communist League (a secret organization composed primarily of German emigrés), it quickly became the position paper of militant working-class movements everywhere.

Because of his political writing and activity, Marx was expelled from both France and Germany in the late 1840s; in May 1849 he settled with his family in London. There, supported by Engels but nonetheless often in poverty, he resided for the remainder of his life. His major works during these decades are the *Grundrisse*, a manuscript of some 800 printed pages (1857–58, published 1939–41); the three book volume *Theories of Surplus Value* (1860s, published 1905–10); and above all *Das Kapital*, volume 1 of which appeared in 1867 (trans. 1886), with volumes 2 and 3, edited by Engels, published posthumously in 1885 and 1894 (trans. 1907, 1909). Volume 4 of *Das Kapital* is the aforementioned *Theories of Surplus Value*, edited and published by Karl Kautsky. Marx also wrote many articles for newspapers in the United States and Europe. Engels's writings include *Herr Eugen Dühring's Revolution in Science* (1878, usually referred to as *Anti-Dühring*), parts of which later appeared

as a summary of the basics of socialism titled *Socialism: Utopian and Scientific* (1892); *The Origin of the Family, Private Property, and the State* (1884); and *Dialectics of Nature* (1925).

A literary theorist and critic reading Marx and Engels may raise questions that the texts do not answer. What roles do writers, critics, and intellectuals play? Do they illuminate for workers the nature of capitalist exploitation, or do they act at the service of those who already and best understand their true circumstances? Should writers be free to state the social and political facts as they see them, or must the goal of working-class revolution always shape their work—and if so, who sets the limits?

Marx has a simple but powerful reply: the answers will come only when the contradictions within capitalism produce them. Capitalism has no remedy for the worst social and economic problems that it creates and that will eventually rend it asunder. Marx is certain that capitalism will end, and why: but no one can know exactly what the roles of intellectuals and critics will be, and what the new society will look like, until the force of historical necessity brings them into being.

Meanwhile, Marxist critics have work to perform, practicing a discipline linked to the goal of radical social change. Thus they must approach literature, literary education, criticism, and theory as integral parts of economic and social life. In *The German Ideology*, as our selection indicates, Marx and Engels emphasize that we must study *real* men and women and *real* processes, not what has typically been said or thought by and about them.

Marx promotes “ideology critique,” that is, the demystifying exposure of how class interests operate through cultural forms, whether political or legal, religious or philosophical, educational or literary. It is the nature of ideology to conceal the reality of class struggle from our perception and consciousness; and insofar as working-class people unconsciously absorb bourgeois values, they are unwitting carriers of “false consciousness.”

The term *ideology* rarely appears in Marx’s *Grundrisse* and *Capital*, but it is implicit in many of Marx’s formulations of the difference between the surface and reality of capitalist society. Marxist critics are expected to investigate the systemic masking of the real methods and consequences of existing socioeconomic arrangements. Sometimes, however, Marx uses the term differently, as when he declares in *A Contribution to the Critique of Political Economy* that we grow aware of and fight the conflict between classes in “ideological forms.”

Later Marxists have developed both the positive and negative senses of ideology. One dominant line of inquiry follows from the writings of ANTONIO GRAMSCI, who in his *Prison Notebooks* (published 1945–75) describes ideology as “the terrain on which men move, acquire consciousness of their position, struggle, etc.”; he explores how a privileged social class can achieve cultural “hegemony,” the manufactured assent to its beliefs and practices won peacefully through ideology. This concept of hegemony, developed by the British Marxist Raymond Williams (especially in *Marxism and Literature*, 1977) and by those he has influenced (notably STUART HALL and DICK HEBDIGE), has become fundamental to cultural studies. Critics use it in studying classic texts, the relationships and differences between canonical and noncanonical literature, popular culture, the media, education, and publishing—all outlets for ideology.

The power of ideology to mask and obscure is also at work in what Marx calls “the fetishism of commodities,” which he discusses in our first selection from *Capital*. Under capitalism, human relations are increasingly characterized by more or less thoroughgoing alienation, monetization, and commodification. Relationships between workers and owners, buyers and sellers, are mediated through the things produced. These commodities become objects of fetishism—seeming to have an objective existence of their own that obscures the individual labor involved in their

production. By being exchanged, they acquire a seemingly inherent value distinct from their use value or physical properties.

As a social and cultural theory, Marxism demands of its followers ongoing critical scrutiny and self-questioning of its own basic texts, which are suggestive but sometimes flawed and often incomplete. Marx and Engels underestimated, for example, the extraordinary power of capitalism to turn back and absorb opposition, and apparently they overlooked the damaging overstatements and reductiveness that mar their arguments. Moreover, though Marx was acutely responsive to the economic and political situation of workers, he appears incapable of actually seeing and making imaginative contact with them and their families, of conveying how they live, think, and feel. Even in his most illuminating work, Marx often mirrors the dehumanizing tendencies that his radical critiques of capitalism condemn. Individuals matter most to him as embodiments of ideas, as components of systems—a form of thinking that the best novelists of his time, such as Dickens and Balzac, brilliantly exposed and corrected.

On the “material conditions of life” and the “economic structure of society,” Marx and Engels are sharp and compelling; on the subject of the creative and critical consciousness of persons and cultures, they falter. For foundational Marxist interpretations of cultural life, one must look instead to the work of such later theorists and critics as W. E. B. DU BOIS, Edmund Wilson (in his writings of the 1930s), THEODOR ADORNO, C. L. R. James, and Raymond Williams. They built upon but went beyond the insights that Marx and Engels provide, and their critical projects drew from the literary texts and cultural traditions that Marx and Engels admired but never fully engaged.

From Economic and Philosophic Manuscripts of 1844¹

* * *

We have proceeded from the premises of political economy.² We have accepted its language and its laws. We presupposed private property, the separation of labour, capital and land, and of wages, profit of capital and rent of land—likewise division of labour, competition, the concept of

1. Translated by Martin Milligan.

2. The 19th-century social science concerned with the relations between political and economic

processes (now often separated into political science and economics).

exchange-value, etc. On the basis of political economy itself, in its own words, we have shown that the worker sinks to the level of a commodity and becomes indeed the most wretched of commodities;³ that the wretchedness of the worker is in inverse proportion to the power and magnitude of his production; that the necessary result of competition is the accumulation of capital in a few hands, and thus the restoration of monopoly in a more terrible form; that finally the distinction between capitalist and land-rentier,⁴ like that between the tiller of the soil and the factory-worker, disappears and that the whole of society must fall apart into the two classes—the property-owners and the propertyless workers.

Political economy proceeds from the fact of private property, but it does not explain it to us. It expresses in general, abstract formulae the *material* process through which private property actually passes, and these formulae it then takes for *laws*. It does not *comprehend* these laws—i.e., it does not demonstrate how they arise from the very nature of private property. Political economy does not disclose the source of the division between labour and capital, and between capital and land. When, for example, it defines the relationship of wages to profit, it takes the interest of the capitalists to be the ultimate cause; i.e., it takes for granted what it is supposed to evolve. Similarly, competition comes in everywhere. It is explained from external circumstances. As to how far these external and apparently fortuitous circumstances are but the expression of a necessary course of development, political economy teaches us nothing. We have seen how, to it, exchange itself appears to be a fortuitous fact. The only wheels which political economy sets in motion are *avarice* and the *war amongst the avaricious—competition*.

Precisely because political economy does not grasp the connections within the movement, it was possible to counterpose, for instance, the doctrine of competition to the doctrine of monopoly, the doctrine of craft-liberty to the doctrine of the corporation, the doctrine of the division of landed property to the doctrine of the big estate—for competition, craft-liberty and the division of landed property were explained and comprehended only as fortuitous, premeditated and violent consequences of monopoly, the corporation, and feudal property, not as their necessary, inevitable and natural consequences.

Now, therefore, we have to grasp the essential connection between private property, avarice, and the separation of labour, capital and landed property; between exchange and competition, value and the devaluation of men, monopoly and competition, etc.; the connection between this whole estrangement and the *money*-system.

Do not let us go back to a fictitious primordial condition as the political economist does, when he tries to explain. Such a primordial condition explains nothing. He merely pushes the question away into a grey nebulous distance. He assumes in the form of fact, of an event, what he is supposed to deduce—namely, the necessary relationship between two things—between, for example, division of labour and exchange. Theology in the same way explains the origin of evil by the fall of man: that is, it assumes as a fact, in historical form, what has to be explained.

3. Because labor itself is sold to others, and at a very low price.

4. One who lives on income from land, stocks, or bonds.

We proceed from an *actual* economic fact.

The worker becomes all the poorer the more wealth he produces, the more his production increases in power and range. The worker becomes an ever cheaper commodity the more commodities he creates. With the *increasing value* of the world of things proceeds in direct proportion the *devaluation* of the world of men. Labour produces not only commodities; it produces itself and the worker as a *commodity*—and does so in the proportion in which it produces commodities generally.

This fact expresses merely that the object which labour produces—labour's product—confronts it as *something alien*, as a *power independent* of the producer. The product of labour is labour which has been congealed in an object, which has become material: it is the *objectification* of labour. Labour's realization is its objectification. In the conditions dealt with by political economy this realization of labour appears as *loss of reality* for the workers; objectification as *loss of the object* and *object-bondage*; appropriation as *estrangement*, as *alienation*.

So much does labour's realization appear as loss of reality that the worker loses reality to the point of starving to death. So much does objectification appear as loss of the object that the worker is robbed of the objects most necessary not only for his life but for his work. Indeed, labour itself becomes an object which he can get hold of only with the greatest effort and with the most irregular interruptions. So much does the appropriation of the object appear as estrangement that the more objects the worker produces the fewer can he possess and the more he falls under the dominion of his product, capital.

All these consequences are contained in the definition that the worker is related to the *product of his labour* as to an *alien* object. For on this premise it is clear that the more the worker spends himself, the more powerful the alien objective world becomes which he creates over-against himself, the poorer he himself—his inner world—becomes, the less belongs to him as his own. It is the same in religion. The more man puts into God, the less he retains in himself. The worker puts his life into the object; but now his life no longer belongs to him but to the object. Hence, the greater this activity, the greater is the worker's lack of objects. Whatever the product of his labour is, he is not. Therefore the greater this product, the less is he himself. The *alienation* of the worker in his product means not only that his labour becomes an object, an *external* existence, but that it exists *outside him*, independently, as something alien to him, and that it becomes a power of its own confronting him; it means that the life which he has conferred on the object confronts him as something hostile and alien.

Let us now look more closely at the *objectification*, at the production of the worker; and therein at the *estrangement*, the *loss* of the object, his product.

The worker can create nothing without *nature*, without the *sensuous external world*. It is the material on which his labor is manifested, in which it is active, from which and by means of which it produces.

But just as nature provides labor with the *means of life* in the sense that labour cannot *live* without objects on which to operate, on the other hand, it also provides the *means of life* in the more restricted sense—i.e., the means for the physical subsistence of the *worker* himself.

Thus the more the worker by his labour *appropriates* the external world, sensuous nature, the more he deprives himself of *means of life* in the double respect: first, that the sensuous external world more and more ceases to be an object belonging to his labour—to be his labour's *means of life*; and secondly, that it more and more ceases to be *means of life* in the immediate sense, means for the physical subsistence of the worker.

Thus in this double respect the worker becomes a slave of his object, first, in that he receives an *object of labour*, i.e., in that he receives *work*; and secondly, in that he receives *means of subsistence*. Therefore, it enables him to exist, first, as a *worker*; and, second, as a *physical subject*. The extremity of this bondage is that it is only as a *worker* that he continues to maintain himself as a *physical subject*, and that it is only as a *physical subject* that he is a *worker*.

(The laws of political economy express the estrangement of the worker in his object thus: the more the worker produces, the less he has to consume; the more values he creates, the more valueless, the more unworthy he becomes; the better formed his product, the more deformed becomes the worker; the more civilized his object, the more barbarous becomes the worker; the mightier labour becomes, the more powerless becomes the worker; the more ingenious labour becomes, the duller becomes the worker and the more he becomes nature's bondsman.)

Political economy conceals the estrangement inherent in the nature of labour by not considering the direct relationship between the worker (labour) and production. It is true that labour produces for the rich wonderful things—but for the worker it produces privation. It produces palaces—but for the worker, hovels. It produces beauty—but for the worker, deformity. It replaces labour by machines—but some of the workers it throws back to a barbarous type of labour, and the other workers it turns into machines. It produces intelligence—but for the worker idiocy, cretinism.⁵

The direct relationship of labour to its produce is the relationship of the worker to the objects of his production. The relationship of the man of means to the objects of production and to production itself is only a *consequence* of this first relationship—and confirms it. We shall consider this other aspect later.

When we ask, then, what is the essential relationship of labour we are asking about the relationship of the *worker* to production.

Till now we have been considering the estrangement, the alienation of the worker only in one of its aspects, i.e., the worker's *relationship to the products of his labour*. But the estrangement is manifested not only in the result but in the *act of production*—within the *producing activity* itself. How would the worker come to face the product of his activity as a stranger, were it not that in the very act of production he was estranging himself from himself? The product is after all but the summary of the activity of production. If then the product of labour is alienation, production itself must be active alienation, the alienation of activity, the activity of alienation. In the estrangement of the object of labour is merely summarized the estrangement, the alienation, in the activity of labour itself.

What, then, constitutes the alienation of labour?

5. That is, stunted physical and mental development.

First, the fact that labour is *external* to the worker, i.e., it does not belong to his essential being; that in his work, therefore, he does not affirm himself but denies himself, does not feel content but unhappy, does not develop freely his physical and mental energy but mortifies his body and ruins his mind. The worker therefore only feels himself outside his work, and in his work feels outside himself. He is at home when he is not working, and when he is working he is not at home. His labour is therefore not voluntary, but coerced; it is *forced labour*. It is therefore not the satisfaction of a need; it is merely a *means* to satisfy needs external to it. Its alien character emerges clearly in the fact that as soon as no physical or other compulsion exists, labour is shunned like the plague. External labour, labour in which man alienates himself, is a labour of self-sacrifice, of mortification. Lastly, the external character of labour for the worker appears in the fact that it is not his own, but someone else's, that it does not belong to him, that in it he belongs, not to himself, but to another. Just as in religion the spontaneous activity of the human imagination, of the human brain and the human heart, operates independently of the individual—that is, operates on him as an alien, divine or diabolical activity—in the same way the worker's activity is not his spontaneous activity. It belongs to another; it is the loss of his self.

As a result, therefore, man (the worker) no longer feels himself to be freely active in any but his animal functions—eating, drinking, procreating, or at most in his dwelling and in dressing-up, etc.; and in his human functions he no longer feels himself to be anything but an animal. What is animal becomes human and what is human becomes animal.

*From The German Ideology*¹

* * *

The fact is, therefore, that definite individuals who are productively active in a definite way enter into these definite social and political relations. Empirical observation must in each separate instance bring out empirically, and without any mystification and speculation, the connection of the social and political structure with production. The social structure and the State are continually evolving out of the life process of definite individuals, but of individuals, not as they may appear in their own or other people's imagination, but as they *really* are; i.e., as they operate, produce materially, and hence as they work under definite material limits, presuppositions and conditions independent of their will.

The production of ideas, of conceptions, of consciousness, is at first directly interwoven with the material activity and the material intercourse of men, the language of real life. Conceiving, thinking, the mental intercourse of men, appear at this stage as the direct efflux of their material behaviour.²

1. Translated by S. Ryazanskaya, based on an earlier translation by W. Lough.

2. That is, the actions that human beings take in

their relationship to the productive forces of their society.

The same applies to mental production as expressed in the language of politics, laws, morality, religion, metaphysics, etc., of a people. Men are the producers of their conceptions, ideas, etc.—real, active men, as they are conditioned by a definite development of their productive forces and of the intercourse corresponding to these, up to its furthest forms. Consciousness can never be anything else than conscious existence, and the existence of men is their actual life-process. If in all ideology men and their circumstances appear upside-down as in a *camera obscura*,³ this phenomenon arises just as much from their historical life-process as the inversion of objects on the retina does from their physical life-process.

In direct contrast to German philosophy⁴ which descends from heaven to earth, here we ascend from earth to heaven. That is to say, we do not set out from what men say, imagine, conceive, nor from men as narrated, thought of, imagined, conceived, in order to arrive at men in the flesh. We set out from real, active men, and on the basis of their real life-process we demonstrate the development of the ideological reflexes and echoes of this life-process. The phantoms formed in the human brain are also, necessarily, sublimates of their material life-process, which is empirically verifiable and bound to material premises. Morality, religion, metaphysics, all the rest of ideology and their corresponding forms of consciousness, thus no longer retain the semblance of independence. They have no history, no development; but men, developing their material production and their material intercourse, alter, along with this their real existence, their thinking and the products of their thinking. Life is not determined by consciousness, but consciousness by life. In the first method of approach the starting-point is consciousness taken as the living individual; in the second method, which conforms to real life, it is the real living individuals themselves, and consciousness is considered solely as *their* consciousness.

This method of approach is not devoid of premises. It starts out from the real premises and does not abandon them for a moment. Its premises are men, not in any fantastic isolation and rigidity, but in their actual, empirically perceptible process of development under definite conditions. As soon as this active life-process is described, history ceases to be a collection of dead facts as it is with the empiricists⁵ (themselves still abstract), or an imagined activity of imagined subjects, as with the idealists.

Where speculation ends—in real life—there real, positive science begins: the representation of the practical activity, of the practical process of development of men. Empty talk about consciousness ceases, and real knowledge has to take its place.

* * *

1845–46

1932

3. Literally, “dark chamber” (Latin): an apparatus invented in the 17th century consisting of a darkened box with an aperture (usually a lens) through which an image is projected (inverted) on the opposite wall.

4. That is, idealism, which holds that reality and knowledge derive not from perceptions but from

ideas or the workings of the human mind or spirit; idealists include IMMANUEL KANT (1724–1804) and GEORG WILHELM FRIEDRICH HEGEL (1770–1831).

5. Those who believe that experiences, especially of the senses, are the only sources of knowledge; for example, DAVID HUME (1711–1776).

*From The Communist Manifesto*¹

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot,² French Radicals and German police-spies.

Where is the party in opposition that has not been decried as Communist by its opponents in power? Where the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the Spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London,³ and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

*I. Bourgeois and Proletarians*⁴

The history of all hitherto existing society is the history of class struggles.

Freeman and slave, patrician and plebeian, lord and serf, guild-master⁵ and journeyman,⁶ in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended either in a revolutionary re-constitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history, we find almost everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the Middle Ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

The modern bourgeois society that has sprouted from the ruins of feudal society has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms: Society as a whole

1. Originally titled *Manifesto of the Communist Party*. This English text was edited by Engels.

2. François Pierre Guillaume Guizot (1787–1874), French statesman and historian who supported the idea of a constitutional monarchy. Klemens Wenzel, Fürst (Prince) von Metternich (1773–1859), Austrian statesman and foreign minister, who worked to suppress nationalist and popular constitutional movements.

3. Members of the Communist League (an international association made up mostly of German emigrés) met in November 1847; they commissioned the writing of the *Manifesto*.

4. By bourgeoisie is meant the class of modern Capitalists, owners of the means of social production and employers of wage-labour. By proletariat, the class of modern wage-labourers who, having no means of production of their own, are reduced to selling their labour-power in order to live [Engels's note].

5. Guild-master, that is, a full member of a guild, a master within, not a head of a guild [Engels's note].

6. A skilled artisan, not yet a full member of a guild, who works for master artisans rather than for himself.

is more and more splitting up into two great hostile camps, into two great classes directly facing each other: Bourgeoisie and Proletariat.

From the serfs of the Middle Ages sprang the chartered burghers⁷ of the earliest towns. From these burgesses⁸ the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape,⁹ opened up fresh ground for the rising bourgeoisie. The East-Indian and Chinese markets, the colonisation of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element in the tottering feudal society, a rapid development.

The feudal system of industry, under which industrial production was monopolised by closed guilds, now no longer sufficed for the growing wants of the new markets. The manufacturing system took its place. The guild-masters were pushed on one side by the manufacturing middle class; division of labour between the different corporate guilds vanished in the face of division of labour in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionised industrial production. The place of manufacture was taken by the giant, Modern Industry, the place of the industrial middle class, by industrial millionaires, the leaders of whole industrial armies, the modern bourgeois.

Modern industry has established the world-market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its turn, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class. An oppressed class under the sway of the feudal nobility, an armed and self-governing association in the medieval commune;¹ here independent urban republic (as in Italy and Germany), there taxable "third estate"² of the monarchy (as in France), afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against the nobility, and, in fact, corner-stone of the great monarchies in general, the bourgeoisie has at last, since the establishment of Modern Industry and of the world-market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie.

7. Privileged middle class.

8. Citizens.

9. The Cape of Good Hope, at the southern tip of Africa.

1. This was the name given their urban communities by the townsmen of Italy and France, after

they had purchased or wrested their initial rights of self-government from their feudal lords [Engels's note].

2. The common people in France (the first estate or political order was the clergy, the second the nobility).

The bourgeoisie, historically, has played a most revolutionary part.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left remaining no other nexus between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine³ sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, it has substituted naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honoured and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage-labourers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigour in the Middle Ages, which Reactionists⁴ so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man's activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals; it has conducted expeditions that put in the shade all former Exoduses of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form, was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all that is holy is profaned, and man is at last compelled to face with sober senses, his real conditions of life, and his relations with his kind.

The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connexions everywhere.

The bourgeoisie has through its exploitation of the world-market given a cosmopolitan character to production and consumption in every country. To the great chagrin of Reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilised nations, by industries that no longer work up indigenous raw

3. Materialist middle-class; the term also is used by MATTHEW ARNOLD, "The Function of Criticism

at the Present Time" (1864; see below).

4. Reactionaries.

material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrow-mindedness become more and more impossible, and from the numerous national and local literatures, there arises a world literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all, even the most barbarian, nations into civilisation. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls,⁵ with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate.⁶ It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilisation into their midst, i.e., to become bourgeois themselves. In one word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as compared with the rural, and has thus rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on the civilised ones, nations of peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated population, centralised means of production, and has concentrated property in a few hands. The necessary consequence of this was political centralisation. Independent, or but loosely connected provinces, with separate interests, laws, governments and systems of taxation, became lumped together into one nation, with one government, one code of laws, one national class-interest, one frontier and one customs-tariff.

The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalisation of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labour?

5. That is, barriers that separate two or more groups, usually as a means of restricting the flow of information, goods, and people (an allusion to the Great Wall of China).

6. China unsuccessfully fought the Opium Wars (1839–42, 1856–60) to prevent the expansion of Western trade.

From Grundrisse¹

* * *

In the case of the arts, it is well known that certain periods of their flowering are out of all proportion to the general development of society, hence also to the material foundation, the skeletal structure as it were, of its organization. For example, the Greeks compared to the moderns or also Shakespeare. It is even recognized that certain forms of art, e.g. the epic, can no longer be produced in their world epoch-making, classical stature as soon as the production of art, as such, begins; that is, that certain significant forms within the realm of the arts are possible only at an undeveloped stage of artistic development. If this is the case with the relation between different kinds of art within the realm of the arts, it is already less puzzling that it is the case in the relation of the entire realm to the general development of society. The difficulty consists only in the general formulation of these contradictions. As soon as they have been specified, they are already clarified.

Let us take e.g. the relation of Greek art and then of Shakespeare to the present time. It is well known that Greek mythology is not only the arsenal of Greek art but also its foundation. Is the view of nature and of social relations on which the Greek imagination and hence Greek [mythology] is based possible with self-acting mule spindles² and railways and locomotives and electrical telegraphs? What chance has Vulcan against Roberts & Co., Jupiter against the lightning rod and Hermes against the Credit Mobilier?³ All mythology overcomes and dominates and shapes the forces of nature in the imagination and by the imagination; it therefore vanishes with the advent of real mastery over them. What becomes of Fama⁴ alongside Printing House Square? Greek art presupposes Greek mythology, i.e. nature and the social forms already reworked in an unconsciously artistic way by the popular imagination. This is its material. Not any mythology whatever, i.e. not an arbitrarily chosen unconsciously artistic reworking of nature (here meaning everything objective, hence including society). Egyptian mythology could never have been the foundation or the womb of Greek art. But, in any case, a *mythology*. Hence, in no way a social development which excludes all mythological, all mythologizing relations to nature; which therefore demands of the artist an imagination not dependent on mythology.

From another side, is Achilles⁵ possible with powder and lead? Or the *Iliad* with the printing press, not to mention the printing machine? Do not the song and the saga and the muse necessarily come to an end with the printer's bar,⁶ hence do not the necessary conditions of epic poetry vanish?

1. Translated by Martin Nicolaus, who sometimes includes clarifying words in brackets: the title, usually left untranslated, means "outlines" or "foundations."

2. Machines used in spinning thread, invented in the late 18th century.

3. A major investment bank in France during the Second Empire (1852–70), against which Marx pits Hermes, Greek god of commerce and invention. The other two (Roman) gods are similarly paired: Vulcan, god of metalworking, with a commercial firm and Jupiter, supreme god and wielder

of the thunderbolt, with a lightning rod.

4. Rumor (Latin), a Roman personification; she repeated whatever she heard until everyone knew it.

5. The greatest of the Greek warriors at Troy, and the focus of Homer's *Iliad* (ca. 8th c. B.C.E.).

6. Lever used to screw down the flat plate of a manual printing press (the German word used here, *Preßbengel*, can also mean printing in general). "The muse": goddess presiding over the arts and intellectual pursuits, traditionally invoked by epic poets as an aid to memory.

But the difficulty lies not in understanding that the Greek arts and epic are bound up with certain forms of social development. The difficulty is that they still afford us artistic pleasure and that in a certain respect they count as a norm and as an unattainable model.

A man cannot become a child again, or he becomes childish. But does he not find joy in the child's naiveté, and must he himself not strive to reproduce its truth at a higher stage? Does not the true character of each epoch come alive in the nature of its children? Why should not the historic childhood of humanity, its most beautiful unfolding, as a stage never to return, exercise an eternal charm? There are unruly children and precocious children. Many of the old peoples belong in this category. The Greeks were normal children. The charm of their art for us is not in contradiction to the undeveloped stage of society on which it grew. [It] is its result, rather, and is inextricably bound up, rather, with the fact that the unripe social conditions under which it arose, and could alone arise, can never return.

1857–58

1939–42

*From Preface to A Contribution to the
Critique of Political Economy*¹

* * *

The first work which I undertook for a solution of the doubts which assailed me was a critical review of the Hegelian philosophy of right, a work the introduction to which appeared in 1844 in the *Deutsch-Französische Jahrbücher*,² published in Paris. My investigation led to the result that legal relations as well as forms of state are to be grasped neither from themselves nor from the so-called general development of the human mind, but rather have their roots in the material conditions of life, the sum total of which Hegel, following the example of the Englishmen and Frenchmen of the eighteenth century, combines under the name of "civil society," that, however, the anatomy of civil society is to be sought in political economy. The investigation of the latter, which I began in Paris, I continued in Brussels, whither I had emigrated in consequence of an expulsion order of M. Guizot.³ The general result at which I arrived and which, once won, served as a guiding thread for my studies, can be briefly formulated as follows: In the social production of their life, men enter into definite relations that are indispensable and independent of their will, relations of production which correspond to a definite stage of development of their material productive forces. The sum total of these relations of production constitutes the economic structure of society, the real foundation, on which rises a legal and political superstructure and to which correspond definite forms of social consciousness. The mode of production of material life conditions the social, political and intellectual life process in

1. Translated by Robert C. Tucker.

2. *German-French Yearbook*. The German philosopher GEORG WILHELM FRIEDRICH HEGEL (1770–1831) described his political philosophy in the *Philosophy of Right* (1821); Marx's essay was "Contribution to the Critique of Hegel's Phi-

losophy of Right."

3. François Pierre Guillaume Guizot (1787–1874), French statesman and historian who supported the idea of a constitutional monarchy; he was the chief power in the government between 1840 and 1848.

general. It is not the consciousness of men that determines their being, but, on the contrary, their social being that determines their consciousness. At a certain stage of their development, the material productive forces of society come in conflict with the existing relations of production, or—what is but a legal expression for the same thing—with the property relations within which they have been at work hitherto. From forms of development of the productive forces these relations turn into their fetters. Then begins an epoch of social revolution. With the change of the economic foundation the entire immense superstructure is more or less rapidly transformed. In considering such transformations a distinction should always be made between the material transformation of the economic conditions of production, which can be determined with the precision of natural science, and the legal, political, religious, aesthetic or philosophic—in short, ideological forms in which men become conscious of this conflict and fight it out. Just as our opinion of an individual is not based on what he thinks of himself, so can we not judge of such a period of transformation by its own consciousness; on the contrary, this consciousness must be explained rather from the contradictions of material life, from the existing conflict between the social productive forces and the relations of production. No social order ever perishes before all the productive forces for which there is room in it have developed; and new, higher relations of production never appear before the material conditions of their existence have matured in the womb of the old society itself. Therefore mankind always sets itself only such tasks as it can solve; since, looking at the matter more closely, it will always be found that the task itself arises only when the material conditions for its solution already exist or are at least in the process of formation. In broad outlines Asiatic, ancient, feudal, and modern bourgeois modes of production can be designated as progressive epochs in the economic formation of society. The bourgeois relations of production are the last antagonistic form of the social process of production—antagonistic not in the sense of individual antagonism, but of one arising from the social conditions of life of the individuals; at the same time the productive forces developing in the womb of bourgeois society create the material conditions for the solution of that antagonism.⁴ This social formation brings, therefore, the prehistory of human society to a close.

*From Capital, Volume 1*¹

From Chapter 1. Commodities

SECTION 4. THE FETISHISM OF COMMODITIES AND THE SECRET THEREOF

A commodity appears, at first sight, a very trivial thing, and easily understood. Its analysis shows that it is, in reality, a very queer thing, abounding

4. That is, socialism—the final “mode of production,” which is in the process of emerging through the class struggle of the bourgeoisie and

proletarians.

1. Translated by Samuel Moore and Edward Aveling, and edited by Engels.

in metaphysical subtleties and theological niceties. So far as it is a value in use, there is nothing mysterious about it, whether we consider it from the point of view that by its properties it is capable of satisfying human wants, or from the point that those properties are the product of human labour. It is as clear as noon-day, that man, by his industry, changes the forms of the materials furnished by Nature, in such a way as to make them useful to him. The form of wood, for instance, is altered, by making a table out of it. Yet, for all that, the table continues to be that common, every-day thing, wood. But, so soon as it steps forth as a commodity, it is changed into something transcendent. It not only stands with its feet on the ground, but, in relation to all other commodities, it stands on its head, and evolves out of its wooden brain grotesque ideas, far more wonderful than "table-turning" ever was.

The mystical character of commodities does not originate, therefore, in their use-value. Just as little does it proceed from the nature of the determining factors of value. For, in the first place, however varied the useful kinds of labour, or productive activities, may be, it is a physiological fact, that they are functions of the human organism, and that each such function, whatever may be its nature or form, is essentially the expenditure of human brain, nerves, muscles, &c. Secondly, with regard to that which forms the groundwork for the quantitative determination of value, namely, the duration of that expenditure, or the quantity of labour, it is quite clear that there is a palpable difference between its quantity and quality. In all states of society, the labour-time that it costs to produce the means of subsistence, must necessarily be an object of interest to mankind, though not of equal interest in different stages of development. And lastly, from the moment that men in any way work for one another, their labour assumes a social form.

Whence, then, arises the enigmatical character of the product of labour, so soon as it assumes the form of commodities? Clearly from this form itself. The equality of all sorts of human labour is expressed objectively by their products all being equally values; the measure of the expenditure of labour-power by the duration of that expenditure, takes the form of the quantity of value of the products of labour; and finally, the mutual relations of the producers, within which the social character of their labour affirms itself, take the form of a social relation between the products.

A commodity is therefore a mysterious thing, simply because in it the social character of men's labour appears to them as an objective character stamped upon the product of that labour; because the relation of the producers to the sum total of their own labour is presented to them as a social relation, existing not between themselves, but between the products of their labour. This is the reason why the products of labour become commodities, social things whose qualities are at the same time perceptible and imperceptible by the senses. In the same way the light from an object is perceived by us not as the subjective excitation of our optic nerve, but as the objective form of something outside the eye itself. But, in the act of seeing, there is at all events, an actual passage of light from one thing to another, from the external object to the eye. There is a physical relation between physical things. But it is different with commodities. There, the existence of the things *quâ*² commodities, and the value-relation between the products of

2. As (originally Latin).

labour which stamps them as commodities, have absolutely no connexion with their physical properties and with the material relations arising therefrom. There it is a definite social relation between men, that assumes, in their eyes, the fantastic form of a relation between things. In order, therefore, to find an analogy, we must have recourse to the mist-enveloped regions of the religious world. In that world the productions of the human brain appear as independent beings endowed with life, and entering into relation both with one another and the human race. So it is in the world of commodities with the products of men's hands. This I call the Fetishism which attaches itself to the products of labour,³ so soon as they are produced as commodities, and which is therefore inseparable from the production of commodities.

This Fetishism of commodities has its origin, as the foregoing analysis has already shown, in the peculiar social character of the labour that produces them.

As a general rule, articles of utility become commodities, only because they are products of the labour of private individuals or groups of individuals who carry on their work independently of each other. The sum total of the labour of all these private individuals forms the aggregate labour of society. Since the producers do not come into social contact with each other until they exchange their products, the specific social character of each producer's labour does not show itself except in the act of exchange. In other words, the labour of the individual asserts itself as a part of the labour of society, only by means of the relations which the act of exchange establishes directly between the products, and indirectly, through them, between the producers. To the latter, therefore, the relations connecting the labour of one individual with that of the rest appear, not as direct social relations between individuals at work, but as what they really are, material relations between persons and social relations between things. It is only by being exchanged that the products of labour acquire, as values, one uniform social status, distinct from their varied forms of existence as objects of utility. This division of a product into a useful thing and a value becomes practically important, only when exchange has acquired such an extension that useful articles are produced for the purpose of being exchanged, and their character as values has therefore to be taken into account, beforehand, during production. From this moment the labour of the individual producer acquires socially a two-fold character. On the one hand, it must, as a definite useful kind of labour, satisfy a definite social want, and thus hold its place as part and parcel of the collective labour of all, as a branch of a social division of labour that has sprung up spontaneously. On the other hand, it can satisfy the manifold wants of the individual producer himself, only in so far as the mutual exchangeability of all kinds of useful private labour is an established social fact, and therefore the private useful labour of each producer ranks on an equality with that of all others. The equalisation of the most different kinds of labour can be the result only of an abstraction from their inequalities, or of reducing them to their common denominator, viz.,⁴

3. By analogy with religious fetishism, the attribution of magical or divine power to objects. Similarly, according to Marx, we impute to commodities a life of their own (and a seemingly inherent value). We treat as relations between

people what are in fact relations between commodities and people, thereby attributing human powers to things.

4. Namely, that is to say (from medieval Latin *videlicet*).

expenditure of human labour-power or human labour in the abstract. The two-fold social character of the labour of the individual appears to him, when reflected in his brain, only under those forms which are impressed upon that labour in every-day practice by the exchange of products. In this way, the character that his own labour possesses of being socially useful takes the form of the condition, that the product must be not only useful, but useful for others, and the social character that his particular labour has of being the equal of all other particular kinds of labour, takes the form that all the physically different articles that are the products of labour, have one common quality, viz., that of having value.

Hence, when we bring the products of our labour into relation with each other as values, it is not because we see in these articles the material receptacles of homogeneous human labour. Quite the contrary: whenever, by an exchange, we equate as values our different products, by that very act, we also equate, as human labour, the different kinds of labour expended upon them. We are not aware of this, nevertheless we do it. Value, therefore, does not stalk about with a label describing what it is. It is value, rather, that converts every product into a social hieroglyphic. Later on, we try to decipher the hieroglyphic, to get behind the secret of our own social products; for to stamp an object of utility as a value, is just as much a social product as language. The recent scientific discovery, that the products of labour, so far as they are values, are but material expressions of the human labour spent in their production, marks, indeed, an epoch in the history of the development of the human race, but, by no means, dissipates the mist through which the social character of labour appears to us to be an objective character of the products themselves. The fact, that in the particular form of production with which we are dealing, viz., the production of commodities, the specific social character of private labour carried on independently, consists in the equality of every kind of that labour, by virtue of its being human labour, which character, therefore, assumes in the product the form of value—this fact appears to the producers, notwithstanding the discovery above referred to, to be just as real and final, as the fact, that, after the discovery by science of the component gases of air, the atmosphere itself remained unaltered.

What, first of all, practically concerns producers when they make in exchange, is the question, how much of some other product they get for their own? in what proportions the products are exchangeable? When these proportions have, by custom, attained a certain stability, they appear to result from the nature of the products, so that, for instance, one ton of iron and two ounces of gold appear as naturally to be of equal value as a pound of gold and a pound of iron in spite of their different physical and chemical qualities appear to be of equal weight. The character of having value, when once impressed upon products, obtains fixity only by reason of their acting and re-acting upon each other as quantities of value. These quantities vary continually, independently of the will, foresight and action of the producers. To them, their own social action takes the form of the action of objects, which rule the producers instead of being ruled by them. It requires a fully developed production of commodities before, from accumulated experience alone, the scientific conviction springs up, that all the different kinds of private labour, which are carried on independently of each other, and yet as spontaneously developed branches of the social division of labour, are con-

tinually being reduced to the quantitative proportions in which society requires them. And why? Because, in the midst of all the accidental and ever fluctuating exchange-relations between the products, the labour-time socially necessary for their production forcibly asserts itself like an overriding law of Nature. The law of gravity thus asserts itself when a house falls about our ears. The determination of the magnitude of value by labour-time is therefore a secret, hidden under the apparent fluctuations in the relative values of commodities. Its discovery, while removing all appearance of mere accidentality from the determination of the magnitude of the values of products, yet in no way alters the mode in which that determination takes place.

Man's reflections on the forms of social life, and consequently, also, his scientific analysis of those forms, take a course directly opposite to that of their actual historical development. He begins, *post festum*,⁵ with the results of the process of development ready to hand before him. The characters that stamp products as commodities, and whose establishment is a necessary preliminary to the circulation of commodities, have already acquired the stability of natural, self-understood forms of social life, before man seeks to decipher, not their historical character, for in his eyes they are immutable, but their meaning. Consequently it was the analysis of the prices of commodities that alone led to the determination of the magnitude of value, and it was the common expression of all commodities in money that alone led to the establishment of their characters as values. It is, however, just this ultimate money-form of the world of commodities that actually conceals, instead of disclosing, the social character of private labour, and the social relations between the individual producers. When I state that coats or boots stand in a relation to linen, because it is the universal incarnation of abstract human labour, the absurdity of the statement is self-evident. Nevertheless, when the producers of coats and boots compare those articles with linen, or, what is the same thing, with gold or silver, as the universal equivalent, they express the relation between their own private labour and the collective labour of society in the same absurd form.

The categories of bourgeois economy consist of such like forms. They are forms of thought expressing with social validity the conditions and relations of a definite, historically determined mode of production, viz., the production of commodities. The whole mystery of commodities, all the magic and necromancy that surrounds the products of labour as long as they take the form of commodities, vanishes therefore, so soon as we come to other forms of production.

Since Robinson Crusoe's⁶ experiences are a favourite theme with political economists, let us take a look at him on his island. Moderate though he be, yet some few wants he has to satisfy, and must therefore do a little useful work of various sorts, such as making tools and furniture, taming goats, fishing and hunting. Of his prayers and the like we take no account, since they are a source of pleasure to him, and he looks upon them as so much recreation. In spite of the variety of his work, he knows that his labour, whatever

5. After the feast (Latin); after the fact, too late.

6. The hero and title character of Daniel Defoe's 1719–20 novel, an English sailor shipwrecked for 24 years on a small tropical island. He is discussed by some political economists and philosophers—

including Adam Smith (1723–1790) and Jean-Jacques Rousseau (1712–1778)—who base their analyses of production on the solitary independent worker.

its form, is but the activity of one and the same Robinson, and consequently, that it consists of nothing but different modes of human labour. Necessity itself compels him to apportion his time accurately between his different kinds of work. Whether one kind occupies a greater space in his general activity than another, depends on the difficulties, greater or less as the case may be, to be overcome in attaining the useful effect aimed at. This our friend Robinson soon learns by experience, and having rescued a watch, ledger, and pen and ink from the wreck, commences, like a true-born Briton, to keep a set of books. His stock-book contains a list of the objects of utility that belong to him, of the operations necessary for their production; and lastly, of the labour-time that definite quantities of those objects have, on an average, cost him. All the relations between Robinson and the objects that form this wealth of his own creation, are here so simple and clear as to be intelligible without exertion, even to Mr. Sedley Taylor.⁷ And yet those relations contain all that is essential to the determination of value.

Let us now transport ourselves from Robinson's island bathed in light to the European middle ages shrouded in darkness. Here, instead of the independent man, we find everyone dependent, serfs and lords, vassals and suzerains, laymen and clergy. Personal dependence here characterises the social relations of production just as much as it does the other spheres of life organised on the basis of that production. But for the very reason that personal dependence forms the ground-work of society, there is no necessity for labour and its products to assume a fantastic form different from their reality. They take the shape, in the transactions of society, of services in kind and payments in kind. Here the particular and natural form of labour, and not, as in a society based on production of commodities, its general abstract form is the immediate social form of labour. Compulsory labour is just as properly measured by time, as commodity-producing labour, but every serf knows that what he expends in the service of his lord, is a definite quantity of his own personal labour-power. The tithe to be rendered to the priest is more matter of fact than his blessing. No matter, then, what we may think of the parts played by the different classes of people themselves in this society, the social relations between individuals in the performance of their labour, appear at all events as their own mutual personal relations, and are not disguised under the shape of social relations between the products of labour.

For an example of labour in common or directly associated labour, we have no occasion to go back to that spontaneously developed form which we find on the threshold of the history of all civilised races. We have one close at hand in the patriarchal industries of a peasant family, that produces corn, cattle, yarn, linen, and clothing for home use. These different articles are, as regards the family, so many products of its labour, but as between themselves, they are not commodities. The different kinds of labour, such as tillage, cattle tending, spinning, weaving and making clothes, which result in the various products, are in themselves, and such as they are, direct social functions, because functions of the family, which, just as much as a society based on the production of commodities, possesses a spontaneously developed system of division of labour. The distribution of the work within the family, and the regulation of

7. A Fellow of Trinity College, Cambridge (1834–1920), who wrote both about musical sounds and harmony and about the relationship between capital and labor.

the labour-time of the several members, depend as well upon differences of age and sex as upon natural conditions varying with the seasons. The labour-power of each individual, by its very nature, operates in this case merely as a definite portion of the whole labour-power of the family, and therefore, the measure of the expenditure of individual labour-power by its duration, appears here by its very nature as a social character of their labour.

Let us now picture to ourselves, by way of change, a community of free individuals, carrying on their work with the means of production in common, in which the labour-power of all the different individuals is consciously applied as the combined labour-power of the community. All the characteristics of Robinson's labour are here repeated, but with this difference, that they are social, instead of individual. Everything produced by him was exclusively the result of his own personal labour, and therefore simply an object of use for himself. The total product of our community is a social product. One portion serves as fresh means of production and remains social. But another portion is consumed by the members as means of subsistence. A distribution of this portion amongst them is consequently necessary. The mode of this distribution will vary with the productive organisation of the community, and the degree of historical development attained by the producers. We will assume, but merely for the sake of a parallel with the production of commodities, that the share of each individual producer in the means of subsistence is determined by his labour-time. Labour-time would, in that case, play a double part. Its apportionment in accordance with a definite social plan maintains the proper proportion between the different kinds of work to be done and the various wants of the community. On the other hand, it also serves as a measure of the portion of the common labour borne by each individual, and of his share in the part of the total product destined for individual consumption. The social relations of the individual producers, with regard both to their labour and to its products, are in this case perfectly simple and intelligible, and that with regard not only to production but also to distribution.

The religious world is but the reflex of the real world. And for a society based upon the production of commodities, in which the producers in general enter into social relations with one another by treating their products as commodities and values, whereby they reduce their individual private labour to the standard of homogeneous human labour—for such a society, Christianity with its *cultus*⁸ of abstract man, more especially in its bourgeois developments, Protestantism, Deism,⁹ &c., is the most fitting form of religion. In the ancient Asiatic and other ancient modes of production, we find that the conversion of products into commodities, and therefore the conversion of men into producers of commodities, holds a subordinate place, which, however, increases in importance as the primitive communities approach nearer and nearer to their dissolution. Trading nations, properly so called, exist in the ancient world only in its interstices, like the gods of Epicurus in the *Intermundia*,¹ or like Jews in the pores of Polish society. Those ancient social

8. Care of; adoration, worship (Latin).

9. Belief in a supreme being as the source of existence that rejects the supernatural doctrines of Christianity and the influence or revelation of God in the universe, stressing instead the import-

ance of reason and ethical conduct.

1. The spaces between the worlds (Latin). Epicurus (341–270 B.C.E.), Greek philosopher who held that the gods had nothing to do with human affairs.

organisms of production are, as compared with bourgeois society, extremely simple and transparent. But they are founded either on the immature development of man individually, who has not yet severed the umbilical cord that unites him with his fellowmen in a primitive tribal community, or upon direct relations of subjection. They can arise and exist only when the development of the productive power of labour has not risen beyond a low stage, and when, therefore, the social relations within the sphere of material life, between man and man, and between man and Nature, are correspondingly narrow. This narrowness is reflected in the ancient worship of Nature, and in the other elements of the popular religions. The religious reflex of the real world can, in any case, only then finally vanish, when the practical relations of every-day life offer to man none but perfectly intelligible and reasonable relations with regard to his fellowmen and to Nature.

The life-process of society, which is based on the process of material production, does not strip off its mystical veil until it is treated as production by freely associated men, and is consciously regulated by them in accordance with a settled plan. This, however, demands for society a certain material ground-work or set of conditions of existence which in their turn are the spontaneous product of a long and painful process of development.

Political Economy has indeed analysed, however incompletely, value and its magnitude, and has discovered what lies beneath these forms. But it has never once asked the question why labour is represented by the value of its product and labour-time by the magnitude of that value. These formulæ, which bear it stamped upon them in unmistakeable letters that they belong to a state of society, in which the process of production has the mastery over man, instead of being controlled by him, such formulæ appear to the bourgeois intellect to be as much a self-evident necessity imposed by Nature as productive labour itself. Hence forms of social production that preceded the bourgeois form, are treated by the bourgeoisie in much the same way as the Fathers of the Church² treated pre-Christian religions.

To what extent some economists are misled by the Fetishism inherent in commodities, or by the objective appearance of the social characteristics of labour, is shown, amongst other ways, by the dull and tedious quarrel over the part played by Nature in the formation of exchange-value. Since exchange-value is a definite social manner of expressing the amount of labour bestowed upon object, Nature has no more to do with it, than it has in fixing the course of exchange.

The mode of production in which the product takes the form of a commodity, or is produced directly for exchange, is the most general and most embryonic form of bourgeois production. It therefore makes its appearance at an early date in history, though not in the same predominating and characteristic manner as now-a-days. Hence its Fetish character is comparatively easy to be seen through. But when we come to more concrete forms, even this appearance of simplicity vanishes. Whence arose the illusions of the monetary system? To it gold and silver, when serving as money, did not represent a social relation between producers but were natural objects with strange social properties. And modern economy, which looks down with such disdain on the monetary system, does not its superstition come out as

2. Early Christian writers who established Christian doctrine before the 8th century.

clear as noon-day, whenever it treats of capital? How long is it since economy discarded the physiocratic illusion, that rents grow out of the soil and not out of society?³

But not to anticipate, we will content ourselves with yet another example relating to the commodity-form. Could commodities themselves speak, they would say: Our use-value may be a thing that interests men. It is no part of us as objects. What, however, does belong to us as objects, is our value. Our natural intercourse as commodities proves it. In the eyes of each other we are nothing but exchange-values. Now listen how those commodities speak through the mouth of the economist. "Value"—(*i.e.*, exchange-value) "is a property of things, riches"—(*i.e.*, use-value) "of man. Value, in this sense, necessarily implies exchanges, riches do not." "Riches" (use-value) "are the attribute of men, value is the attribute of commodities. A man or a community is rich, a pearl or a diamond is valuable. . . . A pearl or a diamond is valuable" as a pearl or diamond. So far no chemist has ever discovered exchange-value either in a pearl or a diamond. The economic discoverers of this chemical element, who by-the-by lay special claim to critical acumen, find however that the use-value of objects belongs to them independently of their material properties, while their value, on the other hand, forms a part of them as objects. What confirms them in this view, is the peculiar circumstance that the use-value of objects is realised without exchange, by means of a direct relation between the objects and man, while, on the other hand, their value is realised only by exchange, that is, by means of a social process. Who fails here to call to mind our good friend, Dogberry, who informs neighbour Seacoal, that, "To be a well-favoured man is the gift of fortune; but reading and writing comes by Nature."⁴

From Chapter 10. *The Working-Day*

SECTION 5. THE STRUGGLE FOR A NORMAL WORKING-DAY. COMPULSORY LAWS FOR THE EXTENSION OF THE WORKING-DAY FROM THE MIDDLE OF THE 14TH TO THE END OF THE 17TH CENTURY

"What is a working-day? What is the length of time during which capital may consume the labour-power whose daily value it buys? How far may the working-day be extended beyond the working-time necessary for the reproduction of labour-power itself?" It has been seen that to these questions capital replies: the working-day contains the full 24 hours, with the deduction of the few hours of repose without which labour-power absolutely refuses its services again. Hence it is self-evident that the labourer is nothing else, his whole life through, than labour-power, that therefore all his disposable time is by nature and law labour-time, to be devoted to the self-expansion of capital. Time for education, for intellectual development, for the fulfilling of social functions and for social intercourse, for the free-play of his bodily and mental activity, even the rest time of Sunday (and that in a country of Sabbatarians!)—moonshine!⁵ But in its blind unrestrainable passion, its

3. The Physiocrats, late 18th-century French economists who were proponents of free trade, believed that agriculture is the source of all wealth.

4. Shakespeare, *Much Ado about Nothing* (ca. 1598), 3.3.13–14 (slightly misquoted). Dogberry is

a comic character, the commander of the watch; Seacoal is one of the watchman.

5. Nonsense, foolishness. Sabbatarians: those who favor strict observance of the Sabbath.

were-wolf⁶ hunger for surplus-labour, capital oversteps not only the moral, but even the merely physical maximum bounds of the working-day. It usurps the time for growth, development, and healthy maintenance of the body. It steals the time required for the consumption of fresh air and sunlight. It higgles⁷ over a meal-time, incorporating it where possible with the process of production itself, so that food is given to the labourer as to a mere means of production, as coal is supplied to the boiler, grease and oil to the machinery. It reduces the sound sleep needed for the restoration, reparation, refreshment of the bodily powers to just so many hours of torpor as the revival of an organism, absolutely exhausted, renders essential. It is not the normal maintenance of the labour-power which is to determine the limits of the working-day; it is the greatest possible daily expenditure of labour-power, no matter how diseased, compulsory, and painful it may be, which is to determine the limits of the labourers' period of repose. Capital cares nothing for the length of life of labour-power. All that concerns it is simply and solely the maximum of labour-power, that can be rendered fluent in a working-day. It attains this end by shortening the extent of the labourer's life, as a greedy farmer snatches increased produce from the soil by robbing it of its fertility.

The capitalistic mode of production (essentially the production of surplus-value,⁸ the absorption of surplus-labour), produces thus, with the extension of the working-day, not only the deterioration of human labour-power by robbing it of its normal, moral and physical, conditions of development and function. It produces also the premature exhaustion and death of this labour-power itself. It extends the labourer's time of production during a given period by shortening his actual life-time.

But the value of the labour-power includes the value of the commodities necessary for the reproduction of the worker, or for the keeping up of the working-class. If then the unnatural extension of the working-day, that capital necessarily strives after in its unmeasured passion for self-expansion, shortens the length of life of the individual labourer, and therefore the duration of his labour-power, the forces used up have to be replaced at a more rapid rate and the sum of the expenses for the reproduction of labour-power will be greater; just as in a machine the part of its value to be reproduced every day is greater the more rapidly the machine is worn out. It would seem therefore that the interest of capital itself points in the direction of a normal working-day.

The slave-owner buys his labourer as he buys his horse. If he loses his slave, he loses capital that can only be restored by new outlay in the slave-mart. But "the rice-grounds of Georgia, or the swamps of the Mississippi may be fatally injurious to the human constitution; but the waste of human life which the cultivation of these districts necessitates, is not so great that it cannot be repaired from the teeming preserves of Virginia and Kentucky. Considerations of economy, moreover, which, under a natural system, afford some security for human treatment by identifying the master's interest with the slave's preservation, when once trading in slaves is practised, become reasons

6. That is, ravenous (like the folkloric human able to transform into a wolf).

7. Higgles.

8. The difference between the amount of capital

needed to produce something and the amount of capital that product is worth; it is created from labor power.

for racking to the uttermost the toil of the slave; for, when his place can at once be supplied from foreign preserves, the duration of his life becomes a matter of less moment than its productiveness while it lasts. It is accordingly a maxim of slave management, in slave-importing countries, that the most effective economy is that which takes out of the human chattel in the shortest space of time the utmost amount of exertion it is capable of putting forth. It is in tropical culture, where annual profits often equal the whole capital of plantations, that negro life is most recklessly sacrificed. It is the agriculture of the West Indies, which has been for centuries prolific of fabulous wealth, that has engulfed millions of the African race. It is in Cuba, at this day, whose revenues are reckoned by millions, and whose planters are princes, that we see in the servile class, the coarsest fare, the most exhausting and unremitting toil, and even the absolute destruction of a portion of its numbers every year.”⁹

*Mutato nomine de te fabula narratur.*¹ For slave-trade read labour-market, for Kentucky and Virginia, Ireland and the agricultural districts of England, Scotland, and Wales, for Africa, Germany. We heard how over-work thinned the ranks of the bakers in London. Nevertheless, the London labour-market is always over-stocked with German and other candidates for death in the bakeries. Pottery, as we saw, is one of the shortest-lived industries. Is there any want therefore of potters? Josiah Wedgwood,² the inventor of modern pottery, himself originally a common workman, said in 1785 before the House of Commons that the whole trade employed from 15,000 to 20,000 people. In the year 1861 the population alone of the town centres of this industry in Great Britain numbered 101,302. “The cotton trade has existed for ninety years . . . It has existed for three generations of the English race, and I believe I may safely say that during that period it has destroyed nine generations of factory operatives.”³ * * *

What experience shows to the capitalist generally is a constant excess of population, *i.e.*, an excess in relation to the momentary requirements of surplus-labour-absorbing capital, although this excess is made up of generations of human beings stunted, short-lived, swiftly replacing each other, plucked, so to say, before maturity. And, indeed, experience shows to the intelligent observer with what swiftness and grip the capitalist mode of production, dating, historically speaking, only from yesterday, has seized the vital power of the people by the very root—shows how the degeneration of the industrial population is only retarded by the constant absorption of primitive and physically uncorrupted elements from the country—shows how even the country labourers, in spite of fresh air and the principle of natural selection, that works so powerfully amongst them, and only permits the survival of the strongest, are already beginning to die off. Capital that has such good reasons for denying the sufferings of the legions of workers that surround it, is in practice moved as much and as little by the sight of the coming degradation and final depopulation of the human race, as by the probable fall of the earth into the sun. In every stock-jobbing swindle⁴ every one knows

4. That is, dishonest stock speculation.

that some time or other the crash must come, but every one hopes that it may fall on the head of his neighbour, after he himself has caught the shower of gold and placed it in safety. *Après moi le déluge!*⁵ is the watchword of every capitalist and of every capitalist nation. Hence Capital is reckless of the health or length of life of the labourer, unless under compulsion from society. To the out-cry as to the physical and mental degradation, the premature death, the torture of over-work, it answers: Ought these to trouble us since they increase our profits? But looking at things as a whole, all this does not, indeed, depend on the good or ill will of the individual capitalist. Free competition brings out the inherent laws of capitalist production, in the shape of external coercive laws having power over every individual capitalist.

The establishment of a normal working-day is the result of centuries of struggle between capitalist and labourer. The history of this struggle shows two opposed tendencies. Compare, *e.g.*, the English factory legislation of our time with the English Labour Statutes from the 14th century to well into the middle of the 18th. Whilst the modern Factory Acts⁶ compulsorily shortened the working-day, the earlier statutes tried to lengthen it by compulsion. Of course the pretensions of capital in embryo—when, beginning to grow, it secures the right of absorbing a *quantum sufficit*⁷ of surplus-labour, not merely by the force of economic relations, but by the help of the State—appear very modest when put face to face with the concessions that, growling and struggling, it has to make in its adult condition. It takes centuries ere the “free” labourer, thanks to the development of capitalistic production, agrees, *i.e.*, is compelled by social conditions, to sell the whole of his active life, his very capacity for work, for the price of the necessities of life, his birthright for a mess of pottage.⁸ Hence it is natural that the lengthening of the work-day, which capital, from the middle of the 14th to the end of the 17th century, tries to impose by State-measures on adult labourers, approximately coincides with the shortening of the working-day which, in the second half of the 19th century, has here and there been effected by the State to prevent the coining of children’s blood into capital. That which to-day, *e.g.*, in the State of Massachusetts, until recently the freest State of the North-American Republic, has been proclaimed as the statutory limit of the labour of children under 12,⁹ was in England, even in the middle of the 17th century, the normal working-day of able-bodied artisans, robust labourers, athletic blacksmiths.

7. Sufficient quantity (Latin).

8. As the hungry Esau sold his birthright to his brother Jacob; Genesis 25.29–34.

9. That is, a 10-hour day (the law passed in 1842).

From Letter from Friedrich Engels to Joseph Bloch¹

London, September 21–22, 1890

According to the materialist conception of history, the *ultimately* determining element in history is the production and reproduction of real life. More than this neither Marx nor I have ever asserted. Hence if somebody twists this into saying that the economic element is the *only* determining one, he transforms that proposition into a meaningless, abstract, senseless phrase. The economic situation is the basis, but the various elements of the superstructure: political forms of the class struggle and its results, to wit: constitutions established by the victorious class after a successful battle, etc., juridical forms, and then even the reflexes of all these actual struggles in the brains of the participants, political, juristic, philosophical theories, religious views and their further development into systems of dogmas, also exercise their influence upon the course of the historical struggles and in many cases preponderate in determining their *form*. There is an interaction of all these elements in which, amid all the endless host of accidents (that is, of things and events, whose inner connection is so remote or so impossible of proof that we can regard it as non-existent, as negligible) the economic movement finally asserts itself as necessary. Otherwise the application of the theory to any period of history one chose would be easier than the solution of a simple equation of the first degree.

We make our history ourselves, but, in the first place, under very definite assumptions and conditions. Among these the economic ones are ultimately decisive. But the political ones, etc., and indeed even the traditions which haunt human minds also play a part, although not the decisive one. The Prussian state also arose and developed from historical, ultimately economic causes. But it could scarcely be maintained without pedantry that among the many small states of North Germany, Brandenburg² was specifically determined by economic necessity to become the great power embodying the economic, linguistic and, after the Reformation, also the religious difference between North and South, and not by other elements as well (above all by its entanglement with Poland, owing to the possession of Prussia, and hence with international political relations—which were indeed also decisive in the formation of the Austrian dynastic power). Without making oneself ridiculous it would be a difficult thing to explain in terms of economics the existence of every small state in Germany, past and present, or the origin of the High German consonant shifts,³ which widened the geographical wall of partition, formed by the mountains from the Sudetic range to the Taunus,⁴ to the extent of a regular fissure across all Germany.

1. A socialist (1871–1936), who in the 1890s was a student at the University of Berlin. The translator is not named.

2. Region that became the core of the kingdom of Prussia (1701–1871) and of the German Empire (1871–1918).

3. Linguistic changes (ca. 500–700 C.E.) that distinguish the German of central and southern Ger-

many (High German, the official dialect) from the speech of northern Germany (Low German); for example, *hopen* (to hope) becomes in High German *hoffen*, and *Plante* (plant) becomes *Pflanze*.

4. A mountain range in southwest central Germany. “The Sudetic range”: the Sudetes, mountains between the Czech Republic and Poland.

In the second place, however, history is made in such a way that the final result always arises from conflicts between many individual wills, of which each again has been made what it is by a host of particular conditions of life. Thus there are innumerable intersecting forces, an infinite series of parallelograms of forces which give rise to one resultant—the historical event. This may again itself be viewed as the product of a power which works as a whole, *unconsciously* and without volition. For what each individual wills is obstructed by everyone else, and what emerges is something that no one willed. Thus past history proceeds in the manner of a natural process and is essentially subject to the same laws of motion. But from the fact that individual wills—of which each desires what he is impelled to by his physical constitution and external, in the last resort economic, circumstances (either his own personal circumstances or those of society in general)—do not attain what they want, but are merged into a collective mean, a common resultant, it must not be concluded that their value is equal to zero. On the contrary, each contributes to the resultant and is to this degree involved in it.

I would furthermore ask you to study this theory from its original sources and not at second-hand; it is really much easier. Marx hardly wrote anything in which it did not play a part. But especially *The Eighteenth Brumaire of Louis Bonaparte* is a most excellent example of its application. There are also many allusions in *Capital*.⁵ Then may I also direct you to my writings: *Herr Eugen Dühring's Revolution in Science* and *Ludwig Feuerbach and the End of Classical German Philosophy*,⁶ in which I have given the most detailed account of historical materialism which, as far as I know, exists.

Marx and I are ourselves partly to blame for the fact that the younger people sometimes lay more stress on the economic side than is due to it. We had to emphasise the main principle *vis-à-vis* our adversaries, who denied it, and we had not always the time, the place or the opportunity to allow the other elements involved in the interaction to come into their rights. But when it was a case of presenting a section of history, that is, of a practical application, it was a different matter and there no error was possible. Unfortunately, however, it happens only too often that people think they have fully understood a new theory and can apply it without more ado from the moment they have mastered its main principles, and even those not always correctly. And I cannot exempt many of the more recent "Marxists" from this reproach, for the most amazing rubbish has been produced in this quarter, too.

1890

5. Vol. 1 was published in 1867, vols. 2 and 3 in 1893 and 1894; *The Eighteenth Brumaire* first appeared in 1852.

6. Published in 1886; *Dühring's Revolution in Science*, now known as *Anti-Dühring*, was published in 1877–78.

MATTHEW ARNOLD

1822–1888

In an assessment published in the 1970s, the literary scholar and essayist Lionel Trilling concluded that Matthew Arnold is “virtually the founding father of modern criticism in the English-speaking world.” Citing our first selection, “The Function of Criticism at the Present Time” (1865), Trilling quoted Arnold’s famous injunction that the critic should strive to “see the object as in itself it really is” and his celebrated definition of criticism as the “disinterested endeavour to learn and propagate the best that is known and thought in the world.” These authoritative statements, Trilling maintained, gave later scholars and teachers their inspiration and interpretive mission.

Arnold provided literary criticism with an important social function and paved the way for its institutionalization in the academy. He regarded the writing and reading of literature as urgent activities in the world, insisting “that poetry is at bottom a criticism of life; that the greatness of a poet lies in his powerful and beautiful application of ideas to life,—to the question: How to live.” Serious criticism, he believed, was responsible for generating and maintaining the context of ideas and high standards that the production of literature required. Even more: criticism, for Arnold, meant an engagement with history, education, politics, religion, philosophy, and other subjects and concerns; literature is vitally connected to society and culture.

Arnold continues today to represent an ideal of literary and cultural humanism that many critics honor. But this same ideal is one that radical critics and contemporary literary theorists have sought to complicate or undermine. As the scholar Joseph Carroll has noted, Arnold’s key term “disinterestedness” is “now the most violently disputed word in the Arnoldian lexicon,” and many theorists from the 1970s to the present have launched their proposals by taking issue with Arnold’s and his followers’ account of the critic’s role and procedures. For example, STANLEY FISH’s reader-response criticism denies the possibility of “disinterested” objective perception, and the Marxist critic TERRY EAGLETON emphasizes Arnold’s alignment with state power and the privileged classes in his stress on “timeless truths.”

Arnold excelled as a critic and polemicist, and he frequently took delight in the public controversies that his books and articles kindled and in the charges hurled against him. Arnold was also a poet, an educator, and an advocate for civility and moderation who followed in the footsteps of his eminent father—Thomas Arnold (1795–1842), a religious leader, historian, and, from 1828 to 1841, the influential, reform-minded headmaster of Rugby, a venerable boarding school for boys. At Rugby, Thomas Arnold added the study of French, German, and mathematics to the traditional classical curriculum and gave new emphasis to history and geography. He resolutely campaigned for Christianity, patriotism, self-reliance, loyalty, duty, and public service, and he won great renown for his commitment to them in education.

Educated at Rugby and Oxford University, Matthew Arnold at first concentrated more on his social life (he was something of a dandy) than on his studies. His poetry—most of which he wrote during the 1840s and 1850s—left him unsatisfied, yet it eloquently expresses the self-doubt, intellectual unease, and emotional hesitancy felt by midcentury intellectuals, when Charles Darwin’s theories of evolution and the skeptical inquiry into the historical status and transmission of biblical texts (the “higher criticism”) were calling the time-honored principles of Christian faith into question. Arnold’s first two books were *The Strayed Reveller, and Other Poems* (1849) and *Empedocles on Etna, and Other Poems* (1852). In his preface to his 1853 collection, *Poems: A New Edition*—his first piece of published prose—Arnold articulated what he conceded was missing from his own verse: “the spirit of the great clas-

sical works," "their intense significance, their noble simplicity, and their calm pathos" that create "unity and profoundness of moral impression." He felt that this failure to evoke the best in European moral value was widespread in modern literature.

In 1851 Arnold received an appointment as an inspector of schools, and this demanding work involved much tedious discussion with teachers and administrators and painstaking reviews of students' examinations and papers. It also required extensive travel in England and research trips abroad in 1859 and 1865, which led to three books on European (particularly French) systems of education. Though it was wearying, Arnold took pride in his work and did not retire until 1883; he viewed the schools as the crucial site for "civilising the next generation of the lower classes, who, as things are going, will have most of the political power of the country in their hands." Clearly, much more than literary interpretation was at stake. In his duties as an inspector, he saw the privations that workers and their families suffered, and he was dedicated to the task of social and cultural progress, identifying himself as a "Liberal of the future."

Arnold was named Professor of Poetry at Oxford University in 1857, a position he held until 1867. Because this appointment did not oblige him to teach or supervise students or to be in residence, he was able both to remain in his government post and to gain notice as a prolific social, cultural, and literary critic. His major prose works are *Essays in Criticism, First Series* (1865), *Essays in Criticism, Second Series* (1888), and *Culture and Anarchy* (1869), which examines the condition of England as represented by the three groups Arnold nicknamed the Barbarians (the aristocracy), the Philistines (the middle classes), and the Populace (the working classes). He also wrote extensively on religion, including *Literature and Dogma* (1873), which, he said, was the "most important" of all his prose works, the one most capable "of being useful." Examining the shaken doctrines and tenets of orthodox creeds and churches, it made a forthright case for a literary response and approach to the Scriptures that would treasure their enduring moral truths. *Literature and Dogma* sold 100,000 copies, far more than any of his other books.

Arnold stated in *Culture and Anarchy* that he wanted culture to heighten among the English "the impulse to the development of the whole man, to connecting and harmonizing all parts of him, perfecting all, leaving none to take their chance." Though these sentiments were presented as possessing a timeless validity, Arnold voiced them at a moment in English history when "anarchy"—social unrest and rioting—had erupted in the streets and revolution seemed a real possibility. The Reform Act of 1832 had increased the number of voters by 50 percent, but the working class and the poor remained without the vote. The defeat of an effort to extend eligibility to their ranks in 1866 brought down the Liberal government and spurred mass protests and violent demonstrations across the country. The Reform Act of 1867, passed in the midst of this social and political upheaval, added 938,000 voters and thereby doubled the size of the electorate.

Who shall inherit England? This question, which Trilling called central to a major tradition of English novelists from Charles Dickens (1812–1870) to E. M. Forster (1879–1970), was raised as well by intellectuals of the nineteenth century (such as Thomas Carlyle and John Ruskin) and twentieth century (such as T. S. Eliot and D. H. Lawrence) in their works of cultural criticism. Not only *who* shall inherit England, but what kinds of power could they be trusted with? What forms of education should they receive? For Arnold in particular, the answers to these interconnected questions could be found in many literary sources—some in the distant past, others closer to his own era. He counseled moral betterment and spiritual renewal, achieved through the appreciative reading of the best literature. The best persons would be critics—poised, balanced, and reflective; they would be foes of fanaticism, zealotry, and political enthusiasm, and they would be aspirants to "perfection" (a term Arnold fastened on in both *Essays in Criticism* and *Culture and Anarchy*). Such arguments echo those of literary and philosophical precursors

and contemporaries. In *The Defence of Poesy* (1595; see above), for example, SIR PHILIP SIDNEY had affirmed that "the final end" of learning "is to lead and draw us to as high a perfection as our degenerate souls, made worse by their clayey lodgings, can be capable of." In "The Poet" (1844; see above), RALPH WALDO EMERSON, whose writings Arnold knew well, celebrated the poet as "representative of man, in virtue of being the largest power to receive and impart."

Because Arnold is mainly interested in the personality and moral tone of the author, not in the resources of language or the unfolding meanings of literary works themselves, he does not devote much attention to specific texts; an exception is his series of lectures *On Translating Homer*, published in 1861. Lines that he does quote typically function for him as "touchstones," those "specimens of poetry of the high, the very highest quality" that "save us from fallacious estimates of value"—and that seem to beg the very question of "greatness" that they are meant to answer. Arnold assumed that his readers would know these authors and texts and their contexts, and that the "touchstones" would be recognized by all as profound and memorable. Yet he himself had minimal sympathy for (or understanding of) English writers of the eighteenth and nineteenth centuries. Moreover, Arnold mentioned fiction only briefly and not very perceptively. Unlike, for example, HENRY JAMES, he showed little interest in music, sculpture, painting, or the theater.

These faults do not diminish the power with which Arnold defined the "function of criticism" for the Victorian and modern periods. Wholeheartedly defending literature against its enemies and detractors, whose emphasis on science, moneymaking, and commercial prosperity had led them to regard poetry as merely a pleasant pastime, he argued that it equipped men and women to perceive authentic value in the workings of the society and culture around them.

Criticism is not, ultimately, something one does; it gestures toward who one is. The same is true of "culture," as Arnold presents it in *Culture and Anarchy* (excerpted below). Culture is "a study of perfection," an "internal condition"; it mandates a sharp yet supple movement of mind, a vigilant guard against an excess of commitment to a single point of view, and a refusal to accept the alluring power of extreme, polarizing judgments. Unlike later critics influenced by anthropology, Arnold does not view culture as designating the distinctive whole way of life of a people or a period. Nor would he agree with such critics as ANTONIO GRAMSCI, STUART HALL, and EDWARD W. SAID, who characterize culture as often an instrument of social and political control and conquest. For Arnold, culture is selective and harmonious, not conflictual. Criticism and culture loom large because of their beneficent effects on the individual, as they impel sustained acts of reflection and prevent persons from falling into complacency and "self-satisfaction."

Arnold defines criticism as involving flexibility, openness to new experiences, and curiosity (a word he explores in both "The Function of Criticism" and *Culture and Anarchy*). He insists, too, on the "free play" of mind—a phrase that poststructuralist theorists such as JACQUES DERRIDA would define far more radically and subversively, without Arnold's belief in a stable textual object that provides a center around which analysis and reflection occur. Arnold tethers criticism to a rigorous duty; criticism, he explains, "tends to *establish* an order of ideas" and seeks to "make the best ideas *prevail*." As his choice of verbs indicates, criticism is challenging work; the campaign must be waged, in a phrase used in "The Function of Criticism," with "inflexible honesty." Arnold firmly believes that some ideas are right and others wrong; he is no relativist. Nor is he a revolutionary, but rather a careful, cautious, deliberate reformer, wary of the ways in which the impulse for change can run wild and become destructive. A good literary critic is, inevitably for Arnold, a good critic in general: a person of culture embarked on a steady, steadfast inquiry into self and society. For all of his witty turns of phrase, topical references and allusions, and stylistic clarity and poise, Arnold is at heart a writer who realized, as he acknowledged in a letter in 1863, that his arguments would make "a good many people uncomfortable."

The Function of Criticism at the Present Time¹

Many objections have been made to a proposition which, in some remarks of mine on translating Homer,² I ventured to put forth; a proposition about criticism, and its importance at the present day. I said: 'Of the literature of France and Germany, as of the intellect of Europe in general, the main effort, for now many years, has been a critical effort; the endeavour, in all branches of knowledge, theology, philosophy, history, art, science, to see the object as in itself it really is.' I added, that owing to the operation in English literature of certain causes, 'almost the last thing for which one would come to English literature is just that very thing which now Europe most desires,—criticism'; and that the power and value of English literature was thereby impaired. More than one rejoinder declared that the importance I here assigned to criticism was excessive, and asserted the inherent superiority of the creative effort of the human spirit over its critical effort. And the other day, having been led by a Mr. Shairp's excellent notice of Wordsworth³ to turn again to his biography, I found, in the words of this great man, whom I, for one, must always listen to with the profoundest respect, a sentence passed on the critic's business, which seems to justify every possible disparagement of it. Wordsworth says in one of his letters:—

'The writers in these publications' (the Reviews), 'while they prosecute their inglorious employment, can not be supposed to be in a state of mind very favourable for being affected by the finer influences of a thing so pure as genuine poetry.'

And a trustworthy reporter⁴ of his conversation quotes a more elaborate judgment to the same effect:—

'Wordsworth holds the critical power very low, infinitely lower than the inventive; and he said to-day that if the quantity of time consumed in writing critiques on the works of others were given to original composition, of

1. First delivered as a lecture at Oxford University, on October 29, 1864, and published in the *National Review* in November 1864, with the title given in the plural, "Functions." Arnold altered the title for the book version (1865) and added several footnotes. The text reprinted here is that of the 1875 third edition, the last one that Arnold prepared.

2. See Lecture II of *On Translating Homer* (1861). The Greek *Iliad* and *Odyssey* attributed to Homer (ca. 8th c. B.C.E.) were a standard part of English elite education.

3. I cannot help thinking that a practice, common in England during the last century, and still followed in France, of printing a notice of this kind,—a notice by a competent critic,—to serve as an introduction to an eminent author's works, might be revived among us with advantage. To

introduce all succeeding editions of Wordsworth, Mr. Shairp's notice might, it seems to me, excellently serve; it is written from the point of view of an admirer, nay, of a disciple, and that is right; but then the disciple must be also, as in this case he is, a critic, a man of letters, not, as too often happens, some relation or friend with no qualification for his task except affection for his author [Arnold's note]. John Campbell Shairp (1819–1885) was a friend of Arnold's at Balliol College, Oxford; the "notice" (in which Arnold is praised) is "Wordsworth: The Man and the Poet," *North British Review* 41 (August 1864): 1–54. WILLIAM WORDSWORTH (1770–1850) is the preeminent English Romantic poet.

4. Christopher Wordsworth, *Memoirs of William Wordsworth* (1851).

whatever kind it might be, it would be much better employed; it would make a man find out sooner his own level, and it would do infinitely less mischief. A false or malicious criticism may do much injury to the minds of others, a stupid invention, either in prose or verse, is quite harmless.'

It is almost too much to expect of poor human nature, that a man capable of producing some effect in one line of literature, should, for the greater good of society, voluntarily doom himself to impotence and obscurity in another. Still less is this to be expected from men addicted to the composition of the 'false or malicious criticism' of which Wordsworth speaks. However, everybody would admit that a false or malicious criticism had better never have been written. Everybody, too, would be willing to admit, as a general proposition, that the critical faculty is lower than the inventive. But is it true that criticism is really, in itself, a baneful and injurious employment; is it true that all time given to writing critiques on the works of others would be much better employed if it were given to original composition, of whatever kind this may be? Is it true that Johnson had better have gone on producing more *Irenes*⁵ instead of writing his *Lives of the Poets*; nay, is it certain that Wordsworth himself was better employed in making his Ecclesiastical Sonnets than when he made his celebrated Preface,⁶ so full of criticism, and criticism of the works of others? Wordsworth was himself a great critic, and it is to be sincerely regretted that he has not left us more criticism; Goethe⁷ was one of the greatest of critics, and we may sincerely congratulate ourselves that he has left us so much criticism. Without wasting time over the exaggeration which Wordsworth's judgment on criticism clearly contains, or over an attempt to trace the causes,—not difficult, I think, to be traced,⁸—which may have led Wordsworth to this exaggeration, a critic may with advantage seize an occasion for trying his own conscience, and for asking himself of what real service at any given moment the practice of criticism either is or may be made to his own mind and spirit, and to the minds and spirits of others.

The critical power is of lower rank than the creative. True; but in assenting to this proposition, one or two things are to be kept in mind. It is undeniable that the exercise of a creative power, that a free creative activity, is the highest function of man; it is proved to be so by man's finding in it his true happiness. But it is undeniable, also, that men may have the sense of exercising this free creative activity in other ways than in producing great works of literature or art; if it were not so, all but a very few men would be shut out from the true happiness of all men. They may have it in well-doing, they may have it in learning, they may have it in criticising. This is one thing to be kept in mind. Another is, that the exercise of the creative power in the production of great works of literature or art, however high this exercise of it may rank, is not at all epochs and under all conditions possible; and that therefore labour may be vainly spent in attempting it, which might with

5. *Irene* (1749), an unsuccessful neoclassical tragedy by SAMUEL JOHNSON (1709–1784), whose *Lives of the Poets* (1779–81) was a considerable critical achievement.

6. The Preface to *Lyrical Ballads* (1800, 1802; see above). The 132 "Ecclesiastical Sonnets" (1821–22), which recount the history of the

Church of England, are not considered among Wordsworth's major works.

7. Johann Wolfgang von Goethe (1749–1832), German poet, dramatist, novelist, and scientist.

8. That is, to hostile reviews of Wordsworth's poetry.

more fruit be used in preparing for it, in rendering it possible. This creative power works with elements, with materials; what if it has not those materials, those elements, ready for its use? In that case it must surely wait till they are ready. Now, in literature,—I will limit myself to literature, for it is about literature that the question arises,—the elements with which the creative power works are ideas; the best ideas on every matter which literature touches, current at the time. At any rate we may lay it down as certain that in modern literature no manifestation of the creative power not working with these can be very important or fruitful. And I say *current* at the time, not merely accessible at the time; for creative literary genius does not principally show itself in discovering new ideas, that is rather the business of the philosopher. The grand work of literary genius is a work of synthesis and exposition, not of analysis and discovery; its gift lies in the faculty of being happily inspired by a certain intellectual and spiritual atmosphere, by a certain order of ideas, when it finds itself in them; of dealing divinely with these ideas, presenting them in the most effective and attractive combinations,—making beautiful works with them, in short. But it must have the atmosphere, it must find itself amidst the order of ideas, in order to work freely; and these it is not so easy to command. This is why great creative epochs in literature are so rare, this is why there is so much that is unsatisfactory in the productions of many men of real genius; because, for the creation of a master-work of literature two powers must concur, the power of the man and the power of the moment, and the man is not enough without the moment;⁹ the creative power has, for its happy exercise, appointed elements, and those elements are not in its own control.

Nay, they are more within the control of the critical power. It is the business of the critical power, as I said in the words already quoted, 'in all branches of knowledge, theology, philosophy, history, art, science, to see the object as in itself it really is.' Thus it tends, at last, to make an intellectual situation of which the creative power can profitably avail itself. It tends to establish an order of ideas, if not absolutely true, yet true by comparison with that which it displaces; to make the best ideas prevail. Presently these new ideas reach society, the touch of truth is the touch of life, and there is a stir and growth everywhere; out of this stir and growth come the creative epochs of literature.

Or, to narrow our range, and quit these considerations of the general march of genius and of society,—considerations which are apt to become too abstract and impalpable,—every one can see that a poet, for instance, ought to know life and the world before dealing with them in poetry; and life and the world being in modern times very complex things, the creation of a modern poet, to be worth much, implies a great critical effort behind it; else it must be a comparatively poor, barren, and short-lived affair. This is why Byron's¹ poetry had so little endurance in it, and Goethe's so much; both Byron and Goethe had a great productive power, but Goethe's was nourished by a great critical effort providing the true materials for it, and Byron's was not; Goethe knew life and the world, the poet's necessary sub-

9. A reference to Hippolyte Taine's *History of English Literature* (3 vols., 1863–64); in the introduction, the French critic and philosopher (1828–1893) describes the impact of heredity,

environment, and history ("la race, le milieu, le moment").

1. George Gordon, Lord Byron (1788–1824), English Romantic poet.

jects, much more comprehensively and thoroughly than Byron. He knew a great deal more of them, and he knew them much more as they really are.

It has long seemed to me that the burst of creative activity in our literature, through the first quarter of this century, had about it in fact something premature; and that from this cause its productions are doomed, most of them, in spite of the sanguine hopes which accompanied and do still accompany them, to prove hardly more lasting than the productions of far less splendid epochs. And this prematureness comes from its having proceeded without having its proper data, without sufficient materials to work with. In other words, the English poetry of the first quarter of this century, with plenty of energy, plenty of creative force, did not know enough. This makes Byron so empty of matter, Shelley² so incoherent, Wordsworth even, profound as he is, yet so wanting in completeness and variety. Wordsworth cared little for books, and disparaged Goethe. I admire Wordsworth, as he is, so much that I cannot wish him different; and it is vain, no doubt, to imagine such a man different from what he is, to suppose that he *could* have been different. But surely the one thing wanting to make Wordsworth an even greater poet than he is,—his thought richer, and his influence of wider application,—was that he should have read more books, among them, no doubt, those of that Goethe whom he disparaged without reading him.

But to speak of books and reading may easily lead to a misunderstanding here. It was not really books and reading that lacked to our poetry at this epoch; Shelley had plenty of reading, Coleridge³ had immense reading. Pindar and Sophocles⁴—as we all say so glibly, and often with so little discernment of the real import of what we are saying—had not many books; Shakespeare was no deep reader. True; but in the Greece of Pindar and Sophocles, in the England of Shakespeare, the poet lived in a current of ideas in the highest degree animating and nourishing to the creative power; society was, in the fullest measure, permeated by fresh thought, intelligent and alive. And this state of things is the true basis for the creative power's exercise, in this it finds its data, its materials, truly ready for its hand; all the books and reading in the world are only valuable as they are helps to this. Even when this does not actually exist, books and reading may enable a man to construct a kind of semblance of it in his own mind, a world of knowledge and intelligence in which he may live and work. This is by no means an equivalent to the artist for the nationally diffused life and thought of the epochs of Sophocles or Shakespeare; but, besides that it may be a means of preparation for such epochs, it does really constitute, if many share in it, a quickening and sustaining atmosphere of great value. Such an atmosphere the many-sided learning and the long and widely-combined critical effort of Germany formed for Goethe, when he lived and worked. There was no national glow of life and thought there as in the Athens of Pericles or the England of Elizabeth.⁵ That was the poet's weakness. But there was a sort of

2. PERCY BYSSHE SHELLEY (1792–1822), English poet.

3. SAMUEL TAYLOR COLERIDGE (1772–1834), English poet and critic, whose wide reading in German Romantic philosophers led to his introducing many of their ideas to English readers.

4. Greek tragedian (ca. 496–406 B.C.E.). Pindar

(ca. 518–438 B.C.E.), Greek lyric poet.

5. Elizabeth I (1533–1603; reigned 1558–1603). Pericles (ca. 495–429 B.C.E.), Athenian statesman, military leader, and supporter of the arts. He was the most influential man in Athens during the city's Golden Age.

equivalent for it in the complete culture and unfettered thinking of a large body of Germans. That was his strength. In the England of the first quarter of this century there was neither a national glow of life and thought, such as we had in the age of Elizabeth, nor yet a culture and a force of learning and criticism such as were to be found in Germany. Therefore the creative power of poetry wanted,⁶ for success in the highest sense, materials and a basis; a thorough interpretation of the world was necessarily denied to it.

At first sight it seems strange that out of the immense stir of the French Revolution and its age should not have come a crop of works of genius equal to that which came out of the stir of the great productive time of Greece, or out of that of the Renaissance, with its powerful episode the Reformation.⁷ But the truth is that the stir of the French Revolution took a character which essentially distinguished it from such movements as these. These were, in the main, disinterestedly intellectual and spiritual movements; movements in which the human spirit looked for its satisfaction in itself and in the increased play of its own activity. The French Revolution took a political, practical character. The movement which went on in France under the old *régime*, from 1700 to 1789, was far more really akin than that of the Revolution itself to the movement of the Renaissance; the France of Voltaire and Rousseau⁸ told far more powerfully upon the mind of Europe than the France of the Revolution. Goethe reproached this last expressly with having 'thrown quiet culture back.'⁹ Nay, and the true key to how much in our Byron, even in our Wordsworth, is this!—that they had their source in a great movement of feeling, not in a great movement of mind. The French Revolution, however,—that object of so much blind hatred,—found undoubtedly its motive-power in the intelligence of men, and not in their practical sense; this is what distinguishes it from the English Revolution of Charles the First's¹ time. This is what makes it a more spiritual event than our Revolution, an event of much more powerful and worldwide interest, though practically less successful; it appeals to an order of ideas which are universal, certain, permanent. 1789 asked of a thing, Is it rational? 1642 asked of a thing, Is it legal? or, when it went furthest, Is it according to conscience? This is the English fashion, a fashion to be treated, within its own sphere, with the highest respect; for its success, within its own sphere, has been prodigious. But what is law in one place is not law in another; what is law here to-day is not law even here to-morrow; and as for conscience, what is binding on one man's conscience is not binding on another's. The old woman who threw her stool at the head of the surpliced minister in St. Giles's Church at Edinburgh² obeyed an impulse to which millions of the human

7. The 16th-century movement in western Europe that aimed at reforming some doctrines and practices of the Roman Catholic Church and resulted in the establishment of the Protestant churches. Renaissance: that is, the Renaissance, the great revival of art, literature, and learning in Europe that began in the 14th century and extended to the 17th century, marking the transition from the medieval to the modern world.

8. Jean-Jacques Rousseau (1712–1778), Swiss-born French political theorist and philosopher. Voltaire: pen name of François-Marie Arouet

(1694–1778), French poet, dramatist, historian, and satirist.

9. In "The Four Seasons: Autumn" (1800).

1. King of England (1600–1649, reigned 1625–49). His conflicts with Parliament led to civil war, which began in 1642 and ended in his defeat and execution.

2. A riot broke out in July 1637 in St. Giles' Cathedral in protest against a new Anglican liturgy written by Archbishop Laud. It was said to have begun when a Presbyterian woman in Edinburgh, Scotland, named Jenny Geddes threw her stool at the dean giving the service and accused him of saying Mass.

race may be permitted to remain strangers. But the prescriptions of reason are absolute, unchanging, of universal validity; *to count by tens is the easiest way of counting*—that is a proposition of which every one, from here to the Antipodes,³ feels the force; at least I should say so if we did not live in a country where it is not impossible that any morning we may find a letter in the *Times* declaring that a decimal coinage is an absurdity.⁴ That a whole nation should have been penetrated with an enthusiasm for pure reason, and with an ardent zeal for making its prescriptions triumph, is a very remarkable thing, when we consider how little of mind, or anything so worthy and quickening as mind, comes into the motives which alone, in general, impel great masses of men. In spite of the extravagant direction given to this enthusiasm, in spite of the crimes and follies in which it lost itself, the French Revolution derives from the force, truth, and universality of the ideas which it took for its law, and from the passion with which it could inspire a multitude for these ideas, a unique and still living power; it is—it will probably long remain—the greatest, the most animating event in history. And as no sincere passion for the things of the mind, even though it turn out in many respects an unfortunate passion, is ever quite thrown away and quite barren of good, France has reaped from hers one fruit—the natural and legitimate fruit, though not precisely the grand fruit she expected: she is the country in Europe where *the people* is most alive.

But the mania for giving an immediate political and practical application to all these fine ideas of the reason was fatal. Here an Englishman is in his element: on this theme we can all go on for hours. And all we are in the habit of saying on it has undoubtedly a great deal of truth. Ideas cannot be too much prized in and for themselves, cannot be too much lived with; but to transport them abruptly into the world of politics and practice, violently to revolutionise this world to their bidding,—that is quite another thing. There is the world of ideas and there is the world of practice; the French are often for suppressing the one and the English the other; but neither is to be suppressed. A member of the House of Commons said to me the other day: 'That a thing is an anomaly, I consider to be no objection to it whatever.' I venture to think he was wrong; that a thing is an anomaly is an objection to it, but absolutely and in the sphere of ideas: it is not necessarily, under such and such circumstances, or at such and such a moment, an objection to it in the sphere of politics and practice. Joubert⁵ has said beautifully: 'C'est la force et le droit qui règlent toutes choses dans le monde; la force en attendant le droit.' (Force and right are the governors of this world; force till right is ready.) *Force till right is ready*; and till right is ready, force, the existing order of things, is justified, is the legitimate ruler. But right is something moral, and implies inward recognition, free assent of the will; we are not ready for right,—*right*, so far as we are concerned, *is not ready*,—until we have attained this sense of seeing it and willing it. The way in which for us it may change and transform force, the existing order of

3. The parts of the earth diametrically opposite the speaker (thus often used of Australia and New Zealand, from the reference point of England).

4. Letters in the London *Times* in 1863 debated whether England should change its system of

weights and measures to the metric system (itself an outgrowth of the French Revolution).

5. Joseph Joubert (1754–1824), French writer and moralist, known for his essays, maxims, and letters.

things, and become, in its turn, the legitimate ruler of the world, should depend on the way in which, when our times comes, we see it and will it. Therefore for other people enamoured of their own newly discerned right, to attempt to impose it upon us as ours, and violently to substitute their right for our force, is an act of tyranny, and to be resisted. It sets at nought the second great half of our maxim, *force till right is ready*. This was the grand error of the French Revolution; and its movement of ideas, by quitting the intellectual sphere and rushing furiously into the political sphere, ran, indeed, a prodigious and memorable course, but produced no such intellectual fruit as the movement of ideas of the Renaissance, and created, in opposition to itself, what I may call an *epoch of concentration*. The great force of that epoch of concentration was England; and the great voice of the epoch of concentration was Burke.⁶ It is the fashion to treat Burke's writings on the French Revolution as superannuated and conquered by the event; as the eloquent but unphilosophical tirades of bigotry and prejudice. I will not deny that they are often disfigured by the violence and passion of the moment, and that in some directions Burke's view was bounded, and his observation therefore at fault. But on the whole, and for those who can make the needful corrections, what distinguishes these writings is their profound, permanent, fruitful, philosophical truth. They contain the true philosophy of an epoch of concentration, dissipate the heavy atmosphere which its own nature is apt to engender round it, and make its resistance rational instead of mechanical.

But Burke is so great because, almost alone in England, he brings thought to bear upon politics, he saturates politics with thought. It is his accident⁷ that his ideas were at the service of an epoch of concentration, not of an epoch of expansion; it is his characteristic that he so lived by ideas, and had such a source of them welling up within him, that he could float even an epoch of concentration and English Tory politics with them. It does not hurt him that Dr. Price⁸ and the Liberals were enraged with him; it does not even hurt him that George the Third and the Tories⁹ were enchanted with him. His greatness is that he lived in a world which neither English Liberalism nor English Toryism is apt to enter;—the world of ideas, not the world of catchwords and party habits. So far is it from being really true of him that he 'to party gave up what was meant for mankind,'¹ that at the very end of his fierce struggle with the French Revolution, after all his invectives against its false pretensions, hollowness, and madness, with his sincere conviction of its mischievousness, he can close a memorandum on the best means of combating it, some of the last pages he ever wrote,²—the *Thoughts on French Affairs*, in December 1791,—with these striking words:—

"The evil is stated, in my opinion, as it exists. The remedy must be where power, wisdom, and information, I hope, are more united with good inten-

9. Members of the political party in Great Britain that, in the late 18th and early 19th century,

favored royal authority, the interest of the country gentry, and the preservation of the existing social and political order; it was succeeded by the Conservative Party.

1. An observation about "good Edmund" Burke in Oliver Goldsmith's poem "Retaliation" (1774), line 32.

2. R. H. Super, the modern editor of Arnold's prose works, notes that in fact Burke continued to write until his death in 1797.

tions than they can be with me. I have done with this subject, I believe, for ever. It has given me many anxious moments for the last two years. *If a great change is to be made in human affairs, the minds of men will be fitted to it; the general opinions and feelings will draw that way. Every fear, every hope will forward it; and then they who persist in opposing this mighty current in human affairs, will appear rather to resist the decrees of Providence itself, than the mere designs of men. They will not be resolute and firm, but perverse and obstinate.*'

That return of Burke upon himself has always seemed to me one of the finest things in English literature, or indeed in any literature. That is what I call living by ideas: when one side of a question has long had your earnest support, when all your feelings are engaged, when you hear all round you no language but one, when your party talks this language like a steam-engine and can imagine no other,—still to be able to think, still to be irresistibly carried, if so it be, by the current of thought to the opposite side of the question, and, like Balaam,³ to be unable to speak anything *but what the Lord has put in your mouth*. I know nothing more striking, and I must add that I know nothing more un-English.

For the Englishman in general is like my friend the Member of Parliament, and believes, point-blank, that for a thing to be an anomaly is absolutely no objection to it whatever. He is like the Lord Auckland⁴ of Burke's day, who, in a memorandum on the French Revolution, talks of 'certain miscreants, assuming the name of philosophers, who have presumed themselves capable of establishing a new system of society.' The Englishman has been called a political animal, and he values what is political and practical so much that ideas easily become objects of dislike in his eyes, and thinkers 'miscreants,' because ideas and thinkers have rashly meddled with politics and practice. This would be all very well if the dislike and neglect confined themselves to ideas transported out of their own sphere, and meddling rashly with practice; but they are inevitably extended to ideas as such, and to the whole life of intelligence; practice is everything, a free play of the mind is nothing. The notion of the free play of the mind upon all subjects being a pleasure in itself, being an object of desire, being an essential provider of elements without which a nation's spirit, whatever compensations it may have for them, must, in the long run, die of inanition, hardly enters into an Englishman's thoughts. It is noticeable that the word *curiosity*, which in other languages is used in a good sense, to mean, as a high and fine quality of man's nature, just this disinterested love of a free play of the mind on all subjects, for its own sake,—it is noticeable, I say, that this word has in our language no sense of the kind, no sense but a rather bad and disparaging one. But criticism, real criticism, is essentially the exercise of this very quality. It obeys an instinct prompting it to try to know the best that is known and thought in the world, irrespectively of practice, politics, and everything of the kind; and to value knowledge and thought as they approach this best, without the intrusion of any other considerations whatever. This is an instinct for which there is, I think, little original sympathy in the practical English nature, and what there was of it

3. Despite being sent by his king to curse the Israelites, Balaam blessed them, speaking "the word that God putteth in [his] mouth" (Numbers

22.38).

4. William Eden, first Baron Auckland (1744–1814), statesman and diplomat.

has undergone a long benumbing period of blight and suppression in the epoch of concentration which followed the French Revolution.

But epochs of concentration cannot well endure for ever; epochs of expansion, in the due course of things, follow them. Such an epoch of expansion seems to be opening in this country. In the first place all danger of a hostile forcible pressure of foreign ideas upon our practice has long disappeared; like the traveller in the fable, therefore, we begin to wear our cloak a little more loosely.⁵ Then, with a long peace, the ideas of Europe steal gradually and amicably in, and mingle, though in infinitesimally small quantities at a time, with our own notions. Then, too, in spite of all that is said about the absorbing and brutalising influence of our passionate material progress, it seems to me indisputable that this progress is likely, though not certain, to lead in the end to an apparition⁶ of intellectual life; and that man, after he has made himself perfectly comfortable and has now to determine what to do with himself next, may begin to remember that he has a mind, and that the mind may be made the source of great pleasure. I grant it is mainly the privilege of faith, at present, to discern this end to our railways, our business, and our fortune-making; but we shall see if, here as elsewhere, faith is not in the end the true prophet. Our ease, our travelling, and our unbounded liberty to hold just as hard and securely as we please to the practice to which our notions have given birth, all tend to beget an inclination to deal a little more freely with these notions themselves, to canvass them a little, to penetrate a little into their real nature. Flutterings of curiosity, in the foreign sense of the word, appear amongst us, and it is in these that criticism must look to find its account. Criticism first; a time of true creative activity, perhaps,—which, as I have said, must inevitably be preceded amongst us by a time of criticism,—hereafter, when criticism has done its work.

It is of the last importance that English criticism should clearly discern what rule for its course, in order to avail itself of the field now opening to it, and to produce fruit for the future, it ought to take. The rule may be summed up in one word,—*disinterestedness*.⁷ And how is criticism to show disinterestedness? By keeping aloof from what is called 'the practical view of things'; by resolutely following the law of its own nature, which is to be a free play of the mind on all subjects which it touches. By steadily refusing to lend itself to any of those ulterior, political, practical considerations about ideas, which plenty of people will be sure to attach to them, which perhaps ought often to be attached to them, which in this country at any rate are certain to be attached to them quite sufficiently, but which criticism has really nothing to do with. Its business is, as I have said, simply to know the best that is known and thought in the world, and by in its turn making this known, to create a current of true and fresh ideas. Its business is to do this with inflexible honesty, with due ability; but its business is to do no more, and to leave alone all questions of practical consequences and applications, questions which will never fail to have due prominence given to them. Else criticism, besides being really false to its own nature, merely continues in the old rut which it has hitherto followed in this country, and

6. An appearance before the world.

7. Objectivity, independence of judgment.

will certainly miss the chance now given to it. For what is at present the bane of criticism in this country? It is that practical considerations cling to it and stifle it. It subverts interests not its own. Our organs of criticism are organs of men and parties having practical ends to serve, and with them those practical ends are the first thing and the play of mind the second; so much play of mind as is compatible with the prosecution of those practical ends is all that is wanted. An organ like the *Revue des Deux Mondes*,⁸ having for its main function to understand and utter the best that is known and thought in the world, existing, it may be said, as just an organ for a free play of the mind, we have not. But we have the *Edinburgh Review*, existing as an organ of the old Whigs,⁹ and for as much play of the mind as may suit its being that; we have the *Quarterly Review*, existing as an organ of the Tories, and for as much play of mind as may suit its being that; we have the *British Quarterly Review*, existing as an organ of the political Dissenters,¹ and for as much play of mind as may suit its being that; we have the *Times*, existing as an organ of the common, satisfied, well-to-do Englishman, and for as much play of mind as may suit its being that. And so on through all the various fractions, political and religious, of our society; every fraction has, as such, its organ of criticism, but the notion of combining all fractions in the common pleasure of a free disinterested play of mind meets with no favour. Directly this play of mind wants to have more scope, and to forget the pressure of practical considerations a little, it is checked, it is made to feel the chain. We saw this the other day in the extinction, so much to be regretted, of the *Home and Foreign Review*.² Perhaps in no organ of criticism in this country was there so much knowledge, so much play of mind; but these could not save it. The *Dublin Review* subordinates play of mind to the practical business of English and Irish Catholicism, and lives. It must needs be that men should act in sects and parties, that each of these sects and parties should have its organ, and should make this organ subserve the interests of its action; but it would be well, too, that there should be a criticism, not the minister of these interests, not their enemy, but absolutely and entirely independent of them. No other criticism will ever attain any real authority or make any real way towards its end,—the creating a current of true and fresh ideas.

It is because criticism has so little kept in the pure intellectual sphere, has so little detached itself from practice, has been so directly polemical and controversial, that it has so ill accomplished, in this country, its best spiritual work; which is to keep man from a self-satisfaction which is retarding and vulgarising, to lead him towards perfection, by making his mind dwell upon what is excellent in itself, and the absolute beauty and fitness of things. A polemical practical criticism makes men blind even to the ideal imperfection of their practice, makes them willingly assert its ideal perfection, in order the better to secure it against attack; and clearly this is nar-

2. Liberal Catholic quarterly in London (1862–64).

rowing and baneful for them. If they were reassured on the practical side, speculative considerations of ideal perfection they might be brought to entertain, and their spiritual horizon would thus gradually widen. Sir Charles Adderley³ says to the Warwickshire farmers:—

‘Talk of the improvement of breed! Why, the race we ourselves represent, the men and women, the old Anglo-Saxon race, are the best breed in the whole world. . . . The absence of a too enervating climate, too unclouded skies, and a too luxurious nature, has produced so vigorous a race of people, and has rendered us so superior to all the world.’

Mr. Roebuck⁴ to the Sheffield cutlers:—

‘I look around me and ask what is the state of England? Is not property safe? Is not every man able to say what he likes? Can you not walk from one end of England to the other in perfect security? I ask you whether, the world over or in past history, there is anything like it? Nothing, I pray that our unrivalled happiness may last.’

Now obviously there is a peril for poor human nature in words and thoughts of such exuberant self-satisfaction, until we find ourselves safe in the streets of the Celestial City.

Das wenige verschwindet leicht dem Blicke,
Der vorwärts sieht, wie viel noch übrig bleibt—

says Goethe;⁵ ‘the little that is done seems nothing when we look forward and see how much we have yet to do.’ Clearly this is a better line of reflection for weak humanity, so long as it remains on this earthly field of labour and trial.

But neither Sir Charles Adderley nor Mr. Roebuck is by nature inaccessible to considerations of this sort. They only lose sight of them owing to the controversial life we all lead, and the practical form which all speculation takes with us. They have in view opponents whose aim is not ideal, but practical; and in their zeal to uphold their own practice against these innovators, they go so far as even to attribute to this practice an ideal perfection. Somebody has been wanting to introduce a six-pound franchise, or to abolish church-rates,⁶ or to collect agricultural statistics by force, or to diminish local self-government. How natural, in reply to such proposals, very likely improper or ill-timed, to go a little beyond the mark, and to say stoutly, ‘Such a race of people as we stand, so superior to all the world! The old Anglo-Saxon race, the best breed in the whole world! I pray that our unrivalled happiness may last! I ask you whether, the world over or in past history, there is anything like it?’ And so long as criticism answers this dithyramb⁷ by insisting that the old Anglo-Saxon race would be still more superior to all others if it had no church-rates, or that our unrivalled happiness would last yet longer with a six-pound franchise, so long will the strain, ‘The best breed in the whole world!’ swell louder and louder, everything ideal and refining will be lost out of sight, and both the assailed and their critics will remain in

3. Conservative member of Parliament (1814–1905), wealthy holder of a large estate in Warwickshire (in central England).

4. John Arthur Roebuck (1801–1879), radical member of Parliament.

England. “Six-pound franchise”: a proposal by radicals to extend the vote to anyone who owned land or buildings worth £6 annual rent (not £10, as set in 1832).

7. That is, statement of impassioned praise (in classical Greece, a wild choral hymn in honor of Dionysus).

a sphere, to say the truth, perfectly unvital, a sphere in which spiritual progression is impossible. But let criticism leave church-rates and the franchise alone, and in the most candid spirit, without a single lurking thought of practical innovation, confront with our dithyramb this paragraph on which I stumbled in a newspaper immediately after reading Mr. Roebuck:—

‘A shocking child murder has just been committed at Nottingham. A girl named Wragg⁸ left the workhouse there on Saturday morning with her young illegitimate child. The child was soon afterwards found dead on Mapperly Hills, having been strangled. Wragg is in custody.’

Nothing but that; but, in juxtaposition with the absolute eulogies of Sir Charles Adderley and Mr. Roebuck, how eloquent, how suggestive are those few lines! ‘Our old Anglo-Saxon breed, the best in the whole world!’—how much that is harsh and ill-favoured there is in this best! *Wragg!* If we are to talk of ideal perfection, of ‘the best in the whole world,’ has any one reflected what a touch of grossness in our race, what an original shortcoming in the more delicate spiritual perceptions, is shown by the natural growth amongst us of such hideous names,—Higginbottom, Stiggins, Bugg! In Ionia and Attica⁹ they were luckier in this respect than ‘the best race in the world’; by the Ilissus¹ there was no Wragg, poor thing! And ‘our unrivalled happiness’;—what an element of grimness, bareness, and hideousness mixes with it and blurs it; the workhouse, the dismal Mapperly Hills,²—how dismal those who have seen them will remember;—the gloom, the smoke, the cold, the strangled illegitimate child! ‘I ask you whether, the world over or in past history, there is anything like it?’ Perhaps not, one is inclined to answer; but at any rate, in that case, the world is very much to be pitied. And the final touch,—short, bleak, and inhuman: *Wragg is in custody*. The sex lost in the confusion of our unrivalled happiness; or (shall I say?) the superfluous Christian name lopped off by the straightforward vigour of our old Anglo-Saxon breed! There is profit for the spirit in such contrasts as this; criticism serves the cause of perfection by establishing them. By eluding sterile conflict, by refusing to remain in the sphere where alone narrow and relative conceptions have any worth and validity, criticism may diminish its momentary importance, but only in this way has it a chance of gaining admittance for those wider and more perfect conceptions to which all its duty is really owed. Mr. Roebuck will have a poor opinion of an adversary who replies to his defiant songs of triumph only by murmuring under his breath, *Wragg is in custody*; but in no other way will these songs of triumph be induced gradually to moderate themselves, to get rid of what in them is excessive and offensive, and to fall into a softer and truer key.

It will be said that it is a very subtle and indirect action which I am thus prescribing for criticism, and that, by embracing in this manner the Indian virtue of detachment³ and abandoning the sphere of practical life, it condemns itself to a slow and obscure work. Slow and obscure it may be, but it is the only proper work of criticism. The mass of mankind will never have any ardent zeal for seeing things as they are; very inadequate ideas will always

8. Elizabeth Wragg; this crime was committed on September 10, 1864.

9. District of Greece that includes Athens. Ionia: area of the west coast of Asia Minor (where Homer is thought to have lived).

3. The ideal of detaching oneself from worldly activity, here associated with Hinduism.

satisfy them.⁴ On these inadequate ideas reposes, and must repose, the general practice of the world. That is as much as saying that whoever sets himself to see things as they are will find himself one of a very small circle; but it is only by this small circle resolutely doing its own work that adequate ideas will ever get current at all. The rush and roar of practical life will always have a dizzying and attracting effect upon the most collected spectator, and tend to draw him into its vortex; most of all will this be the case where that life is so powerful as it is in England. But it is only by remaining collected, and refusing to lend himself to the point of view of the practical man, that the critic can do the practical man any service; and it is only by the greatest sincerity in pursuing his own course, and by at last convincing even the practical man of his sincerity, that he can escape misunderstandings which perpetually threaten him.

For the practical man is not apt for fine distinctions, and yet in these distinctions, truth and the highest culture greatly find their account. But it is not easy to lead a practical man,—unless you reassure him as to your practical intentions, you have no chance of leading him,—to see that a thing which he has always been used to look at from one side only, which he greatly values, and which, looked at from that side, quite deserves, perhaps, all the prizing and admiring which he bestows upon it,—that this thing, looked at from another side, may appear much less beneficent and beautiful, and yet retain all its claims to our practical allegiance. Where shall we find language innocent enough, how shall we make the spotless purity of our intentions evident enough, to enable us to say to the political Englishman that the British Constitution itself, which, seen from the practical side, looks such a magnificent organ of progress and virtue, seen from the speculative side,—with its compromises, its love of facts, its horror of theory, its studied avoidance of clear thoughts,—that, seen from this side, our august Constitution sometimes looks,—forgive me, shade of Lord Somers!⁵—a colossal machine for the manufacture of Philistines?⁶ How is Cobbett⁷ to say this and not be misunderstood, blackened as he is with the smoke of a life-long conflict in the field of political practice? how is Mr. Carlyle⁸ to say it and not be misunderstood, after his furious raid into this field with his *Latter-day Pamphlets*? how is Mr. Ruskin,⁹ after his pugnacious political economy? I say, the critic must keep out of the region of immediate practice in the political, social, humanitarian sphere, if he wants to make a beginning for that more free speculative treatment of things, which may perhaps one day make its benefits felt even in this sphere, but in a natural and thence irresistible manner.

Do what he will, however, the critic will still remain exposed to frequent misunderstandings, and nowhere so much as in this country. For here people are particularly indisposed even to comprehend that without this

4. Arnold takes the terms “adequate” and “inadequate” from the *Ethics* (1677) of the Dutch philosopher BARUCH SPINOZA.

5. John Somers (1651–1716), English constitutional lawyer and statesman.

6. The materialist middle classes (a name taken from a biblical people that waged war against the Israelites).

7. William Cobbett (1762–1835), English radical

journalist and reformer.

8. Thomas Carlyle (1795–1881), Scottish-born essayist and historian; he expressed bitter antidemocratic views in *Latter-Day Pamphlets* (1850).

9. John Ruskin (1819–1900), art critic and social critic. In *Unto This Last* (1860–62), he challenged the business and industrial practices and the materialism of the age.

free disinterested treatment of things, truth and the highest culture are out of the question. So immersed are they in practical life, so accustomed to take all their notions from this life and its processes, that they are apt to think that truth and culture themselves can be reached by the process of this life, and that it is an impertinent singularity to think of reaching them in any other. 'We are all *terræ filii*,'¹ cries their eloquent advocate; 'all Philistines together. Away with the notion of proceeding by any other course than the course dear to the Philistines; let us have a social movement, let us organise and combine a party to pursue truth and new thought, let us call it *the liberal party*, and let us all stick to each other, and back each other up. Let us have no nonsense about independent criticism, and intellectual delicacy, and the few and the many. Don't let us trouble ourselves about foreign thought; we shall invent the whole thing for ourselves as we go along. If one of us speaks well, applaud him; if one of us speaks ill, applaud him too; we are all in the same movement, we are all liberals, we are all in pursuit of truth.' In this way the pursuit of truth becomes really a social, practical, pleasurable affair, almost requiring a chairman, a secretary, and advertisements; with the excitement of an occasional scandal, with a little resistance to give the happy sense of difficulty overcome; but, in general, plenty of bustle and very little thought. To act is so easy, as Goethe says; to think is so hard!² It is true that the critic has many temptations to go with the stream, to make one of the party movement, one of these *terræ filii*; it seems ungracious to refuse to be a *terræ filius*, when so many excellent people are; but the critic's duty is to refuse, or, if resistance is vain, at least to cry with Obermann: *Périssons en résistant*.³

How serious a matter it is to try and resist, I had ample opportunity of experiencing when I ventured some time ago to criticise the celebrated first volume of Bishop Colenso.⁴ The echoes of the storm which was then raised I still, from time to time, hear grumbling round me. That storm arose out of a misunderstanding almost inevitable. It is a result of no little culture to attain to a clear perception that science and religion are two wholly different things. The multitude will for ever confuse them, but happily that is of no great real importance, for while the multitude imagines itself to live by its false science, it does really live by its true religion. Dr. Colenso, however, in his first volume did all he could to strengthen the confusion,⁵ and to

1. Sons of the earth (Latin); that is, men of the soil.

2. A reference to Goethe's novel *Wilhelm Meister's Apprenticeship* (1795–96).

3. Let us die resisting (French). Quoted from *Obermann* (1804), a Romantic epistolary novel by Etienne de Sénancour.

4. So sincere is my dislike to all personal attack and controversy, that I abstain from reprinting, at this distance of time from the occasion which called them forth, the essays in which I criticised Dr. Colenso's book; I feel bound, however, after all that has passed, to make here a final declaration of my sincere impenitence for having published them. Nay, I cannot forbear repeating yet once more, for his benefit and that of his readers, this sentence from my original remarks upon him: *There is truth of science and truth of religion; truth of science does not become truth of*

religion till it is made religious. And I will add: Let us have all the science there is from the men of science; from the men of religion let us have religion [Arnold's note]. John William Colenso (1814–1883), bishop of Natal in South Africa, whose controversial studies disputed orthodox theology and the historical accuracy of biblical texts. In "The Bishop and the Philosopher" (*Macmillan's Magazine*, January 1863), Arnold sharply criticized Colenso's scholarship and failure to address true spiritual needs.

5. It has been said I make it "a crime against literary criticism and the higher culture to attempt to inform the ignorant." Need I point out that the ignorant are not informed by being confirmed in a confusion? [Arnold's note]. Quoted from the jurist and essayist Fitzjames Stephen (1829–1894) in "Mr. Matthew Arnold and His Countrymen," *Saturday Review*, December 3, 1864.

make it dangerous. He did this with the best intentions, I freely admit, and with the most candid ignorance that this was the natural effect of what he was doing; but, says Joubert, 'Ignorance, which in matters of morals extenuates the crime, is itself, in intellectual matters, a crime of the first order.' I criticised Bishop Colenso's speculative confusion. Immediately there was a cry raised: 'What is this? here is a liberal attacking a liberal. Do not you belong to the movement? are not you a friend of truth? Is not Bishop Colenso in pursuit of truth? then speak with proper respect of his book. Dr. Stanley⁶ is another friend of truth, and you speak with proper respect of his book; why make these invidious differences? both books are excellent, admirable, liberal; Bishop Colenso's perhaps the most so, because it is the boldest, and will have the best practical consequences for the liberal cause. Do you want to encourage to the attack of a brother liberal his, and your, and our implacable enemies, the *Church and State Review* or the *Record*,—the High Church rhinoceros and the Evangelical hyæna? Be silent, therefore; or rather speak, speak as loud as ever you can! and go into ecstasies over the eighty and odd pigeons.'⁷

But criticism cannot follow this coarse and indiscriminate method. It is unfortunately possible for a man in pursuit of truth to write a book which reposes upon a false conception. Even the practical consequences of a book are to genuine criticism no recommendation of it, if the book is, in the highest sense, blundering. I see that a lady⁸ who herself, too, is in pursuit of truth, and who writes with great ability, but a little too much, perhaps, under the influence of the practical spirit of the English liberal movement, classes Bishop Colenso's book and M. Renan's⁹ together, in her survey of the religious state of Europe, as facts of the same order, works, both of them, of 'great importance'; 'great ability, power, and skill'; Bishop Colenso's, perhaps, the most powerful; at least, Miss Cobbe gives special expression to her gratitude that to Bishop Colenso 'has been given the strength to grasp, and the courage to teach, truths of such deep import.' In the same way, more than one popular writer has compared him to Luther.¹ Now it is just this kind of false estimate which the critical spirit is, it seems to me, bound to resist. It is really the strongest possible proof of the low ebb at which, in England, the critical spirit is, that while the critical hit in the religious literature of Germany is Dr. Strauss's book,² in that of France M. Renan's book, the book of Bishop Colenso is the critical hit in the religious literature of England. Bishop Colenso's book reposes on a total misconception of the essential elements of the religious problem, as that problem is now presented for solution. To criticism, therefore, which seeks to have the best that is known and thought on this problem, it is, however well meant, of no importance whatever. M. Renan's book attempts a new synthesis of the elements furnished to us by the Four Gospels. It attempts, in my opinion, a synthesis, perhaps

6. Arthur Penrhyn Stanley (1815–1881), English biographer of Thomas Arnold, an ecclesiastical historian and advocate of religious toleration.

7. Colenso used mathematics to cast doubt on the historical validity of certain passages in Leviticus and Numbers.

8. Frances Power Cobbe (1822–1908), Irish social worker and author of books on reform, women's rights, and religion. Her "survey" is

Broken Lights (1864).

9. Ernest Renan (1823–1892), French critic, historian, Orientalist, and author of *The Life of Jesus* (1863).

1. Martin Luther (1483–1546), German religious reformer and founder of the Reformation.

2. *The Life of Jesus* (1835–36), by the German theologian David Friedrich Strauss (1808–1874).

premature, perhaps impossible, certainly not successful. Up to the present time, at any rate, we must acquiesce in Fleury's sentence on such recastings of the Gospel-story: *Quiconque s'imagine la pouvoir mieux écrire, ne l'entend pas*.³ M. Renan had himself passed by anticipation a like sentence on his own work, when he said: 'If a new presentation of the character of Jesus were offered to me, I would not have it; its very clearness would be, in my opinion, the best proof of its insufficiency.' His friends may with perfect justice rejoin that at the sight of the Holy Land, and of the actual scene of the Gospel-story, all the current of M. Renan's thoughts may have naturally changed, and a new casting of that story irresistibly suggested itself to him; and that this is just a case for applying Cicero's maxim: Change of mind is not inconsistency—*nemo doctus unquam mutationem consilii inconstantiam dixit esse*.⁴ Nevertheless, for criticism, M. Renan's first thought must still be the truer one, as long as his new casting so fails more fully to commend itself, more fully (to use Coleridge's happy phrase about the Bible) to *find* us.⁵ Still M. Renan's attempt is, for criticism, of the most real interest and importance, since, with all its difficulty, a fresh synthesis of the New Testament *data*,—not a making war on them, in Voltaire's fashion,⁶ not a leaving them out of mind, in the world's fashion, but the putting a new construction upon them, the taking them from under the old, traditional, conventional point of view and placing them under a new one,—is the very essence of the religious problem, as now presented; and only by efforts in this direction can it receive a solution.

Again, in the same spirit in which she judges Bishop Colenso, Miss Cobbe, like so many earnest liberals of our practical race, both here and in America, herself sets vigorously about a positive reconstruction of religion, about making a religion of the future out of hand, or at least setting about making it. We must not rest, she and they are always thinking and saying, in negative criticism, we must be creative and constructive; hence we have such works as her recent *Religious Duty*,⁷ and works still more considerable, perhaps by others, which will be in every one's mind. These works often have much ability; they often spring out of sincere convictions, and a sincere wish to do good; and they sometimes, perhaps, do good. Their fault is (if I may be permitted to say so) one which they have in common with the British College of Health, in the New Road. Every one knows the British College of Health; it is that building with the lion and the statue of the Goddess Hygeia⁸ before it; at least I am sure about the lion, though I am not absolutely certain about the Goddess Hygeia. This building does credit, perhaps, to the resources of Dr. Morrison⁹ and his disciples; but it falls a good deal short of one's idea of what a British College of Health ought to be. In England, where we hate public interference and love individual enterprise, we have a

8. Greek deity personifying health.

9. James Morrison (1770–1840), merchant and vendor, described himself as "the Hygeist"; in 1828 he founded the British College of Health, from which he distributed his cure-all patent medicine.

whole crop of places like the British College of Health; the grand name without the grand thing. Unluckily, creditable to individual enterprise as they are, they tend to impair our taste by making us forget what more grandiose, noble, or beautiful character properly belongs to a public institution. The same may be said of the religions of the future of Miss Cobbe and others. Creditable, like the British College of Health, to the resources of their authors, they yet tend to make us forget what more grandiose, noble, or beautiful character properly belongs to religious constructions. The historic religions, with all their faults, have had this; it certainly belongs to the religious sentiment, when it truly flowers, to have this; and we impoverish our spirit if we allow a religion of the future without it. What then is the duty of criticism here? To take the practical point of view, to applaud the liberal movement and all its works,—its New Road religions of the future into the bargain,—for their general utility's sake? By no means; but to be perpetually dissatisfied with these works, while they perpetually fall short of a high and perfect ideal.

For criticism, these are elementary laws; but they never can be popular, and in this country they have been very little followed, and one meets with immense obstacles in following them. That is a reason for asserting them again and again. Criticism must maintain its independence of the practical spirit and its aim. Even with well-meant efforts of the practical spirit it must express dissatisfaction, if in the sphere of the ideal they seem impoverishing and limiting. It must not hurry on to the goal because of its practical importance. It must be patient, and know how to wait; and flexible, and know how to attach itself to things and how to withdraw from them. It must be apt to study and praise elements that for the fulness of spiritual perfection are wanted, even though they belong to a power which in the practical sphere may be maleficent. It must be apt to discern the spiritual shortcomings or illusions of powers that in the practical sphere may be beneficent. And this without any notion of favouring or injuring, in the practical sphere, one power or the other; without any notion of playing off, in this sphere, one power against the other. When one looks, for instance, at the English Divorce Court,—an institution which perhaps has its practical conveniences, but which in the ideal sphere is so hideous; an institution which neither makes divorce impossible nor makes it decent, which allows a man to get rid of his wife, or a wife of her husband, but makes them drag one another first, for the public edification, through a mire of unutterable infamy,—when one looks at this charming institution, I say, with its crowded trials, its newspaper reports, and its money compensations, this institution in which the gross unregenerate British Philistine has indeed stamped an image of himself,—one may be permitted to find the marriage theory of Catholicism¹ refreshing and elevating. Or when Protestantism, in virtue of its supposed rational and intellectual origin, gives the law to criticism too magisterially, criticism may and must remind it that its pretensions, in this respect, are illusive and do it harm; that the Reformation was a moral rather than an intellectual event; that Luther's theory of grace no more exactly reflects the mind of the spirit than Bossuet's² philosophy of

1. That is, that in Christian marriage, once consummated, there can never be an absolute divorce.

2. Jacques Bénigne Bossuet (1627–1704), French

bishop and moralist; he maintained that Providence guided history in order to establish Christianity and, especially, the Catholic Church.

history reflects it; and that there is no more antecedent probability of the Bishop of Durham's stock of ideas being agreeable to perfect reason than of Pope Pius the Ninth's.³ But criticism will not on that account forget the achievements of Protestantism in the practical and moral sphere; nor that, even in the intellectual sphere, Protestantism, though in a blind and stumbling manner, carried forward the Renaissance, while Catholicism threw itself violently across its path.

I lately heard a man of thought and energy contrasting the want of ardor and movement which he now found amongst young men in this country with what he remembered in his own youth, twenty years ago. 'What reformers we were then!' he exclaimed; 'what a zeal we had! how we canvassed every institution in Church and State, and were prepared to remodel them all on first principles!' He was inclined to regret, as a spiritual flagging, the lull which he saw. I am disposed rather to regard it as a pause in which the turn to a new mode of spiritual progress is being accomplished. Everything was long seen, by the young and ardent amongst us, in inseparable connection with politics and practical life. We have pretty well exhausted the benefits of seeing things in this connection, we have got all that can be got by so seeing them. Let us try a more disinterested mode of seeing them; let us betake ourselves more to the serener life of the mind and spirit. This life, too, may have its excesses and dangers; but they are not for us at present. Let us think of quietly enlarging our stock of true and fresh ideas, and not, as soon as we get an idea or half an idea, be running out with it into the street, and trying to make it rule there. Our ideas will, in the end, shape the world all the better for maturing a little. Perhaps in fifty years' time it will in the English House of Commons be an objection to an institution that it is an anomaly, and my friend the Member of Parliament will shudder in his grave. But let us in the meanwhile rather endeavour that in twenty years' time it may, in English literature, be an objection to a proposition that it is absurd. That will be a change so vast, that the imagination almost fails to grasp it. *Ab integro sæclorum nascitur ordo.*⁴

If I have insisted so much on the course which criticism must take where politics and religion are concerned, it is because, where these burning matters are in question, it is most likely to go astray. I have wished, above all, to insist on the attitude which criticism should adopt toward things in general; on its right tone and temper of mind. But then comes another question as to the subject-matter which literary criticism should most seek. Here, in general, its course is determined for it by the idea which is the law of its being; the idea of a disinterested endeavour to learn and propagate the best that is known and thought in the world, and thus to establish a current of fresh and true ideas. By the very nature of things, as England is not all the world, much of the best that is known and thought in the world cannot be of English growth, must be foreign; by the nature of things, again, it is just this that we are least likely to know, while English thought is streaming in upon us from all sides, and takes excellent care that we shall not be ignorant of its existence. The English critic of literature, therefore, must dwell much on foreign

3. Pius IX (1792–1878), pope from 1846 to 1878, was criticized for his conservative views. Bishop of Durham: Charles Thomas Baring (1807–1879).

order is born (Latin). From Virgil, *Eclogue* 4.5 (ca. 37 B.C.E.). This poem was sometimes interpreted by Christians as predicting the birth of the Messiah.

thought, and with particular heed on any part of it, which, while significant and fruitful in itself, is for any reason specially likely to escape him. Again, judging is often spoken of as the critic's one business, and so in some sense it is; but the judgment which almost insensibly forms itself in a fair and clear mind, along with fresh knowledge, is the valuable one; and thus knowledge, and ever fresh knowledge, must be the critic's great concern for himself. And it is by communicating fresh knowledge, and letting his own judgment pass along with it,—but insensibly, and in the second place, not the first, as a sort of companion and clue, not as an abstract lawgiver,—that the critic will generally do most good to his readers. Sometimes, no doubt, for the sake of establishing an author's place in literature, and his relation to a central standard (and if this is not done, how are we to get at our *best in the world*?), criticism may have to deal with a subject-matter so familiar that fresh knowledge is out of the question, and then it must be all judgment; an enunciation and detailed application of principles. Here the great safeguard is never to let oneself become abstract, always to retain an intimate and lively consciousness of the truth of what one is saying, and, the moment this fails us, to be sure that something is wrong. Still, under all circumstances, this mere judgment and application of principles is, in itself, not the most satisfactory work to the critic; like mathematics, it is tautological, and cannot well give us, like fresh learning, the sense of creative activity.

But stop, some one will say; all this talk is of no practical use to us whatever; this criticism of yours is not what we have in our minds when we speak of criticism; when we speak of critics and criticism, we mean critics and criticism of the current English literature of the day; when you offer to tell criticism its function, it is to this criticism that we expect you to address yourself. I am sorry for it, for I am afraid I must disappoint these expectations. I am bound by my own definition of criticism: *a disinterested endeavour to learn and propagate the best that is known and thought in the world*. How much of current English literature comes into this 'best that is known and thought in the world'? Not very much, I fear; certainly less, at this moment, than of the current literature of France or Germany. Well, then, am I to alter my definition of criticism, in order to meet the requirements of a number of practising English critics, who, after all, are free in their choice of a business? That would be making criticism lend itself just to one of those alien practical considerations, which, I have said, are so fatal to it. One may say, indeed, to those who have to deal with the mass—so much better disregarded—of current English literature, that they may at all events endeavour, in dealing with this, to try it, so far as they can, by the standard of the best that is known and thought in the world; one may say, that to get anywhere near this standard, every critic should try and possess one great literature, at least, besides his own; and the more unlike his own, the better. But, after all, the criticism I am really concerned with,—the criticism which alone can much help us for the future, the criticism which, throughout Europe, is at the present day meant, when so much stress is laid on the importance of criticism and the critical spirit,—is a criticism which regards Europe as being, for intellectual and spiritual purposes, one great confederation, bound to a joint action and working to a common result; and whose members have, for their proper outfit, a knowledge of Greek, Roman, and Eastern antiquity, and of one another. Special, local, and temporary advantages

being put out of account, that modern nation will in the intellectual and spiritual sphere make most progress, which most thoroughly carries out this programme. And what is that but saying that we too, all of us, as individuals, the more thoroughly we carry it out, shall make the more progress?

There is so much inviting us!—what are we to take? what will nourish us in growth towards perfection? That is the question which, with the immense field of life and of literature lying before him, the critic has to answer; for himself first, and afterwards for others. In this idea of the critic's business the essays brought together in the following pages⁵ have had their origin; in this idea, widely different as are their subjects, they have, perhaps, their unity.

I conclude with what I said at the beginning: to have the sense of creative activity is the great happiness and the great proof of being alive, and it is not denied to criticism to have it; but then criticism must be sincere, simple, flexible, ardent, ever widening its knowledge. Then it may have, in no contemptible measure, a joyful sense of creative activity; a sense which a man of insight and conscience will prefer to what he might derive from a poor, starved, fragmentary, inadequate creation. And at some epochs no other creation is possible.

Still, in full measure, the sense of creative activity belongs only to genuine creation; in literature we must never forget that. But what true man of letters ever can forget it? It is no such common matter for a gifted nature to come into possession of a current of true and living ideas, and to produce amidst the inspiration of them, that we are likely to underrate it. The epochs of Æschylus⁶ and Shakespeare make us feel their pre-eminence. In an epoch like those is, no doubt, the true life of literature; there is the promised land, towards which criticism can only beckon. That promised land it will not be ours to enter, and we shall die in the wilderness:⁷ but to have desired to enter it, to have saluted it from afar, is already, perhaps, the best distinction among contemporaries; it will certainly be the best title to esteem with posterity.

1864, 1875

From Culture and Anarchy

From Chapter 1. Sweetness and Light¹

The disparagers of culture make its motive curiosity; sometimes, indeed, they make its motive mere exclusiveness and vanity. The culture which is supposed to plume itself on a smattering of Greek and Latin is a culture which is begotten by nothing so intellectual as curiosity; it is valued either out of sheer vanity and ignorance or else as an engine of social and class

5. In the book *Essays in Criticism*; this essay was the first in the volume.

6. Greek tragedian (525–456 B.C.E.).

7. Like Moses, who viewed the Promised Land but did not live to enter it. See Deuteronomy 32.48–52, 34.1–4.

1. First delivered, with the title "Culture and Its

Enemies," as Arnold's final lecture as Professor of Poetry at Oxford University, June 7, 1867, and published in the *Cornhill Magazine* in July. It appeared as chapter 1 of *Culture and Anarchy* in 1869. The text reprinted here is that of the 1882 third edition, the last that Arnold himself prepared.

distinction, separating its holder, like a badge or title, from other people who have not got it. No serious man would call this *culture*, or attach any value to it, as culture, at all. To find the real ground for the very different estimate which serious people will set upon culture, we must find some motive for culture in the terms of which may lie a real ambiguity; and such a motive the word *curiosity* gives us.

I have before now pointed out² that we English do not, like the foreigners, use this word in a good sense as well as in a bad sense. With us the word is always used in a somewhat disapproving sense. A liberal and intelligent eagerness about the things of the mind may be meant by a foreigner when he speaks of curiosity, but with us the word always conveys a certain notion of frivolous and unedifying activity. In the *Quarterly Review*, some little time ago, was an estimate of the celebrated French critic, M. Sainte-Beuve,³ and a very inadequate estimate it in my judgment was. And its inadequacy consisted chiefly in this: that in our English way it left out of sight the double sense really involved in the word *curiosity*, thinking enough was said to stamp M. Sainte-Beuve with blame if it was said that he was impelled in his operations as a critic by curiosity, and omitting either to perceive that M. Sainte-Beuve himself, and many other people with him, would consider that this was praiseworthy and not blameworthy, or to point out why it ought really to be accounted worthy of blame and not of praise. For as there is a curiosity about intellectual matters which is futile, and merely a disease, so there is certainly a curiosity,—a desire after the things of the mind simply for their own sakes and for the pleasure of seeing them as they are,—which is, in an intelligent being, natural and laudable. Nay, and the very desire to see things as they are implies a balance and regulation of mind which is not often attained without fruitful effort, and which is the very opposite of the blind and diseased impulse of mind which is what we mean to blame when we blame curiosity. Montesquieu⁴ says: 'The first motive which ought to impel us to study is the desire to augment the excellence of our nature, and to render an intelligent being yet more intelligent.' This is the true ground to assign for the genuine scientific passion, however manifested, and for culture, viewed simply as a fruit of this passion; and it is a worthy ground, even though we let the term *curiosity* stand to describe it.

But there is of culture another view, in which not solely the scientific passion, the sheer desire to see things as they are, natural and proper in an intelligent being, appears as the ground of it. There is a view in which all the love of our neighbour, the impulses towards action, help, and beneficence, the desire for removing human error, clearing human confusion, and diminishing human misery, the noble aspiration to leave the world better and happier than we found it,—motives eminently such as are called social,—come in as part of the grounds of culture, and the main and pre-eminent part. Culture is then properly described not as having its origin in curiosity, but as having its origin in the love of perfection; it is *a study of perfection*. It moves

2. In "The Function of Criticism at the Present Time" (1864; see above).

3. Charles Augustin Sainte-Beuve (1804–1869), French literary critic. In the review mentioned (*Quarterly Review* 119 [January 1866]: 80–108), the author identifies Arnold as Sainte-Beuve's disciple and states that the *Essays in Criticism*

are "graceful but perfectly unsatisfactory."

4. Charles de Secondat Montesquieu (1689–1755), French philosopher and legal and political theorist. Arnold quotes his "Discourse on the Motives That Ought to Encourage Us to the Sciences" (1725).

by the force, not merely or primarily of the scientific passion for pure knowledge, but also of the moral and social passion for doing good. As, in the first view of it, we took for its worthy motto Montesquieu's words: 'To render an intelligent being yet more intelligent!' so, in the second view of it, there is no better motto which it can have than these words of Bishop Wilson:⁵ 'To make reason and the will of God prevail!'

Only, whereas the passion for doing good is apt to be overhasty in determining what reason and the will of God say, because its turn is for acting rather than thinking and it wants to be beginning to act; and whereas it is apt to take its own conceptions, which proceed from its own state of development and share in all the imperfections and immaturities of this, for a basis of action; what distinguishes culture is, that it is possessed by the scientific passion as well as by the passion of doing good; that it demands worthy notions of reason and the will of God, and does not readily suffer its own crude conceptions to substitute themselves for them. And knowing that no action or institution can be salutary and stable which is not based on reason and the will of God, it is not so bent on acting and instituting, even with the great aim of diminishing human error and misery ever before its thoughts, but that it can remember that acting and instituting are of little use, unless we know how and what we ought to act and to institute.

This culture is more interesting and more far-reaching than that other, which is founded solely on the scientific passion for knowing. But it needs times of faith and ardour, times when the intellectual horizon is opening and widening all round us, to flourish in. And is not the close and bounded intellectual horizon within which we have long lived and moved now lifting up, and are not new lights finding free passage to shine in upon us? For a long time there was no passage for them to make their way in upon us, and then it was of no use to think of adapting the world's action to them. Where was the hope of making reason and the will of God prevail among people who had a routine which they had christened reason and the will of God, in which they were inextricably bound, and beyond which they had no power of looking? But now the iron force of adhesion to the old routine,—social, political, religious,—has wonderfully yielded; the iron force of exclusion of all which is new has wonderfully yielded. The danger now is, not that people should obstinately refuse to allow anything but their old routine to pass for reason and the will of God, but either that they should allow some novelty or other to pass for these too easily, or else that they should under-rate the importance of them altogether, and think it enough to follow action for its own sake, without troubling themselves to make reason and the will of God prevail therein. Now, then, is the moment for culture to be of service, culture which believes in making reason and the will of God prevail, believes in perfection, is the study and pursuit of perfection, and is no longer debarred, by a rigid invincible exclusion of whatever is new, from getting acceptance for its ideas, simply because they are new.

The moment this view of culture is seized, the moment it is regarded not solely as the endeavour to see things as they are, to draw towards a knowledge of the universal order which seems to be intended and aimed at in the world,

5. Thomas Wilson (1663–1755), English churchman and author of devotional works. Arnold is condensing a passage from Wilson's *Maxims* (first published in 1781).

and which it is a man's happiness to go along with or his misery to go counter to,—to learn, in short, the will of God,—the moment, I say, culture is considered not merely as the endeavour to *see* and *learn* this, but as the endeavour, also, to make it *prevail*, the moral, social, and beneficent character of culture becomes manifest. The mere endeavour to see and learn the truth for our own personal satisfaction is indeed a commencement for making it prevail, a preparing the way for this, which always serves this, and is wrongly, therefore, stamped with blame absolutely in itself and not only in its caricature and degeneration. But perhaps it has got stamped with blame, and disparaged with the dubious title of curiosity, because in comparison with this wider endeavour of such great and plain utility it looks selfish, petty, and unprofitable.

And religion, the greatest and most important of the efforts by which the human race has manifested its impulse to perfect itself,—religion, that voice of the deepest human experience,—does not only enjoin and sanction the aim which is the great aim of culture, the aim of setting ourselves to ascertain what perfection is and to make it prevail; but also, in determining generally in what human perfection consists, religion comes to a conclusion identical with that which culture,—culture seeking the determination of this question through *all* the voices of human experience which have been heard upon it, of art, science, poetry, philosophy, history, as well as of religion, in order to give a greater fulness and certainty to its solution,—likewise reaches. Religion says: *The kingdom of God is within you*;⁶ and culture, in like manner, places human perfection in an *internal* condition, in the growth and predominance of our humanity proper, as distinguished from our animality. It places it in the ever-increasing efficacy and in the general harmonious expansion of those gifts of thought and feeling, which make the peculiar dignity, wealth, and happiness of human nature. As I have said on a former occasion:⁷ 'It is in making endless additions to itself, in the endless expansion of its powers, in endless growth in wisdom and beauty, that the spirit of the human race finds its ideal. To reach this ideal, culture is an indispensable aid, and that is the true value of culture.' Not a having and a resting, but a growing and a becoming, is the character of perfection as culture conceives it; and here, too, it coincides with religion.

And because men are all members of one great whole, and the sympathy which is in human nature will not allow one member to be indifferent to the rest or to have a perfect welfare independent of the rest, the expansion of our humanity, to suit the idea of perfection which culture forms, must be a *general* expansion. Perfection, as culture conceives it, is not possible while the individual remains isolated. The individual is required, under pain of being stunted and enfeebled in his own development if he disobeys, to carry others along with him in his march towards perfection, to be continually doing all he can to enlarge and increase the volume of the human stream sweeping thitherward. And here, once more, culture lays on us the same obligation as religion, which says, as Bishop Wilson has admirably put it, that 'to promote the kingdom of God is to increase and hasten one's own happiness.'

But, finally, perfection,—as culture from a thorough disinterested study of human nature and human experience learns to conceive it,—is a harmonious expansion of *all* the powers which make the beauty and worth of

6. Luke 17.21.

7. In *A French Eton* (1864), chapter 3.

human nature, and is not consistent with the over-development of any one power at the expense of the rest. Here culture goes beyond religion, as religion is generally conceived by us.

If culture, then, is a study of perfection, and of harmonious perfection, general perfection, and perfection which consists in becoming something rather than in having something, in an inward condition of the mind and spirit, not in an outward set of circumstances,—it is clear that culture, instead of being the frivolous and useless thing which Mr. Bright, and Mr. Frederic Harrison,⁸ and many other Liberals are apt to call it, has a very important function to fulfil for mankind. And this function is particularly important in our modern world, of which the whole civilisation is, to a much greater degree than the civilisation of Greece and Rome, mechanical and external, and tends constantly to become more so. But above all in our own country has culture a weighty part to perform, because here that mechanical character, which civilisation tends to take everywhere, is shown in the most eminent degree. Indeed nearly all the characters of perfection, as culture teaches us to fix them, meet in this country with some powerful tendency which thwarts them and sets them at defiance. The idea of perfection as an *inward* condition of the mind and spirit is at variance with the mechanical and material civilisation in esteem with us, and nowhere, as I have said, so much in esteem as with us. The idea of perfection as a *general* expansion of the human family is at variance with our strong individualism, our hatred of all limits to the unrestrained swing of the individual's personality, our maxim of 'every man for himself.' Above all, the idea of perfection as a *harmonious* expansion of human nature is at variance with our want of flexibility, with our inaptitude for seeing more than one side of a thing, with our intense energetic absorption in the particular pursuit we happen to be following. So culture has a rough task to achieve in this country. Its preachers have, and are likely long to have, a hard time of it, and they will much oftener be regarded, for a great while to come, as elegant or spurious Jeremiahs⁹ than as friends and benefactors. That, however, will not prevent their doing in the end good service if they persevere. And, meanwhile, the mode of action they have to pursue, and the sort of habits they must fight against, ought to be made quite clear for every one to see, who may be willing to look at the matter attentively and dispassionately.

Faith in machinery is, I said, our besetting danger; often in machinery most absurdly disproportioned to the end which this machinery, if it is to do any good at all, is to serve; but always in machinery, as if it had a value in and for itself.¹ What is freedom but machinery? what is population but machinery? what is coal but machinery? what are railroads but machinery? what is wealth but machinery? what are, even, religious organisations but machinery? Now almost every voice in England is accustomed to speak of these things as if they were precious ends in themselves, and therefore had some of the characters of perfection indisputably joined to them. I have before now

8. English jurist and philosopher (1831–1923), and critic of Arnold's cultural views. John Bright (1811–1889), English political reformer, orator, and member of Parliament.

9. That is, speakers who complain, lament, or condemn at length, like the biblical prophet.

1. In "Signs of the Times" (1829), the Scottish-born author Thomas Carlyle had stated that it was now "the Mechanical Age. It is the Age of Machinery, in every outward and inward sense of that word."

noticed Mr. Roebuck's² stock argument for proving the greatness and happiness of England as she is, and for quite stopping the mouths of all gainsayers. Mr. Roebuck is never weary of reiterating this argument of his, so I do not know why I should be weary of noticing it. 'May not every man in England say what he likes?'—Mr. Roebuck perpetually asks; and that, he thinks, is quite sufficient, and when every man may say what he likes, our aspirations ought to be satisfied. But the aspirations of culture, which is the study of perfection, are not satisfied, unless what men say, when they may say what they like, is worth saying,—has good in it, and more good than bad. In the same way the *Times*, replying to some foreign strictures on the dress, looks, and behaviour of the English abroad, urges that the English ideal is that every one should be free to do and to look just as he likes. But culture indefatigably tries, not to make what each raw person may like the rule by which he fashions himself; but to draw ever nearer to a sense of what is indeed beautiful, graceful, and becoming, and to get the raw person to like that.

And in the same way with respect to railroads and coal. Every one must have observed the strange language current during the late discussions as to the possible failure of our supplies of coal. Our coal, thousands of people were saying, is the real basis of our national greatness; if our coal runs short, there is an end of the greatness of England. But what is greatness?—culture makes us ask. Greatness is a spiritual condition worthy to excite love, interest, and admiration; and the outward proof of possessing greatness is that we excite love, interest, and admiration. If England were swallowed up by the sea to-morrow, which of the two, a hundred years hence, would most excite the love, interest, and admiration of mankind,—would most, therefore, show the evidences of having possessed greatness,—the England of the last twenty years, or the England of Elizabeth,³ of a time of splendid spiritual effort, but when our coal, and our industrial operations depending on coal, were very little developed? Well, then, what an unsound habit of mind it must be which makes us talk of things like coal or iron as constituting the greatness of England, and how salutary a friend is culture, bent on seeing things as they are, and thus dissipating delusions of this kind and fixing standards of perfection that are real!

Wealth, again, that end to which our prodigious works for material advantage are directed,—the commonest of commonplaces tells us how men are always apt to regard wealth as a precious end in itself; and certainly they have never been so apt thus to regard it as they are in England at the present time. Never did people believe anything more firmly than nine Englishmen out of ten at the present day believe that our greatness and welfare are proved by our being so very rich. Now, the use of culture is that it helps us, by means of its spiritual standard of perfection, to regard wealth as but machinery, and not only to say as a matter of words that we regard wealth as but machinery, but really to perceive and feel that it is so. If it were not for this purging effect wrought upon our minds by culture, the whole world, the future as well as the present, would inevitably belong to the Philistines.⁴ The people who believe most that most greatness and welfare are proved by

2. John Arthur Roebuck (1801–1879), radical member of Parliament. "Before now": see "The Function of Criticism at the Present Time."

3. Elizabeth I (1533–1603; reigned 1558–1603).

4. The materialist middle classes (a name taken from a biblical people that waged war against the Israelites).

our being very rich, and who most give their lives and thoughts to becoming rich, are just the very people whom we call Philistines. Culture says: 'Consider these people, then, their way of life, their habits, their manners, the very tones of their voice; look at them attentively; observe the literature they read, the things which give them pleasure, the words which come forth out of their mouths, the thoughts which make the furniture of their minds: would any amount of wealth be worth having with the condition that one was to become just like these people by having it?' And thus culture begets a dissatisfaction which is of the highest possible value in stemming the common tide of men's thoughts in a wealthy and industrial community, and which saves the future, as one may hope, from being vulgarised, even if it cannot save the present.

Population, again, and bodily health and vigour, are things which are nowhere treated in such an unintelligent, misleading, exaggerated way as in England. Both are really machinery; yet how many people all around us do we see rest in them and fail to look beyond them! Why, one has heard people, fresh from reading certain articles of the *Times* on the Registrar-General's returns of marriages and births in this country,⁵ who would talk of our large English families in quite a solemn strain, as if they had something in itself beautiful, elevating, and meritorious in them; as if the British Philistine would have only to present himself before the Great Judge with his twelve children, in order to be received among the sheep⁶ as a matter of right!

But bodily health and vigour, it may be said, are not to be classed with wealth and population as mere machinery; they have a more real and essential value. True; but only as they are more intimately connected with a perfect spiritual condition than wealth or population are. The moment we disjoin them from the idea of a perfect spiritual condition, and pursue them, as we do pursue them, for their own sake and as ends in themselves, our worship of them becomes as mere worship of machinery, as our worship of wealth or population, and as unintelligent and vulgarising a worship as that is. Every one with anything like an adequate idea of human perfection has distinctly marked this subordination to higher and spiritual ends of the cultivation of bodily vigour and activity. 'Bodily exercise profiteth little; but godliness is profitable unto all things,' says the author of the Epistle to Timothy.⁷ And the utilitarian Franklin⁸ says as explicitly:—'Eat and drink such an exact quantity as suits the constitution of thy body, *in reference to the services of the mind.*' But the point of view of culture, keeping the mark of human perfection simply and broadly in view, and not assigning to this perfection, as religion or utilitarianism assigns to it, a special and limited character, this point of view, I say, of culture is best given by these words of Epictetus:⁹—'It is a sign of ἀφροσύνη,' says he,—that is, of a nature not finely tempered,—'to give yourselves for instance, a great fuss about exercise, a great fuss about eating, a great fuss about drinking, a great fuss about walking, a great fuss about riding. All these things ought to be done merely by the way: the formation of the spirit and character must be our real concern.' This is admirable; and, indeed, the Greek word εὐφροσύνη, a finely tempered nature, gives exactly the notion of perfection

5. "When Marriages are many and Deaths are few it is certain that the people are doing well" (*London Times*, February 3, 1866).

6. That is, the saved; see Matthew 25.31–46.

7. 1 Timothy 4.8.

8. Benjamin Franklin (1706–1790), American

statesman, writer, and scientist. Arnold quotes Franklin's first recommendation in "Rules of Health," from *Poor Richard's Almanack* (1732–57).

9. Greek Stoic philosopher (ca. 55–ca. 135 C.E.), who taught in Rome, in *Enchiridion* 41.

as culture brings us to conceive it: a harmonious perfection, a perfection in which the characters of beauty and intelligence are both present, which unites 'the two noblest of things,'—as Swift,¹ who of one of the two, at any rate, had himself all too little, most happily calls them in his *Battle of the Books*,—'the two noblest of things, *sweetness and light*.' The εὐφυνής² is the man who tends towards sweetness and light; the ἀφυνής, on the other hand, is our Philistine. The immense spiritual significance of the Greeks is due to their having been inspired with this central and happy idea of the essential character of human perfection; and Mr. Bright's misconception of culture, as a smattering of Greek and Latin, comes itself, after all, from this wonderful significance of the Greeks having affected the very machinery of our education, and is in itself a kind of homage to it.

In thus making sweetness and light to be characters of perfection, culture is of like spirit with poetry, follows one law with poetry. Far more than on our freedom, our population, and our industrialism, many amongst us rely upon our religious organisations to save us. I have called religion a yet more important manifestation of human nature than poetry, because it has worked on a broader scale for perfection, and with greater masses of men. But the idea of beauty and of a human nature perfect on all its sides, which is the dominant idea of poetry, is a true and invaluable idea, though it has not yet had the success that the idea of conquering the obvious faults of our animality, and of a human nature perfect on the moral side,—which is the dominant idea of religion,—has been enabled to have; and it is destined, adding to itself the religious idea of a devout energy, to transform and govern the other.

The best art and poetry of the Greeks, in which religion and poetry are one, in which the idea of beauty and of a human nature perfect on all sides adds to itself a religious and devout energy, and works in the strength of that, is on this account of such surpassing interest and instructiveness for us, though it was,—as, having regard to the human race in general, and, indeed, having regard to the Greeks themselves, we must own,—a premature attempt, an attempt which for success needed the moral and religious fibre in humanity to be more braced and developed than it had yet been. But Greece did not err in having the idea of beauty, harmony, and complete human perfection, so present and paramount. It is impossible to have this idea too present and paramount; only, the moral fibre must be braced too. And we, because we have braced the moral fibre, are not on that account in the right way, if at the same time the idea of beauty, harmony, and complete human perfection, is wanting or misapprehended amongst us; and evidently it is wanting or misapprehended at present. And when we rely as we do on our religious organisations, which in themselves do not and cannot give us this idea, and think we have done enough if we make them spread and prevail, then, I say, we fall into our common fault of overvaluing machinery.

* * *

1867, 1882

1. Jonathan Swift (1667–1745), English satirist, poet, and clergyman. In *The Battle of the Books* (1704), he recounts why Aesop, judging a contest between the spider (here representing the moderns) and the bee (the ancients), decided in favor of the bee: "the difference is, that, instead of dirt

and poison, we have rather chosen to fill our hives with honey and wax; thus furnishing mankind with the two noblest of things, which are sweetness and light." In the larger battle that Swift describes, the outcome is less certain.

2. That is, a well-tempered nature.

WALTER PATER

1839–1894

Contemporary critics and theorists have returned to Walter Pater's books and essays, reexamined them in relation to current interests in figurative language, creativity in criticism, and historical study, and dramatically raised his critical stock. Literary histories had often described Pater as a "minor" Victorian overshadowed by MATTHEW ARNOLD. An impressionist critic who coined the English phrase "art for art's sake" (which he later amended to "art for its own sake"), he sketched, it was said, the adventures of his soul among masterpieces. Now, however, Pater's conception of art and his exaltation of aesthetic experience have linked him with his contemporaries RALPH WALDO EMERSON and FRIEDRICH NIETZSCHE as a crucial writer for postmodern theory and criticism.

Pater's work has always been important for creative writers, including William Butler Yeats, who refashioned Pater's prose description of Leonardo da Vinci's *Mona Lisa* in *Studies in the History of the Renaissance* (1873) and made it the first "poem" in the *Oxford Book of Modern Verse* (1936). Pater has also inspired such twentieth-century theorists of literary and critical consciousness as Georges Poulet and (in his early writings) PAUL DE MAN. HAROLD BLOOM and J. Hillis Miller point to Pater as having enriched and supplemented the Romantic tradition in criticism inaugurated by SAMUEL TAYLOR COLERIDGE and refined by John Ruskin in *Modern Painters*, 1843–56, and *The Stones of Venice*, 1851–53.

Pater was born in the East End of London. His father, a surgeon, died in 1842, and he was raised in a household of women that included his mother, a grandmother, and an aunt. After attending King's School, Canterbury, he began his undergraduate career at Queen's College, Oxford University, where he wrote essays on Greek philosophy for the eminent scholar Benjamin Jowett. Pater received his degree in 1862 and the following year was elected to Old Mortality, a literary society at Oxford. He became a fellow of Oxford's Brasenose College in 1864, living there and, later, in London as a teacher, scholar, and critic.

During the summer of 1865, Pater made his first trip to Italy, traveling in the company of his pupil and close friend C. L. Shadwell, to whom he would dedicate *Studies in the History of the Renaissance*. The paintings he saw in Florence and other cities deeply moved him, giving him "a richer, more daring sense of life than any to be seen in Oxford." For Pater, the Italian Renaissance was not merely a historical period but a tremor in the heart that marked the consciousness of the person attuned to its splendors. To know the glorious works of Renaissance art was intensely, indeed erotically, to *feel* them, and this feeling was Pater's means of countering the dulling of sensation, the termination of feeling, the inevitability of death.

Pater's first essays were published anonymously in the late 1860s. A study of Coleridge in the *Westminster Review* (1866) suggests that Pater found a central theme early on: "Modern thought is distinguished from ancient by its cultivation of the 'relative' spirit in place of the 'absolute.' . . . To the modern spirit nothing is, or can be rightly known, except relatively and under certain conditions." Pater's first publication under his name was "Notes on Leonardo da Vinci" (1869). *Studies in the History of the Renaissance*, a collection of essays on writers and Italian painters (including Leonardo da Vinci and Sandro Botticelli), appeared four years later.

Pater's next book, the romance *Marius the Epicurean* (1885), describes the development of a young Roman in the time of Marcus Aurelius, the second-century C.E. Roman emperor and Stoic philosopher. He conceived it as the first of a three-part series—the second to be set in sixteenth-century France and the third in late eighteenth-century England—but the other volumes remained unwritten. Pater's

later books include *Imaginary Portraits* (1887), *Appreciations, with an Essay on Style* (1889), and *Plato and Platonism* (1893). *Greek Studies* (1895) and an unfinished romance, *Gaston de Latour* (1896), were published posthumously. The three-volume theological project that Pater planned for his later years, which he seems to have envisioned as a response to Arnold's writings on religion and culture, was left undone.

Studies in the History of the Renaissance was a momentous text for a number of Pater's younger contemporaries, including OSCAR WILDE. Pater states that his primary concern is with Italy in the fifteenth century, but he deliberately defines the term *Renaissance* much more widely, describing it as an "outbreak of the human spirit" from the "limits which the religious system of the middle ages imposed on the heart and the imagination." Throughout the book, Pater emphasizes the precious, fine textures of art, but always with the implication that only persons of rich receptiveness, of exquisite and accurate perception, can wholly sense and appreciate its singularities. The reliance on austere discipline to achieve liberation—the free life that art renders possible—helps explain Pater's great appeal. By making a religion of art, a sacred duty of artistic creation and perception, Pater built the foundation for modern aestheticist rapture as well as for impressionist criticism.

Studies in the History of the Renaissance received mixed reviews. Some concurred with Pater, against Ruskin, in his esteem for the Renaissance. But others attacked Pater for advocating pleasure as the highest good and self-gratification as the best rule for the conduct of life. George Eliot in a letter called the book "quite poisonous in its false principles of criticism and false conceptions of life." Some accused Pater of projecting nineteenth-century modes of thinking onto the Renaissance. To defend himself against these charges of hedonism and ahistoricism, Pater changed the title of the second edition (1877) to *The Renaissance: Studies in Art and Poetry* and omitted the conclusion, which declared that nothing mattered more than the experience of brilliant moments (he restored it, in a slightly modified form, for the third and fourth editions). The damage had been done, however; in later years, he failed to win Oxford appointments he might otherwise have received.

In the preface, Pater sounds a concrete, pragmatic note. Impatient with the notion that critics should seek broad, general definitions of key terms, he declares that "Beauty, like all other qualities presented to human experience, is relative." Referring to the pleasure that we receive from "a picture, a landscape, a fair personality in life or in a book," Pater intimates that on one level at least there is no difference between life and art, nature and culture: each matters only insofar as it gives pleasure.

Pater at first seems directly to challenge Arnold's dictum that the critic must see the object as in itself it really is by adding a necessary "first step": "to know one's own impression as it really is, to discriminate it, to realise it distinctly." Yet their goal is the same; knowing the impression is the means through which one perceives how and why one is "deeply moved by the presence of beautiful objects." This response to art matters, according to Pater, because it frees each mind from being "a solitary prisoner [in] its own dream of a world." Even more important, it frees individuals from their bondage to routine and particularly to death. The love of art for its own sake is what makes us, while the response lasts, more alive than dead. Like other late nineteenth-century figures, Pater registers a heightened sense of fleeting beauty wherever it materializes, qualities also evident in so-called decadent literature and impressionist painting of the time.

Pater's view of criticism and art startled his contemporaries, because God is absent from it. Most of them saw death not as final but as the pathway to the highest form of life. Pater neither offers religious consolation nor invokes the moral earnestness and high seriousness of earlier Victorian writers, including Thomas Carlyle, Arnold, and Eliot. He seems unconcerned as well about social and political change: there is no higher purpose than seizing, desperately, each moment for whatever intensities it might supply. This is obviously the main limitation of his position,

for the responsibility of the critic is maximizing his or her *pleasure*, not contributing to knowledge or to change in a body politic that in Pater's view can no more withstand decay and death than anything or anyone else.

From Studies in the History of the Renaissance

Preface

Many attempts have been made by writers on art and poetry to define beauty in the abstract, to express it in the most general terms, to find some universal formula for it. The value of these attempts has most often been in the suggestive and penetrating things said by the way. Such discussions help us very little to enjoy what has been well done in art or poetry, to discriminate between what is more and what is less excellent in them, or to use words like beauty, excellence, art, poetry, with a more precise meaning than they would otherwise have. Beauty, like all other qualities presented to human experience, is relative; and the definition of it becomes unmeaning and useless in proportion to its abstractness. To define beauty, not in the most abstract but in the most concrete terms possible, to find, not its universal formula, but the formula which expresses most adequately this or that special manifestation of it, is the aim of the true student of aesthetics.

"To see the object as in itself it really is,"¹ has been justly said to be the aim of all true criticism whatever; and in aesthetic criticism the first step towards seeing one's object as it really is, is to know one's own impression as it really is, to discriminate it,² to realise it distinctly. The objects with which aesthetic criticism deals—music, poetry, artistic and accomplished forms of human life—are indeed receptacles of so many powers or forces: they possess, like the products of nature, so many virtues or qualities. What is this song or picture, this engaging personality presented in life or in a book, to *me*? What effect does it really produce on me? Does it give me pleasure? and if so, what sort or degree of pleasure? How is my nature modified by its presence, and under its influence? The answers to these questions are the original facts with which the aesthetic critic has to do; and, as in the study of light, of morals, of number, one must realise such primary data for one's self, or not at all. And he who experiences these impressions strongly, and drives directly at the discrimination and analysis of them, has no need to trouble himself with the abstract question what beauty is in itself, or what its exact relation to truth or experience—metaphysical questions, as unprofitable as metaphysical questions elsewhere. He may pass them all by as being, answerable or not, of no interest to him.

The aesthetic critic, then, regards all the objects with which he has to do, all works of art, and the fairer forms of nature and human life, as powers or forces producing pleasurable sensations, each of a more or less peculiar or

1. MATTHEW ARNOLD's phrase, which he used first in "On Translating Homer" (1862) and then in the opening paragraph of a more widely read

essay, "The Function of Criticism at the Present Time" (1864; see above).

2. To perceive its distinguishing features.

unique kind. This influence he feels, and wishes to explain, by analysing and reducing it to its elements. To him, the picture, the landscape, the engaging personality in life or in a book, *La Gioconda*, the hills of Carrara, Pico of Mirandola,³ are valuable for their virtues, as we say, in speaking of a herb, a wine, a gem; for the property each has of affecting one with a special, a unique, impression of pleasure. Our education becomes complete in proportion as our susceptibility to those impressions increases in depth and variety. And the function of the æsthetic critic is to distinguish, to analyse, and separate from its adjuncts, the virtue by which a picture, a landscape, a fair personality in life or in a book, produces this special impression of beauty or pleasure, to indicate what the source of that impression is, and under what conditions it is experienced. His end is reached when he has disengaged that virtue, and noted it, as a chemist notes some natural element, for himself and others; and the rule for those who would reach this end is stated with great exactness in the words of a recent critique of Sainte-Beuve:—*De se borner à connaître de près les belles choses, et à s'en nourrir en exquis amateurs, en humanistes accomplis*.⁴

What is important, then, is not that the critic should possess a correct abstract definition of beauty for the intellect, but a certain kind of temperament, the power of being deeply moved by the presence of beautiful objects. He will remember always that beauty exists in many forms. To him all periods, types, schools of taste, are in themselves equal. In all ages there have been some excellent workmen, and some excellent work done. The question he asks is always:—In whom did the stir, the genius, the sentiment of the period find itself? where was the receptacle of its refinement, its elevation, its taste? “The ages are all equal,” says William Blake, “but genius is always above its age.”⁵

Often it will require great nicety to disengage this virtue from the commoner elements with which it may be found in combination. Few artists, not Goethe or Byron⁶ even, work quite cleanly, casting off all *débris*, and leaving us only what the heat of their imagination has wholly fused and transformed. Take, for instance, the writings of Wordsworth.⁷ The heat of his genius, entering into the substance of his work, has crystallised a part, but only a part, of it; and in that great mass of verse there is much which might well be forgotten. But scattered up and down it, sometimes fusing and transforming entire compositions, like the Stanzas on *Resolution and Independence*, or the *Ode on the Recollections of Childhood*,⁸ sometimes, as if at random, depositing a fine crystal here or there, in a matter it does not wholly search through and transmute, we trace the action of his unique, incommunicable

3. Giovanni Pico, count of Mirandola (1463–1494), an Italian humanist and Neoplatonist philosopher whom Pater examines in one of the chapters of *The Renaissance*. *La Gioconda*: Leonardo da Vinci's painting *Mona Lisa* (ca. 1504). Carrara: a region of Italy famous for its white marble.

4. One should limit oneself to knowing beautiful things intimately, and nourish oneself on them like exquisite amateurs, like accomplished humanists (French). Charles-Augustin Sainte-Beuve (1804–1869), an eminent French critic and journalist; he wrote this sentence in an 1867 essay on the French poet and humanist JOACHIM DU BELLAY (1522–1560). Pater devotes a later chapter of

Studies in the Renaissance to du Bellay.

5. From annotations to volume 1 of *The Works of Sir Joshua Reynolds* made by the Romantic poet Blake (1757–1827).

6. George Gordon, Lord Byron (1788–1824), English Romantic poet. Johann Wolfgang von Goethe (1749–1832), German poet, dramatist, and novelist.

7. WILLIAM WORDSWORTH (1770–1850), the greatest of the English Romantic poets.

8. That is, “Ode: Intimations of Immortality from Recollections of Early Childhood” (1807). “Resolution and Independence” was also published in 1807.

faculty, that strange, mystical sense of a life in natural things, and of man's life as a part of nature, drawing strength and colour and character from local influences, from the hills and streams, and from natural sights and sounds. Well! that is the *virtue*, the active principle in Wordsworth's poetry; and then the function of the critic of Wordsworth is to follow up that active principle, to disengage it, to mark the degree in which it penetrates his verse.

The subjects of the following studies are taken from the history of the *Renaissance*, and touch what I think the chief points in that complex, many-sided movement. I have explained in the first of them what I understand by the word, giving it a much wider scope than was intended by those who originally used it to denote that revival of classical antiquity in the fifteenth century which was only one of many results of a general excitement and enlightening of the human mind, but of which the great aim and achievements of what, as Christian art, is often falsely opposed to the Renaissance, were another result. This outbreak of the human spirit may be traced far into the Middle Age itself, with its motives already clearly pronounced, the care for physical beauty, the worship of the body, the breaking down of those limits which the religious system of the Middle Age imposed on the heart and the imagination. I have taken as an example of this movement, this earlier Renaissance within the Middle Age itself, and as an expression of its qualities, two little compositions in early French; not because they constitute the best possible expression of them, but because they help the unity of my series, inasmuch as the Renaissance ends also in France, in French poetry, in a phase of which the writings of Joachim du Bellay are in many ways the most perfect illustration. The Renaissance, in truth, put forth in France an aftermath, a wonderful later growth, the products of which have to the full that subtle and delicate sweetness which belongs to a refined and comely decadence, as its earliest phases have the freshness which belongs to all periods of growth in art, the charm of *ascêsis*,⁹ of the austere and serious girding of the loins in youth.

But it is in Italy, in the fifteenth century, that the interest of the Renaissance mainly lies,—in that solemn fifteenth century which can hardly be studied too much, not merely for its positive results in the things of the intellect and the imagination, its concrete works of art, its special and prominent personalities, with their profound æsthetic charm, but for its general spirit and character, for the ethical qualities of which it is a consummate type.

The various forms of intellectual activity which together make up the culture of an age, move for the most part from different starting-points, and by unconnected roads. As products of the same generation they partake indeed of a common character, and unconsciously illustrate each other; but of the producers themselves, each group is solitary, gaining what advantage or disadvantage there may be in intellectual isolation. Art and poetry, philosophy and the religious life, and that other life of refined pleasure and action in the conspicuous places of the world, are each of them confined to its own circle of ideas, and those who prosecute either of them are generally little curious of the thoughts of others. There come, however, from time to

9. Practice, training (Greek); but in his essay "Style," included in *Appreciations* (1889), Pater defines it as "self-restraint, a skillful economy of means."

time, eras of more favourable conditions, in which the thoughts of men draw nearer together than is their wont, and the many interests of the intellectual world combine in one complete type of general culture. The fifteenth century in Italy is one of these happier eras, and what is sometimes said of the age of Pericles is true of that of Lorenzo:¹—it is an age productive in personalities, many-sided, centralised, complete. Here, artists and philosophers and those whom the action of the world has elevated and made keen, do not live in isolation, but breathe a common air, and catch light and heat from each other's thoughts. There is a spirit of general elevation and enlightenment in which all alike communicate. The unity of this spirit gives unity to all the various products of the Renaissance; and it is to this intimate alliance with mind, this participation in the best thoughts which that age produced, that the art of Italy in the fifteenth century owes much of its grave dignity and influence.

I have added an essay on Winckelmann,² as not incongruous with the studies which precede it, because Winckelmann, coming in the eighteenth century, really belongs in spirit to an earlier age. By his enthusiasm for the things of the intellect and the imagination for their own sake, by his Hellenism, his life-long struggle to attain to the Greek spirit, he is in sympathy with the humanists of a previous century. He is the last fruit of the Renaissance, and explains in a striking way its motive and tendencies.

Conclusion³

Λέγει που Ἡράκλειτος ὅτι πάντα χωρεῖ καὶ οὐδὲν μένει⁴

To regard all things and principles of things as inconstant modes or fashions has more and more become the tendency of modern thought. Let us begin with that which is without—our physical life. Fix upon it in one of its more exquisite intervals, the moment, for instance, of delicious recoil from the flood of water in summer heat. What is the whole physical life in that moment but a combination of natural elements to which science gives their names? But those elements, phosphorus and lime and delicate fibres, are present not in the human body alone: we detect them in places most remote from it. Our physical life is a perpetual motion of them—the passage of the blood, the waste and repairing of the lenses of the eye, the modification of the tissues of the brain under every ray of light and sound—processes which science reduces to simpler and more elementary forces. Like the elements of which we are composed, the action of these forces extends beyond us: it rusts iron and ripens corn.⁵ Far out on every side of us those elements are

1. Lorenzo de Medici (1449–1492), ruler of and patron of the arts in Florence, and himself a poet. Pericles (ca. 495–429 B.C.E.), Athenian statesman and patron of the arts and architecture.

2. Johann Joachim Winckelmann (1717–1768), German classical archaeologist and art historian.

3. This brief "Conclusion" was omitted in the second edition of this book, as I conceived it might possibly mislead some of those young men into whose hands it might fall. On the whole, I have thought it best to reprint it here, with some

slight changes which bring it closer to my original meaning. I have dealt more fully in *Marius the Epicurean* with the thoughts suggested by it [Pater's note]. *Marius the Epicurean* (1885), philosophical novel set in 2d-century C.E. Rome.

4. Somewhere Heraclitus says that all things are in motion and nothing is lasting (Greek); in *Plato and Platonism* (1893), Pater translated the end of the epigraph, "All things give way: nothing remaineth." Heraclitus (active ca. 500 B.C.E.), pre-Socratic Greek philosopher.

5. That is, wheat.

broadcast, driven in many currents; and birth and gesture and death and the springing of violets from the grave⁶ are but a few out of ten thousand resultant combinations. That clear, perpetual outline of face and limb is but an image of ours, under which we group them—a design in a web, the actual threads of which pass out beyond it. This at least of flame-like our life has, that it is but the concurrence, renewed from moment to moment, of forces parting sooner or later on their ways.

Or if we begin with the inward world of thought and feeling, the whirlpool is still more rapid, the flame more eager and devouring. There it is no longer the gradual darkening of the eye, the gradual fading of colour from the wall—movements of the shore-side, where the water flows down indeed, though in apparent rest—but the race of the midstream, a drift of momentary acts of sight and passion and thought. At first sight experience seems to bury us under a flood of external objects, pressing upon us with a sharp and importunate reality, calling us out of ourselves in a thousand forms of action. But when reflexion begins to play upon those objects they are dissipated under its influence; the cohesive force seems suspended like some trick of magic; each object is loosed into a group of impressions—colour, odour, texture—in the mind of the observer. And if we continue to dwell in thought on this world, not of objects in the solidity with which language invests them, but of impressions, unstable, flickering, inconsistent, which burn and are extinguished with our consciousness of them, it contracts still further: the whole scope of observation is dwarfed into the narrow chamber of the individual mind. Experience, already reduced to a group of impressions, is ringed round for each one of us by that thick wall of personality through which no real voice has ever pierced on its way to us, or from us to that which we can only conjecture to be without. Every one of those impressions is the impression of the individual in his isolation, each mind keeping as a solitary prisoner its own dream of a world. Analysis goes a step further still, and assures us that those impressions of the individual mind to which, for each one of us, experience dwindles down, are in perpetual flight; that each of them is limited by time, and that as time is infinitely divisible, each of them is infinitely divisible also; all that is actual in it being a single moment, gone while we try to apprehend it, of which it may ever be more truly said that it has ceased to be than that it is. To such a tremulous wisp constantly re-forming itself on the stream, to a single sharp impression, with a sense in it, a relic more or less fleeting, of such moments gone by, what is real in our life fines itself down. It is with this movement, with the passage and dissolution of impressions, images, sensations, that analysis leaves off—that continual vanishing away, that strange, perpetual, weaving and unweaving of ourselves.

Philosophiren, says Novalis, *ist dæphlegmatisiren, vivificiren*.⁷ The service of philosophy, of speculative culture, towards the human spirit, is to rouse, to startle it to a life of constant and eager observation. Every moment some form grows perfect in hand or face; some tone on the hills or the sea is choicer than the rest; some mood of passion or insight or intellectual excitement is

6. An echo of Laertes's words at the grave of Ophelia, *Hamlet* (ca. 1600), 5.1.222–23: "And from her fair and unpolluted flesh / May violets spring."

7. To philosophize is to cast away inertia, to bring oneself to life (German). Novalis: the pen

name of Baron Friedrich von Hardenberg (1772–1801), German Romantic poet and novelist; "Fragmente II" from his *Hymns to the Night* (1800) is quoted here.

irresistibly real and attractive to us,—for that moment only. Not the fruit of experience, but experience itself, is the end. A counted number of pulses only is given to us of a variegated, dramatic life. How may we see in them all that is to be seen in them by the finest senses? How shall we pass most swiftly from point to point, and be present always at the focus where the greatest number of vital forces unite in their purest energy?

To burn always with this hard, gem-like flame, to maintain this ecstasy, is success in life. In a sense it might even be said that our failure is to form habits: for, after all, habit is relative to a stereotyped world, and meantime it is only the roughness of the eye that makes any two persons, things, situations, seem alike. While all melts under our feet, we may well grasp at any exquisite passion, or any contribution to knowledge that seems by a lifted horizon to set the spirit free for a moment, or any stirring of the senses, strange dyes, strange colours, and curious odours, or work of the artist's hands, or the face of one's friend. Not to discriminate every moment some passionate attitude in those about us, and in the very brilliancy of their gifts some tragic dividing of forces on their ways, is, on this short day of frost and sun, to sleep before evening. With this sense of the splendour of our experience and of its awful brevity, gathering all we are into one desperate effort to see and touch, we shall hardly have time to make theories about the things we see and touch. What we have to do is to be for ever curiously testing new opinions and courting new impressions, never acquiescing in a facile orthodoxy, of Comte, or of Hegel,⁸ or of our own. Philosophical theories or ideas, as points of view, instruments of criticism, may help us to gather up what might otherwise pass unregarded by us. "Philosophy is the microscope of thought."⁹ The theory or idea or system which requires of us the sacrifice of any part of this experience, in consideration of some interest into which we cannot enter, or some abstract theory we have not identified with ourselves, or of what is only conventional, has no real claim upon us.

One of the most beautiful passages of Rousseau¹ is that in the sixth book of the *Confessions*, where he describes the awakening in him of the literary sense. An undefinable taint of death had clung always about him, and now in early manhood he believed himself smitten by mortal disease. He asked himself how he might make as much as possible of the interval that remained; and he was not biassed by anything in his previous life when he decided that it must be by intellectual excitement, which he found just then in the clear, fresh writings of Voltaire.² Well! we are all *condamnés*, as Victor Hugo says: we are all under sentence of death but with a sort of indefinite reprieve—*les hommes sont tous condamnés à mort avec des sursis indéfinis*.³ we have an interval, and then our place knows us no more. Some spend this interval in listlessness, some in high passions, the wisest, at least among "the children of this world,"⁴ in art and song. For our one chance

8. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German idealist philosopher. Auguste Comte (1798–1857), French positivist philosopher.

9. From *Les Misérables* (1862) by Victor Hugo (1802–1885), the leader of the Romantic movement in France.

1. Jean-Jacques Rousseau (1712–1778), Swiss-born French philosopher and political theorist; his *Confessions* were published in 12 books (1781, 1788).

2. The scholar Donald L. Hill has pointed out that Rousseau, in his *Confessions*, nowhere mentions reading the French Enlightenment philosopher and writer Voltaire (François-Marie Arouet, 1694–1778).

3. Men are all condemned to death with indefinite reprieves (French). From Hugo, *The Last Day of a Condemned Person* (1832).

4. Luke 16.8.

lies in expanding that interval, in getting as many pulsations as possible into the given time. Great passions may give us this quickened sense of life, ecstasy and sorrow of love, the various forms of enthusiastic activity, disinterested or otherwise, which come naturally to many of us. Only be sure it is passion—that it does yield you this fruit of a quickened, multiplied consciousness. Of such wisdom, the poetic passion, the desire of beauty, the love of art for its own sake, has most. For art comes to you proposing frankly to give nothing but the highest quality to your moments as they pass, and simply for those moments' sake.

1873, 1893

HENRY JAMES

1843–1916

Born in New York City, Henry James typically is placed in anthologies of American literature, but he was in truth a cosmopolitan novelist and critic who sought to make his mark on the American, English, and European literary scenes. “We can deal freely with forms of civilization not our own,” he affirmed in a letter in 1867, “can pick and choose and assimilate and in short (aesthetically) claim our property wherever we find it.” He wished to bring about “a vast intellectual fusion and synthesis of the various National tendencies of the world”; his concern with the complex challenges and rewards of the “art of fiction” was general, not limited to American fiction alone.

Henry James Sr., a religious philosopher and visionary, believed that his five children should be educated with as few restrictions as possible; hence he had taken them to Europe in 1855 for a three-year acquisition of a “sensuous education.” Theaters, art galleries, museums, monuments, and landscapes were his favored sites for learning. Among the gifted members of this family was William James, Henry’s elder brother, a professor of philosophy and then psychology at Harvard whose influential books include *The Varieties of Religious Experience* (1902) and *Pragmatism* (1907). During the late 1860s and early 1870s, Henry James lived abroad much of the time; in 1876 he decided to reside in London and frequently visit the Continent, especially Rome and Paris.

James was an explorer of, and mediator between, cultures. One of his best early stories, “A Passionate Pilgrim” (1871), deals with the social and cultural challenges faced by an American visitor to Europe. He developed this theme of cultural interanimation and difference in his travel writings, such as *Transatlantic Sketches* (1875), and in a series of novels and novellas that includes *Roderick Hudson* (1876), *The American* (1877), *The Europeans* (1878), *Daisy Miller* (1879), *An International Episode* (1879), and *The Portrait of a Lady* (1881). “I aspire to write in such a way,” James declared, “that it would be impossible to an outsider to say whether I am at a given moment an American writing about England or an Englishman writing about America. . . . And so far from being ashamed of such an ambiguity I should be exceedingly proud of it, for it would be highly civilised.”

As his work of the 1870s and early 1880s attests, James was already an accomplished author when our selection, “The Art of Fiction”—his credo as a novelist—was published in London in September 1884. A month after the essay appeared,

James lamented in a letter to the critic and biographer T. S. Perry that “my poor article has not attracted the smallest attention here & I haven’t heard, or seen, an allusion to it.” But soon critics and reviewers, especially in England, began to refer and reply to the piece. In subsequent decades, as James’s own reputation rose, “The Art of Fiction” gained prominence as an inquiry into, and defense of, the novelist’s craft. A century later, the scholar James E. Miller Jr. judged it “perhaps the most popular and surely the most influential brief statement of fictional theory ever made.”

British and American novelists before James, including Henry Fielding, Jane Austen, Sir Walter Scott, and Nathaniel Hawthorne, had commented on the nature of the novel and its relationship to the romance. Beginning in the mid-eighteenth century with SAMUEL JOHNSON, critics had considered the status and structure of “fiction” as a narrative form. Book-length studies included Clara Reeve’s *Progress of Romance* (1785) and John Dunlop’s massive two-volume survey, *The History of Fiction* (1816). By 1884 countless essays and reviews in Victorian periodicals had debated plot, character, design and unity, morality in fiction, and many other topics in analyses written by such eminent novelists as George Eliot and by such noteworthy critics as G. H. Lewes and Leslie Stephen.

James added to his own rich experience as a writer the decades of development that the novel had undergone by the 1880s. He profited from extensive reading and close personal contact with the best writers of the day (among them William Dean Howells, Gustave Flaubert, Guy de Maupassant, Émile Zola, and Ivan Turgenev). As an active essayist and reviewer since the 1860s for the *Nation*, the *North American Review*, and the *Atlantic Monthly*, James was defining his own artistic identity and measuring himself alongside national and international competition. His critical books of this period include *French Poets and Novelists* (1878) and *Hawthorne* (1879), and he examined fiction with a keen awareness of his own practice.

Taking as his point of departure an 1884 lecture by the popular novelist, historian, and philanthropist Walter Besant and borrowing its title, James insisted that the novelist be allowed to pursue artistic experiments freely. He told his friend Robert Louis Stevenson that “The Art of Fiction” was “simply a plea for liberty,” which for him signified the writer’s choice of subject and right both to experiment and to dissent from conventional standards and opinions. In one of the ironies that makes James so intriguing, he was a very *interested* critic, not an objective one. Even when he focuses on authors whom he genuinely admires, such as Honoré de Balzac, Turgenev, and George Eliot, he cannot quite bring himself to respond to (let alone accept) them on their own terms—though his theory implies that he should. Here, as elsewhere in his critical writings, his allegiance to his own artistic aims and methods prevented James from engaging writers impartially and with full understanding; his assessments of Charles Dickens, Walt Whitman, Charles Baudelaire, and Fyodor Dostoyevsky, among others, suffer from his impatience with their often controversial subjects and innovations in form. James’s criticisms thus sometimes tell us less about the shortcomings of the work discussed than about the tensions between his theory and practice.

Like MATTHEW ARNOLD in “The Function of Criticism at the Present Time” (1864; see above), James in “The Art of Fiction” maintains that criticism prepares and enhances the context for creative writing. In an essay about Arnold published in the same year as “The Art of Fiction,” James describes the good novel (it “emits its light and stimulates our desire for perfection”) in a manner very close to Arnold’s definition of “the pursuit of perfection” as “the pursuit of sweetness and light” in *Culture and Anarchy* (1869; see above). James’s tone is forthright, optimistic, and celebratory of the power of the literary imagination. “The Art of Fiction” is a controlled, resonant rearticulation of the tributes to the imagination voiced decades earlier by WILLIAM WORDSWORTH, SAMUEL TAYLOR COLERIDGE, PERCY BYSSHE SHELLEY, and RALPH WALDO EMERSON on behalf of the poet. James is often identified as a literary

realist and early modernist—Ezra Pound and T. S. ELIOT esteemed him highly. But the roots of his creative and critical practice lie in Romanticism's organic conception of literary form, and in its exalted view of the literary vocation. The writer, James remarked, is an alchemist who "renews something like the old dream of the secret of life."

These connections are important to bear in mind when reading James's essay. "The Art of Fiction" often has been interpreted in isolation, with little note of its affinities to other critical and theoretical texts that preceded it. Sometimes it has been treated exclusively within the canon of James's own creative and critical writings, as a prelude both to his dense, difficult final three novels, *The Wings of the Dove* (1902), *The Ambassadors* (1903), and *The Golden Bowl* (1904), and to the later prefaces—a "comprehensive manual" for "aspirants" to the profession—that he composed for the twenty-six-volume New York Edition of his novels and stories (1907–09, 1917). Such intensively "Jamesian" readings value "The Art of Fiction" as a formative text in James's own career: it shows him, like Wordsworth and Coleridge, establishing the terms through which his own work should be understood and appraised. But if we locate the essay solely within James's corpus, we are prevented from understanding how this piece (and others he produced) contributes to his significance in the general history of narrative theory.

James's concern for taste, judgment, and discrimination glances backward to the eighteenth-century writers DAVID HUME and EDMUND BURKE. When he hails the novel as "a personal, a direct impression of life," he more immediately echoes the heightened phrasing that WALTER PATER had employed in *Studies in the History of the Renaissance* (1873; see above). His account of the novel as an "organism" not only reinforces the account of "organic form" delineated by Coleridge in the *Biographia Literaria* but also anticipates the elaborations of this same idea in the writings of JOHN CROWE RANSOM, CLEANTH BROOKS, and other New Critics of the 1930s and 1940s.

"The Art of Fiction" is a subtle verbal performance; playful, witty, and ironic, it is both generous and tough-minded toward James's target-of-opportunity Walter Besant. Reading James profitably means paying close attention to his metaphors (e.g., the "huge spider-web" of experience) and analogies (e.g., between the novel and the picture). It means being alert as well to the illuminations provided by James's handling of specific words, as when he reiterates the "torment" of the writer. There are also key moments when James invites readers to reflect on the implications of his claims. In perhaps the most elusive of these, he asserts that "the deepest quality of a work of art will always be the quality of the mind of the producer." James realized the demands inherent in such a claim: How will we know, in the case of each novel, when we have made contact with the mind of its producer? How can we determine that mind's special quality? But his chosen criterion highlights the intimate relationship between writer and reader that the cosmopolitan James always looked for, and that he called on readers of "The Art of Fiction" to share.

"The Art of Fiction" Keywords: Authorship, Defense of Criticism, Formalism, Narrative Theory, The Novel, Realism

The Art of Fiction

I should not have affixed so comprehensive a title to these few remarks, necessarily wanting in any completeness upon a subject the full consideration of which would carry us far, did I not seem to discover a pretext for my temerity in the interesting pamphlet lately published under this name

by Mr. Walter Besant.¹ Mr. Besant's lecture at the Royal Institution—the original form of his pamphlet—appears to indicate that many persons are interested in the art of fiction, and are not indifferent to such remarks, as those who practise it may attempt to make about it. I am therefore anxious not to lose the benefit of this favourable association, and to edge in a few words under cover of the attention which Mr. Besant is sure to have excited. There is something very encouraging in his having put into form certain of his ideas on the mystery of story-telling.

It is a proof of life and curiosity—curiosity on the part of the brotherhood of novelists as well as on the part of their readers. Only a short time ago it might have been supposed that the English novel was not what the French call *discutable*.² It had no air of having a theory, a conviction, a consciousness of itself behind it—of being the expression of an artistic faith, the result of choice and comparison. I do not say it was necessarily the worse for that: it would take much more courage than I possess to intimate that the form of the novel as Dickens and Thackeray³ (for instance) saw it had any taint of incompleteness. It was, however, *naïf* (if I may help myself out with another French word); and evidently if it be destined to suffer in any way for having lost its *naïveté* it has now an idea of making sure of the corresponding advantages. During the period I have alluded to there was a comfortable, good-humoured feeling abroad that a novel is a novel, as a pudding is a pudding, and that our only business with it could be to swallow it. But within a year or two, for some reason or other, there have been signs of returning animation—the era of discussion would appear to have been to a certain extent opened. Art lives upon discussion, upon experiment, upon curiosity, upon variety of attempt, upon the exchange of views and the comparison of standpoints; and there is a presumption that those times when no one has anything particular to say about it, and has no reason to give for practice or preference, though they may be times of honour, are not times of development—are times, possibly even, a little of dulness. The successful application of any art is a delightful spectacle, but the theory too is interesting; and though there is a great deal of the latter without the former I suspect there has never been a genuine success that has not had a latent core of conviction. Discussion, suggestion, formulation, these things are fertilising when they are frank and sincere. Mr. Besant has set an excellent example in saying what he thinks, for his part, about the way in which fiction should be written, as well as about the way in which it should be published; for his view of the “art,” carried on into an appendix, covers that too. Other labourers in the same field will doubtless take up the argument, they will give it the light of their experience, and the effect will surely be to make our interest in the novel a little more what it had for some time threatened to fail to be—a serious, active, inquiring interest, under protection of which this delightful study may, in moments of confidence, venture to say a little more what it thinks of itself.

It must take itself seriously for the public to take it so. The old superstition about fiction being “wicked” has doubtless died out in England; but the

1. English novelist, historian, and critic (1836–1901). “Temerity”: excessive confidence or boldness, audacity.

2. Discussable, debatable (French).

3. William Thackeray (1811–1863), English novelist and satirist. Charles Dickens (1812–1870), most popular 19th-century English novelist.

spirit of it lingers in a certain oblique regard directed toward any story which does not more or less admit that it is only a joke. Even the most jocular novel feels in some degree the weight of the proscription that was formerly directed against literary levity: the jocularity does not always succeed in passing for orthodoxy. It is still expected, though perhaps people are ashamed to say it, that a production which is after all only a "make believe" (for what else is a "story"?) shall be in some degree apologetic—shall renounce the pretension of attempting really to represent life. This, of course, any sensible, wide-awake story declines to do, for it quickly perceives that the tolerance granted to it on such a condition is only an attempt to stifle it disguised in the form of generosity. The old evangelical hostility to the novel, which was as explicit as it was narrow, and which regarded it as little less favourable to our immortal part than a stage-play, was in reality far less insulting. The only reason for the existence of a novel is that it does attempt to represent life.⁴ When it relinquishes this attempt, the same attempt that we see on the canvas of the painter, it will have arrived at a very strange pass. It is not expected of the picture that it will make itself humble in order to be forgiven; and the analogy between the art of the painter and the art of the novelist is, so far as I am able to see, complete. Their inspiration is the same, their process (allowing for the different quality of the vehicle), is the same, their success is the same. They may learn from each other, they may explain and sustain each other. Their cause is the same, and the honour of one is the honour of another. The Mahometans⁵ think a picture an unholy thing, but it is a long time since any Christian did, and it is therefore the more odd that in the Christian mind the traces (dissimulated though they may be) of a suspicion of the sister art should linger to this day. The only effectual way to lay it to rest is to emphasise the analogy to which I just alluded—to insist on the fact that as the picture is reality, so the novel is history. That is the only general description (which does it justice) that we may give of the novel. But history also is allowed to represent life; it is not, any more than painting, expected to apologise. The subject-matter of fiction is stored up likewise in documents and records, and if it will not give itself away, as they say in California, it must speak with assurance, with the tone of the historian. Certain accomplished novelists have a habit of giving themselves away which must often bring tears to the eyes of people who take their fiction seriously. I was lately struck, in reading over many pages of Anthony Trollope,⁶ with his want of discretion in this particular. In a digression, a parenthesis or an aside, he concedes to the reader that he and this trusting friend are only "making believe." He admits that the events he narrates have not really happened, and that he can give his narrative any turn the reader may like best. Such a betrayal of a sacred office seems to me, I confess, a terrible crime; it is what I mean by the attitude of apology, and it shocks me every whit as much in Trollope as it would have shocked me in Gibbon or Macaulay.⁷ It implies that

4. In the first version of the essay, James wrote "does compete with life." Robert Louis Stevenson criticized the use of the word "compete" in his reply to James, "A Humble Remonstrance," in the December 1884 issue of *Longman's*.

5. Muslims (i.e., followers of Muhammad, or Mahomet). Islam generally prohibits representa-

tional art.

6. Prolific English novelist (1815–1882).

7. Thomas Babington Macaulay (1800–1859), English historian, essayist, and statesman. Edward Gibbon (1737–1794), English historian, author of *The History of the Decline and Fall of the Roman Empire* (6 vols., 1776–88).

the novelist is less occupied in looking for the truth (the truth, of course I mean, that he assumes, the premises that we must grant him, whatever they may be), than the historian, and in doing so it deprives him at a stroke of all his standing-room. To represent and illustrate the past, the actions of men, is the task of either writer, and the only difference that I can see is, in proportion as he succeeds, to the honour of the novelist, consisting as it does in his having more difficulty in collecting his evidence, which is so far from being purely literary.⁸ It seems to me to give him a great character, the fact that he has at once so much in common with the philosopher and the painter; this double analogy is a magnificent heritage.

It is of all this evidently that Mr. Besant is full when he insists upon the fact that fiction is one of the *fine* arts, deserving in its turn of all the honours and emoluments that have hitherto been reserved for the successful profession of music, poetry, painting, architecture. It is impossible to insist too much on so important a truth, and the place that Mr. Besant demands for the work of the novelist may be represented, a trifle less abstractly, by saying that he demands not only that it shall be reputed artistic, but that it shall be reputed very artistic indeed. It is excellent that he should have struck this note, for his doing so indicates that there was need of it, that his proposition may be to many people a novelty. One rubs one's eyes at the thought; but the rest of Mr. Besant's essay confirms the revelation. I suspect in truth that it would be possible to confirm it still further, and that one would not be far wrong in saying that in addition to the people to whom it has never occurred that a novel ought to be artistic, there are a great many others who, if this principle were urged upon them, would be filled with an indefinable mistrust. They would find it difficult to explain their repugnance, but it would operate strongly to put them on their guard. "Art," in our Protestant communities, where so many things have got so strangely twisted about, is supposed in certain circles to have some vaguely injurious effect upon those who make it an important consideration, who let it weigh in the balance. It is assumed to be opposed in some mysterious manner to morality, to amusement, to instruction. When it is embodied in the work of the painter (the sculptor is another affair!) you know what it is: it stands there before you, in the honesty of pink and green and a gilt frame; you can see the worst of it at a glance, and you can be on your guard. But when it is introduced into literature it becomes more insidious—there is danger of its hurting you before you know it. Literature should be either instructive or amusing, and there is in many minds an impression that these artistic preoccupations, the search for form, contribute to neither end, interfere indeed with both. They are too frivolous to be edifying, and too serious to be diverting; and they are moreover priggish and paradoxical and superfluous. That, I think, represents the manner in which the latent thought of many people who read novels as an exercise in skipping would explain itself if it were to become articulate. They would argue, of course, that a novel ought to be "good," but they would interpret this term in a fashion of their own, which indeed would vary considerably from one critic to another. One would say that being good means representing virtuous and aspiring characters, placed in prominent positions;

8. On somewhat different grounds, ARISTOTLE argues in *Poetics* 9 (see above) that poetry is more philosophical and more worthwhile than history.

another would say that it depends on a "happy ending," on a distribution at the last of prizes, pensions, husbands, wives, babies, millions, appended paragraphs, and cheerful remarks. Another still would say that it means being full of incident and movement, so that we shall wish to jump ahead, to see who was the mysterious stranger, and if the stolen will was ever found, and shall not be distracted from this pleasure by any tiresome analysis or "description." But they would all agree that the "artistic" idea would spoil some of their fun. One would hold it accountable for all the description, another would see it revealed in the absence of sympathy. Its hostility to a happy ending would be evident, and it might even in some cases render any ending at all impossible. The "ending" of a novel is, for many persons, like that of a good dinner, a course of dessert and ices, and the artist in fiction is regarded as a sort of meddlesome doctor who forbids agreeable aftertastes. It is therefore true that this conception of Mr. Besant's of the novel as a superior form encounters not only a negative but a positive indifference. It matters little that as a work of art it should really be as little or as much of its essence to supply happy endings, sympathetic characters, and an objective tone, as if it were a work of mechanics: the association of ideas, however incongruous, might easily be too much for it if an eloquent voice were not sometimes raised to call attention to the fact that it is at once as free and as serious a branch of literature as any other.

Certainly this might sometimes be doubted in presence of the enormous number of works of fiction that appeal to the credulity of our generation, for it might easily seem that there could be no great character in a commodity so quickly and easily produced. It must be admitted that good novels are much compromised by bad ones, and that the field at large suffers discredit from overcrowding. I think, however, that this injury is only superficial, and that the superabundance of written fiction proves nothing against the principle itself. It has been vulgarised, like all other kinds of literature, like everything else to-day, and it has proved more than some kinds accessible to vulgarisation. But there is as much difference as there ever was between a good novel and a bad one: the bad is swept with all the daubed canvases and spoiled marble into some unvisited limbo, or infinite rubbish-yard beneath the back-windows of the world, and the good subsists and emits its light and stimulates our desire for perfection. As I shall take the liberty of making but a single criticism of Mr. Besant, whose tone is so full of the love of his art, I may as well have done with it at once. He seems to me to mistake in attempting to say so definitely beforehand what sort of an affair the good novel will be. To indicate the danger of such an error as that has been the purpose of these few pages; to suggest that certain traditions on the subject, applied *a priori*, have already had much to answer for, and that the good health of an art which undertakes so immediately to reproduce life must demand that it be perfectly free. It lives upon exercise, and the very meaning of exercise is freedom. The only obligation to which in advance we may hold a novel, without incurring the accusation of being arbitrary, is that it be interesting. That general responsibility rests upon it, but it is the only one I can think of. The ways in which it is at liberty to accomplish this result (of interesting us) strike me as innumerable, and such as can only suffer from being marked out or fenced in by prescription. They are as various as the temperament of man, and they are successful in proportion as they

reveal a particular mind, different from others. A novel is in its broadest definition a personal, a direct impression of life: that, to begin with, constitutes its value, which is greater or less according to the intensity of the impression. But there will be no intensity at all, and therefore no value, unless there is freedom to feel and say. The tracing of a line to be followed, of a tone to be taken, of a form to be filled out, is a limitation of that freedom and a suppression of the very thing that we are most curious about. The form, it seems to me, is to be appreciated after the fact: then the author's choice has been made, his standard has been indicated; then we can follow lines and directions and compare tones and resemblances. Then in a word we can enjoy one of the most charming of pleasures, we can estimate quality, we can apply the test of execution. The execution belongs to the author alone; it is what is most personal to him, and we measure him by that. The advantage, the luxury, as well as the torment and responsibility of the novelist, is that there is no limit to what he may attempt as an executant—no limit to his possible experiments, efforts, discoveries, successes. Here it is especially that he works, step by step, like his brother of the brush, of whom we may always say that he has painted his picture in a manner best known to himself. His manner is his secret, not necessarily a jealous one. He cannot disclose it as a general thing if he would; he would be at a loss to teach it to others. I say this with a due recollection of having insisted on the community of method of the artist who paints a picture and the artist who writes a novel. The painter is able to teach the rudiments of his practice, and it is possible, from the study of good work (granted the aptitude), both to learn how to paint and to learn how to write. Yet it remains true, without injury to the *rapprochement*,⁹ that the literary artist would be obliged to say to his pupil much more than the other, "Ah, well, you must do it as you can!" It is a question of degree, a matter of delicacy. If there are exact sciences, there are also exact arts, and the grammar of painting is so much more definite that it makes the difference.

I ought to add, however, that if Mr. Besant says at the beginning of his essay that the "laws of fiction may be laid down and taught with as much precision and exactness as the laws of harmony, perspective, and proportion," he mitigates what might appear to be an extravagance by applying his remark to "general" laws, and by expressing most of these rules in a manner with which it would certainly be unaccommodating to disagree. That the novelist must write from his experience, that his "characters must be real and such as might be met with in actual life;" that "a young lady brought up in a quiet country village should avoid descriptions of garrison life," and "a writer whose friends and personal experiences belong to the lower middle-class should carefully avoid introducing his characters into society;" that one should enter one's notes in a common-place book; that one's figures should be clear in outline; that making them clear by some trick of speech or of carriage is a bad method, and "describing them at length" is a worse one: that English Fiction should have a "conscious moral purpose;" that "it is almost impossible to estimate too highly the value of careful workmanship—that is, of style;" that "the most important point of all is the story," that "the story is everything":

9. The bringing together (French); that is, of painting and novel writing.

these are principles with most of which it is surely impossible not to sympathise. That remark about the lower middle-class writer and his knowing his place is perhaps rather chilling; but for the rest I should find it difficult to dissent from any one of these recommendations. At the same time, I should find it difficult positively to assent to them, with the exception, perhaps, of the injunction as to entering one's notes in a common-place book. They scarcely seem to me to have the quality that Mr. Besant attributes to the rules of the novelist—the “precision and exactness” of “the laws of harmony, perspective, and proportion.” They are suggestive, they are even inspiring, but they are not exact, though they are doubtless as much so as the case admits of: which is a proof of that liberty of interpretation for which I just contended. For the value of these different injunctions—so beautiful and so vague—is wholly in the meaning one attaches to them. The characters, the situation, which strike one as real will be those that touch and interest one most, but the measure of reality is very difficult to fix. The reality of Don Quixote or of Mr. Micawber¹ is a very delicate shade; it is a reality so coloured by the author's vision that, vivid as it may be, one would hesitate to propose it as a model: one would expose one's self to some very embarrassing questions on the part of a pupil. It goes without saying that you will not write a good novel unless you possess the sense of reality; but it will be difficult to give you a recipe for calling that sense into being. Humanity is immense, and reality has a myriad forms; the most one can affirm is that some of the flowers of fiction have the odour of it, and others have not; as for telling you in advance how your nosegay should be composed, that is another affair. It is equally excellent and inconclusive to say that one must write from experience; to our supposititious aspirant such a declaration might savor of mockery. What kind of experience is intended, and where does it begin and end? Experience is never limited, and it is never complete; it is an immense sensibility, a kind of huge spider-web of the finest silken threads suspended in the chamber of consciousness, and catching every airborne particle in its tissue. It is the very atmosphere of the mind; and when the mind is imaginative—much more when it happens to be that of a man of genius—it takes to itself the faintest hints of life, it converts the very pulses of the air into revelations. The young lady living in a village has only to be a damsel upon whom nothing is lost to make it quite unfair (as it seems to me) to declare to her that she shall have nothing to say about the military. Greater miracles have been seen than that, imagination assisting, she should speak the truth about some of these gentlemen. I remember an English novelist, a woman of genius,² telling me that she was much commended for the impression she had managed to give in one of her tales of the nature and way of life of the French Protestant youth. She had been asked where she learned so much about this recondite being, she had been congratulated on her peculiar opportunities. These opportunities consisted in her having once, in Paris, as she ascended a staircase, passed an open door where, in the household of a *pasteur*,³ some of the young Protestants were seated at table

1. Character in *David Copperfield* (1849–50), by Dickens. Don Quixote: title character of the novel (1605, 1615), by Miguel de Cervantes (1547–1616).

2. Identified by James's biographer Leon Edel as

3. Protestant minister, pastor (French).

round a finished meal. The glimpse made a picture; it lasted only a moment, but that moment was experience. She had got her direct personal impression, and she turned out her type. She knew what youth was, and what Protestantism; she also had the advantage of having seen what it was to be French, so that she converted these ideas into a concrete image and produced a reality. Above all, however, she was blessed with the faculty which when you give it an inch takes an ell, and which for the artist is a much greater source of strength than any accident of residence or of place in the social scale. The power to guess the unseen from the seen, to trace the implication of things, to judge the whole piece by the pattern, the condition of feeling life in general so completely that you are well on your way to knowing any particular corner of it—this cluster of gifts may almost be said to constitute experience, and they occur in country and in town, and in the most differing stages of education. If experience consists of impressions, it may be said that impressions *are* experience, just as (have we not seen it?) they are the very air we breathe. Therefore, if I should certainly say to a novice, "Write from experience and experience only," I should feel that this was rather a tantalising monition if I were not careful immediately to add, "Try to be one of the people on whom nothing is lost!"

I am far from intending by this to minimise the importance of exactness—of truth of detail. One can speak best from one's own taste, and I may therefore venture to say that the air of reality (solidity of specification) seems to me to be the supreme virtue of a novel—the merit on which all its other merits (including that conscious moral purpose of which Mr. Besant speaks) helplessly and submissively depend. If it be not there they are all as nothing, and if these be there, they owe their effect to the success with which the author has produced the illusion of life. The cultivation of this success, the study of this exquisite process, form, to my taste, the beginning and the end of the art of the novelist. They are his inspiration, his despair, his reward, his torment, his delight. It is here in very truth that he competes with life; it is here that he competes with his brother the painter in *his* attempt to render the look of things, the look that conveys their meaning, to catch the colour, the relief, the expression, the surface, the substance of the human spectacle. It is in regard to this that Mr. Besant is well inspired when he bids him take notes. He cannot possibly take too many, he cannot possibly take enough. All life solicits him, and to "render" the simplest surface, to produce the most momentary illusion, is a very complicated business. His case would be easier, and the rule would be more exact, if Mr. Besant had been able to tell him what notes to take. But this, I fear, he can never learn in any manual; it is the business of his life. He has to take a great many in order to select a few, he has to work them up as he can, and even the guides and philosophers who might have most to say to him must leave him alone when it comes to the application of precepts, as we leave the painter in communion with his palette. That his characters "must be clear in outline," as Mr. Besant says—he feels that down to his boots; but how he shall make them so is a secret between his good angel and himself. It would be absurdly simple if he could be taught that a great deal of "description" would make them so, or that on the contrary the absence of description and the cultivation of dialogue, or the absence of dialogue and the multiplication of "incident," would rescue him from his difficulties. Nothing, for instance, is more possible than that

he be of a turn of mind for which this odd, literal opposition of description and dialogue, incident and description, has little meaning and light. People often talk of these things as if they had a kind of *internecine*⁴ distinctness, instead of melting into each other at every breath, and being intimately associated parts of one general effort of expression. I cannot imagine composition existing in a series of blocks, nor conceive, in any novel worth discussing at all, of a passage of description that is not in its intention narrative, a passage of dialogue that is not in its intention descriptive, a touch of truth of any sort that does not partake of the nature of incident, or an incident that derives its interest from any other source than the general and only source of the success of a work of art—that of being illustrative. A novel is a living thing, all one and continuous, like any other organism, and in proportion as it lives will it be found, I think, that in each of the parts there is something of each of the other parts. The critic who over the close texture of a finished work shall pretend to trace a geography of items will mark some frontiers as artificial, I fear, as any that have been known to history. There is an old-fashioned distinction between the novel of character and the novel of incident which must have cost many a smile to the intending fabulist who was keen about his work. It appears to me as little to the point as the equally celebrated distinction between the novel and the romance—to answer as little to any reality. There are bad novels and good novels, as there are bad pictures and good pictures; but that is the only distinction in which I see any meaning, and I can as little imagine speaking of a novel of character as I can imagine speaking of a picture of character. When one says picture one says of character, when one says novel one says of incident, and the terms may be transposed at will. What is character but the determination of incident? What is incident but the illustration of character? What is either a picture or a novel that is *not* of character? What else do we seek in it and find in it? It is an incident for a woman to stand up with her hand resting on a table and look out at you in a certain way; or if it be not an incident I think it will be hard to say what it is. At the same time it is an expression of character. If you say you don't see it (character in *that—allons donc!*⁵), this is exactly what the artist who has reasons of his own for thinking he *does* see it undertakes to show you. When a young man makes up his mind that he has not faith enough after all to enter the church as he intended, that is an incident, though you may not hurry to the end of the chapter to see whether perhaps he doesn't change once more. I do not say that these are extraordinary or startling incidents. I do not pretend to estimate the degree of interest proceeding from them, for this will depend upon the skill of the painter. It sounds almost puerile to say that some incidents are intrinsically much more important than others, and I need not take this precaution after having professed my sympathy for the major ones in remarking that the only classification of the novel that I can understand is into that which has life and that which has it not.

The novel and the romance, the novel of incident and that of character—these clumsy separations appear to me to have been made by critics and readers for their own convenience, and to help them out of some of their

4. Relating to conflict or struggle within a group; mutually destructive.

5. Come now, that's nonsense (French).

occasional queer predicaments, but to have little reality or interest for the producer, from whose point of view it is of course that we are attempting to consider the art of fiction. The case is the same with another shadowy category which Mr. Besant apparently is disposed to set up—that of the “modern English novel”; unless indeed it be that in this matter he has fallen into an accidental confusion of stand-points. It is not quite clear whether he intends the remarks in which he alludes to it to be didactic or historical. It is as difficult to suppose a person intending to write a modern English as to suppose him writing an ancient English novel: that is a label which begs the question. One writes the novel, one paints the picture, of one’s language and of one’s time, and calling it modern English will not, alas! make the difficult task any easier. No more, unfortunately, will calling this or that work of one’s fellow-artist a romance—unless it be, of course, simply for the pleasantness of the thing, as for instance when Hawthorne gave this heading to his story of *Blithedale*.⁶ The French, who have brought the theory of fiction to remarkable completeness, have but one name for the novel, and have not attempted smaller things in it, that I can see, for that. I can think of no obligation to which the “romancer” would not be held equally with the novelist; the standard of execution is equally high for each. Of course it is of execution that we are talking—that being the only point of a novel that is open to contention. This is perhaps too often lost sight of, only to produce interminable confusions and cross-purposes. We must grant the artist his subject, his idea, his *donnée*:⁷ our criticism is applied only to what he makes of it. Naturally I do not mean that we are bound to like it or find it interesting; in case we do not our course is perfectly simple—to let it alone. We may believe that of a certain idea even the most sincere novelist can make nothing at all, and the event may perfectly justify our belief; but the failure will have been a failure to execute, and it is in the execution that the fatal weakness is recorded. If we pretend to respect the artist at all, we must allow him his freedom of choice, in the face, in particular cases, of innumerable presumptions that the choice will not fructify. Art derives a considerable part of its beneficial exercise from flying in the face of presumptions, and some of the most interesting experiments of which it is capable are hidden in the bosom of common things. Gustave Flaubert has written a story about the devotion of a servant-girl to a parrot,⁸ and the production, highly finished as it is, cannot on the whole be called a success. We are perfectly free to find it flat, but I think it might have been interesting; and I, for my part, am extremely glad he should have written it; it is a contribution to our knowledge of what can be done—or what cannot. Ivan Turgénieff has written a tale about a deaf and dumb serf and a lap-dog,⁹ and the thing is touching, loving, a little masterpiece. He struck the note of life where Gustave Flaubert missed it—he flew in the face of a presumption and achieved a victory.

Nothing, of course, will ever take the place of the good old fashion of “liking” a work of art or not liking it: the most improved criticism will not abolish that primitive, that ultimate test. I mention this to guard myself from the

6. *The Blithedale Romance* (1852), by Nathaniel Hawthorne (1804–1864). This American writer’s clearest statement of the distinction he saw between novel and romance appears in his preface to *The House of Seven Gables* (1851).

7. That which is given, starting point (French).

8. “A Simple Soul” (1877), by the French author Flaubert (1821–1880).

9. “Mumu” (1856), by the Russian author Turgenev (1818–1883).

accusation of intimating that the idea, the subject, of a novel or a picture, does not matter. It matters, to my sense, in the highest degree, and if I might put up a prayer it would be that artists should select none but the richest. Some, as I have already hastened to admit, are much more remunerative than others, and it would be a world happily arranged in which persons intending to treat them should be exempt from confusions and mistakes. This fortunate condition will arrive only, I fear, on the same day that critics become purged from error. Meanwhile, I repeat, we do not judge the artist with fairness unless we say to him, "Oh, I grant you your starting-point, because if I did not I should seem to prescribe to you, and heaven forbid I should take that responsibility. If I pretend to tell you what you must not take, you will call upon me to tell you then what you must take; in which case I shall be prettily caught. Moreover, it isn't till I have accepted your data that I can begin to measure you. I have the standard, the pitch; I have no right to tamper with your flute and then criticise your music. Of course I may not care for your idea at all; I may think it silly, or stale, or unclean; in which case I wash my hands of you altogether. I may content myself with believing that you will not have succeeded in being interesting, but I shall, of course, not attempt to demonstrate it, and you will be as indifferent to me as I am to you. I needn't remind you that there are all sorts of tastes: who can know it better? Some people, for excellent reasons, don't like to read about carpenters; others, for reasons even better, don't like to read about courtesans. Many object to Americans. Others (I believe they are mainly editors and publishers) won't look at Italians. Some readers don't like quiet subjects; others don't like bustling ones. Some enjoy a complete illusion, others the consciousness of large concessions. They choose their novels accordingly, and if they don't care about your idea they won't, *a fortiori*,¹ care about your treatment."

So that it comes back very quickly, as I have said, to the liking: in spite of M. Zola,² who reasons less powerfully than he represents, and who will not reconcile himself to this absoluteness of taste, thinking that there are certain things that people ought to like, and that they can be made to like. I am quite at a loss to imagine anything (at any rate in this matter of fiction) that people *ought* to like or to dislike. Selection will be sure to take care of itself, for it has a constant motive behind it. That motive is simply experience. As people feel life, so they will feel the art that is most closely related to it. This closeness of relation is what we should never forget in talking of the effort of the novel. Many people speak of it as a factitious, artificial form, a product of ingenuity, the business of which is to alter and arrange the things that surround us, to translate them into conventional, traditional moulds. This, however, is a view of the matter which carries us but a very short way, condemns the art to an eternal repetition of a few familiar *clichés*, cuts short its development, and leads us straight up to a dead wall. Catching the very note and trick, the strange irregular rhythm of life, that is the attempt whose strenuous force keeps Fiction upon her feet. In proportion as in what she offers us we see life *without* rearrangement do we feel that we are touching the

1. For a still stronger reason; all the more (New Latin).

2. Emile Zola (1840–1902), French novelist,

critic, and theorist of the naturalist movement in literature. James finds Zola's theory less impressive than his practice.

truth; in proportion as we see it *with* rearrangement do we feel that we are being put off with a substitute, a compromise and convention. It is not uncommon to hear an extraordinary assurance of remark in regard to this matter of rearranging, which is often spoken of as if it were the last word of art. Mr. Besant seems to me in danger of falling into the great error with his rather unguarded talk about "selection." Art is essentially selection, but it is a selection whose main care is to be typical, to be inclusive. For many people art means rose-coloured window-panes, and selection means picking a bouquet for Mrs. Grundy.³ They will tell you glibly that artistic considerations have nothing to do with the disagreeable, with the ugly; they will rattle off shallow commonplaces about the province of art and the limits of art till you are moved to some wonder in return as to the province and the limits of ignorance. It appears to me that no one can ever have made a seriously artistic attempt without becoming conscious of an immense increase—a kind of revelation—of freedom. One perceives in that case—by the light of a heavenly ray—that the province of art is all life, all feeling, all observation, all vision. As Mr. Besant so justly intimates, it is all experience. That is a sufficient answer to those who maintain that it must not touch the sad things of life, who stick into its divine unconscious bosom little prohibitory inscriptions on the end of sticks, such as we see in public gardens—"It is forbidden to walk on the grass; it is forbidden to touch the flowers; it is not allowed to introduce dogs or to remain after dark; it is requested to keep to the right." The young aspirant in the line of fiction whom we continue to imagine will do nothing without taste, for in that case his freedom would be of little use to him; but the first advantage of his taste will be to reveal to him the absurdity of the little sticks and tickets. If he have taste, I must add, of course he will have ingenuity, and my disrespectful reference to that quality just now was not meant to imply that it is useless in fiction. But it is only a secondary aid; the first is a capacity for receiving straight impressions.

Mr. Besant has some remarks on the question of "the story" which I shall not attempt to criticise, though they seem to me to contain a singular ambiguity, because I do not think I understand them. I cannot see what is meant by talking as if there were a part of a novel which is the story and part of it which for mystical reasons is not—unless indeed the distinction be made in a sense in which it is difficult to suppose that any one should attempt to convey anything. "The story," if it represents anything, represents the subject, the idea, the *donnée* of the novel; and there is surely no "school"—Mr. Besant speaks of a school—which urges that a novel should be all treatment and no subject. There must assuredly be something to treat; every school is intimately conscious of that. This sense of the story being the idea, the starting-point, of the novel, is the only one that I see in which it can be spoken of as something different from its organic whole; and since in proportion as the work is successful the idea permeates and penetrates it, informs and animates it, so that every word and every punctuation-point contribute directly to the expression, in that proportion do we lose our sense of the story being a blade which may be drawn more or less out of its sheath. The story and the novel, the idea and the form, are the needle and thread,

3. The unseen arbiter of taste and morals in the play *Speed the Plough* (1798), by the English playwright Thomas Morton—a symbol of moral rigidity.

and I never heard of a guild of tailors who recommended the use of the thread without the needle, or the needle without the thread. Mr. Besant is not the only critic who may be observed to have spoken as if there were certain things in life which constitute stories, and certain others which do not. I find the same odd implication in an entertaining article⁴ in the *Pall Mall Gazette*, devoted, as it happens, to Mr. Besant's lecture. "The story is the thing!" says this graceful writer, as if with a tone of opposition to some other idea. I should think it was, as every painter who, as the time for "sending in" his picture⁵ looms in the distance, finds himself still in quest of a subject—as every belated artist not fixed about his theme will heartily agree. There are some subjects which speak to us and others which do not, but he would be a clever man who should undertake to give a rule—an index expurgatorius⁶—by which the story and the no-story should be known apart. It is impossible (to me at least) to imagine any such rule which shall not be altogether arbitrary. The writer in the *Pall Mall* opposes the delightful (as I suppose) novel of *Margot la Balafrée* to certain tales in which "Bostonian nymphs" appear to have "rejected English dukes for psychological reasons."⁷ I am not acquainted with the romance just designated, and can scarcely forgive the *Pall Mall* critic for not mentioning the name of the author, but the title appears to refer to a lady who may have received a scar in some heroic adventure. I am inconsolable at not being acquainted with this episode, but am utterly at a loss to see why it is a story when the rejection (or acceptance) of a duke is not, and why a reason, psychological or other, is not a subject when a cicatrix⁸ is. They are all particles of the multitudinous life with which the novel deals, and surely no dogma which pretends to make it lawful to touch the one and unlawful to touch the other will stand for a moment on its feet. It is the special picture that must stand or fall, according as it seem to possess truth or to lack it. Mr. Besant does not, to my sense, light up the subject by intimating that a story must, under penalty of not being a story, consist of "adventures." Why of adventures more than of green spectacles?⁹ He mentions a category of impossible things, and among them he places "fiction without adventure." Why without adventure, more than without matrimony, or celibacy, or parturition, or cholera, or hydropathy, or Jansenism?¹ This seems to me to bring the novel back to the hapless little rôle of being an artificial, ingenious thing—bring it down from its large, free character of an immense and exquisite correspondence with life. And what is adventure, when it comes to that, and by what sign is the listening pupil to recognise it? It is an adventure—an immense one—for me to write this little article; and for a Bostonian nymph to reject an English duke is an adventure only less stirring, I should say, than for an English duke to be rejected by a Bostonian

1. A Roman Catholic religious movement, condemned as heresy, that emphasized predestination and the importance of personal holiness; it grew out of the writings of the Dutch theologian Cornelis Jansen (1585–1638).

nymph. I see dramas within dramas in that, and innumerable points of view. A psychological reason is, to my imagination, an object adorably pictorial; to catch the tint of its complexion—I feel as if that idea might inspire one to Titianesque² efforts. There are few things more exciting to me, in short, than a psychological reason, and yet, I protest, the novel seems to me the most magnificent form of art. I have just been reading, at the same time, the delightful story of *Treasure Island*, by Mr. Robert Louis Stevenson and, in a manner less consecutive, the last tale from M. Edmond de Goncourt, which is entitled *Chérie*.³ One of these works treats of murders, mysteries, islands of dreadful renown, hairbreadth escapes, miraculous coincidences and buried doubloons. The other treats of a little French girl who lived in a fine house in Paris, and died of wounded sensibility because no one would marry her. I call *Treasure Island* delightful, because it appears to me to have succeeded wonderfully in what it attempts; and I venture to bestow no epithet upon *Chérie*, which strikes me as having failed deplorably in what it attempts—that is in tracing the development of the moral consciousness of a child. But one of these productions strikes me as exactly as much of a novel as the other, and as having a “story” quite as much. The moral consciousness of a child is as much a part of life as the islands of the Spanish Main, and the one sort of geography seems to me to have those “surprises” of which Mr. Besant speaks quite as much as the other. For myself (since it comes back in the last resort, as I say, to the preference of the individual), the picture of the child’s experience has the advantage that I can at successive steps (an immense luxury, near to the “sensual pleasure” of which Mr. Besant’s critic in the *Pall Mall* speaks) say Yes or No, as it may be, to what the artist puts before me. I have been a child in fact, but I have been on a quest for a buried treasure only in supposition, and it is a simple accident that with M. de Goncourt I should have for the most part to say No. With George Eliot,⁴ when she painted that country with a far other intelligence, I always said Yes.

The most interesting part of Mr. Besant’s lecture is unfortunately the briefest passage—his very cursory allusion to the “conscious moral purpose” of the novel. Here again it is not very clear whether he be recording a fact or laying down a principle; it is a great pity that in the latter case he should not have developed his idea. This branch of the subject is of immense importance, and Mr. Besant’s few words point to considerations of the widest reach, not to be lightly disposed of. He will have treated the art of fiction but superficially who is not prepared to go every inch of the way that these considerations will carry him. It is for this reason that at the beginning of these remarks I was careful to notify the reader that my reflections on so large a theme have no pretension to be exhaustive. Like Mr. Besant, I have left the question of the morality of the novel till the last, and at the last I find I have used up my space. It is a question surrounded with difficulties, as witness the very first that meets us, in the form of a definite question, on the threshold. Vagueness, in such a discussion, is fatal, and what is the meaning of

2. That is, characteristic of the Venetian painter Titian (Tiziano Vecellio, ca. 1488–1576), especially famous for his use of color.

3. A psychological study of a young woman (1884), by Goncourt (1822–1896). *Treasure Island*, by

Stevenson (1850–1894), was published in 1883.

4. English novelist (1819–1880). George Eliot depicted “that country” of a child’s consciousness in *The Mill on the Floss* (1860) and *Silas Marner* (1861).

your morality and your conscious moral purpose? Will you not define your terms and explain how (a novel being a picture) a picture can be either moral or immoral? You wish to paint a moral picture or carve a moral statue: will you not tell us how you would set about it? We are discussing the Art of Fiction; questions of art are questions (in the widest sense) of execution; questions of morality are quite another affair, and will you not let us see how it is that you find it so easy to mix them up? These things are so clear to Mr. Besant that he has deduced from them a law which he sees embodied in English Fiction, and which is "a truly admirable thing and a great cause for congratulation." It is a great cause for congratulation indeed when such thorny problems become as smooth as silk. I may add that in so far as Mr. Besant perceives that in point of fact English Fiction has addressed itself preponderantly to these delicate questions he will appear to many people to have made a vain discovery. They will have been positively struck, on the contrary, with the moral timidity of the usual English novelist; with his (or with her) aversion to face the difficulties with which on every side the treatment of reality bristles. He is apt to be extremely shy (whereas the picture that Mr. Besant draws is a picture of boldness), and the sign of his work, for the most part, is a cautious silence on certain subjects. In the English novel (by which of course I mean the American as well), more than in any other, there is a traditional difference between that which people know and that which they agree to admit that they know, that which they see and that which they speak of, that which they feel to be a part of life and that which they allow to enter into literature. There is the great difference, in short, between what they talk of in conversation and what they talk of in print. The essence of moral energy is to survey the whole field, and I should directly reverse Mr. Besant's remark and say not that the English novel has a purpose, but that it has a diffidence. To what degree a purpose in a work of art is a source of corruption I shall not attempt to inquire; the one that seems to me least dangerous is the purpose of making a perfect work. As for our novel, I may say lastly on this score that as we find it in England to-day it strikes me as addressed in a large degree to "young people," and that this in itself constitutes a presumption that it will be rather shy. There are certain things which it is generally agreed not to discuss, not even to mention, before young people. That is very well, but the absence of discussion is not a symptom of the moral passion. The purpose of the English novel—"a truly admirable thing, and a great cause for congratulation"—strikes me therefore as rather negative.

There is one point at which the moral sense and the artistic sense lie very near together; that is in the light of the very obvious truth that the deepest quality of a work of art will always be the quality of the mind of the producer. In proportion as that intelligence is fine will the novel, the picture, the statue partake of the substance of beauty and truth. To be constituted of such elements is, to my vision, to have purpose enough. No good novel will ever proceed from a superficial mind; that seems to me an axiom which, for the artist in fiction, will cover all needful moral ground: if the youthful aspirant take it to heart it will illuminate for him many of the mysteries of "purpose." There are many other useful things that might be said to him, but I have come to the end of my article, and can only touch them as I pass. The critic in the *Pall Mall Gazette*, whom I have already quoted, draws attention

to the danger, in speaking of the art of fiction, of generalising. The danger that he has in mind is rather, I imagine, that of particularising, for there are some comprehensive remarks which, in addition to those embodied in Mr. Besant's suggestive lecture, might without fear of misleading him be addressed to the ingenuous student. I should remind him first of the magnificence of the form that is open to him, which offers to sight so few restrictions and such innumerable opportunities. The other arts, in comparison, appear confined and hampered; the various conditions under which they are exercised are so rigid and definite. But the only condition that I can think of attaching to the composition of the novel is, as I have already said, that it be sincere. This freedom is a splendid privilege, and the first lesson of the young novelist is to learn to be worthy of it. "Enjoy it as it deserves," I should say to him; "take possession of it, explore it to its utmost extent, publish it, rejoice in it. All life belongs to you, and do not listen either to those who would shut you up into corners of it and tell you that it is only here and there that art inhabits, or to those who would persuade you that this heavenly messenger wings her way outside of life altogether, breathing a superfine air, and turning away her head from the truth of things. There is no impression of life, no manner of seeing it and feeling it, to which the plan of the novelist may not offer a place; you have only to remember that talents so dissimilar as those of Alexandre Dumas and Jane Austen,⁵ Charles Dickens and Gustave Flaubert have worked in this field with equal glory. Do not think too much about optimism and pessimism; try and catch the colour of life itself. In France to-day we see a prodigious effort (that of Emile Zola, to whose solid and serious work no explorer of the capacity of the novel can allude without respect), we see an extraordinary effort vitiated by a spirit of pessimism on a narrow basis. M. Zola is magnificent, but he strikes an English reader as ignorant; he has an air of working in the dark; if he had as much light as energy, his results would be of the highest value. As for the aberrations of a shallow optimism, the ground (of English fiction especially) is strewn with their brittle particles as with broken glass. If you must indulge in conclusions, let them have the taste of a wide knowledge. Remember that your first duty is to be as complete as possible—to make as perfect a work. Be generous and delicate and pursue the prize."

1884, 1888

5. English novelist (1775–1817). Dumas (1802–1870), French dramatist and novelist whose works include *The Three Musketeers* (1844).

FRIEDRICH NIETZSCHE

1844–1900

Friedrich Nietzsche is the wild man, the self-proclaimed anti-Christ, of Western thought. A brilliant polemicist, he champions energy over reason and art over science while contemptuous of the quiet, “timid” virtues of domesticity, democracy, and peace. His extravagances not only remind us of modernism’s persistent desire to shock the staid middle classes but also recall the many twentieth-century figures—from W. B. Yeats and Ezra Pound to MARTIN HEIDEGGER and PAUL DE MAN—whose genius is inextricably mixed with dubious political views. But Nietzsche, an inveterate foe of Christianity and of Platonic philosophy, is absolutely central to modern and postmodern attempts to rethink the Western tradition’s most fundamental assumptions.

Nietzsche was born in Röcken, a small village in Prussian Saxony. He was the son and grandson (on both sides of the family) of Lutheran ministers. His father died when he was four and his younger brother died the next year, leaving him the only male in a household with five women. Nietzsche’s subsequent infatuations with the work of the German philosopher Arthur Schopenhauer (1788–1860) and with the work, theories, and wife of the German composer Richard Wagner (1813–1883), followed by his equally violent rejections of the two men, are sometimes explained in terms of “surrogate father figures” and oedipal rebellion. Certainly, Wagner and his wife Cosima dominated Nietzsche’s life in the early 1870s. Having received his doctorate at the University of Leipzig, Nietzsche was appointed professor of philology at the University of Basel in Switzerland in 1869. He met Wagner and Cosima von Bülow in late 1868, and his first book, *The Birth of Tragedy* (1872), combines a new theory of Greek tragedy with an extended argument that Wagner’s work constitutes a German rebirth of that ancient form. By 1876, however, Nietzsche had broken completely with Wagner, repelled by Wagner’s turn to Christianity and his increasing anti-Semitism. That same year, ill health forced Nietzsche to stop teaching. In 1879 he officially resigned his university post, receiving a small disability pension. He spent the next ten years writing the books that present his ambitious attempt to overthrow Christianity and post-Socratic philosophy through a radical “revaluation of all values.” The last ten years of Nietzsche’s life were lost to incoherent madness. After a mental breakdown in 1889, he returned to Röcken to live with his mother; when she died, in 1897, he came under the care of his sister Elisabeth, which continued until his death.

Even before Nietzsche’s death, his sister wrote a biography to publicize his work, and she published her own editions of his writings. She stressed those elements that accorded with her own anti-Semitic and pro-Aryan views and is often blamed for the Nazis’ later appropriation of Nietzsche as a philosopher sympathetic to their policies. But blaming his sister does not absolve Nietzsche. Some aspects of his thought chime with National Socialism, while others contradict it. Those who read and interpret Nietzsche’s challenging work must grapple with his relation to the Nazis, just as they must take into account his tremendous influence on modernism, existentialism, and poststructuralism.

Our selections from *The Birth of Tragedy* show how Nietzsche returns to Greek thought before Plato to discover the artistic form and worldview that he prefers to the Platonic and Christian traditions. (MATTHEW ARNOLD in the nineteenth century and MARTIN HEIDEGGER and ERICH AUERBACH in the twentieth also return to the pre-Socratic Greeks for principles to counter modernity.) Nietzsche’s mantra in this text is that “only as an aesthetic phenomenon do existence and the world appear justified!” This formula draws on the root meaning of *aesthetics* as “pertaining to sense perception.” Nietzsche says that life is worthwhile only if we experience

strong feelings or sensations. As WALTER PATER, who was writing at almost exactly the same time, would put it, the quality and intensity of our sensations indicates the quality of our lives. And for Nietzsche, as for Pater, the step from the “aesthetic” as sensation to the “aesthetic” as art is a short one. Art is the realm of heightened sensation. But whereas Pater stresses the experience of the spectator, Nietzsche focuses on the exuberant joy felt by the artist/creator in the struggle to bend recalcitrant materials to his or her will.

Nietzsche thus appears to promote heroic individualism and transcendent genius. He has often been read this way, not least by countless modernist artists, who also responded to his diatribes against the conformist “herds” that try to curb the strong, amoral artist. Much in Nietzsche celebrates the “will” of the “overman” (superman) and denigrates everything (from conventional morality to democracy) that would make the genius answerable to any authority outside of his self. “His” is used advisedly—Nietzsche often contrasts this individual’s manly strength to the effeminate weakness of lesser souls.

Yet to read Nietzsche as a philosopher of heroic individualism is to miss much. Human suffering figures largely in Nietzsche’s thought; the individual is subjected to a world that precedes and is more powerful than the self. Greek tragedy, in Nietzsche’s view, grants us a glimpse of a “primordial unity” that predates individuation (which Nietzsche associates with comedy). He takes seriously the claim that Greek tragedy originated in choral songs performed at a festival of Dionysus and that Aeschylus introduced the first individualized characters.

Such individuation, Nietzsche argues in *The Birth of Tragedy*, is necessary for artistic expression, artistic form. (In his later work, he often claims that “the subject” is a grammatical form that we consistently mistake for a metaphysical entity.) The chaos of Dionysian nondifferentiation (intimated by music) can be rendered intelligible or expressible only by the “calm” Apollonian “semblance” (conveyed by words and images). But the glory of Greek tragedy is that it does not take Apollonian semblance for truth—or, at least, not for the entire truth. Prometheus becomes Nietzsche’s primary example of the need to establish an existence apart from the primordial unity. But Prometheus “must suffer for the fact of [his] individuation.” And Nietzsche insists that it is the sufferings of Dionysus himself, whose repeated deaths and rebirths enact the “end of individuation,” that are represented in every tragedy. The “primal contradiction hidden within the things of this world” is that while humans can experience energy, will, and sensation only as individuals, the process of individuation separates them from the universe. Thus suffering is inevitable; the essence of the tragic view is to affirm that suffering, to glory in the active wrongdoing by which the hero offends the way things are, and to say, as Nietzsche imagines Aeschylus saying: “All that exists is just and unjust and is equally justified in both respects.”

Tragedy can exist only so long as we recognize, accept, and affirm the irresolvable contradiction between our hopes and how the world is. Once we believe that suffering is not inevitable, tragedy dies: we begin to demand justice from our gods, and life is justified not as an aesthetic phenomenon but rather because justice is finally done. In the comic ending, the good are rewarded, the bad punished, and human desires and worldly facts are aligned. In *The Birth of Tragedy*, Nietzsche blames Euripides and Socrates for the death of the tragic worldview in ancient Athenian society. Euripides effects a reconciliation with the gods in many of his plays, thus assuring the audience that all can be made right in this world. Socrates, and then PLATO, suggests that reason can lead humans to ascertain the truths of the universe to which they can conform.

Later in his career Nietzsche attacked Christianity for its essentially comic vision. We get hints of that critique here when he contrasts the Semitic notion of “sin” to the Aryan notion of “wrongdoing.” This passage, with its oppositions of Aryan and Semite, masculine and feminine, points to problematic features in

Nietzsche's work (as does his lyric call for a rebirth of the German spirit). Nietzsche highlights our admiration of the tragic hero, who often (as in Oedipus's case) could not have avoided wrongdoing. The notion of "sin," however, indicates both that one is free to act and that acting differently would have been better, would (it is strongly implied) not have led to suffering. Nietzsche urges us to have the strength to love life even though suffering is inevitable. Indeed, he suggests that we are most alive when we suffer, because that is when we are feeling most intensely. The murdered and resurrected god whose myth embodies this worldview is the tragic Dionysus, not the comic Christ.

This mixture of nobility and masochism, of rebellion (against Plato and Christianity) and submission (to Dionysus), proved heady stuff to many modernists. Of course, other factors—ranging from SIGMUND FREUD's use of the Oedipal myth to the slaughter of a generation in World War I—also shaped the modernist fascination with tragedy and pre-Socratic Greece. But Nietzsche is central to attempts during the previous and present centuries to find imaginative and historical alternatives to both the Christian worldview and to the narrative of Western progress and enlightenment. That such attempts come from both the political left and the right indicates the complexity of the Western heritage and of Nietzsche's engagement with it.

Our second selection, the essay "On Truth and Lying in a Non-Moral Sense" (written 1873), was not published during Nietzsche's lifetime. It articulates a number of Nietzsche's major themes and became a favorite reference point for post-structuralists such as JACQUES DERRIDA and Paul de Man during the 1970s. Nietzsche's target here is nothing less than the epistemological foundations of Western philosophy. From Plato on, Western philosophy has been committed (with a few exceptions) to ascertaining the fixed and solid truth that exists independently of human minds. Nietzsche simply denies that we can ever know anything except through the lens of human perception. We cannot put that lens aside in order to judge which perceptions accurately portray the world and which do not. Given this impossibility, why are humans committed to the search for "truth"? Because, Nietzsche answers, truth is a useful illusion, one that serves a fundamental drive to survive. Nietzsche's explanation here is recognizably Darwinian. Behaviors that sustain life will be adopted by the species as a whole. Truth is a comfortable lie; it suggests that "the world [is] something which is similar in kind to humanity," and it boosts self-confidence, the untroubled conviction of being right. While Nietzsche is scornful of this smug "anthropomorphism," he does underline its utility.

The essay's account of language's role in human cognition has been especially influential among literary theorists. Nietzsche accepts that the outer world impinges on the human perceiver, but we translate that experience into human terms by naming it. This "first metaphor" introduces an unbridgeable gap, which leads Nietzsche to conclude that "subject and object" are "absolutely different spheres." Nor do the nonrepresentational additions ("supplements") supplied by language stop there. We also use the same name to designate separate experiences of nerve stimulation. We call today's "leaf" by the same word used to label yesterday's. This substitution of one "concept" in the place of multiple experiences is the "second metaphor" that Nietzsche identifies—and his account of how concepts erase awareness of differences would later echo throughout poststructuralism. "Every concept," he writes, "comes into being by making equivalent that which is non-equivalent[,] . . . by forgetting those features which differentiate one thing from another."

Once Nietzsche pulls the veil of illusion from our eyes and shows that truth is a "mobile army of metaphors, metonymies, anthropomorphisms," what next? One possible response is stoicism, described in the essay's last paragraph. Alone in an alien world, humans could just endure, preserving a "dignified equilibrium" in the face of everything to which life subjects them. More extreme is the "nihilistic" denial of this world as "fallen" or "evil," a position that Nietzsche associates with Christianity. Against stoicism and nihilism, Nietzsche calls on humans to forcefully and joyfully

step into the vacuum created by the death of truth, of God, and of the other metaphysical guarantees on which the West has traditionally relied. We must learn not just to accept but to proudly affirm that “humanity” is a “mighty architectural genius who succeeds in erecting the infinitely complicated cathedral of concepts on moving foundations, or even, one might say, on flowing water.” Nietzsche celebrates the creativity and the will that builds a world for humans to inhabit—and he takes the artist as his prime example of an individual responding joyfully to the challenge of shedding the illusion of truth.

For the modernists of the early twentieth century, Nietzsche was often more an attitude, a stance, than a philosopher. A few powerful phrases—“the death of God,” “overman,” “will to power,” “herd morality,” and “beyond good and evil”—suggested his blasphemous demystification of progressive, “enlightened” values. Nietzsche’s aestheticism, his disdain of reason, and his lyrical style led many readers to see his work as existing somewhere between poetry and philosophy. But his work has received much more extensive scholarly and philosophical analysis after 1945. His critiques of truth, of substance, and of the self, along with his accounts of language and the formation of moral codes, were all taken extremely seriously, despite their summary dismissal by some intellectuals. Perhaps debates about Nietzsche’s politics have been especially fierce because his views have often been adopted—and not just by poststructuralists.

For literary critics, Nietzsche’s methods may be as important as any view he holds. Famously described by the French philosopher Paul Ricoeur (1913–2005) as, in company with KARL MARX and Freud, a founder of the “hermeneutics of suspicion,” Nietzsche teaches us not to take any pronouncement at face value. If we want to understand the meaning of a term, we must discover its “genealogy”—the way the term has been deployed in specific circumstances to achieve specific results. (MICHEL FOUCAULT later explicitly adopted this Nietzschean method in his studies of the prison and of sexuality.) From the perspective of Nietzschean genealogy, terms are tools and weapons in the continual struggles and conflicts that characterize human interactions with the world and with each other. Nietzsche’s own effort to alter our understanding of tragedy is concerned less with determining the “truth” of tragedy than with revising the dominant worldviews that his readers have inherited from Christianity and Western philosophy. The success of that attempt stands apart from whatever virtues his genealogical method possesses—but those to whom the method appeals have usually been sympathetic to the message.

“On Truth and Lying in a Non-Moral Sense” Keywords: Deconstruction, Interpretation Theory, Language, Poststructuralism, Representation, Rhetoric

*From The Birth of Tragedy*¹

I

We shall have gained much for the science of aesthetics when we have come to realize, not just through logical insight but also with the certainty of something directly apprehended (*Anschauung*), that the continuous evolution of art is bound up with the duality of the *Apolline* and the *Dionysiac* in much the

1. Translated by Ronald Speirs. Except as indicated, all subsequent notes are the translator’s; in the text, he occasionally retains the original

German in parentheses. The full title is *The Birth of Tragedy from the Spirit of Music*.

same way as reproduction depends on there being two sexes which co-exist in a state of perpetual conflict interrupted only occasionally by periods of reconciliation. We have borrowed these names from the Greeks who reveal the profound mysteries of their view of art to those with insight, not in concepts, admittedly, but through the penetratingly vivid figures of their gods. Their two deities of art, Apollo and Dionysos,² provide the starting-point for our recognition that there exists in the world of the Greeks an enormous opposition, both in origin and goals, between the Apolline art of the image-maker or sculptor (*Bildner*) and the imageless art of music, which is that of Dionysos. These two very different drives (*Triebe*) exist side by side, mostly in open conflict, stimulating and provoking (*reizen*) one another to give birth to ever-new, more vigorous offspring in whom they perpetuate the conflict inherent in the opposition between them, an opposition only apparently bridged by the common term 'art'—until eventually, by a metaphysical miracle of the Hellenic 'Will', they appear paired and, in this pairing, finally engender a work of art which is Dionysiac and Apolline in equal measure: Attic tragedy.³

In order to gain a closer understanding of these two drives, let us think of them in the first place as the separate art-worlds of *dream* and *intoxication* (*Rausch*). Between these two physiological phenomena an opposition can be observed which corresponds to that between the Apolline and the Dionysiac. As Lucretius⁴ envisages it, it was in dream that the magnificent figures of the gods first appeared before the souls of men; in dream the great image-maker saw the delightfully proportioned bodies of super-human beings; and the Hellenic poet, if asked about the secrets of poetic procreation, would likewise have reminded us of dream and would have given an account much like that given by Hans Sachs in the *Meistersinger*:

My friend, it is the poet's task
To mark his dreams, their meaning ask.
Trust me, the truest phantom man doth know
Hath meaning only dreams may show:
The arts of verse and poetry
Tell nought but dreaming's prophecy.⁵

Every human being is fully an artist when creating the worlds of dream, and the lovely semblance of dream is the precondition of all the arts of image-making, including, as we shall see, an important half of poetry. We take pleasure in dreaming, understanding its figures without mediation; all forms speak to us; nothing is indifferent or unnecessary. Yet even while this dream-reality is most alive, we nevertheless retain a pervasive sense that it is *semblance*; at least this is my experience, and I could adduce a good deal of evidence and the statements of poets to attest to the frequency, indeed

2. Greek god of wine, the object of frenzied cult worship (somewhat muted in its official forms). Apollo: Greek god of music, prophecy, and medicine, associated with the higher developments of civilization; as Phoebus Apollo, he is god of light [editor's note].

3. Plays performed at the festival of Dionysus in Athens during the 5th century B.C.E. [editor's note].

4. Roman poet and philosopher (ca. 94–55 B.C.E.);

see *De Rerum Natura* (*On the Nature of Things*) 5.1169–82 [editor's note].

5. Wagner, *Die Meistersinger*, Act III, sc. 2. [Richard Wagner (1813–1883), German composer whose music and aesthetic theories greatly influenced Nietzsche's argument in *The Birth of Tragedy*. Hans Sachs (1494–1576), German poet and dramatist who has a major role in Wagner's 1868 opera—editor's note.]

normality, of my experience. Philosophical natures even have a presentiment that hidden beneath the reality in which we live and have our being there also lies a second, quite different reality; in other words, this reality too is a semblance. Indeed Schopenhauer actually states that the mark of a person's capacity for philosophy is the gift for feeling occasionally as if people and all things were mere phantoms or dream-images.⁶ A person with artistic sensibility relates to the reality of dream in the same way as a philosopher relates to the reality of existence: he attends to it closely and with pleasure, using these images to interpret life, and practising for life with the help of these events. Not that it is only the pleasant and friendly images which give him this feeling of complete intelligibility; he also sees passing before him things which are grave, gloomy, sad, dark, sudden blocks, teasings of chance, anxious expectations, in short the entire 'Divine Comedy'⁷ of life, including the Inferno, but not like some mere shadow-play—for he, too, lives in these scenes and shares in the suffering—and yet never without that fleeting sense of its character as semblance. Perhaps others will recall, as I do, shouting out, sometimes successfully, words of encouragement in the midst of the perils and terrors of a dream: 'It is a dream! I will dream on!' I have even heard of people who were capable of continuing the causality of one and the same dream through three and more successive nights. All of these facts are clear evidence that our innermost being, the deep ground (*Untergrund*) common to all our lives, experiences the state of dreaming with profound pleasure (*Lust*) and joyous necessity.

The Greeks also expressed the joyous necessity of dream-experience in their Apollo: as the god of all image-making energies, Apollo is also the god of prophecy. According to the etymological root of his name, he is 'the luminous one' (*der Scheinende*), the god of light; as such, he also governs the lovely semblance produced by the inner world of fantasy. The higher truth, the perfection of these dream-states in contrast to the only partially intelligible reality of the daylight world, together with the profound consciousness of the helping and healing powers of nature in sleep and dream, is simultaneously the symbolic analogue of the ability to prophesy and indeed of all the arts through which life is made possible and worth living. But the image of Apollo must also contain that delicate line which the dream-image may not overstep if its effect is not to become pathological, so that, in the worst case, the semblance would deceive us as if it were crude reality; his image (*Bild*) must include that measured limitation (*maßvolle Begrenzung*), that freedom from wilder impulses, that wise calm of the image-making god. In accordance with his origin, his eye must be 'sun-like'; even when its gaze is angry and shows displeasure, it exhibits the consecrated quality of lovely semblance. Thus, in an eccentric sense, one could apply to Apollo what Schopenhauer says about human beings trapped in the veil of maya:

Just as the boatman sits in his small boat, trusting his frail craft in a stormy sea that is boundless in every direction, rising and falling with the howling, mountainous waves, so in the midst of a world full of

6. Aus Schopenhauers handschriftlichem Nachlass, ed. J. Frauenstädt (Leipzig 1874), p. 295. [Arthur Schopenhauer (1788–1860), German philosopher, a major influence on Nietzsche—editor's note.]

7. Epic poem by the Italian poet DANTE ALIGHIERI (1265–1321); in the first part, *Inferno*, the poet narrates a passage through hell [editor's note].

suffering and misery the individual man calmly sits, supported by and trusting in the *principium individuationis*⁸ [. . .] (*World as Will and Representation*, I, p. 416)

Indeed one could say that Apollo is the most sublime expression of imperturbable trust in this principle and of the calm sitting-there of the person trapped within it; one might even describe Apollo as the magnificent divine image (*Götterbild*) of the *principium individuationis*, whose gestures and gaze speak to us of all the intense pleasure, wisdom and beauty of 'semblance'.

In the same passage Schopenhauer has described for us the enormous *horror* which seizes people when they suddenly become confused and lose faith in the cognitive forms of the phenomenal world because the principle of sufficient reason, in one or other of its modes, appears to sustain an exception. If we add to this horror the blissful ecstasy which arises from the innermost ground of man, indeed of nature itself, whenever this breakdown of the *principium individuationis* occurs, we catch a glimpse of the essence of the *Dionysiac*, which is best conveyed by the analogy of *intoxication*. These Dionysiac stirrings, which, as they grow in intensity, cause subjectivity to vanish to the point of complete self-forgetting, awaken either under the influence of narcotic drink, of which all human beings and peoples who are close to the origin of things speak in their hymns, or at the approach of spring when the whole of nature is pervaded by lust for life. In the German Middle Ages, too, ever-growing throngs roamed from place to place, impelled by the same Dionysiac power, singing and dancing as they went; in these St John's and St Vitus' dancers we recognize the Bacchic choruses of the Greeks, with their pre-history in Asia Minor, extending to Babylon and the orgiastic Sacaea.⁹ There are those who, whether from lack of experience or from dullness of spirit, turn away in scorn or pity from such phenomena, regarding them as 'popular diseases' while believing in their own good health; of course, these poor creatures have not the slightest inkling of how spectral and deathly pale their 'health' seems when the glowing life of Dionysiac enthusiasts storms past them.

Not only is the bond between human beings renewed by the magic of the Dionysiac, but nature, alienated, inimical, or subjugated, celebrates once more her festival of reconciliation with her lost son, humankind. Freely the earth offers up her gifts, and the beasts of prey from mountain and desert approach in peace. The chariot of Dionysos is laden with flowers and wreaths; beneath its yoke stride panther and tiger. If one were to transform Beethoven's jubilant 'Hymn to Joy'¹ into a painting and place no constraints on one's imagination as the millions sink into the dust, shivering in awe, then one could begin to approach the Dionysiac. Now the slave is a freeman, now all the rigid, hostile barriers, which necessity, caprice, or 'impudent fashion'² have established between human beings, break asunder. Now, hearing this

8. Principle of individuation (Latin). For Schopenhauer, the mind can apprehend the world only by dividing it up into individual things; this process produces an erroneous vision of reality, which he calls "the veil of maya" [editor's note].

9. A festival of the winter solstice. Nietzsche links together a number of ecstatic celebrations

[editor's note].

1. Beethoven used a version of Schiller's ode *To Joy* for the choral finale of his Ninth Symphony. [Ludwig van Beethoven (1770–1827), German composer. FRIEDRICH VON SCHILLER (1759–1805), German poet and playwright—editor's note.]

2. Quotation from Schiller's *To Joy*.

gospel of universal harmony, each person feels himself to be not simply united, reconciled or merged with his neighbour, but quite literally one with him, as if the veil of maya had been torn apart, so that mere shreds of it flutter before the mysterious primordial unity (*das Ur-Eine*). Singing and dancing, man expresses his sense of belonging to a higher community; he has forgotten how to walk and talk and is on the brink of flying and dancing, up and away into the air above. His gestures speak of his enchantment. Just as the animals now talk and the earth gives milk and honey,³ there now sounds out from within man something supernatural: he feels himself to be a god, he himself now moves in such ecstasy and sublimity as once he saw the gods move in his dreams. Man is no longer an artist, he has become a work of art: all nature's artistic power reveals itself here, amidst shivers of intoxication, to the highest, most blissful satisfaction of the primordial unity. Here man, the noblest clay, the most precious marble, is kneaded and carved and, to the accompaniment of the chisel-blows of the Dionysiac world-artist, the call of the Eleusinian Mysteries rings out: 'Fall ye to the ground, ye millions? Feelst thou thy Creator, world?'⁴

9

Everything that rises to the surface in dialogue, the Apolline part of Greek tragedy, appears simple, transparent, beautiful. In this sense the dialogue is a copy of the Hellene, whose nature is expressed in dance, because in dance the greatest strength is still only potential, although it is betrayed by the suppleness and luxuriance of movement. Thus the language of Sophocles⁵ heroes surprises us by its Apolline definiteness and clarity, so that we feel as if we are looking straight into the innermost ground of its being, and are somewhat astonished that the road to this ground is so short. But if we once divert our gaze from the character of the hero as it rises to the surface and becomes visible—fundamentally, it is no more than an image of light (*Lichtbild*) projected on to a dark wall, i.e. appearance (*Erscheinung*) through and through—if, rather, we penetrate to the myth which projects itself in these bright reflections, we suddenly experience a phenomenon which inverts a familiar optical one. When we turn away blinded after a strenuous attempt to look directly at the sun, we have dark, coloured patches before our eyes, as if their purpose were to heal them; conversely, those appearances of the Sophoclean hero in images of light, in other words, the Apolline quality of the mask, are the necessary result of gazing into the inner, terrible depths of nature—radiant patches, as it were, to heal a gaze seared by gruesome night. Only in this sense may we believe that we have grasped the serious and significant concept of 'Greek serenity' (*Heiterkeit*) correctly; admittedly, wherever one looks at present one comes across a misunderstood notion of this as 'cheerfulness', something identified with a condition of unendangered ease and comfort.

3. Conflation of Euripides' *Bacchae* lines 142 and 708–11 with *Exodus* 3.8. [Euripides (ca. 485–ca. 406 B.C.E.), the last of the three great Attic tragedians; Nietzsche associates him with the decline of tragedy. The *Bacchae* of the play are the frenzied women who follow Dionysus—editor's note.]
4. Schiller's *To Joy*, lines 33–34. [Eleusinian Mys-

teries: the most famous of the secret Greek cults, which were connected with Demeter (goddess of the fruits of the earth) and Dionysus. Eleusis was an important town in southwest Attica—editor's note.]

5. Greek tragedian (ca. 496–406 B.C.E.) [editor's note].

The most suffering figure of the Greek stage, the unfortunate *Oedipus*,⁶ was understood by Sophocles as the noble human being who is destined for error and misery despite his wisdom, but who in the end, through his enormous suffering, exerts on the world around him a magical, beneficent force which remains effective even after his death. The noble human being does not sin, so this profound poet wants to tell us; every law, all natural order, indeed the moral world, may be destroyed by his actions, yet by these very actions a higher, magical circle of effects is drawn which found a new world on the ruins of the old one that has been overthrown. This is what the poet, inasmuch as he is also a religious thinker, wishes to tell us; as a poet he first shows us a wonderfully tied trial-knot which the judge slowly undoes, strand by strand, to bring great harm upon himself; the genuinely Hellenic delight in this dialectical solution is so great that an air of sovereign serenity pervades the whole work, blunting all the sharp, horrifying preconditions of that trial. We encounter this same serenity in *Oedipus at Colonus*, but here it is elevated into infinite transfiguration; in this play the old man, stricken with an excess of suffering, and exposed, purely as a *suffering being*, to all that affects him, is contrasted with the unearthly serenity which comes down from the sphere of the gods as a sign to us that in his purely passive behaviour the hero achieves the highest form of activity, which has consequences reaching far beyond his own life, whereas all his conscious words and actions in his life hitherto have merely led to his passivity. Thus the trial-knot of the story of Oedipus, which strikes the mortal eye as inextricably tangled, is slowly unravelled—and we are overcome by the most profound human delight at this matching piece of divine dialectic. If our explanation has done justice to the poet, the question remains whether the content of the myth has been exhausted thereby; at this point it becomes plain that the poet's whole interpretation of the story is nothing other than one of those images of light held out to us by healing nature after we have gazed into the abyss. Oedipus, murderer of his father, husband of his mother, Oedipus the solver of the Sphinx's riddle! What does this trinity of fateful deeds tell us? There is an ancient popular belief, particularly in Persia, that a wise magician can only be born out of incest; the riddle-solving Oedipus who woos his mother immediately leads us to interpret this as meaning that some enormous offence against nature (such as incest in this case) must first have occurred to supply the cause whenever prophetic and magical energies break the spell of present and future, the rigid law of individuation, and indeed the actual magic of nature. How else could nature be forced to reveal its secrets, other than by victorious resistance to her, i.e. by some unnatural event? I see this insight expressed in that terrible trinity of Oedipus' fates: the same man who solves the riddle of nature—that of the double-natured⁷ sphinx—must also destroy the most sacred orders of nature by murdering his father and becoming his mother's husband. Wisdom, the

6. The hero of *Oedipus Rex* (ca. 430 B.C.E.), who unknowingly kills his father, the king of Thebes, and then marries his mother, becoming king in turn; when he discovers the truth, he blinds himself and is banished. In *Oedipus at Colonus* (produced posthumously), the ruler of Thebes unsuccessfully attempts to persuade Oedipus,

now a dying old man, to return so that after his death he will benefit and not curse the city (Greek heroes were thought to exert power even when dead) [editor's note].

7. Having the face of a woman and the body of a lion [editor's note].

myth seems to whisper to us, and Dionysiac wisdom in particular, is an unnatural abomination: whoever plunges nature into the abyss of destruction by what he knows must in turn experience the dissolution of nature in his own person. 'The sharp point of wisdom turns against the wise man; wisdom is an offence against nature': such are the terrible words the myth calls out to us. But, like a shaft of sunlight, the Hellenic poet touches the sublime and terrible Memnon's Column of myth⁸ so that it suddenly begins to sound—in Sophoclean melodies!

I shall now contrast the glory of passivity with the glory of activity which shines around the *Prometheus* of Aeschylus.⁹ What the thinker Aeschylus had to tell us here, but what his symbolic poetic image only hints at, has been revealed to us by the youthful Goethe in the reckless words of his *Prometheus*:

Here I sit, forming men
In my own image,
A race to be like me,
To suffer and to weep,
To know delight and joy
And heed you not,
Like me!¹

Raising himself to Titanic heights, man fights for and achieves his own culture, and he compels the gods to ally themselves with him because, in his very own wisdom, he holds existence and its limits in his hands. But the most wonderful thing in that poem about Prometheus (which, in terms of its basic thought, is the true hymn of impiety) is its profound, Aeschylean tendency to *justice*: the limitless suffering of the bold 'individual' on the one hand, and the extreme plight of the gods, indeed a premonition of the twilight of the gods, on the other; the power of both these worlds of suffering to enforce reconciliation, metaphysical oneness—all this recalls in the strongest possible way the centre and principal tenet of the Aeschylean view of the world, which sees *moira*,² as eternal justice, throned above gods and men. If the boldness of Aeschylus in placing the world of the Olympians on his scales of justice seems astonishing, we must remember that the deep-thinking Greek had an unshakably firm foundation for metaphysical thought in his Mysteries, so that all attacks of scepticism could be discharged on the Olympians. The Greek artist in particular had an obscure feeling that he and these gods were mutually dependent, a feeling symbolized precisely in Aeschylus' *Prometheus*. The Titanic artist found within himself the defiant belief that he could create human beings and destroy the Olympian gods at least, and that his higher wisdom enabled him to do so, for which, admittedly, he was forced to do penance by suffering eternally. The magnificent

8. The remnants of a monumental statue in Egypt were said to produce a musical tone when illuminated by the rays of the rising sun.

9. Greek tragedian (525–456 B.C.E.), generally credited with giving Attic drama its traditional form. *Prometheus Bound* depicts Prometheus, a Titan (pre-Olympian god) punished by Zeus, the supreme god who has overthrown the Titans, for giving fire to humans. Prometheus is chained to

a rock in the mountains, where daily a vulture tears out his liver. According to some stories, Prometheus created humans out of mud [editor's note].

1. Goethe, *Prometheus*, lines 51 ff. [Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and novelist; Nietzsche quotes the final stanza of his 1773 poem—editor's note.]

2. Fate or destiny (Greek) [editor's note].

'ability' (*Können*) of the great genius, for which even eternal suffering is too small a price to pay, the bitter pride of the *artist*: this is the content and the soul of Aeschylus' play, whereas Sophocles, in his *Oedipus*, begins the prelude to the victory-hymn of the *saint*. But even Aeschylus' interpretation of the myth does not plumb its astonishing, terrible depths; rather, the artist's delight in Becoming, the serenity of artistic creation in defiance of all catastrophes, is merely a bright image of clouds and sky reflected in a dark sea of sadness. Originally, the legend of Prometheus belonged to the entire community of Aryan peoples³ and documented their talent for the profound and the tragic; indeed, it is not unlikely that this myth is as significant for the Aryan character as the myth of the Fall is for the Semitic character, and that the relationship between the two myths is like that between brother and sister. The myth of Prometheus presupposes the unbounded value which naive humanity placed on *fire* as the true palladium⁴ of every rising culture; but it struck those contemplative original men as a crime, a theft perpetrated on divine nature, to believe that man commanded fire freely, rather than receiving it as a gift from heaven, as a bolt of lightning which could start a blaze, or as the warming fire of the sun. Thus the very first philosophical problem presents a painful, irresolvable conflict between god and man, and pushes it like a mighty block of rock up against the threshold of every culture. Humanity achieves the best and highest of which it is capable by committing an offence and must in turn accept the consequences of this, namely the whole flood of suffering and tribulations which the offended heavenly powers *must* in turn visit upon the human race as it strives nobly towards higher things: a bitter thought, but one which, thanks to the *dignity* it accords to the offence, contrasts strangely with the Semitic myth of the Fall, where the origin of evil was seen to lie in curiosity, mendacious pretence, openness to seduction, lasciviousness, in short: in a whole series of predominantly feminine attributes. What distinguishes the Aryan conception is the sublime view that *active sin* is the true Promethean virtue; thereby we have also found the ethical foundation of pessimistic tragedy, its *justification* of the evil in human life, both in the sense of human guilt and in the sense of the suffering brought about by it. The curse in the nature of things, which the reflective Aryan is not inclined simply to explain away, the contradiction at the heart of the world, presents itself to him as a mixture of different worlds, e.g. a divine and a human one, each of which, taken individually, is in the right, but which, as one world existing alongside another, must suffer for the fact of its individuation. The heroic urge of the individual to reach out towards the general, the attempt to cross the fixed boundaries of individuation, and the desire to become the *one* world-being itself, all this leads him to suffer in his own person the primal contradiction hidden within the things of this world, i.e. he commits a great wrong and suffers. Thus great wrongdoing is understood as masculine by the Aryans, but as feminine by the Semites,⁵

3. Speakers of Indo-European, the prehistoric language whose descendants include Greek, German, English, and Hindi; here they are contrasted with speakers of Semitic languages, such as those who wrote Genesis in Hebrew [editor's note].

4. Here simply: "prized possession." [Specifically,

in Greek mythology, the Palladium was a statue of the goddess Pallas Athena, whose presence at Troy supposedly kept the city safe—editor's note.]

5. The noun translated as "wrongdoing" (*der Frevel*) has masculine gender in German; "sin" (*die Sünde*) has feminine.

just as the original wrong was committed by a man and the original sin by a woman. These, incidentally, are the words of the warlocks' chorus:

So what, if women on the whole
Take many steps to reach the goal?
Let them run as fast as they dare,
With one good jump a man gets there.⁶

Anyone who understands the innermost kernel of the legend of Prometheus—namely that wrongdoing is of necessity imposed on the titanically striving individual—is bound also to sense the un-Apolline quality of this pessimistic view of things, for it is the will of Apollo to bring rest and calm to individual beings precisely by drawing boundaries between them, and by reminding them constantly, with his demands for self-knowledge and measure, that these are the most sacred laws in the world. But lest this Apolline tendency should cause form to freeze into Egyptian stiffness and coldness, lest the attempt to prescribe the course and extent of each individual wave should cause the movement of the whole lake to die away, the flood-tide of the Dionysiac would destroy periodically all the small circles in which the one-sidedly Apolline will attempted to confine Hellenic life. That sudden swell of the Dionysiac tide then lifts the separate little waves of individuals on to its back, just as the Titan Atlas,⁷ brother of Prometheus, lifted up the earth. This Titanic urge to become, as it were, the Atlas of all single beings, and to carry them on a broad back higher and higher, further and further, is the common feature shared by the Promethean and the Dionysiac. In this respect the Prometheus of Aeschylus is a Dionysiac mask, whereas the aforementioned deep strain of justice in Aeschylus reveals to those with eyes to see his paternal descent from Apollo, the god of individuation and of the boundaries of justice. The double essence of Aeschylus' Prometheus, his simultaneously Apolline and Dionysiac nature, could therefore be expressed like this: 'All that exists is just and unjust and is equally justified in both respects.'

That is your world. That you call a world.⁸

10

It is a matter of indisputable historical record that the only subject-matter of Greek tragedy, in its earliest form, was the sufferings of Dionysos, and that for a long time the only hero present on the stage was, accordingly, Dionysos. But one may also say with equal certainty that, right down to Euripides, Dionysos never ceased to be the tragic hero, and that all the famous figures of the Greek stage, Prometheus, Oedipus etc., are merely masks of that original hero, Dionysos. The fact that there is a deity behind all these masks is one of the essential reasons for the 'ideal' quality of those famous figures which has prompted so much astonishment. Someone or other (I do not know who) once remarked that all individuals, as individuals, are comic, and therefore un-tragic; from which one could conclude that

6. Goethe, *Faust* [1808], I, 3982 ff.

7. In Greek myth, punished for warring against the Olympian gods by having to bear the world

upon his shoulders [editor's note].

8. Goethe, *Faust*, I, 409.

the Greeks were quite *incapable* of tolerating any individuals on the tragic stage. And indeed this does appear to have been their feeling, just as the reason for the Platonic distinction between, and deprecation of, the 'idea' as opposed to the 'idol',⁹ or copied image, lay deep within the Hellenic character. Using Plato's terminology, one would have to say something like this about the tragic figures of the Hellenic stage: the one, truly real Dionysos manifests himself in a multiplicity of figures, in the mask of a fighting hero and, as it were, entangled in the net of the individual will. In the way that he now speaks and acts, the god who appears resembles an erring, striving, suffering individual; and the fact that he *appears* at all with such epic definiteness and clarity, is the effect of Apollo, the interpreter of dreams, who interprets to the chorus its Dionysiac condition by means of this symbolic appearance. In truth, however, this hero is the suffering Dionysos of the Mysteries, the god who experiences the sufferings of individuation in his own person, of whom wonderful myths recount that he was torn to pieces by the Titans when he was a boy and is now venerated in this condition as Zagreus;¹ at the same time, it is indicated that his being torn into pieces, the genuinely Dionysiac *suffering*, is like a transformation into air, water, earth, and fire, so that we are to regard the state of individuation as the source and primal cause of all suffering, as something inherently to be rejected. From the smile of that Dionysos the Olympian gods were born, from his tears human beings. In this existence as a dismembered god, Dionysos has a double nature; he is both cruel, savage demon and mild, gentle ruler. But what the epopts² hoped for was the rebirth of Dionysos, which we must now understand, by premonition, as the end of individuation; the epopts' roaring song of jubilation rang out to greet this third Dionysos. Only in the hope of this is there a gleam of joy on the countenance of a world torn apart and shattered into individuals; myth symbolizes this in the image of Demeter, sunk in eternal mourning, who knows no *happiness* until she is told that she can give birth to Dionysos *again*. In the views described here we already have all the constituent elements of a profound and pessimistic way of looking at the world and thus, at the same time, of *the doctrine of the Mysteries taught by tragedy*: the fundamental recognition that everything which exists is a unity; the view that individuation is the primal source of all evil; and art as the joyous hope that the spell of individuation can be broken, a premonition of unity restored.

* * *

24

* * *

At this point we need to take a bold run-up and vault into a metaphysics of art, as I repeat my earlier sentence that only as an aesthetic phenomenon

9. That is, an *eikōn*, or "likeness," which PLATO (ca. 427–ca. 347 B.C.E.) sees as necessarily inferior to the Form or Idea (*idea*) of which it can be only an imperfect representation and through which it participates in what is truly real [editor's note].

1. A myth to the effect that Dionysos, under the name "Zagreus," is torn apart and then reassembled occurs in some late Hellenistic sources.

Whether this is a survival of an older (perhaps secret) doctrine about Dionysos, as Nietzsche assumes, or a late innovative embellishment of earlier tradition is, given the state of our knowledge, undecidable. [In this version, Dionysos is the son of Demeter; in most myths, he is said to be the son of a mortal woman, Semele, and Zeus—editor's note.]

2. Devoted followers who have "seen" their god.

do existence and the world appear justified; which means that tragic myth in particular must convince us that even the ugly and disharmonious is an artistic game which the Will, in the eternal fullness of its delight, plays with itself. Yet this difficult, primal phenomenon of Dionysiac art can be grasped in a uniquely intelligible and direct way in the wonderful significance of *musical dissonance*; as indeed music generally is the only thing which, when set alongside the world, can illustrate what is meant by the justification of the world as an aesthetic phenomenon. The pleasure engendered by the tragic myth comes from the same homeland as our pleasurable sensation of dissonance in music. The Dionysiac, with the primal pleasure it perceives even in pain, is the common womb from which both music and the tragic myth are born.

Could it not be that, with the assistance of musical dissonance, we have eased significantly the difficult problem of the effect of tragedy? After all, we do now understand the meaning of our desire to look, and yet to long to go beyond looking when we are watching tragedy; when applied to our response to the artistic use of dissonance, this state of mind would have to be described in similar terms: we want to listen, but at the same time we long to go beyond listening. That striving towards infinity, that wing-beat of longing even as we feel supreme delight in a clearly perceived reality, these things indicate that in both these states of mind we are to recognize a Dionysiac phenomenon, one which reveals to us the playful construction and demolition of the world of individuality as an outpouring of primal pleasure and delight, a process quite similar to Heraclitus the Obscure's comparison of the force that shapes the world to a playing child who sets down stones here, there, and the next place, and who builds up piles of sand only to knock them down again.³

Thus, in order to judge the Dionysiac capacity of a people correctly, it is necessary for us to consider the evidence not simply of their music but also of their tragic myth. Given the intimate relationship between music and myth, one would expect that the atrophy of the one would be connected to the degeneration and depravation of the other, if indeed it is true that any weakening of myth generally expresses a waning of the capacity for the Dionysiac. One only needs to glance at the development of the German character to be left in no doubt on both counts: we saw that the nature of Socratic optimism,⁴ something which is as unartistic as it is parasitic on life, was revealed in equal measure both in opera and in the abstract character of our mythless existence, in an art which had sunk to the level of mere entertainment as much as in a life guided by concepts. We took some comfort, however, from certain signs that, despite all this, the German spirit has remained whole, in magnificent health, depth, and Dionysiac strength, resting and dreaming in an inaccessible abyss like a knight who has sunk into slumber; now the Dionysiac song rises from this abyss to tell us that, at this very moment, this German knight still dreams his ancient Dionysiac myth in blissfully grave visions. Let no one believe that the German spirit has lost its mythical home for ever, if it can still understand so clearly the voices of the

3. Heraclitus, fragment 52. [Heraclitus (active ca. 500 B.C.E.), pre-Socratic Greek philosopher—editor's note.]

4. In sections that we have omitted, Nietzsche

portrays the Greek philosopher Socrates (469–399 B.C.E.) as opposed to Dionysus and an ally of Euripides [editor's note].

birds which tell of its homeland. One day it will find itself awake, with all the morning freshness that comes from a vast sleep; then it will slay dragons, destroy the treacherous dwarfs, and awaken Brünnhilde—and not even Wotan's spear itself will be able to bar its path!⁵

My friends, you who believe in the music of Dionysos, you also know what tragedy means for us. In it we have the tragic myth, reborn from music—and in this you may hope for all things and forget that which is most painful! But for all of us the most painful thing is that long period of indignity when the German genius lived in the service of treacherous dwarfs, estranged from hearth and home. You understand what my words mean—just as you will also understand, finally, my hopes.

25

Music and tragic myth both express, in the same way, the Dionysiac capacity of a people, and they cannot be separated from one another. Both originate in an artistic realm which lies beyond the Apolline; both transfigure a region where dissonance and the terrible image of the world fade away in chords of delight; both play with the goad of disinclination, trusting to their immeasurably powerful arts of magic; both justify by their play the existence of even the 'worst of all worlds'. Here the Dionysiac shows itself, in comparison with the Apolline, to be the eternal and original power of art which summons the entire world of appearances into existence, in the midst of which a new, transfiguring semblance is needed to hold fast within life the animated world of individuation. If you could imagine dissonance assuming human form—and what else is man?—this dissonance would need, to be able to live, a magnificent illusion which would spread a veil of beauty over its own nature. This is the true artistic aim of Apollo, in whose name we gather together all those countless illusions of beautiful semblance which, at every moment, make existence at all worth living at every moment and thereby urge us on to experience the next.

At the same time, only as much of that foundation of all existence, that Dionysiac underground of the world, can be permitted to enter an individual's consciousness as can be overcome, in its turn, by the Apolline power of transfiguration, so that both of these artistic drives are required to unfold their energies in strict, reciprocal proportion, according to the law of eternal justice. Where the Dionysiac powers rise up with such unbounded vigour as we are seeing at present, Apollo, too, must already have descended amongst us, concealed in a cloud, and his most abundant effects of beauty will surely be seen by a generation which comes after us.

That there is a need for this effect is a feeling which each of us would grasp intuitively, if he were ever to feel himself translated, even just in dream, back into the life of an ancient Hellene. As he wandered beneath rows of high, Ionic columns, gazing upwards to a horizon cut off by pure and noble lines, seeing beside him reflections of his own, transfigured form in luminous marble, surrounded by human beings who walk solemnly or move delicately,

5. In Wagner's opera *Siegfried* (1876) the hero slays a dragon (really the giant Fafner), kills the dwarf Mime, and awakens the heroine Brünnhilde

despite the efforts of Wotan, chief of the gods, to block him [editor's note].

with harmonious sounds and a rhythmical language of gestures—would such a person, with all this beauty streaming in on him from all sides, not be bound to call out, as he raised a hand to Apollo: ‘Blessed people of Hellas! How great must Dionysos be amongst you, if the God of Delos considers such acts of magic are needed to heal your dithyrambic⁶ madness!’ It is likely, however, that an aged Athenian would reply to a visitor in this mood, looking up at him with the sublime eye of Aeschylus: ‘But say also this, curious stranger: how much did this people have to suffer in order that it might become so beautiful! But now follow me to the tragedy and sacrifice along with me in the temple of both deities!’

1872

On Truth and Lying in a Non-Moral Sense¹

I

In some remote corner of the universe, flickering in the light of the countless solar systems into which it had been poured, there was once a planet on which clever animals invented cognition. It was the most arrogant and most mendacious minute in the ‘history of the world’; but a minute was all it was. After nature had drawn just a few more breaths the planet froze and the clever animals had to die. Someone could invent a fable like this and yet they would still not have given a satisfactory illustration of just how pitiful, how insubstantial and transitory, how purposeless and arbitrary the human intellect looks within nature; there were eternities during which it did not exist; and when it has disappeared again, nothing will have happened. For this intellect has no further mission that might extend beyond the bounds of human life. Rather, the intellect is human, and only its own possessor and progenitor regards it with such pathos, as if it housed the axis around which the entire world revolved. But if we could communicate with a midge we would hear that it too floats through the air with the very same pathos, feeling that it too contains within itself the flying centre of this world. There is nothing in nature so despicable and mean that would not immediately swell up like a balloon from just one little puff of that force of cognition; and just as every bearer of burdens wants to be admired, so the proudest man of all, the philosopher, wants to see, on all sides, the eyes of the universe trained, as through telescopes, on his thoughts and deeds.

It is odd that the intellect can produce this effect, since it is nothing other than an aid supplied to the most unfortunate, most delicate and most transient of beings so as to detain them for a minute within existence; otherwise, without this supplement, they would have every reason to flee existence as quickly as did Lessing’s infant son.² The arrogance inherent in cognition

6. Manifest in dithyrambs, choral poems originally sung in honor of Dionysus and later associated with highly excited music and impassioned language. Delos: Greek island in the Cyclades, site of an important oracle of Apollo [editor’s note].

1. Translated by Ronald Speirs. Except as indi-

cated, all notes are the translator’s.

2. Lessing’s first and only son died immediately after birth, followed soon after by his mother. This drew from Lessing the comment: “Was it good sense that they had to pull him into the world with iron tongs, or that he noticed the filth

and feeling casts a blinding fog over the eyes and senses of human beings, and because it contains within itself the most flattering evaluation of cognition it deceives them about the value of existence. Its most general effect is deception—but each of its separate effects also has something of the same character.

As a means for the preservation of the individual, the intellect shows its greatest strengths in dissimulation, since this is the means to preserve those weaker, less robust individuals who, by nature, are denied horns or the sharp fangs of a beast of prey with which to wage the struggle for existence. This art of dissimulation reaches its peak in humankind, where deception, flattery, lying and cheating, speaking behind the backs of others, keeping up appearances,³ living in borrowed finery, wearing masks, the drapery of convention, play-acting for the benefit of others and oneself—in short, the constant fluttering of human beings around the one flame of vanity is so much the rule and the law that there is virtually nothing which defies understanding so much as the fact that an honest and pure drive towards truth should ever have emerged in them. They are deeply immersed in illusions and dream-images; their eyes merely glide across the surface of things and see ‘forms’; nowhere does their perception lead into truth; instead it is content to receive stimuli and, as it were, to play with its fingers on the back of things. What is more, human beings allow themselves to be lied to in dreams every night of their lives, without their moral sense ever seeking to prevent this happening, whereas it is said that some people have even eliminated snoring by willpower. What do human beings really know about themselves? Are they even capable of perceiving themselves in their entirety just once, stretched out as in an illuminated glass case? Does nature not remain silent about almost everything, even about our bodies, banishing and enclosing us within a proud, illusory consciousness, far away from the twists and turns of the bowels, the rapid flow of the blood stream and the complicated tremblings of the nerve-fibres? Nature has thrown away the key, and woe betide fateful curiosity should it ever succeed in peering through a crack in the chamber of consciousness, out and down into the depths, and thus gain an intimation of the fact that humanity, in the indifference of its ignorance, rests on the pitiless, the greedy, the insatiable, the murderous—clinging in dreams, as it were, to the back of a tiger. Given this constellation, where on earth can the drive to truth possibly have come from?

Insofar as the individual wishes to preserve himself in relation to other individuals, in the state of nature he mostly used his intellect for concealment and dissimulation; however, because necessity and boredom also lead men to want to live in societies and herds, they need a peace treaty, and so they endeavour to eliminate from their world at least the crudest forms of the *bellum omnium contra omnes*.⁴ In the wake of this peace treaty, however,

so quickly? Was it not good sense that he took the first opportunity to leave it again?” (Letter to Eschenburg, 10 January 1778). [GOTTHOLD EPHRAIM LESSING (1729–1781), German dramatist and critic—editor’s note.]

3. The verb Nietzsche uses is *repräsentieren*. This means keeping up a show in public, representing one’s family, country, or social group

before the eyes of the world.

4. War of all against all (Latin): phrase associated with Thomas Hobbes’ description of the state of nature before the institution of political authority (cf. Hobbes, *De cive* I.12 and *Leviathan*, chapter XIII). [Hobbes (1588–1679), English political philosopher—editor’s note.]

comes something which looks like the first step towards the acquisition of that mysterious drive for truth. For that which is to count as 'truth' from this point onwards now becomes fixed, i.e. a way of designating things is invented which has the same validity and force everywhere, and the legislation of language also produces the first laws of truth, for the contrast between truth and lying comes into existence here for the first time: the liar uses the valid tokens of designation—words—to make the unreal appear to be real; he says, for example, 'I am rich', whereas the correct designation for his condition would be, precisely, 'poor'. He misuses the established conventions by arbitrarily switching or even inverting the names for things. If he does this in a manner that is selfish and otherwise harmful, society will no longer trust him and therefore exclude him from its ranks. Human beings do not so much flee from being tricked as from being harmed by being tricked. Even on this level they do not hate deception but rather the damaging, inimical consequences of certain species of deception. Truth, too, is only desired by human beings in a similarly limited sense. They desire the pleasant, life-preserving consequences of truth; they are indifferent to pure knowledge if it has no consequences, but they are actually hostile towards truths which may be harmful and destructive. And, besides, what is the status of those conventions of language? Are they perhaps products of knowledge, of the sense of truth? Is there a perfect match between things and their designations? Is language the full and adequate expression of all realities?

Only through forgetfulness could human beings ever entertain the illusion that they possess truth to the degree described above. If they will not content themselves with truth in the form of tautology, i.e. with empty husks, they will for ever exchange illusions for truth. What is a word? The copy of a nervous stimulation in sounds. To infer from the fact of the nervous stimulation that there exists a cause outside us is already the result of applying the principle of sufficient reason wrongly. If truth alone had been decisive in the genesis of language, if the viewpoint of certainty had been decisive in creating designations, how could we possibly be permitted to say, 'The stone is hard', as if 'hard' were something known to us in some other way, and not merely as an entirely subjective stimulus? We divide things up by gender, describing a tree as masculine and a plant as feminine⁵—how arbitrary these translations are! How far they have flown beyond the canon of certainty! We speak of a snake; the designation captures only its twisting movements and thus could equally well apply to a worm. How arbitrarily these borders are drawn, how one-sided the preference for this or that property of a thing! When different languages are set alongside one another it becomes clear that, where words are concerned, what matters is never truth, never the full and adequate expression;⁶ otherwise there would not be so many languages. The 'thing-in-itself'⁷ (which would be, precisely, pure truth, truth without consequences) is impossible for even the creator of language to grasp, and indeed this is not at all desir-

5. "Tree" is masculine in German (*der Baum*) and "plant" (*die Pflanze*) is feminine.

6. Nietzsche uses the term *adäquat*, which indicates that the meaning of something is fully conveyed by a word or expression; English "adequate" alone does not convey this sense completely.

7. Term used by the German philosopher IMMANUEL KANT (1724–1804) for the real object independent of our awareness of it. Kant argues that such categories as time and space, mentioned later by Nietzsche, are part of our own form of thought, not of what we observe [editor's note].

able. He designates only the relations of things to human beings, and in order to express them he avails himself of the boldest metaphors. The stimulation of a nerve is first translated into an image: first metaphor! The image is then imitated by a sound: second metaphor! And each time there is a complete leap from one sphere into the heart of another, new sphere. One can conceive of a profoundly deaf human being who has never experienced sound or music; just as such a person will gaze in astonishment at the Chladnian sound-figures in sand,⁸ find their cause in the vibration of a string, and swear that he must now know what men call sound—this is precisely what happens to all of us with language. We believe that when we speak of trees, colours, snow, and flowers, we have knowledge of the things themselves, and yet we possess only metaphors of things which in no way correspond to the original entities. Just as the musical sound appears as a figure in the sand, so the mysterious 'X' of the thing-in-itself appears first as a nervous stimulus, then as an image, and finally as an articulated sound. At all events, things do not proceed logically when language comes into being, and the entire material in and with which the man of truth, the researcher, the philosopher, works and builds, stems, if not from cloud-cuckoo land, then certainly not from the essence of things.

Let us consider in particular how concepts are formed; each word immediately becomes a concept, not by virtue of the fact that it is intended to serve as a memory (say) of the unique, utterly individualized, primary experience to which it owes its existence, but because at the same time it must fit countless other, more or less similar cases, i.e. cases which, strictly speaking, are never equivalent, and thus nothing other than non-equivalent cases. Every concept comes into being by making equivalent that which is non-equivalent. Just as it is certain that no leaf is ever exactly the same as any other leaf, it is equally certain that the concept 'leaf' is formed by dropping these individual differences arbitrarily, by forgetting those features which differentiate one thing from another, so that the concept then gives rise to the notion that something other than leaves exists in nature, something which would be 'leaf', a primal form, say, from which all leaves were woven, drawn, delineated, dyed, curled, painted—but by a clumsy pair of hands, so that no single example turned out to be a faithful, correct, and reliable copy of the primal form. We call a man honest; we ask, 'Why did he act so honestly today?' Our answer is usually: 'Because of his honesty.' Honesty!—yet again, this means that the leaf is the cause of the leaves. We have no knowledge of an essential quality which might be called honesty, but we do know of numerous individualized and hence non-equivalent actions which we equate with each other by omitting what is unlike, and which we now designate as honest actions; finally we formulate from them a *qualitas occulta*⁹ with the name 'honesty'.

Like form, a concept is produced by overlooking what is individual and real, whereas nature knows neither forms nor concepts and hence no species, but only an 'X' which is inaccessible to us and indefinable by us.

8. The vibration of a string can create figures in the sand (in an appropriately constructed sand-box) which give a visual representation of that which the human ear perceives as a tone. The

term comes from the name of the [German] physicist Ernst Chladni [1756–1827], whose experiments demonstrated the effect.

9. Hidden property (Latin).

For the opposition we make between individual and species is also anthropomorphic and does not stem from the essence of things, although we equally do not dare to say that it does *not* correspond to the essence of things, since that would be a dogmatic assertion and, as such, just as incapable of being proved as its opposite.

What, then, is truth? A mobile army of metaphors, metonymies, anthropomorphisms, in short a sum of human relations which have been subjected to poetic and rhetorical intensification, translation, and decoration, and which, after they have been in use for a long time, strike a people as firmly established, canonical, and binding; truths are illusions of which we have forgotten that they are illusions, metaphors which have become worn by frequent use and have lost all sensuous vigour, coins which, having lost their stamp, are now regarded as metal and no longer as coins. Yet we still do not know where the drive to truth comes from, for so far we have only heard about the obligation to be truthful which society imposes in order to exist, i.e. the obligation to use the customary metaphors, or, to put it in moral terms, the obligation to lie in accordance with firmly established convention, to lie *en masse* and in a style that is binding for all. Now, it is true that human beings forget that this is how things are; thus they lie unconsciously in the way we have described, and in accordance with centuries-old habits—and precisely *because of this unconsciousness*, precisely because of this forgetting, they arrive at the feeling of truth. The feeling that one is obliged to describe one thing as red, another as cold, and a third as dumb, prompts a moral impulse which pertains to truth; from its opposite, the liar whom no one trusts and all exclude, human beings demonstrate to themselves just how honourable, confidence-inspiring and useful truth is. As creatures of *reason*, human beings now make their actions subject to the rule of abstractions; they no longer tolerate being swept away by sudden impressions and sensuous perceptions; they now generalize all these impressions first, turning them into cooler, less colourful concepts in order to harness the vehicle of their lives and actions to them. Everything which distinguishes human beings from animals depends on this ability to sublimate sensuous metaphors into a schema, in other words, to dissolve an image into a concept. This is because something becomes possible in the realm of these schemata which could never be achieved in the realm of those sensuous first impressions, namely the construction of a pyramidal order based on castes and degrees, the creation of a new world of laws, privileges, subordinations, definitions of borders, which now confronts the other, sensuously perceived world as something firmer, more general, more familiar, more human, and hence as something regulatory and imperative. Whereas every metaphor standing for a sensuous perception is individual and unique and is therefore always able to escape classification, the great edifice of concepts exhibits the rigid regularity of a Roman *columbarium*,¹ while logic breathes out that air of severity and coolness which is peculiar to mathematics. Anyone who has been touched by that cool breath will scarcely believe that concepts too, which are as bony and eight-cornered as a dice and just as capable of being shifted around, are only the left-over *residue of a metaphor*, and that the

illusion produced by the artistic translation of a nervous stimulus into images is, if not the mother, then at least the grandmother of each and every concept. Within this conceptual game of dice, however, 'truth' means using each die in accordance with its designation, counting its spots precisely, forming correct classifications, and never offending against the order of castes nor against the sequence of classes of rank. Just as the Romans and the Etruscans divided up the sky with rigid mathematical lines and confined a god in a space which they had thus delimited as in a *templum*,² all peoples have just such a mathematically divided firmament of concepts above them, and they understand the demand of truth to mean that the god of every concept is to be sought only in *his* sphere. Here one can certainly admire humanity as a mighty architectural genius who succeeds in erecting the infinitely complicated cathedral of concepts on moving foundations, or even, one might say, on flowing water; admittedly, in order to rest on such foundations, it has to be like a thing constructed from cobwebs, so delicate that it can be carried off on the waves and yet so firm as not to be blown apart by the wind. By these standards the human being is an architectural genius who is far superior to the bee; the latter builds with wax which she gathers from nature, whereas the human being builds with the far more delicate material of concepts which he must first manufacture from himself. In this he is to be much admired—but just not for his impulse to truth, to the pure cognition of things. If someone hides something behind a bush, looks for it in the same place and then finds it there, his seeking and finding is nothing much to boast about; but this is exactly how things are as far as the seeking and finding of 'truth' within the territory of reason is concerned. If I create the definition of a mammal and then, having inspected a camel, declare, 'Behold, a mammal', then a truth has certainly been brought to light, but it is of limited value, by which I mean that it is anthropomorphic through and through and contains not a single point which could be said to be 'true in itself', really and in a generally valid sense, regardless of mankind. Anyone who researches for truths of that kind is basically only seeking the metamorphosis of the world in human beings; he strives for an understanding of the world as something which is similar in kind to humanity, and what he gains by his efforts is at best a feeling of assimilation. Rather as the astrologer studies the stars in the service of human beings and in relation to humanity's happiness and suffering, this type of researcher regards the whole world as linked to humankind, as the infinitely refracted echo of an original sound, that of humanity, and as the multiple copy of a single, original image, that of humanity. His procedure is to measure all things against man, and in doing so he takes as his point of departure the erroneous belief that he has these things directly before him, as pure objects. Thus, forgetting that the original metaphors of perception were indeed metaphors, he takes them for the things themselves.

Only by forgetting this primitive world of metaphor, only by virtue of the fact that a mass of images, which originally flowed in a hot, liquid stream from the primal power of the human imagination, has become hard and rigid, only because of the invincible faith that *this* sun, *this* window, *this* table is a truth in itself—in short only because man forgets himself as a

2. Literally, a space marked out; the space of the heavens; sanctuary, temple (Latin) [editor's note].

subject, and indeed as *an artistically creative* subject, does he live with some degree of peace, security, and consistency; if he could escape for just a moment from the prison walls of this faith, it would mean the end of his 'consciousness of self'.³ He even has to make an effort to admit to himself that insects or birds perceive a quite different world from that of human beings, and that the question as to which of these two perceptions of the world is the more correct is quite meaningless, since this would require them to be measured by the criterion of the *correct perception*, i.e. by a *non-existent* criterion. But generally it seems to me that the correct perception—which would mean the full and adequate expression of an object in the subject—is something contradictory and impossible; for between two absolutely different spheres, such as subject and object are, there is no causality, no correctness, no expression, but at most an *aesthetic* way of relating, by which I mean an allusive transference, a stammering translation into a quite different language. For which purpose a middle sphere and mediating force is certainly required which can freely invent and freely create poetry. The word appearance (*Erscheinung*) contains many seductions, and for this reason I avoid using it as far as possible; for it is not true that the essence of things appears in the empirical world. A painter who has no hands and who wished to express in song the image hovering before him will still reveal more through this substitution of one sphere for another than the empirical world betrays of the essence of things. Even the relation of a nervous stimulus to the image produced thereby is inherently not a necessary relationship; but when that same image has been produced millions of times and has been passed down through many generations of humanity, indeed eventually appears in the whole of humanity as a consequence of the same occasion, it finally acquires the same significance for all human beings, as if it were the only necessary image and as if that relation of the original nervous stimulus to the image produced were a relation of strict causality—in exactly the same way as a dream, if repeated eternally, would be felt and judged entirely as reality. But the fact that a metaphor becomes hard and rigid is absolutely no guarantee of the necessity and exclusive justification of that metaphor.

Anyone who is at home in such considerations will certainly have felt a deep mistrust of this kind of idealism when once he has become clearly convinced of the eternal consistency, ubiquitousness and infallibility of the laws of nature; he will then conclude that everything, as far as we can penetrate, whether to the heights of the telescopic world or the depths of the microscopic world, is so sure, so elaborated, so endless, so much in conformity to laws, and so free of lacunae, that science will be able to mine these shafts successfully for ever, and that everything found there will be in agreement and without self-contradiction. How little all of this resembles a product of the imagination, for if it were such a thing, the illusion and the unreality would be bound to be detectable somewhere. The first thing to be said against this view is this: if each of us still had a different kind of sensuous perception, if we ourselves could only perceive things as, variously, a bird, a worm, or a plant does, or if one of us were to see a stimulus as red, a second person were to see the same stimulus as blue, while a third were even to

3. The word Nietzsche uses here—*Selbstbewußtsein*—could also mean "self-confidence."

hear it as a sound, nobody would ever speak of nature as something conforming to laws; rather they would take it to be nothing other than a highly subjective formation. Consequently, what is a law of nature for us at all? It is not known to us in itself but only in its effects, i.e. in its relations to other laws of nature which are in turn known to us only as relations. Thus, all these relations refer only to one another, and they are utterly incomprehensible to us in their essential nature; the only things we really know about them are things which we bring to bear on them: time and space, in other words, relations of succession and number. But everything which is wonderful and which elicits our astonishment at precisely these laws of nature, everything which demands explanation of us and could seduce us into being suspicious of idealism, is attributable precisely and exclusively to the rigour and universal validity of the representations of time and space. But these we produce within ourselves and from ourselves with the same necessity as a spider spins; if we are forced to comprehend all things under these forms alone, then it is no longer wonderful that what we comprehend in all these things is actually nothing other than these very forms; for all of them must exhibit the laws of number, and number is precisely that which is most astonishing about things. All the conformity to laws which we find so imposing in the orbits of the stars and chemical processes is basically identical with those qualities which we ourselves bring to bear on things, so that what we find imposing is our own activity. Of course the consequence of this is that the artistic production of metaphor, with which every sensation begins within us, already presupposes those forms, and is thus executed in them; only from the stability of these original forms can one explain how it is possible for an edifice of concepts to be constituted in its turn from the metaphors themselves. For this conceptual edifice is an imitation of the relations of time, space, and number on the foundations of metaphor.

2

Originally, as we have seen, it is *language* which works on building the edifice of concepts; later it is *science*. Just as the bee simultaneously builds the cells of its comb and fills them with honey, so science works unceasingly at that great *columbarium* of concepts, the burial site of perceptions, builds ever-new, ever-higher tiers, supports, cleans, renews the old cells, and strives above all to fill that framework which towers up to vast heights, and to fit into it in an orderly way the whole empirical world, i.e. the anthropomorphic world. If even the man of action binds his life to reason and its concepts, so as not to be swept away and lose himself, the researcher builds his hut close by the tower of science so that he can lend a hand with the building and find protection for himself beneath its already existing bulwarks. And he has need of protection, for there exist fearful powers which constantly press in on him and which confront scientific truth with 'truths' of quite another kind, on shields emblazoned with the most multifarious emblems.

That drive to form metaphors, that fundamental human drive which cannot be left out of consideration for even a second without also leaving out human beings themselves, is in truth not defeated, indeed hardly even tamed, by the process whereby a regular and rigid new world is built from its own sublimated products—concepts—in order to imprison it in a fortress.

The drive seeks out a channel and a new area for its activity, and finds it in myth and in art generally. It constantly confuses the cells and the classifications of concepts by setting up new translations, metaphors, metonymies; it constantly manifests the desire to shape the given world of the waking human being in ways which are just as multiform, irregular, inconsequential, incoherent, charming and ever-new, as things are in the world of dream. Actually the waking human being is only clear about the fact that he is awake thanks to the rigid and regular web of concepts, and for that reason he sometimes comes to believe that he is dreaming if once that web of concepts is torn apart by art. Pascal is right to maintain that if the same dream were to come to us every night we would occupy ourselves with it just as much as we do with the things we see every day: 'If an artisan could be sure to dream each night for a full twelve hours that he was a king,' says Pascal, 'I believe he would be just as happy as a king who dreamt for twelve hours each night that he was an artisan.'⁴ Thanks to the constantly effective miracle assumed by myth, the waking day of a people who are stimulated by myth, as the ancient Greeks were, does indeed resemble dream more than it does the day of a thinker whose mind has been sobered by science. If, one day, any tree may speak as a nymph, or if a god can carry off virgins in the guise of a bull, if the goddess Athene herself is suddenly seen riding on a beautiful chariot in the company of Pisistratus through the market-places of Athens⁵—and that was what the honest Athenian believed—then anything is possible at any time, as it is in dream, and the whole of nature cavorts around men as if it were just a masquerade of the gods who are merely having fun by deceiving men in every shape and form.

But human beings themselves have an unconquerable urge to let themselves be deceived, and they are as if enchanted with happiness when the bard recites epic fairy-tales as if they were true, or when the actor in a play acts the king more regally than reality shows him to be. The intellect, that master of pretence, is free and absolved of its usual slavery for as long as it can deceive without *doing harm*, and it celebrates its Saturnalian festivals⁶ when it does so; at no time is it richer, more luxuriant, more proud, skilful, and bold. Full of creative contentment, it jumbles up metaphors and shifts the boundary stones of abstraction, describing a river, for example, as a moving road that carries men to destinations to which they normally walk. The intellect has now cast off the mark of servitude; whereas it normally labours, with dull-spirited industry, to show to some poor individual who lusts after life the road and the tools he needs, and rides out in search of spoils and booty for its master, here the intellect has become the master itself and is permitted to wipe the expression of neediness from its face. Whatever the intellect now does, all of it, compared with what it did before, bears the mark of pretence, just as what it did before bore the mark of distortion. It

5. Herodotus 1.60. [The Greek historian (ca. 484–ca. 425 B.C.E.) describes in the passage cited a ruse of the Athenian ruler Pisistratus (d. 527 B.C.E.) after he was forced out of the city in 566: he dressed a tall, handsome woman in armor and led the people to believe that Athena, goddess of

war and wisdom and the patron of Athens, was herself restoring him to power. "The guise of a bull": Zeus, the Greek king of the gods, took the form of a bull when he abducted Europa, a Phoenician princess—editor's note.]

6. Roman holidays at the winter solstice during which no business was conducted, slaves were temporarily freed, and the normal rules of propriety were suspended [editor's note].

copies human life, but it takes it to be something good and appears to be fairly content with it. That vast assembly of beams and boards to which needy man clings, thereby saving himself on his journey through life, is used by the liberated intellect as a mere climbing frame and plaything on which to perform its most reckless tricks; and when it smashes this framework, jumbles it up and ironically re-assembles it, pairing the most unlike things and dividing those things which are closest to one another, it reveals the fact that it does not require those makeshift aids of neediness, and that it is now guided, not by concepts but by intuitions. No regular way leads from these intuitions into the land of the ghostly schemata and abstractions; words are not made for them; man is struck dumb when he sees them, or he will speak only in forbidden metaphors and unheard-of combinations of concepts so that, by at least demolishing and deriding the old conceptual barriers, he may do creative justice to the impression made on him by the mighty, present intuition.

There are epochs in which the man of reason and the man of intuition stand side by side, the one fearful of intuition, the other filled with scorn for abstraction, the latter as unreasonable as the former is unartistic. They both desire to rule over life; the one by his knowledge of how to cope with the chief calamities of life by providing for the future, by prudence and regularity, the other by being an 'exuberant hero'⁷ who does not see those calamities and who only acknowledges life as real when it is disguised as beauty and appearance. Where the man of intuition, as was once the case in ancient Greece, wields his weapons more mightily and victoriously than his contrary, a culture can take shape, given favourable conditions, and the rule of art over life can become established; all the expressions of a life lived thus are accompanied by pretence, by the denial of neediness, by the radiance of metaphorical visions, and indeed generally by the immediacy of deception. Neither the house, nor the gait, nor the clothing, nor the pitcher of clay gives any hint that these things were invented by neediness; it seems as if all of them were intended to express sublime happiness and Olympian⁸ cloudlessness and, as it were, a playing with earnest things. Whereas the man who is guided by concepts and abstractions only succeeds thereby in warding off misfortune, is unable to compel the abstractions themselves to yield him happiness, and strives merely to be as free as possible of pain, the man of intuition, standing in the midst of a culture, reaps directly from his intuitions not just protection from harm but also a constant stream of brightness, a lightening of the spirit, redemption, and release. Of course, *when* he suffers, he suffers more severely; indeed he suffers more frequently because he does not know how to learn from experience and keeps on falling into the very same trap time after time. When he is suffering he is just as unreasonable as he is when happy, he shouts out loudly and knows no solace. How differently the same misfortune is endured by the stoic who has learned from experience and who governs himself by means of concepts! This man, who otherwise seeks only honesty, truth, freedom from illusions, and

8. That is, characteristic of Mount Olympus, the home of the Greek gods [editor's note].

protection from the onslaughts of things which might distract him, now performs, in the midst of misfortune, a masterpiece of pretence, just as the other did in the midst of happiness: he does not wear a twitching, mobile, human face, but rather a mask, as it were, with its features in dignified equilibrium; he does not shout, nor does he even change his tone of voice. If a veritable storm-cloud empties itself on his head, he wraps himself in his cloak and slowly walks away from under it.

1903

OSCAR WILDE

1854–1900

Oscar Wilde is known for his epigrammatic wit, dazzling skills in conversation, and scandalous homosexual behavior, which in 1895 led to his trial and imprisonment for sodomy. But Wilde was more than a brilliant—and tragic—cultural personality. He was a gifted, wonderfully entertaining, and disquieting writer, the author of an impressive body of work that includes the superb comedy *The Importance of Being Earnest*, the haunting novel *The Picture of Dorian Gray*, and sharp, suggestive critical essays.

Wilde was born in Dublin, Ireland. His father was a surgeon and respected author; his mother also wrote both verse and prose. Educated in classics at Trinity College, Dublin, Wilde won a fellowship to Magdalen College, Oxford University. There he was influenced by the eminent art historian John Ruskin, WALTER PATER, and the Pre-Raphaelite brotherhood of English poets and painters. The young Wilde began to lead his life as if it were a work of art, to be crafted, cultivated, and made to sparkle. Defying orthodoxy and social convention, he was flamboyant and theatrical.

In 1881, at his own expense, Wilde published his first book, *Poems*, a promising but derivative volume that reflects the influence of Wilde's reading of John Keats (1795–1821), Algernon Swinburne (1837–1909), Pater, and the Pre-Raphaelites. In the following year, Wilde toured and lectured in the United States. It is said that on his arrival in New York City, when asked by customs officials if he had anything to declare, he replied, "Only my genius." Wilde was by now a leader of the aesthetic movement, which rallied around the dictum of "art for art's sake." His deliberate eccentricity and exuberant self-regard drew ridicule in the weekly comic periodical *Punch*, and he was parodied as Bunthorne in Gilbert and Sullivan's 1881 operetta *Patience*.

Though Wilde had (in the words of one recent scholar) "flirted" with homosexuality for a number of years, he married Constance Lloyd, daughter of a prominent Irish barrister, in 1884. For his two sons Wilde wrote stories—inspired by the Danish writer Hans Christian Andersen—included in *The Happy Prince and Other Tales* (1888) and *A House of Pomegranates* (1892). He also wrote reviews for the *Pall Mall Gazette* and, from 1887 to 1889, served as the editor of *Woman's World*, a popular periodical to which Constance also contributed articles on politics and women's issues.

In the early 1890s, Wilde hit his stride. *The Picture of Dorian Gray* appeared first in *Lippincott's Magazine* in 1890; the book, revised and expanded by six chapters, was published in 1891. It recounts the story of a beautiful young man who seems

not to age but whose portrait becomes aged and ugly over time, the sign of his own corruption. In *Intentions* (1891), an important collection of essays, Wilde presented his audacious views on literature, art, and criticism; and in *Collected Poems* (1892), he gathered his verse. Wilde had hoped to center his literary career in poetry, but his greatest success was as a comic and satiric dramatist. His plays include *Lady Windemere's Fan* (1892); *A Woman of No Importance* (1893); *An Ideal Husband* (1895); and, above all, *The Importance of Being Earnest* (1895), which describes the courtships and betrothals of two young men-about-town who are leading double lives. Wilde also wrote the historical tragedies *The Duchess of Padua* (1892) and *Salomé* (1893); the latter, about the woman who danced before Herod and afterward demanded the head of John the Baptist, was written in French and then published in an English translation (1894) that included eerie, erotic illustrations by Aubrey Beardsley.

Wilde's pleasure in titillating and unnerving his audiences and readers resulted in many striking witticisms, such as Cecily's reproach in *The Importance of Being Earnest*: "I hope you have not been leading a double life, pretending to be wicked and being really good all the time. That would be hypocrisy." Yet in his own way, Wilde was deeply serious and morally earnest. A critic of middle-class Philistine smugness and moral complacency, he too wanted greater opportunity—though more than MATTHEW ARNOLD would have accepted—for freedom of expression and dissent, for the right to contest the status quo.

In one of his lectures in America, Wilde had declared, "To disagree with three fourths of all England on all points of view is one of the first elements of sanity." But in 1895 Wilde discovered that social and moral convention could be relentlessly punitive. When the marquess of Queensberry, the father of Wilde's lover, Lord Alfred Douglas, left a card at his club addressed "To Oscar Wilde, posing as a sodomite," Wilde unsuccessfully sued for libel—and then was himself arrested for violating the law forbidding "indecentencies between grown-up men, in public or private." Wilde was found guilty and sentenced to two years' imprisonment at hard labor.

After his release in May 1897, Wilde—separated from his wife and children, broken, bankrupt, and disgraced—left for France, calling himself "Sebastian Melmoth" ("Sebastian" after the Christian martyred by arrows in early fourth-century Rome, and "Melmoth" after the doomed hero of Charles Maturin's 1820 Gothic novel *Melmoth the Wanderer*). Wilde spent the rest of his life as an exile in Europe, recovering enough focus as a writer to tell of his painful prison experiences in *The Ballad of Reading Gaol* (1898). He died in Paris in November 1900, having remarked, "If I were to survive into the twentieth century, it would be more than the English people could bear." *De Profundis* ("out of the depths," the first two words of the Latin version of Psalm 130), both a book-length letter of reproach to Lord Alfred and a personal testament, was published in 1905. His self-judgment in this text is unsparing, as he declares: "Terrible as was what the world did to me, what I did to myself was far more terrible still."

In the preface to *The Picture of Dorian Gray*, our first selection, Wilde sketches his position on art and morality in a sequence of aphorisms. Authentic artists, says Wilde, concern themselves with style and form, with the adroit handling of the artistic medium and the shaping of beautiful works. Morality, he explains, is not a matter of an artist's or a writer's message; it instead rests in how well he or she has executed an aesthetic task. Wilde revises Arnold's statement that critics should be devoted to the best that has been thought and said by maintaining that the best is the most beautiful, whose nature is ultimately formal and stylistic rather than ethical. Wilde provokes us by concluding, "All art is quite useless."

Our next selection is an excerpt from the final part of Wilde's "The Decay of Lying: An Observation," which he completed in December 1888. It was published in the January 1889 issue of the journal *The Nineteenth Century*, and Wilde then revised and expanded it for his collection *Intentions*. Showing his mastery of the "dialogue"

form, Wilde presents two characters, Vivian and Cyril, in conversation in the library of a country house in Nottinghamshire. Vivian has written an essay titled "The Decay of Lying: A Protest," which he reads aloud to, and explicates for, Cyril—Wilde named the characters after his own sons Cyril (born in 1885) and Vivian (born in 1886). Wilde here deftly explores a two-part antirealist claim: "Art never expresses anything but itself" and "Life imitates Art far more than Art imitates Life."

As Wilde's biographer Richard Ellman has noted, Wilde mocks "conventional theories of sincerity and verisimilitude" and proposes instead an aesthetic based on "lies and masks." Ellman makes the astute point that Wilde avoids the term "imagination" because it connotes a Romantic flow or outpouring from within; he prefers the deliberately disquieting term "lying," with its implication of a self-aware desire to mislead and deceive. Writers do not tell the truth, but rather are engaged in doing the opposite. Furthermore, they do not reflect or take expression from the era in which they live but instead give shape to the era: Art gives character and meaning to Life.

From one perspective, Wilde's goal in "The Decay of Lying" is a familiar one; like HORACE, SIR PHILIP SIDNEY, and others from the classical period to the Renaissance, he seeks to entertain and instruct readers. He revels in paradox and exaggeration; he enjoys clever turns of phrase and reversing conventional judgments and assumptions; and he is fond of sequences of wit and irony. Throughout it is a bright, amusing performance.

But at the same time, the ideas that Wilde holds up for inspection are highly subversive, indeed outrageous. "The Decay of Lying," as Ellman has observed, presents the writer-artist as "a sacred malefactor," a liar, a nontruth teller who is not bound by any taken-for-granted norms of good and evil. In a sense, Wilde is reaching back to PLATO, who denounced fiction for its falsehood—the claim that Wilde comes forward to embrace and rejoice in. Both exhilarating and unnerving, Wilde's cleverly articulated conception of art gives supreme power to writers, critics, and playwrights: it is for him a manifesto and an act of self-expression. Just as much or more, however, what Wilde offers to his readers is a provocative pose that impels them to ask whether there is a significant difference between telling the truth and lying.

In "The Critic as Artist" (1890, 1891), a brisk, pointed dialogue on the nature of, and relationship between, the arts and criticism, Wilde expands on and develops the claims he advanced in the preface to *Dorian Gray* and in "The Decay of Lying." His mouthpiece Gilbert not only celebrates criticism in its own right but asserts and praises its superiority over so-called creative or primary literary and artistic work. Throughout, Wilde emphasizes and honors style, form, and self-conscious craft; in an anti-Romantic thrust, he devalues inspiration. He is antihistorical as well, opposed to history because of (and here he echoes RALPH WALDO EMERSON) the constraints that it imposes on individual expression.

"The details of history," according to Gilbert in part 1, "are always wearisome." Criticism "is more fascinating than history," for it "is concerned simply with oneself": it is a type of autobiography and impressionism. As Gilbert's comments on Ruskin and Pater indicate, for Wilde it does not matter whether the creative critic is faithful to the work of art: accurate statements about an aesthetic object or the artist's intentions count less than the critical essay's status as an independent work of art. In part 2, Wilde qualifies and complicates this position; for example, in his references to Shakespeare he concedes that historical study is important after all. But he continues to stress that "the highest Criticism, being the purest form of personal impression, is, in its way, more creative than creation."

Wilde is not an especially original thinker. He draws on nineteenth-century French and English authors, including the poet-critic Théophile Gautier, the novelist Joris-Karl Huysman, the poet Charles Baudelaire, and Pater. The concept of "art for art's sake" was in fact proposed by Gautier, in the preface to *Mademoiselle de Maupin*

(1835), where he affirmed: “Les choses sont belles en proportion inverse de leur utilité” (Things are beautiful in inverse proportion to their usefulness). Sometimes Wilde’s cool, canny ironies can feel predictable, produced on cue and according to formula. There is a measure of truth to the complaint of the American cultural critic H. L. Mencken (1880–1956) that in his endless flaunting of paradoxes, Wilde can be as insufferable as an overpious preacher.

On the other hand, Wilde’s epigrams and arguments at their best are compelling, and in recent years his life has drawn equal interest. Literary critics and theorists and scholars in gender and gay and lesbian studies have since the 1980s devoted many books and essays to Wilde’s writings and extraordinary and aggrieved life. Even earlier, critics including NORTHROP FRYE and HAROLD BLOOM praised him extravagantly; Frye, in *Creation and Recreation* (1980), portrayed Wilde as a theorist of the imagination equal in significance to the revolutionary painter and poet William Blake (1757–1827). Like Blake, and like the later Romantics PERCY BYSSHE SHELLEY and Emerson, Wilde contends that great writers and artists give structure to life through the power of their enlightened vision. For him the terms and values of art themselves constitute life. Nature, Wilde maintained, “is our creation. . . . Things are because we see them.” The result of critical inquiry is not truth, but an interpretation—or rather a series of misinterpretations, of misreadings, since we do not (and never will) possess an objectively known reality with which we could appraise and firmly decide among conflicting views.

This line of argument gives us a Wilde akin less to Pater than to the German philosopher FRIEDRICH NIETZSCHE, the Nietzsche of *The Will to Power* (1901) in particular: “It is our needs that interpret the world; our drives and their For and Against. Every drive is a kind of lust to rule; each one has its perspective that it would like to compel all the other drives to accept as a norm.” Wilde lacks this tone of grim intensity, but his elegantly articulated ideas imply the consequences that Nietzsche and later authors have expressed.

Preface to *The Picture of Dorian Gray* Keywords: Aesthetics, Authorship, Defense of Criticism, Ethics

“The Decay of Lying: An Observation” Keywords: Aesthetics, Authorship, Realism, Representation

“The Critic as Artist” Keywords: Aesthetics, Authorship, The Canon/Tradition, Defense of Criticism, Ethics, Interpretation Theory, Literary History, Representation, Subjectivity

Preface to *The Picture of Dorian Gray*

The artist is the creator of beautiful things.

To reveal art and conceal the artist is art’s aim.

The critic is he who can translate into another manner or a new material his impression of beautiful things.

The highest as the lowest form of criticism is a mode of autobiography. Those who find ugly meanings in beautiful things are corrupt without being charming. This is a fault.

Those who find beautiful meanings in beautiful things are the cultivated. For these there is hope.

They are the elect to whom beautiful things mean only Beauty.

There is no such thing as a moral or an immoral book.

Books are well written, or badly written. That is all.

The nineteenth century dislike of Realism is the rage of Caliban seeing his own face in a glass.¹

The nineteenth century dislike of Romanticism is the rage of Caliban not seeing his own face in a glass.

The moral life of man forms part of the subject-matter of the artist, but the morality of art consists in the perfect use of an imperfect medium. No artist desires to prove anything. Even things that are true can be proved.

No artist has ethical sympathies. An ethical sympathy in an artist is an unpardonable mannerism of style.

No artist is ever morbid. The artist can express everything.

Thought and language are to the artist instruments of an art.

Vice and virtue are to the artist materials for an art.

From the point of view of form, the type of all the arts is the art of the musician. From the point of view of feeling, the actor's craft is the type.

All art is at once surface and symbol.

Those who go beneath the surface do so at their peril.

Those who read the symbol do so at their peril.

It is the spectator, and not life, that art really mirrors.

Diversity of opinion about a work of art shows that the work is new, complex, and vital.

When critics disagree the artist is in accord with himself.

We can forgive a man for making a useful thing as long as he does not admire it. The only excuse for making a useless thing is that one admires it intensely.

All art is quite useless.

1891

From The Decay of Lying: An Observation

* * *

Cyril. * * * But even admitting this strange imitative instinct in Life and Nature, surely you would acknowledge that Art expresses the temper of its age, the spirit of its time, the moral and social conditions that surround it, and under whose influence it is produced.

Vivian. Certainly not! Art never expresses anything but itself. This is the principle of my new æsthetics; and it is this, more than that vital connection between form and substance, on which Mr Pater¹ dwells, that makes music the type of all the arts. Of course, nations and individuals, with that healthy natural vanity which is the secret of existence, are always under the impression that it is of them that the Muses are talking, always trying to find in the calm dignity of imaginative art some mirror of their own turbid² passions, always forgetting that the singer of life is not Apollo, but Marsyas.³

1. Mirror. Caliban: half-human slave of Prospero in Shakespeare's play *The Tempest* (1611).

1. WALTER PATER (1839–1884), English essayist and art critic. The reference is to "The School of Giorgione," included in *The Renaissance: Studies in Art and Poetry* (2d ed., 1877), where Pater explores "a certain interpenetration of the matter or subject of a work of art with the form of it" in painting, music, and poetry. The Italian painter

Giorgione (1478–1510) was an early master of the Venetian school.

2. Not clear or transparent; confused, muddled.

3. In Greek mythology, a flute player who challenged Apollo, god of music and poetry, to a musical contest, judged by the Muses (the 9 daughters of Memory who presided over the arts and all intellectual pursuits); after he lost, Apollo flayed him alive for his presumption.

Remote from reality, and with her eyes turned away from the shadows of the cave,⁴ Art reveals her own perfection, and the wondering crowd that watches the opening of the marvellous, many-petalled rose⁵ fancies that it is its own history that is being told to it, its own spirit that is finding expression in a new form. But it is not so. The highest art rejects the burden of the human spirit, and gains more from a new medium or a fresh material than she does from any enthusiasm for art, or from any lofty passion, or from any great awakening of the human consciousness. She develops purely on her own lines. She is not symbolic of any age. It is the ages that are her symbols.

Even those who hold that Art is representative of time and place and people, cannot help admitting that the more imitative an art is, the less it represents to us the spirit of its age. The evil faces of the Roman emperors look out at us from the foul porphyry and spotted jasper⁶ in which the realistic artists of the day delighted to work, and we fancy that in those cruel lips and heavy sensual jaws we can find the secret of the ruin of the Empire. But it was not so. The vices of Tiberius⁷ could not destroy that supreme civilization, any more than the virtues of the Antonines⁸ could save it. It fell for other, for less interesting reasons. The sibyls and prophets of the Sistine⁹ may indeed serve to interpret for some that new birth of the emancipated spirit that we call the Renaissance; but what do the drunken boors and brawling peasants of Dutch art tell us about the great soul of Holland? The more abstract, the more ideal an art is, the more it reveals to us the temper of its age. If we wish to understand a nation by means of its art, let us look at its architecture or its music.

Cyril. I quite agree with you there. The spirit of an age may be best expressed in the abstract ideal arts, for the spirit itself is abstract and ideal. Upon the other hand, for the visible aspect of an age, for its look, as the phrase goes, we must of course go to the arts of imitation.

Vivian. I don't think so. After all, what the imitative arts really give us are merely the various styles of particular artists, or of certain schools of artists. Surely you don't imagine that the people of the Middle Ages bore any resemblance at all to the figures on mediæval stained glass, or in mediæval stone and wood carving, or on mediæval metal-work, or tapestries, or illuminated MSS.¹ They were probably very ordinary-looking people, with nothing grotesque, or remarkable, or fantastic in their appearance. The Middle Ages, as we know them in art, are simply a definite form of style, and there is no reason at all why an artist with this style should not be produced in the nineteenth century. No great artist ever sees things as they really are. If he did, he would cease to be an artist. Take an example from our own day. I know that

4. PLATO (ca. 427–ca. 347 B.C.E.), in *Republic* 7.514a–518b, compares the human condition to that of prisoners in a cave, able to see only shadows cast by representations of things (and thus at a double remove from reality).

5. See DANTE (1265–1321), *Paradiso* 31: the sacred host in Heaven appears in the form of a white rose.

6. A variety of quartz, usually colored red. "Porphyry": a reddish-purplish rock. Wilde is referring here to stoneware and sculpture made from these materials.

7. The second Roman emperor (42 B.C.E.–37 C.E.; emperor 14–37 C.E.) accused by ancient historians of cruelty, perversion, and vice.

8. The collective name of 4 Roman emperors of the 2d century C.E.; the first, Antoninus Pius (86–161; emperor, 138–161), was known for his beneficence and enjoyed a peaceful reign.

9. The Sistine Chapel in Rome, whose ceiling was painted by Michelangelo Buonarroti between 1508 and 1512. "Sibyls": female prophets.

1. Manuscripts.

you are fond of Japanese things.² Now, do you really imagine that the Japanese people, as they are presented to us in art, have any existence? If you do, you have never understood Japanese art at all. The Japanese people are the deliberate self-conscious creation of certain individual artists. If you set a picture by Hokusai, or Hokkei,³ or any of the great native painters, beside a real Japanese gentleman or lady, you will see that there is not the slightest resemblance between them. The actual people who live in Japan are not unlike the general run of English people; that is to say, they are extremely commonplace, and have nothing curious or extraordinary about them. In fact the whole of Japan is a pure invention. There is no such country, there are no such people. One of our most charming painters⁴ went recently to the Land of the Chrysanthemum in the foolish hope of seeing the Japanese. All he saw, all he had the chance of painting, were a few lanterns and some fans. He was quite unable to discover the inhabitants, as his delightful exhibition at Messrs Dowdeswell's Gallery showed only too well. He did not know that the Japanese people are, as I have said, simply a mode of style, an exquisite fancy of art. And so, if you desire to see a Japanese effect, you will not behave like a tourist and go to Tokio. On the contrary, you will stay at home, and steep yourself in the work of certain Japanese artists, and then, when you have absorbed the spirit of their style, and caught their imaginative manner of vision, you will go some afternoon and sit in the Park or stroll down Piccadilly,⁵ and if you cannot see an absolutely Japanese effect there, you will not see it anywhere. Or, to return again to the past, take as another instance the ancient Greeks. Do you think that Greek art ever tells us what the Greek people were like? Do you believe that the Athenian women were like the stately dignified figures of the Parthenon frieze,⁶ or like those marvellous goddesses who sat in the triangular pediments of the same building? If you judge from the art, they certainly were so. But read an authority, like Aristophanes⁷ for instance. You will find that the Athenian ladies laced tightly, wore high-heeled shoes, dyed their hair yellow, painted and rouged their faces, and were exactly like any silly fashionable or fallen creature of our own day. The fact is that we look back on the ages entirely through the medium of Art, and Art, very fortunately, has never once told us the truth.

Cyril. But modern portraits by English painters, what of them? Surely they are like the people they pretend to represent?

Vivian. Quite so. They are so like them that a hundred years from now no one will believe in them. The only portraits in which one believes are portraits where there is very little of the sitter, and a very great deal of the artist. Holbein's⁸ drawings of the men and women of his time impress us with a

2. Japanese art, especially woodblock prints, influenced many Western artists in the late 19th century and became highly fashionable in England.

3. Totoya (Katsushika) Hokkei (1780–1850), Japanese printmaker, a student of the artist Katsushika Hokusai (1760–1849), who is remembered for his historical scenes and landscapes.

4. Mortimer Menpes (1859–1938), an Australian-born painter who was one of the first to study Japanese art in Japan; he exhibited his work at the Dowdeswell Gallery in London in April–May 1888.

5. A major shopping street in central London.

The Park: Hyde Park, popular for fashionable promenades.

6. The continuous band of low-relief sculpture, depicting a religious procession, that adorned the outside of the Parthenon, the temple of Athena (built 447–432 B.C.E.) on the Acropolis of Athens; in 1816 almost half of the 525-foot frieze was bought by London's British Museum.

7. Greek comic playwright (ca. 450–ca. 385 B.C.E.).

8. Hans Holbein the Younger (1497?–1553), German portrait artist and printmaker.

sense of their absolute reality. But this is simply because Holbein compelled life to accept his conditions, to restrain itself within his limitations, to reproduce his type, and to appear as he wished it to appear. It is style that makes us believe in a thing—nothing but style. Most of our modern portrait painters are doomed to absolute oblivion. They never paint what they see. They paint what the public sees, and the public never sees anything.

* * *

Cyril. * * * But in order to avoid making any error I want you to tell me briefly the doctrines of the new Æsthetics.

Vivian. Briefly, then, they are these. Art never expresses anything but itself. It has an independent life, just as Thought has, and develops purely on its own lines. It is not necessarily realistic in an age of realism, nor spiritual in an age of faith. So far from being the creation of its time, it is usually in direct opposition to it, and the only history that it preserves for us is the history of its own progress. Sometimes it returns upon its footsteps, and revives some antique form, as happened in the archaistic movement of late Greek Art, and in the pre-Raphaelite movement⁹ of our own day. At other times it entirely anticipates its age, and produces in one century work that it takes another century to understand, to appreciate, and to enjoy. In no case does it reproduce its age. To pass from the art of a time to the time itself is the great mistake that all historians commit.

The second doctrine is this. All bad art comes from returning to Life and Nature, and elevating them into ideals. Life and Nature may sometimes be used as part of Art's rough material, but before they are of any real service to art they must be translated into artistic conventions. The moment Art surrenders its imaginative medium it surrenders everything. As a method Realism is a complete failure, and the two things that every artist should avoid are modernity of form and modernity of subject-matter. To us, who live in the nineteenth century, any century is a suitable subject for art except our own. The only beautiful things are the things that do not concern us. It is, to have the pleasure of quoting myself,¹ exactly because Hecuba is nothing to us that her sorrows are so suitable a motive for a tragedy. Besides, it is only the modern that ever becomes old-fashioned. M. Zola sits down to give us a picture of the Second Empire.² Who cares for the Second Empire now? It is out of date. Life goes faster than Realism, but Romanticism is always in front of Life.

The third doctrine is that Life imitates Art far more than Art imitates Life. This results not merely from Life's imitative instinct, but from the fact that the self-conscious aim of Life is to find expression, and that Art offers it certain beautiful forms through which it may realize that energy. It is a theory that has never been put forward before, but it is extremely fruitful,

9. A "brotherhood" founded in 1848 by English poets and painters who rejected Victorian materialism and neoclassical conventions of academic art, focusing instead on the medieval world and imitating Italian painters prior to Raphael (Raffaello Sanzio, 1483–1520). "Archaistic": imitating earlier archaic art (ca. 660–480 B.C.E.), especially sculpture, as produced in the 4th century B.C.E.

1. Wilde repeats the following phrase from an earlier passage not included in our selection. The ref-

erence is to *Hamlet* (ca. 1600)—"What's Hecuba to him, or he to Hecuba, / That he should weep for her?" (2.2.536–37)—Hamlet's response to an actor's impassioned sympathy for the suffering of a mythical figure, the Trojan queen Hecuba.

2. The imperial Bonapartist regime (1852–70) of Napoleon III. Émile Zola (1840–1902), French novelist whose naturalist works described the corruption and decadence of the Second Empire in realistic detail.

and throws an entirely new light upon the history of Art. It follows, as a corollary from this, that external Nature also imitates Art. The only effects that she can show us are effects that we have already seen through poetry, or in paintings. This is the secret of Nature's charm, as well as the explanation of Nature's weakness. The final revelation is that Lying, the telling of beautiful untrue things, is the proper aim of Art. But of this I think I have spoken at sufficient length. And now let us go out on the terrace, where 'droops the milk-white peacock like a ghost', while the evening star 'washes the dusk with silver'.³ At twilight nature becomes a wonderfully suggestive effect, and is not without loveliness, though perhaps its chief use is to illustrate quotations from the poets. Come! We have talked long enough.

1891

*From The Critic as Artist*¹

From Part I

* * *

Ernest. *** I am quite ready to admit that I was wrong in what I said about the Greeks. They were, as you have pointed out, a nation of art critics. I acknowledge it, and I feel a little sorry for them. For the creative faculty is higher than the critical. There is really no comparison between them.

Gilbert. The antithesis between them is entirely arbitrary. Without the critical faculty, there is no artistic creation at all worthy of the name. You spoke a little while ago of that fine spirit of choice and delicate instinct of selection by which the artist realises life for us, and gives to it a momentary perfection. Well, that spirit of choice, that subtle tact of omission, is really the critical faculty in one of its most characteristic moods, and no one who does not possess this critical faculty can create anything at all in art. Arnold's definition of literature as a criticism of life,² was not very felicitous in form, but it showed how keenly he recognised the importance of the critical element in all creative work.

Ernest. I should have said that great artists worked unconsciously, that they were "wiser than they knew," as, I think, Emerson remarks somewhere.³

Gilbert. It is really not so, Ernest. All fine imaginative work is self-conscious and deliberate. No poet sings because he must sing. At least, no great poet does. A great poet sings because he chooses to sing. It is so now, and it has always been so. We are sometimes apt to think that the voices that sounded at the dawn of poetry were simpler, fresher, and more natural than ours, and

3. Wilde quotes first "Now Sleeps the Crimson Petal, Now the White," a lyric from *The Princess* (1847), by Alfred, Lord Tennyson, and then the poem "To the Evening Star" (1783), by William Blake.

1. Originally titled "The True Function and Value of Criticism, with Some Remarks on the Importance of Doing Nothing." For his book *Intentions* (1891), Wilde retitled and revised the text.

2. Often in "The Critic as Artist," Wilde alludes or responds directly to MATTHEW ARNOLD's views on literature and criticism in *Essays in Criticism: First Series* (1865), in particular "The Function of Criticism at the Present Time" (see above).

3. See "The Over-Soul" and "Compensation," both in *Essays: First Series* (1841), by RALPH WALDO EMERSON (1803–1882).

that the world which the early poets looked at, and through which they walked, had a kind of poetical quality of its own, and almost without changing could pass into song. The snow lies thick now upon Olympus, and its steep, scarped sides are bleak and barren, but once, we fancy, the white feet of the Muses brushed the dew from the anemones in the morning, and at evening came Apollo⁴ to sing to the shepherds in the vale. But in this we are merely lending to other ages what we desire, or think we desire, for our own. Our historical sense is at fault. Every century that produces poetry is, so far, an artificial century, and the work that seems to us to be the most natural and simple product of its time is always the result of the most self-conscious effort. Believe me, Ernest, there is no fine art without self-consciousness, and self-consciousness and the critical spirit are one.

Ernest. I see what you mean, and there is much in it. But surely you would admit that the great poems of the early world, the primitive, anonymous collective poems, were the result of the imagination of races, rather than of the imagination of individuals?

Gilbert. Not when they became poetry. Not when they received a beautiful form. For there is no art where there is no style, and no style where there is no unity, and unity is of the individual. No doubt Homer had old ballads and stories to deal with, as Shakespeare had chronicles and plays and novels from which to work, but they were merely his rough material. He took them and shaped them into song. They became his, because he made them lovely. They were built out of music,

And so not built at all,
And therefore built for ever.⁵

The longer one studies life and literature, the more strongly one feels that behind everything that is wonderful stands the individual, and that it is not the moment that makes the man, but the man who creates the age. Indeed, I am inclined to think that each myth and legend that seems to us to spring out of the wonder, or terror, or fancy of tribe and nation, was in its origin the invention of one single mind. The curiously limited number of the myths seems to me to point to this conclusion. But we must not go off into questions of comparative mythology. We must keep to criticism. And what I want to point out is this. An age that has no criticism is either an age in which art is immobile, hieratic,⁶ and confined to the reproduction of formal types, or an age that possesses no art at all. There have been critical ages that have not been creative, in the ordinary sense of the word, ages in which the spirit of man has sought to set in order the treasures of his treasure-house, to separate the gold from the silver, and the silver from the lead, to count over the jewels, and to give names to the pearls. But there has never been a creative age that has not been critical also. For it is the critical faculty that invents fresh forms. The tendency of creation is to repeat itself. It is to the critical instinct that we owe each new school that springs up, each new

4. The Greek god of prophecy, music, and poetry. Olympus: mountain range in northern Greece and home of the Greek gods. Muses: in Greek mythology, the 9 daughters of memory; they presided over the arts and sciences.

5. Slightly misquoting Alfred, Lord Tennyson,

Idylls of the King (1859–85), “Gareth and Lynette,” lines 272–74.

6. Pertaining to the priesthood; here a reference to certain styles in art in which the representations or methods are fixed by religious tradition.

mould that art finds ready to its hand. There is really not a single form that art now uses that does not come to us from the critical spirit of Alexandria,⁷ where these forms were either stereotyped,⁸ or invented, or made perfect. I say Alexandria, not merely because it was there that the Greek spirit became most self-conscious, and indeed ultimately expired in scepticism and theology, but because it was to that city, and not to Athens, that Rome turned for her models, and it was through the survival, such as it was, of the Latin language that culture lived at all. When, at the Renaissance, Greek literature dawned upon Europe, the soil had been in some measure prepared for it. But to get rid of the details of history, which are always wearisome, and usually inaccurate, let us say generally that the forms of art have been due to the Greek critical spirit. To it we owe the epic, the lyric, the entire drama in every one of its developments, including burlesque, the idyll, the romantic novel, the novel of adventure, the essay, the dialogue, the oration, the lecture, for which perhaps we should not forgive them, and the epigram, in all the wide meaning of that word. In fact, we owe it everything, except the sonnet, to which, however, some curious parallels of thought movement may be traced in the Anthology,⁹ American journalism, to which no parallel can be found anywhere, and the ballad in sham Scotch dialect, which one of our most industrious writers¹ has recently proposed should be made the basis for a final and unanimous effort on the part of our second-rate poets to make themselves really romantic. Each new school, as it appears, cries out against criticism, but it is to the critical faculty in man that it owes its origin. The mere creative instinct does not innovate, but reproduces.

Ernest. You have been talking of criticism as an essential part of the creative spirit, and I now fully accept your theory. But what of criticism outside creation? I have a foolish habit of reading periodicals, and it seems to me that most modern criticism is perfectly valueless.

Gilbert. So is most modern creative work, also. Mediocrity weighing mediocrity in the balance, and incompetence applauding its brother—that is the spectacle which the artistic activity of England affords us from time to time. And yet, I feel I am a little unfair in this matter. As a rule, the critics—I speak, of course, of the higher class, of those, in fact, who write for the sixpenny papers—are far more cultured than the people whose work they are called upon to review. This is, indeed, only what one would expect, for criticism demands infinitely more cultivation than creation does.

Ernest. Really?

Gilbert. Certainly. Anybody can write a three-volumed novel.² It merely requires a complete ignorance of both life and literature. The difficulty that I should fancy the reviewer feels is the difficulty of sustaining any standard. Where there is no style a standard must be impossible. The poor reviewers are apparently reduced to be the reporters of the police court of literature, the chroniclers of the doings of the habitual criminals of art. It is sometimes

7. City and major seaport in northern Egypt. Founded by Alexander the Great after he conquered Egypt in 331 B.C.E., it was the center of Hellenistic commerce and learning, with a great university and two royal libraries.

8. Fixed in unchanging form.

9. The Greek or Palatine Anthology, a collection

of Greek epigrams (some from as early as the 7th c. B.C.E.) compiled ca. 980 C.E.

1. William Sharp (1855–1905), Scottish writer whose works (written under the name Fiona Macleod) include mystic Celtic tales and romances of peasant life.

2. Standard length of Victorian novels.

said of them that they do not read all through the works they are called upon to criticise. They do not. Or at least they should not. If they did so, they would become confirmed misanthropes; or, if I may borrow a phrase from one of the pretty Newnham graduates, confirmed womanthropes³ for the rest of their lives. Nor is it necessary. To know the vintage and quality of a wine one need not drink the whole cask. It must be perfectly easy in half an hour to say whether a book is worth anything or worth nothing. Ten minutes are really sufficient, if one has the instinct for form. Who wants to wade through a dull volume? One tastes it, and that is quite enough—more than enough, I should imagine. I am aware that there are many honest workers in painting as well as in literature who object to criticism entirely. They are quite right. Their work stands in no intellectual relation to their age. It brings us no new element of pleasure. It suggests no fresh departure of thought, or passion, or beauty. It should not be spoken of. It should be left to the oblivion that it deserves.

Ernest. But, my dear fellow—excuse me for interrupting you—you seem to me to be allowing your passion for criticism to lead you a great deal too far. For, after all, even you must admit that it is much more difficult to do a thing than to talk about it.

Gilbert. More difficult to do a thing than to talk about it? Not at all. That is a gross popular error. It is very much more difficult to talk about a thing than to do it. In the sphere of actual life that is, of course, obvious. Anybody can make history. Only a great man can write it. There is no mode of action, no form of emotion, that we do not share with the lower animals. It is only by language that we rise above them, or above each other—by language, which is the parent, and not the child, of thought. Action, indeed, is always easy, and when presented to us in its most aggravated, because most continuous form, which I take to be that of real industry, becomes simply the refuge of people who have nothing whatsoever to do. No, Ernest, don't talk about action. It is a blind thing, dependent on external influences, and moved by an impulse of whose nature it is unconscious. It is a thing incomplete in its essence, because limited by accident, and ignorant of its direction, being always at variance with its aim. Its basis is the lack of imagination. It is the last resource of those who know not how to dream.

Ernest. Gilbert, you treat the world as if it were a crystal ball. You hold it in your hand, and reverse it to please a wilful fancy. You do nothing but rewrite history.

Gilbert. The one duty we owe to history is to rewrite it. That is not the least of the tasks in store for the critical spirit. When we have fully discovered the scientific laws that govern life we shall realise that the one person who has more illusions than the dreamer is the man of action. He, indeed, knows neither the origin of his deeds nor their results. From the field in which he thought that he had sown thorns we have gathered our vintage, and the fig-tree that he planted for our pleasure is as barren as the thistle, and more bitter.⁴ It is because Humanity has never known where it was going that it has been able to find its way.

3. A nonsensical coinage meaning "woman-haters." Newnham: the second of the colleges for women in Cambridge (founded in 1871; women initially did not follow the university curricu-

lum and were not granted Cambridge degrees for another half century).

4. See Matthew 7.16: "Do men gather grapes of thorns, or figs of thistles?"

Ernest. You think, then, that in the sphere of action a conscious aim is a delusion?

Gilbert. It is worse than a delusion. If we lived long enough to see the results of our actions, it may be that those who call themselves good would be sickened with a dull remorse, and those whom the world calls evil stirred by a noble joy. Each little thing that we do passes into the great machine of life, which may grind our virtues to powder and make them worthless, or transform our sins into elements of a new civilisation, more marvellous and more splendid than any that has gone before. * * *

Ernest. * * * But, surely, the higher you place the creative artist, the lower must the critic rank.

Gilbert. Why so?

Ernest. Because the best that he can give us will be but an echo of rich music, a dim shadow of clear-outlined form. It may, indeed, be that life is chaos, as you tell me that it is; that its martyrdoms are mean and its heroisms ignoble; and that it is the function of Literature to create, from the rough material of actual existence, a new world that will be more marvellous, more enduring, and more true than the world that common eyes look upon, and through which common natures seek to realise their perfection. But surely, if this new world has been made by the spirit and touch of a great artist, it will be a thing so complete and perfect that there will be nothing left for the critic to do. I quite understand now, and indeed admit most readily, that it is far more difficult to talk about a thing than to do it. But it seems to me that this sound and sensible maxim, which is really extremely soothing to one's feelings, and should be adopted as its motto by every Academy of Literature all over the world, applies only to the relations that exist between Art and Life, and not to any relations that there may be between Art and Criticism.

Gilbert. But, surely, Criticism is itself an art. And just as artistic creation implies the working of the critical faculty, and, indeed, without it cannot be said to exist at all, so Criticism is really creative in the highest sense of the word. Criticism is, in fact, both creative and independent.

Ernest. Independent?

Gilbert. Yes; independent. Criticism is no more to be judged by any low standard of imitation or resemblance than is the work of poet or sculptor. The critic occupies the same relation to the work of art that he criticises as the artist does to the visible world of form and colour, or the unseen world of passion and of thought. He does not even require for the perfection of his art the finest materials. Anything will serve his purpose. And just as out of the sordid and sentimental amours of the silly wife of a small country doctor in the squalid village of Yonville-l'Abbaye, near Rouen, Gustave Flaubert⁵ was able to create a classic, and make a masterpiece of style, so from subjects of little or of no importance, such as the pictures in this year's Royal Academy, or in any year's Royal Academy, for that matter, Mr. Lewis Morris's poems, M. Ohnet's novels, or the plays of Mr. Henry Arthur Jones,⁶ the true critic can, if it be his pleasure so to direct or waste his faculty of contemplation, produce work that will be flawless in beauty and instinct with

5. French novelist (1821–1880); the “amours” are treated in *Madame Bovary* (1856).

6. English dramatist (1851–1929). Morris (1833–

1907), Welsh poet, essayist, and barrister. Georges Ohnet (1848–1918), French novelist and dramatist.

intellectual subtlety. Why not? Dulness is always an irresistible temptation for brilliancy, and stupidity is the permanent *Bestia Trionfante*⁷ that calls wisdom from its cave. To an artist so creative as the critic, what does subject-matter signify? No more and no less than it does to the novelist and the painter. Like them, he can find his motives everywhere. Treatment is the test. There is nothing that has not in it suggestion or challenge.

Ernest. But is Criticism really a creative art?

Gilbert. Why should it not be? It works with materials, and puts them into a form that is at once new and delightful. What more can one say of poetry? Indeed, I would call criticism a creation within a creation. For just as the great artists, from Homer and Æschylus, down to Shakespeare and Keats,⁸ did not go directly to life for their subject-matter, but sought for it in myth, and legend, and ancient tale, so the critic deals with materials that others have, as it were, purified for him, and to which imaginative form and colour have been already added. Nay, more, I would say that the highest Criticism, being the purest form of personal impression, is, in its way, more creative than creation, as it has least reference to any standard external to itself, and is, in fact, its own reason for existing, and, as the Greeks would put it, in itself, and to itself, an end. Certainly, it is never trammelled by any shackles of verisimilitude. No ignoble considerations of probability, that cowardly concession to the tedious repetitions of domestic or public life, affect it ever. One may appeal from fiction unto fact. But from the soul there is no appeal.

Ernest. From the soul?

Gilbert. Yes, from the soul. That is what the highest Criticism really is, the record of one's own soul. It is more fascinating than history, as it is concerned simply with oneself. It is more delightful than philosophy, as its subject is concrete and not abstract, real and not vague. It is the only civilised form of autobiography, as it deals not with the events, but with the thoughts of one's life; not with life's physical accidents of deed or circumstance, but with the spiritual moods and imaginative passions of the mind. I am always amused by the silly vanity of those writers and artists of our day who seem to imagine that the primary function of the critic is to chatter about their second-rate work. The best that one can say of most modern creative art is that it is just a little less vulgar than reality, and so the critic, with his fine sense of distinction and sure instinct of delicate refinement, will prefer to look into the silver mirror or through the woven veil, and will turn his eyes away from the chaos and clamour of actual existence, though the mirror be tarnished and the veil be torn. His sole aim is to chronicle his own impressions. It is for him that pictures are painted, books written, and marble hewn into form.

Ernest. I seem to have heard another theory of Criticism.

Gilbert. Yes: it has been said by one whose gracious memory we all revere, and the music of whose pipe once lured Proserpina from her Sicilian fields, and made those white feet stir, and not in vain, the Cumnor cowslips, that

7. Triumphant Beast (Italian); the reference is to *Spaccio della bestia Trionfante* (1584, *Expulsion of the Triumphant Beast*), a philosophical allegory by the Italian scientist and philosopher Giordano Bruno (1548–1600).

8. John Keats (1795–1821), English Romantic poet; roughly 2 centuries separated his works from those of Shakespeare, and the tragedies of Æschylus (525–456 B.C.E.) from the epics of Homer.

the proper aim of Criticism is to see the object as in itself it really is.⁹ But this is a very serious error, and takes no cognisance of Criticism's most perfect form, which is in its essence purely subjective, and seeks to reveal its own secret and not the secret of another. For the highest Criticism deals with art not as expressive, but as impressive, purely.

Ernest. But is that really so?

Gilbert. Of course it is. Who cares whether Mr. Ruskin's views on Turner¹ are sound or not? What does it matter? That mighty and majestic prose of his, so fervid and so fiery-coloured in its noble eloquence, so rich in its elaborate, symphonic music, so sure and certain, at its best, in subtle choice of word and epithet, is at least as great a work of art as any of those wonderful sunsets that bleach or rot on their corrupted canvases in England's Gallery;² greater, indeed, one is apt to think at times, not merely because its equal beauty is more enduring, but on account of the fuller variety of its appeal, soul speaking to soul in those long-cadenced lines, not through form and colour alone, though through these, indeed, completely and without loss, but with intellectual and emotional utterance, with lofty passion and with loftier thought, with imaginative insight, and with poetic aim; greater, I always think, even as Literature is the greater art. Who, again, cares whether Mr. Pater has put into the portrait of Monna Lisa³ something that Lionardo never dreamed of? The painter may have been merely the slave of an archaic smile, as some have fancied, but whenever I pass into the cool galleries of the Palace of the Louvre, and stand before that strange figure "set in its marble chair in that cirque of fantastic rocks, as in some faint light under sea," I murmur to myself, "She is older than the rocks among which she sits; like the vampire, she has been dead many times, and learned the secrets of the grave; and has been a diver in deep seas, and keeps their fallen day about her; and trafficked for strange webs with Eastern merchants; and, as Leda, was the mother of Helen of Troy, and, as St. Anne, the mother of Mary; and all this has been to her but as the sound of lyres and flutes, and lives only in the delicacy with which it has moulded the changing lineaments, and tinged the eyelids and the hands." And I say to my friend, "The presence that thus so strangely rose beside the waters is expressive of what in the ways of a thousand years man had come to desire"; and he answers me, "Hers is the head upon which all 'the ends of the world are come,' and the eyelids are a little weary."

And so the picture becomes more wonderful to us than it really is, and reveals to us a secret of which, in truth, it knows nothing, and the music of the mystical prose is as sweet in our ears as was that flute-player's music that lent to the lips of La Gioconda⁴ those subtle and poisonous curves. Do you ask me what Lionardo would have said had any one told him of this picture that "all the thoughts and experience of the world had etched and moulded there in that which they had of power to refine and make expressive the outward

9. Matthew Arnold defines the "aim of criticism" in "The Function of Criticism at the Present Time." In his poem "Thyrsis" (1866), Arnold says that he would supplicate Proserpina, the Roman goddess of fertility and queen of the underworld, "in vain"; for while she knows Sicily well, she does not know the "Cumnor cowslips," near Oxford.

1. The painter J. M. W. Turner (1775–1851), passionately defended by the English writer, reformer, and art critic John Ruskin (1819–1900).

2. The National Gallery, in London.

3. In the essay on Leonardo da Vinci (1452–1519) included in *Studies in the History of the Renaissance* (1873), by WALTER PATER (1839–1894); Gilbert then quotes Pater.

4. The subject of Leonardo's painting (ca. 1504) was the wife of Francesco del Gioconda; thus, the *Mona Lisa* is sometimes referred to as *La Gioconda*.

form, the animalism of Greece, the lust of Rome, the reverie of the Middle Age with its spiritual ambition and imaginative loves, the return of the Pagan world, the sins of the Borgias?"⁵ He would probably have answered that he had contemplated none of these things, but had concerned himself simply with certain arrangements of lines and masses, and with new and curious colour-harmonies of blue and green. And it is for this very reason that the criticism which I have quoted is criticism of the highest kind. It treats the work of art simply as a starting-point for a new creation. It does not confine itself—let us at least suppose so for the moment—to discovering the real intention of the artist and accepting that as final. And in this it is right, for the meaning of any beautiful created thing is, at least, as much in the soul of him who looks at it as it was in his soul who wrought it. Nay, it is rather the beholder who lends to the beautiful thing its myriad meanings, and makes it marvellous for us, and sets it in some new relation to the age, so that it becomes a vital portion of our lives, and a symbol of what we pray for, or perhaps of what, having prayed for, we fear that we may receive. The longer I study, Ernest, the more clearly I see that the beauty of the visible arts is, as the beauty of music, impressive primarily, and that it may be marred, and indeed often is so, by any excess of intellectual intention on the part of the artist. For when the work is finished it has, as it were, an independent life of its own, and may deliver a message far other than that which was put into its lips to say. Sometimes, when I listen to the overture of *Tannhäuser*,⁶ I seem indeed to see that comely knight treading delicately on the flower-strewn grass, and to hear the voice of Venus calling to him from the caverned hill. But at other times it speaks to me of a thousand different things, of myself, it may be, and my own life, or of the lives of others whom one has loved and grown weary of loving, or of the passions that man has known, or of the passions that man has not known, and so has sought for. To-night it may fill one with that *ΕΡΩΣ ΤΩΝ ΑΔΥΝΑΤΩΝ*, that *Amour de l'Impossible*,⁷ which falls like a madness on many who think they live securely and out of reach of harm, so that they sicken suddenly with the poison of unlimited desire, and, in the infinite pursuit of what they may not obtain, grow faint and swoon or stumble. To-morrow, like the music of which Aristotle and Plato tell us, the noble Dorian music⁸ of the Greek, it may perform the office of a physician, and give us an anodyne against pain, and heal the spirit that is wounded, and "bring the soul into harmony with all right things." And what is true about music is true about all the arts. Beauty has as many meanings as man has moods. Beauty is the symbol of symbols. Beauty reveals everything, because it expresses nothing. When it shows us itself it shows us the whole fiery-coloured world.

Ernest. But is such work as you have talked about really criticism?

Gilbert. It is the highest Criticism, for it criticises not merely the individual work of art, but Beauty itself, and fills with wonder a form which the artist may have left void, or not understood, or understood incompletely.

5. An Italian family, influential from the 14th to the 16th century, that included religious, military, and political leaders and patrons of the arts; they were notorious for their ruthlessness and greed.

6. An 1845 opera by the German composer Richard Wagner (1813–1883), which describes the legendary relationship between the 14th-century German poet of the title and Venus, Roman god-

dess of love.

7. The Greek and French phrases both mean "love of the impossible."

8. Restrained and simple music associated with the Dorians, the last of the northern invaders of Greece (ca. 11th c. B.C.E.). On the Greek philosophers PLATO (ca. 427–ca. 347 B.C.E.) and ARISTOTLE (384–322 B.C.E.), see above.

Ernest. The highest Criticism, then, is more creative than creation, and the primary aim of the critic is to see the object as in itself it really is not; that is your theory, I believe?

Gilbert. Yes, that is my theory. To the critic the work of art is simply a suggestion for a new work of his own, that need not necessarily bear any obvious resemblance to the thing it criticises. The one characteristic of a beautiful form is that one can put into it whatever one wishes, and see in it whatever one chooses to see; and the Beauty, that gives to creation its universal and æsthetic element, makes the critic a creator in his turn, and whispers of a thousand different things which were not present in the mind of him who carved the statue or painted the panel or graved the gem.

It is sometimes said by those who understand neither the nature of the highest Criticism nor the charm of the highest Art, that the pictures that the critic loves most to write about are those that belong to the anecdotal of painting, and that deal with scenes taken out of literature or history. But this is not so. Indeed, pictures of this kind are far too intelligible. As a class, they rank with illustrations, and, even considered from this point of view, are failures, as they do not stir the imagination, but set definite bounds to it. For the domain of the painter is, as I suggested before, widely different from that of the poet. To the latter belongs life in its full and absolute entirety; not merely the beauty that men look at, but the beauty that men listen to also; not merely the momentary grace of form or the transient gladness of colour, but the whole sphere of feeling, the perfect cycle of thought. The painter is so far limited that it is only through the mask of the body that he can show us the mystery of the soul; only through conventional images that he can handle ideas; only through its physical equivalents that he can deal with psychology. And how inadequately does he do it then, asking us to accept the torn turban of the Moor for the noble rage of Othello, or a dotard in a storm for the wild madness of Lear! Yet it seems as if nothing could stop him. Most of our elderly English painters spend their wicked and wasted lives in poaching upon the domain of the poets, marring their motives by clumsy treatment, and striving to render, by visible form or colour, the marvel of what is invisible, the splendour of what is not seen. Their pictures are, as a natural consequence, insufferably tedious. They have degraded the visible arts into the obvious arts, and the one thing not worth looking at is the obvious. I do not say that poet and painter may not treat of the same subject. They have always done so, and will always do so. But while the poet can be pictorial or not, as he chooses, the painter must be pictorial always. For a painter is limited, not to what he sees in nature, but to what upon canvas may be seen.

And so, my dear Ernest, pictures of this kind will not really fascinate the critic. He will turn from them to such works as make him brood and dream and fancy, to works that possess the subtle quality of suggestion, and seem to tell one that even from them there is an escape into a wider world. It is sometimes said that the tragedy of an artist's life is that he cannot realise his ideal. But the true tragedy that dogs the steps of most artists is that they realise their ideal too absolutely. For, when the ideal is realised, it is robbed of its wonder and its mystery, and becomes simply a new starting point for an ideal that is other than itself. This is the reason why music is the perfect type of art. Music can never reveal its ultimate secret. This, also, is the explanation of the value of limitations in art. The sculptor gladly surrenders imitative

colour, and the painter the actual dimensions of form, because by such renunciations they are able to avoid too definite a presentation of the Real, which would be mere imitation, and too definite a realisation of the Ideal, which would be too purely intellectual. It is through its very incompleteness that Art becomes complete in beauty, and so addresses itself, not to the faculty of recognition nor to the faculty of reason, but to the æsthetic sense alone, which, while accepting both reason and recognition as stages of apprehension, subordinates them both to a pure synthetic impression of the work of art as a whole, and, taking whatever alien emotional elements the work may possess, uses their very complexity as a means by which a richer unity may be added to the ultimate impression itself. You see, then, how it is that the æsthetic critic rejects those obvious modes of art that have but one message to deliver, and having delivered it becomes dumb and sterile, and seeks rather for such modes as suggest reverie and mood, and by their imaginative beauty make all interpretations true and no interpretation final. Some resemblance, no doubt, the creative work of the critic will have to the work that has stirred him to creation, but it will be such resemblance as exists, not between Nature and the mirror that the painter of landscape or figure may be supposed to hold up to her, but between Nature and the work of the decorative artist. Just as on the flowerless carpets of Persia, tulip and rose blossom indeed, and are lovely to look on, though they are not reproduced in visible shape or line; just as the pearl and purple of the sea-shell is echoed in the church of St. Mark at Venice; just as the vaulted ceiling of the wondrous chapel of Ravenna⁹ is made gorgeous by the gold and green and sapphire of the peacock's tail, though the birds of Juno¹ fly not across it; so the critic reproduces the work that he criticises in a mode that is never imitative, and part of whose charm may really consist in the rejection of resemblance, and shows us in this way not merely the meaning but also the mystery of Beauty, and, by transforming each art into literature, solves once for all the problem of Art's unity.

* * *

From *Part 2*

* * *

Ernest. *** You have told me that the highest criticism deals with art, not as expressive, but as impressive purely, and is, consequently, both creative and independent; is, in fact, an art by itself, occupying the same relation to creative work that creative work does to the visible world of form and colour, or the unseen world of passion and of thought. Well, now tell me, will not the critic be sometimes a real interpreter?

Gilbert. Yes; the critic will be an interpreter, if he chooses. He can pass from his sympathetic impression of the work of art as a whole, to an analysis or exposition of the work itself, and in this lower sphere, as I hold it to be, there are many delightful things to be said and done. Yet his object will not always be to explain the work of art. He may seek rather to deepen its mystery, to

9. City in north central Italy, known for its Roman and Byzantine buildings, tombs (including that of the poet DANTE ALIGHIERI), and mosaics.

1. That is, peacocks (associated with Juno, the queen of the Roman gods).

raise round it, and round its maker, that mist of wonder which is dear to both gods and worshippers alike. Ordinary people are "terribly at ease in Zion."² They propose to walk arm in arm with the poets, and have a glib, ignorant way of saying, "Why should we read what is written about Shakespeare and Milton? We can read the plays and the poems. That is enough." But an appreciation of Milton is, as the late Rector of Lincoln³ remarked once, the reward of consummate scholarship. And he who desires to understand Shakespeare truly must understand the relations in which Shakespeare stood to the Renaissance and the Reformation, to the age of Elizabeth and the age of James;⁴ he must be familiar with the history of the struggle for supremacy between the old classical forms and the new spirit of romance, between the school of Sidney, and Daniel, and Jonson, and the school of Marlowe⁵ and Marlowe's greater son; he must know the materials that were at Shakespeare's disposal, and the method in which he used them, and the conditions of theatric presentation in the sixteenth and seventeenth centuries, their limitations and their opportunities for freedom, and the literary criticism of Shakespeare's day, its aims and modes and canons; he must study the English language in its progress, and blank or rhymed verse in its various developments; he must study the Greek drama, and the connection between the art of the creator of the Agamemnon⁶ and the art of the creator of Macbeth; in a word, he must be able to bind Elizabethan London to the Athens of Pericles,⁷ and to learn Shakespeare's true position in the history of European drama and the drama of the world. The critic will certainly be an interpreter, but he will not treat Art as a riddling Sphinx, whose shallow secret may be guessed and revealed by one whose feet are wounded and who knows not his name.⁸ Rather, he will look upon Art as a goddess whose mystery it is his province to intensify, and whose majesty his privilege to make more marvellous in the eyes of men.

And here, Ernest, this strange thing happens. The critic will, indeed, be an interpreter, but he will not be an interpreter in the sense of one who simply repeats in another form a message that has been put into his lips to say. For, just as it is only by contact with the art of foreign nations that the art of a country gains that individual and separate life that we call nationality, so, by curious inversion, it is only by intensifying his own personality that the critic can interpret the personality and work of others, and the more strongly this personality enters into the interpretation the more real the interpretation becomes, the more satisfying, the more convincing, and the more true.

Ernest. I would have said that personality would have been a disturbing element.

2. In a passage in *Culture and Anarchy* (1868, 1869), Matthew Arnold quotes a remark by the Scottish-born essayist and historian Thomas Carlyle (1795–1881) on the difference between Hellenism and Hebraism: "Socrates is terribly at ease in Zion."

3. Mark Pattison (1813–1884), English scholar whose works include a book on John Milton (1879); he was elected rector of Lincoln College, Oxford University, in 1861.

4. James I (1566–1625) reigned 1603–25, after the death of Elizabeth I.

5. Christopher Marlowe (1564–1593), English poet and dramatist. SIR PHILIP SIDNEY (1554–1586), English poet, politician, and soldier. Samuel Dan-

iel (1562–1619), English poet and historian. Ben Jonson (1572–1637), English poet and dramatist.

6. *Agamemnon* (458 B.C.E.) is the first play in the *Oresteia* trilogy of Aeschylus.

7. Great Athenian statesman, military leader, and famous patron of the arts (ca. 495–429 B.C.E.).

8. The parents of Oedipus (literally, "swollen foot") left their newborn son—his feet pierced and bound together—on a mountainside to die. He grew up to solve the Sphinx's riddle and fulfill the prophecy they had hoped to avert by his death (that he would kill his father). His story is told in the *Iliad* and in many Greek dramas, most notably Sophocles' *Oedipus Rex* (ca. 430 B.C.E.).

Gilbert. No; it is an element of revelation. If you wish to understand others you must intensify your own individualism.

Ernest. What, then, is the result?

Gilbert. I will tell you, and perhaps I can tell you best by definite example. It seems to me that, while the literary critic stands, of course, first, as having the wider range, and larger vision, and nobler material, each of the arts has a critic, as it were, assigned to it. The actor is a critic of the drama. He shows the poet's work under new conditions, and by a method special to himself. He takes the written word, and action, gesture, and voice become the media of revelation. The singer, or the player on lute and viol, is the critic of music. The etcher of a picture robs the painting of its fair colours, but shows us by the use of a new material its true colour-quality, its tones and values, and the relations of its masses, and so is, in his way, a critic of it, for the critic is he who exhibits to us a work of art in a form different from that of the work itself, and the employment of a new material is a critical as well as a creative element. Sculpture, too, has its critic, who may be either the carver of a gem, as he was in Greek days, or some painter like Mantegna,⁹ who sought to reproduce on canvas the beauty of plastic line and the symphonic dignity of processional bas-relief. And in the case of all these creative critics of art it is evident that personality is an absolute essential for any real interpretation. When Rubinstein plays to us the *Sonata Appassionata*¹ of Beethoven, he gives us not merely Beethoven, but also himself, and so gives us Beethoven absolutely—Beethoven reinterpreted through a rich artistic nature, and made vivid and wonderful to us by a new and intense personality. When a great actor plays Shakespeare we have the same experience. His own individuality becomes a vital part of the interpretation. People sometimes say that actors give us their own Hamlets, and not Shakespeare's; and this fallacy—for it is a fallacy—is, I regret to say, repeated by that charming and graceful writer who has lately deserted the turmoil of literature for the peace of the House of Commons—I mean the author of *Obiter Dicta*.² In point of fact, there is no such thing as Shakespeare's Hamlet. If Hamlet has something of the definiteness of a work of art, he has also all the obscurity that belongs to life. There are as many Hamlets as there are melancholies.

Ernest. As many Hamlets as there are melancholies?

Gilbert. Yes: and as art springs from personality, so it is only personality that it can be revealed, and from the meeting of the two comes right interpretative criticism.

Ernest. The critic, then, considered as the interpreter, will give no less than he receives, and lend as much as he borrows?

Gilbert. He will be always showing us the work of art in some new relation to our age. He will always be reminding us that great works of art are living things—are, in fact, the only things that live. So much, indeed, will he feel this, that I am certain that, as civilisation progresses and we become more highly organised, the elect spirits of each age, the critical and cultured spirits, will grow less and less interested in actual life, and *will seek to gain*

9. Andrea Mantegna (1431–1506), northern Italian painter and engraver, known for his mastery of perspective and compositional techniques.

1. Piano Sonata in F Minor, opus 57 (1805), by Ludwig van Beethoven (1770–1827). Anton

Rubinstein (1829–1894), famous Russian pianist.

2. Augustine Birrell (1850–1933), English writer and politician; *Obiter Dicta* was published in 3 vols. (1884, 1887, 1924).

their impressions almost entirely from what Art has touched. For Life is terribly deficient in form. Its catastrophes happen in the wrong way and to the wrong people. There is a grotesque horror about its comedies, and its tragedies seem to culminate in farce. One is always wounded when one approaches it. Things last either too long, or not long enough.

* * *

Ernest. But where in this is the function of the critical spirit?

Gilbert. The culture that this transmission of racial experiences³ makes possible can be made perfect by the critical spirit alone, and indeed may be said to be one with it. For who is the true critic but he who bears within himself the dreams, and ideas, and feelings of myriad generations, and to whom no form of thought is alien, no emotional impulse obscure? And who the true man of culture, if not he who by fine scholarship and fastidious rejection has made instinct self-conscious and intelligent, and can separate the work that has distinction from the work that has it not, and so by contact and comparison makes himself master of the secrets of style and school, and understands their meanings, and listens to their voices, and develops that spirit of disinterested curiosity which is the real root, as it is the real flower, of the intellectual life, and thus attains to intellectual clarity; and, having learned “the best that is known and thought in the world,” lives it—is not fanciful to say so—with those who are the Immortals?

Yes, Ernest: the contemplative life, the life that has for its aim not *doing* but *being*, and not *being* merely, but *becoming*—that is what the critical spirit can give us. The gods live thus: either brooding over their own perfection, as Aristotle tells us, or, as Epicurus⁴ fancied, watching with the calm eyes of the spectator the tragi-comedy of the world that they have made. We, too, might live like them, and set ourselves to witness with appropriate emotions the varied scenes that man and nature afford. We might make ourselves spiritual by detaching ourselves from action, and become perfect by the rejection of energy. It has often seemed to me that Browning⁵ felt something of this. Shakespeare hurls Hamlet into active life, and makes him realise his mission by effort. Browning might have given us a Hamlet who would have realised his mission by thought. Incident and event were to him unreal or unmeaning. He made the soul the protagonist of life’s tragedy, and looked on action as the one undramatic element of a play. To us, at any rate, the *ΒΙΟΣ ΘΕΩΡΗΤΙΚΟΣ*⁶ is the true ideal. From the high tower of Thought we can look out at the world. Calm, and self-centred, and complete, the æsthetic critic contemplates life, and no arrow drawn at a venture can pierce between the joints of his harness. He at least is safe. He has discovered how to live.

Is such a mode of life immoral? Yes: all the arts are immoral, except those baser forms of sensual or didactic art that seek to excite to action of evil or of good. For action of every kind belongs to the sphere of ethics. The aim of art is simply to create a mood. Is such a mode of life unpractical? Ah! it is not so

3. That is, the experiences of a tribe, nation, or people, regarded as forming a distinct ethnic stock or group.

4. Greek philosopher (341–270 B.C.E.), whose teachings emphasize gaining happiness through

self-restraint, moderation, and detachment. Aristotle: see *Metaphysics* 12.7, 9.

5. Robert Browning (1812–1889), English poet.

6. *Bios theōrētikos*: contemplative life (Greek).

easy to be unpractical as the ignorant Philistine⁷ imagines. It were well for England if it were so. There is no country in the world so much in need of unpractical people as this country of ours. With us, Thought is degraded by its constant association with practice. Who that moves in the stress and turmoil of actual existence, noisy politician, or brawling social reformer, or poor, narrow-minded priest, blinded by the sufferings of that unimportant section of the community among whom he has cast his lot, can seriously claim to be able to form a disinterested intellectual judgment about any one thing? Each of the professions means a prejudice. The necessity for a career forces every one to take sides. We live in the age of the overworked, and the under-educated; the age in which people are so industrious that they become absolutely stupid. And, harsh though it may sound, I cannot help saying that such people deserve their doom. The sure way of knowing nothing about life is to try to make oneself useful.

Ernest. A charming doctrine, Gilbert.

Gilbert. I am not sure about that, but it has at least the minor merit of being true.

1890, 1891

7. A member of a biblical people who waged war against the Israelites. Matthew Arnold applies the name in *Culture and Anarchy* to the compla-

cent materialist middle classes, indifferent or antagonistic to artistic and cultural values.

SIGMUND FREUD

1856–1939

It is hard to imagine the twentieth century without Sigmund Freud. Along with Charles Darwin (1809–1882), KARL MARX (1818–1883), and Albert Einstein (1879–1955), he helped revolutionize the modern Western conception of human life and its place in the universe. For Freud, human reason was not master in its own house but a precarious defense mechanism struggling against, and often motivated by, unconscious desires and forces. His theory and practice of psychoanalysis have changed the way people think about themselves today, whether they are aware of it or not. At the same time, psychoanalysis has been controversial from the beginning because, unlike experimental science, it cannot be adequately tested, falsified, or objectified. It aims higher than—or falls short of—objective verifiability because it is a study of the very limits of objectivity itself. The impossibility of separating psychoanalysis from the biography of its founder has been used to discredit it, but in fact Freud's writings signal a significant change in the relation between autobiography and thought. They make visible in new ways the narrative challenges involved in telling the story of a life—one's own in particular. Freud's attention to language may help explain why his writings have grown in importance for literary scholars at the same time that they are increasingly criticized for diverging from the protocols of science. Yet perhaps it is also in large part because his writings exist at the limits of *both* literature and science that Freud continues to fascinate us.

Freud was born in Moravia (in what is now the Czech Republic), the first of seven children, to poor Jewish parents. His young mother, Amalia, was his father Jacob's third wife. The Freuds moved to Vienna in 1860, where Sigmund obtained all his education (with the exception of a few months in Paris). Although psychoanalysis today is associated with the "talking cure" and the theory of infantile sexuality, Freud began his career as a clinical neurologist, obtaining his medical degree in 1881. He entered the University of Vienna in 1873, at a time when Jews, who had moved to liberal Vienna in sizable numbers, were already being scapegoated for Austria's economic problems. Freud, in his *Autobiographical Study* (1925), attributed his independence of mind to his position just outside the "compact majority" (Henrik Ibsen's phrase) of German gentile culture, which he nevertheless also shared. When Nazi Germany annexed Austria in 1938, Freud left Vienna reluctantly and under duress. In his lifetime, social liberalism had given way to the most virulent anti-Semitism—a sad confirmation of his warning against taking any notion of the progress of civilization for granted.

While working to obtain his medical degree, Freud was distracted by his broad interests in research. Among other subjects, he became fascinated by the account given by the respected physician Josef Breuer of the treatment of a particularly intelligent hysterical patient. "Anna O." invented the term "talking cure"; she is often considered the first patient of psychoanalysis, although Freud himself never treated her. Fifteen years later, Freud and Breuer would write *Studies on Hysteria* (1895) about this and later cases. In the meantime Freud met Martha Bernays, the woman he hoped would become his wife, and went to Paris. Too poor to marry, he progressed in his profession by getting a small grant to work at the famous Salpêtrière mental hospital under the supervision of the medical showman and great specialist in hysteria Jean-Martin Charcot. In 1886 he returned to Vienna, opened his medical practice, and married Martha; they had six children (three girls and three boys). From 1891 onward, the Freuds lived at Berggasse 19, where Sigmund set up his famous consulting room.

In the years leading up to his groundbreaking *Interpretation of Dreams* (1900), Freud began a formative and intellectually wide-ranging correspondence with Wilhelm Fliess, an ear, nose, and throat specialist from Berlin. In his practice, Freud gradually abandoned the hypnotic treatments for hysteria recommended by Charcot, substituting instead a form of dialogue between patient and doctor. At first convinced that many of his patients had suffered sexual abuse (or "seduction") by their fathers in childhood, he later came to realize that some of his patients' tales of sexual events were fantasies. The death in 1896 of Freud's own father perhaps increased his unwillingness to believe in paternal guilt. What he called the "abandonment of the seduction theory" has become controversial in recent decades (largely because of Jeffrey Moussaieff Masson's 1984 book, *The Assault on Truth: Freud's Suppression of the Seduction Theory*), criticized as an abandonment of the realities of childhood sexual abuse. But the shift was not first and foremost a denial of the reality of incest; Freud saw in fantasies of incest a psychic reality, and an infantile sexuality, that had to be taken seriously in itself. In his move from realities of fact to realities of fantasy, however, Freud changed the sex of the representative subject: in his new theory of unconscious desire (the "Oedipus complex"), he substituted the desiring son for the abused daughter, the desirable mother for the guilty father. The father, in his account, was no longer a lawbreaker but a lawgiver: the enforcer of the law prohibiting incest between the son and the mother.

In order to gather evidence of the existence of unconscious forces at work in everyday life, Freud turned to psychological phenomena that were at once recognized and disregarded. His first three books—*The Interpretation of Dreams*, *The Psychopathology of Everyday Life* (published in a journal in 1901 and as a book in 1904), and *Jokes and Their Relation to the Unconscious* (1905)—lay out the analytical strategies that would inform the better-known *Three Essays in the Theory of*

Sexuality (1905). His theory would have been impossible without the meticulous study of the discredited forms of knowledge revealed by dreams, slips of the tongue, memory lapses, and jokes.

Freud continued seeing patients and published several extensive and now famous case studies—*Fragment of an Analysis of a Case of Hysteria* (better known as “Dora,” 1905), “Analysis of a Phobia in a Five-Year-Old Boy” (“Little Hans,” 1909), “Notes Upon a Case of Obsessional Neurosis” (“Rat Man,” 1909), “Psycho-Analytic Notes on an Autobiographical Account of a Case of Paranoia” (“Schreber,” 1911), and *From the History of an Infantile Neurosis* (“Wolf Man,” written 1914 and published 1918). Each attempts to come to terms with a difficult psychoanalytic but also *narrative* challenge: for example, Dora left treatment before Freud was finished with her, and his later footnotes allude to oversights in his understanding; Wolf Man’s childhood neurosis could be analyzed only through the screen of adult constructions; and Schreber was analyzed not as Freud’s patient but as the author of an autobiography. Freud’s case histories offer a fascinating hybrid of certainty, doubt, and inner debate.

In addition to his research and his practice, Freud, at the suggestion of a disciple, founded the Psychological Wednesday Society (later transformed into the Vienna Psychoanalytic Society) in 1902. He traveled to the United States in 1909 to lecture and receive an honorary degree from Clark University in Worcester, Massachusetts, accompanied by his younger colleagues Carl G. Jung and Sandor Ferenczi (his lectures were subsequently published as *Five Lectures on Psychoanalysis*, 1910). The tensions—theoretical, personal, and institutional—between Freud and Jung were already growing; by the end of 1912, the two had essentially stopped speaking to each other. Freud took his revenge on his wayward disciples in his polemical “History of the Psycho-Analytic Movement” (1914). He also published a new series of lectures and a number of papers on psychoanalytic technique.

When World War I began Freud’s three sons volunteered for the army, but he grew more and more critical of war as a solution to human problems. (Later, at the request of the League of Nations, Freud would collaborate with Albert Einstein in writing *Why War?* [1933].) The war deeply affected his thought, already in a new phase with the publication of his celebrated essay on narcissism in 1914. Traumatic neuroses seemed to put in question the dominance in psychic life of the “pleasure principle” that he had posited as the motive force of dreams. Even children’s games sometimes seemed to give greater weight to the process of repetition itself than to the pleasurable thing repeated. It was at this time that Freud wrote his essay “The ‘Uncanny’” (1919) and the longer *Beyond the Pleasure Principle* (1920). A sense of strangeness, of genuinely enigmatic forces, pervades his theory of the “death instinct” and the “repetition compulsion.” But perhaps this strangeness was also a way of reconnecting with the strangeness of his original discoveries, which had grown quite familiar. The theoretical gains from this period are formulated in *The Ego and the Id* (1923). (The famous Latin names for the almost allegorical parts of the self—ego, id, superego—were bestowed by translators; Freud himself used German terms meaning “I,” “it,” and “over-I.”)

In the 1920s Freud wrote about larger cultural forces and structures (*Group Psychology and the Analysis of the Ego*, 1921; *The Future of an Illusion*, 1927; and *Civilization and Its Discontents*, 1929), provided major reformulations of his theory, and turned his attention to the problem of sexual difference. His paper “Some Psychological Consequences of the Anatomical Distinction between the Sexes” (1925) began to explore the question of “castration” in a new way. When children observe that some people have penises and others do not, he asserted, they assume that everyone must at first have had one, and that in some people it had been cut off. This encounter with the fact of difference is more satisfying to the little boy than to the little girl. But the “psychic consequences” are far-reaching: the boy takes seriously the father’s threat of castration as the punishment for incest, thus experiencing

"castration anxiety," while the girl tries to deal with her "inferiority," thus feeling "penis envy." In later essays—especially "Female Sexuality" (1931) and "Femininity" (1932)—Freud attempted to make sense of the desires his theory allotted to women. Feminists have treated his theories with ambivalence: on the one hand, he had the merit of describing human sexuality as a *question*, not a *given*; on the other hand, his phrase "anatomy is destiny" seems in the final analysis to uphold the sexual certainties he himself questioned.

The lectures Freud wrote that include "Femininity" were never meant to be delivered; a series of operations for mouth cancer (beginning in 1923) had left him unable to perform in public. The political situation was also worrisome: Adolf Hitler had been appointed chancellor of Germany, and the Nazi Party was in control. Freud's books were among those burned in Berlin. His last book, *Moses and Monotheism*, was not completed until his own "exodus" to England in 1938. In London in 1939, his cancer worsening, Freud officially closed his practice; and, just after the Germans invaded Poland and after France and Britain declared war on Germany, Freud asked his physician to give him a lethal dose of morphine. He died in September of that year.

How did Freud practice interpretation, then, and how did his theory transform it? Although the details of each individual dream are particular to the dreamer, there are, says Freud, some dreams that occur widely and point to the existence of universal desires. Incest and its prohibition—the universal break between nature and culture, according to anthropologists—form the core of Freud's theory of unconscious desire. In our first selection from *The Interpretation of Dreams*, he turns to the same literary text as ARISTOTLE for a version of the fundamental human plot: Sophocles' *Oedipus Rex*. Warned by an oracle that he will kill his father and marry his mother, Oedipus leaves home in order to escape his fate, only to kill a man and marry a woman who turn out to be the very biological parents who had abandoned him as an infant in order to thwart the same oracle. Literature thus exists for Freud as a form of evidence: the play's centuries-long hold over the attention of viewers must correspond to its depiction of something universally fascinating and repressed. The truth told by the oracle corresponds to unconscious desire, fulfilling itself despite—or perhaps because of—every conscious effort to escape it. The plot of Sophocles' play also furnishes a parallel to the plot of an analysis: a patient's resistance to unconscious knowledge is like Oedipus's reluctance to learn his true identity. Freud goes on to discuss the relation between *Oedipus Rex* and Shakespeare's *Hamlet*—both in terms of the incest taboo. In answer to the question "Why does Hamlet delay his revenge for his father's death?" Freud replies, "Because his uncle has only carried out a murder that he himself wanted to accomplish." In a few short pages, Freud thus revolutionized the reading of two major canonical texts of Western culture and placed the world of the imagination at the center of human subjectivity.

Freud's attention to new modes of meaning has been immensely suggestive for literary studies. While the relation between literature and dreams has often been noted, as in the ancient work of Macrobius (b. ca. 360 C.E.), Freud pursues the connection beyond the realm of general symbolism to lay out a kind of rhetoric of everyday dreams. In our second selection, on the dream-work, he writes that dreams are not nonsensical but meaningful. They are composites made out of the residues of individual lives chosen by the unconscious to represent the fulfillment of a wish: no simple "key" can decode them. Only the dreamer can provide a set of associations to illuminate the "dream-thoughts" behind the dream. Beneath the composite surface, which functions like a puzzle, lies the wish, the puzzle's solution. The dream-thoughts function like a "latent content" behind the "manifest content" of the dream.

Distortion and disguise fill dreams—or literary texts—because the unconscious wish is in some way unacceptable and must evade censorship. Dreams have three main sources of unavoidable distortion, he argues: condensation, displacement, and

the needs of representation. These unconscious “primary processes” are also subject to “secondary revision,” the editing to which a dream is subject if the dreamer tries to remember it on awakening. Freud’s description of the four rhetorical operations (“distortions”) performed by dreams has been productively extended to literary texts: while the role of secondary revision there is stronger and more complex, literary texts may provide access to forces that are not directly accessible in other ways.

Freud often uses literary texts to illustrate or confirm his theory. His reading of a 1903 novella by Wilhelm Jensen (*Delusion and Dream in Wilhelm Jensen’s “Gradiva,”* 1907) aims to ratify his theory of dreams; “Creative Writers and Daydreaming” (1908) expands on his description of fantasy life; in “The Theme of the Three Caskets” (1913), he turns again to Shakespeare; and in numerous other short essays and notes Freud focuses directly on literature or art. But some of the most explicit literary demonstrations function as “secondary revisions” of the theory itself, eliding the role of literature in *forming* central concepts (the Oedipus complex, narcissism, etc.). For Freud, it is always as if a bourgeois drama is playing on the conscious stage of the psyche, while a Greek tragedy is going on somewhere else.

Freud’s celebrated essay “The ‘Uncanny,’” our second selection, offers both a literary application and a new theoretical direction. It contains an extensive analysis of E. T. A. Hoffmann’s short story “The Sandman” (1816), in which a young man, Nathaniel, traumatized by the mysterious death of his father, falls in love with a wooden doll, Olympia, in preference to his flesh-and-blood sweetheart. Freud argues that what is uncanny about the story is related not to intellectual uncertainty about whether the doll is alive (as an article by Ernst Jentsch had speculated), but to anxiety about the cause of Nathaniel’s father’s death. When Nathaniel encounters Coppola, an optician, he thinks he recognizes Coppelius, a lawyer, whom he believes to have caused his father’s death and who is conflated in his mind with the Sandman—a storybook figure who takes the eyes of little children who won’t go to bed. These threats to the eyes are connected in Freud’s mind to the castration complex (Oedipus had blinded himself on learning that he had fulfilled the prophecy). The uncanny return of these figures (the Sandman, Coppelius, Coppola) is also related to Freud’s new sense of the “repetition compulsion.” Dolls and inanimate objects, which for Freud are not uncanny in the story, nevertheless return to haunt the essay’s discussion of “the omnipotence of thoughts” and of the supposedly surmounted childhood belief in animism.

Freud begins his discussion with the characteristics of the word *uncanny*, extensively documented through citations from a dictionary. The German *unheimlich* (unhomelike, uncanny) turns out to share a meaning with its apparent opposite. *Heimlich* (homey, familiar) can also mean “concealed, secret,” and thus the opposite of the familiar and open. This process of estrangement of the familiar (of the “home”) is exactly the same as the process of repression. The fear of being buried alive, for example, is a distorted desire to return to the mother’s womb—the “home” of all humanity. The German term gives a clue to a process that psychoanalysis tries to understand more generally. Freud expresses astonishment that other languages lack the equivalent of what in German is such a handy word. But if all languages had the same process in the same place, that process would become a theme, a topic, and thus belong to conscious, rather than unconscious, knowledge.

The essay also addresses “aesthetics” more generally, as its first sentence announces. Indeed, it investigates what analyses of the “beautiful” and the “sublime” leave out: the disturbing, the unsettling, the uncomfortable. Freud’s essay itself is far from beautiful: it wanders from topic to topic, it quotes others at great length, it places major points in footnotes, and, in general, it seems sewn together from mismatched parts. Hence, we have edited an already poorly sutured text. Yet “The ‘Uncanny,’” offers the reader an opportunity to follow the *process*, and not just the *result*, of Freud’s thinking. Indeed, that the essay lacks “organic” form, so that readers tend to

get lost in it, contributes powerfully to its own uncanny effect. In recent years, partly as a result of Freud's essay, critics have devoted increasing attention to the Gothic in literature and to elements Freud associates with the uncanny—unexpected doubles, severed limbs, bodies buried alive, the return of the dead, magical thinking. Freud's reading of Hoffmann's story allows him to touch many theoretical bases that he, unlike many others, feels comfortable with—unacceptable authorial desires, castration anxieties, homosexual fantasies. But Freud's essay itself also makes readable the persistence of questions he dismisses, and it vividly reveals, in its wandering way, his fascination with what is escaping his grasp.

Freud's short essay titled "Fetishism" (1927), our final selection, builds on his analysis of the consequences of sexual difference. Certain men, he claims, cannot accept the evidence that the woman (the mother) doesn't have a penis. In order to fall in love with women and not become homosexual, they choose as a substitute some object that will continue to support the sexual interest they originally had in the missing maternal penis. The logic of fetishism thus involves both perceiving and denying the evidence of maternal "castration." In a very different way, the same logic of denial and displacement underlies Karl Marx's theory of "the fetishism of the commodity" (*Capital*, vol. 1, 1867; see above). There, the commodity itself appears to contain the value that is really produced by the processes of labor invisible behind it. Here, the substitute (foot, velvet, hair, etc.) appears to function like a sexual organ. In both cases there is a "gleam" around the fetish that attracts desire (sexual or commercial), as if the fetish actually contained the values that it represents.

Freud's analyses have had a fundamental impact on what we now understand as literary theory, influencing virtually every twentieth-century critic. On the one hand, Freud's radical new view of subjectivity has deeply affected the analysis of characters, authors, and readers, enabling a new understanding of split, hidden, or contradictory desires and intentions. On the other hand, for Freud literature is not just an illustration but also a source and authority for understanding those desires and intentions in the first place.

Perhaps more profoundly, Freud changed the nature of attentiveness itself. It was in listening to patients differently that Freud discovered the unconscious—a force of otherness as powerful as, but in no way equivalent to, a god. Inside every person, he said, there was *something* transmitting scrambled messages in a cryptic language, trying to break through the conscious surface of life. The "other" was in ourselves—indeed, it *was* ourselves. Despite the limitations of Freud's middle-class Viennese patriarchal assumptions, his conception of a human subjectivity fundamentally at odds with itself opened up possibilities he never dreamed of. Each person's life was documented in more than one way: official personal history (conscious remembrance and self-image) and unofficial personal history (the record of changes, traumas, desires, anxieties, and associations that might never have been conscious). Unconscious history contained impossible or forbidden wishes, repressed from the official record or simply outgrown—wishes that remained active in the unconscious and sought expression in dreams, mistakes, jokes, myths, and other discredited or discounted forms of communication. Psychoanalysis is the name for the theory and practice of their interpretation, and literary theory continues to derive inspiration from the psychoanalytic engagement with the most canonical as well as the most uncanonical of texts.

[THE OEDIPUS COMPLEX]

In my experience, which is already extensive, the chief part in the mental lives of all children who later become psychoneurotics is played by their parents. Being in love with the one parent and hating the other are among the essential constituents of the stock of psychical impulses which is formed at that time and which is of such importance in determining the symptoms of the later neurosis. It is not my belief, however, that psychoneurotics differ sharply in this respect from other human beings who remain normal—that they are able, that is, to create something absolutely new and peculiar to themselves. It is far more probable—and this is confirmed by occasional observations on normal children—that they are only distinguished by exhibiting on a magnified scale feelings of love and hatred to their parents which occur less obviously and less intensely in the minds of most children.

This discovery is confirmed by a legend that has come down to us from classical antiquity: a legend whose profound and universal power to move can only be understood if the hypothesis I have put forward in regard to the psychology of children has an equally universal validity. What I have in mind is the legend of King Oedipus and Sophocles'² drama which bears his name.

Oedipus, son of Laius, King of Thebes, and of Jocasta, was exposed as an infant because an oracle had warned Laius that the still unborn child would be his father's murderer. The child was rescued, and grew up as a prince in an alien court, until, in doubts as to his origin, he too questioned the oracle and was warned to avoid his home since he was destined to murder his father and take his mother in marriage. On the road leading away from what he believed was his home, he met King Laius and slew him in a sudden quarrel. He came next to Thebes and solved the riddle set him by the Sphinx³ who barred his way. Out of gratitude the Thebans made him their king and gave him Jocasta's hand in marriage. He reigned long in peace and honour, and she who, unknown to him, was his mother bore him two sons and two daughters. Then at last a plague broke out and the Thebans made enquiry once more of the oracle. It is at this point that Sophocles' tragedy opens. The messengers bring back the reply that the plague will cease when the murderer of Laius has been driven from the land.

But he, where is he? Where shall now be read
The fading record of this ancient guilt?⁴

The action of the play consists in nothing other than the process of revealing, with cunning delays and ever-mounting excitement—a process that can

1. Translated by James Strachey. This standard edition incorporates later revisions made by Freud.

2. Greek tragic dramatist (ca. 496–406 B.C.E.), author of *Oedipus Rex* (ca. 430).

3. A monster with a woman's face, lion's body,

and bird's wings who killed travelers who could not answer her riddle; when Oedipus solved it, she killed herself.

4. Lewis Campbell's translation (1883), lines 108–9 [translator's note].

be likened to the work of a psychoanalysis—that Oedipus himself is the murderer of Laius, but further that he is the son of the murdered man and of Jocasta. Appalled at the abomination which he has unwittingly perpetrated, Oedipus blinds himself and forsakes his home. The oracle has been fulfilled.

Oedipus Rex is what is known as a tragedy of destiny. Its tragic effect is said to lie in the contrast between the supreme will of the gods and the vain attempts of mankind to escape the evil that threatens them. The lesson which, it is said, the deeply moved spectator should learn from the tragedy is submission to the divine will and realization of his own impotence. Modern dramatists have accordingly tried to achieve a similar tragic effect by weaving the same contrast into a plot invented by themselves. But the spectators have looked on unmoved while a curse or an oracle was fulfilled in spite of all the efforts of some innocent man: later tragedies of destiny have failed in their effect.

If *Oedipus Rex* moves a modern audience no less than it did the contemporary Greek one, the explanation can only be that its effect does not lie in the contrast between destiny and human will, but is to be looked for in the particular nature of the material on which that contrast is exemplified. There must be something which makes a voice within us ready to recognize the compelling force of destiny in the *Oedipus*, while we can dismiss as merely arbitrary such dispositions as are laid down in [Grillparzer's] *Die Ahnfrau*⁵ or other modern tragedies of destiny. And a factor of this kind is in fact involved in the story of King Oedipus. His destiny moves us only because it might have been ours—because the oracle laid the same curse upon us before our birth as upon him. It is the fate of all of us, perhaps, to direct our first sexual impulse towards our mother and our first hatred and our first murderous wish against our father. Our dreams convince us that that is so. King Oedipus, who slew his father Laius and married his mother Jocasta, merely shows us the fulfilment of our own childhood wishes. But, more fortunate than he, we have meanwhile succeeded, in so far as we have not become psychoneurotics, in detaching our sexual impulses from our mothers and in forgetting our jealousy of our fathers. Here is one in whom these primaevial wishes of our childhood have been fulfilled, and we shrink back from him with the whole force of the repression by which those wishes have since that time been held down within us. While the poet, as he unravels the past, brings to light the guilt of Oedipus, he is at the same time compelling us to recognize our own inner minds, in which those same impulses, though suppressed, are still to be found. The contrast with which the closing Chorus leaves us confronted—

. . . Fix on Oedipus your eyes,
Who resolved the dark enigma, noblest champion and most wise.
Like a star his envied fortune mounted beaming far and wide:
Now he sinks in seas of anguish, whelmed beneath a raging tide . . .⁶

—strikes as a warning at ourselves and our pride, at us who since our childhood have grown so wise and so mighty in our own eyes. Like Oedipus, we

5. *The Ancestress* (1817), by the Austrian dramatist Franz Grillparzer. The play's protagonist unknowingly falls in love with his sister and

kills his father.

6. Campbell's translation, lines 1524–27 [translator's note].

live in ignorance of these wishes, repugnant to morality, which have been forced upon us by Nature, and after their revelation we may all of us well seek to close our eyes to the scenes of our childhood.⁷

There is an unmistakable indication in the text of Sophocles' tragedy itself that the legend of Oedipus sprang from some primaeval dream-material which had as its content the distressing disturbance of a child's relation to his parents owing to the first stirrings of sexuality. At a point when Oedipus, though he is not yet enlightened, has begun to feel troubled by his recollection of the oracle, Jocasta consoles him by referring to a dream which many people dream, though, as she thinks, it has no meaning:

Many a man ere now in dreams hath lain
With her who bare him. He hath least annoy
Who with such omens troubleth not his mind.⁸

To-day, just as then, many men dream of having sexual relations with their mothers, and speak of the fact with indignation and astonishment. It is clearly the key to the tragedy and the complement to the dream of the dreamer's father being dead. The story of Oedipus is the reaction of the imagination to these two typical dreams. And just as these dreams, when dreamt by adults, are accompanied by feelings of repulsion, so too the legend must include horror and self-punishment. Its further modification originates once again in a misconceived secondary revision of the material, which has sought to exploit it for theological purposes. (Cf. the dream-material in dreams of exhibiting [discussed earlier].) The attempt to harmonize divine omnipotence with human responsibility must naturally fail in connection with this subject-matter just as with any other.

Another of the great creations of tragic poetry, Shakespeare's *Hamlet*, has its roots in the same soil as *Oedipus Rex*. But the changed treatment of the same material reveals the whole difference in the mental life of these two widely separated epochs of civilization: the secular advance of repression in the emotional life of mankind. In the *Oedipus* the child's wishful phantasy that underlies it is brought into the open and realized as it would be in a dream. In *Hamlet* it remains repressed; and—just as in the case of a neurosis—we only learn of its existence from its inhibiting consequences. Strangely enough, the overwhelming effect produced by the more modern

7. [Footnote added 1914:] None of the findings of psycho-analytic research has provoked such embittered denials, such fierce opposition—or such amusing contortions—on the part of critics as this indication of the childhood impulses towards incest which persist in the unconscious. An attempt has even been made recently to make out, in the face of all experience, that the incest should only be taken as “symbolic.”—Ferenczi (“The Symbolic Representation of the Pleasure and Reality Principles in the Oedipus Myth,” 1912) has proposed an ingenious “over-interpretation” of the Oedipus myth, based on a passage in one of Schopenhauer's letters.—[Added 1919:] Later studies have shown that the “Oedipus complex,” which was touched upon for the first time in the above paragraphs in the *Interpretation of Dreams*, throws

a light of undreamt-of importance on the history of the human race and the evolution of religion and morality. (See my *Totem and Taboo*, 1912–13 [Essay IV].) [Freud's note].—[Actually the gist of this discussion of the Oedipus complex and of the *Oedipus Rex*, as well as of what follows on the subject of *Hamlet*, had already been put forward by Freud in a letter to Fliess as early as October 15, 1897. A still earlier hint at the discovery of the Oedipus complex was included in a letter of May 31, 1897.—The actual term “Oedipus complex” seems to have been first used by Freud in his published writings in the first of his “Contributions to the Psychology of Love” (1910)—translator's note.] Some of Freud's later footnotes are omitted.

8. Campbell's translation, lines 982–84 [translator's note].

tragedy has turned out to be compatible with the fact that people have remained completely in the dark as to the hero's character. The play is built up on Hamlet's hesitations over fulfilling the task of revenge that is assigned to him; but its text offers no reasons or motives for these hesitations and an immense variety of attempts at interpreting them have failed to produce a result. According to the view which was originated by Goethe⁹ and is still the prevailing one to-day, Hamlet represents the type of man whose power of direct action is paralysed by an excessive development of his intellect. (He is 'sicklied o'er with the pale cast of thought'.)¹ According to another view, the dramatist has tried to portray a pathologically irresolute character which might be classed as neurasthenic. The plot of the drama shows us, however, that Hamlet is far from being represented as a person incapable of taking any action. We see him doing so on two occasions: first in a sudden outburst of temper, when he runs his sword through the eavesdropper behind the arras, and secondly in a premeditated and even crafty fashion, when, with all the callousness of a Renaissance prince, he sends the two courtiers to the death that had been planned for himself. What is it, then, that inhibits him in fulfilling the task set him by his father's ghost? The answer, once again, is that it is the peculiar nature of the task. Hamlet is able to do anything—except take vengeance on the man who did away with his father and took that father's place with his mother, the man who shows him the repressed wishes of his own childhood realized. Thus the loathing which should drive him on to revenge is replaced in him by self-reproaches, by scruples of conscience, which remind him that he himself is literally no better than the sinner whom he is to punish. Here I have translated into conscious terms what was bound to remain unconscious in Hamlet's mind; and if anyone is inclined to call him a hysteric, I can only accept the fact as one that is implied by my interpretation. The distaste for sexuality expressed by Hamlet in his conversation with Ophelia fits in very well with this: the same distaste which was destined to take possession of the poet's mind more and more during the years that followed, and which reached its extreme expression in *Timon of Athens*. For it can of course only be the poet's own mind which confronts us in Hamlet. I observe in a book on Shakespeare by Georg Brandes² (1896) a statement that *Hamlet* was written immediately after the death of Shakespeare's father (in 1601), that is, under the immediate impact of his bereavement and, as we may well assume, while his childhood feelings about his father had been freshly revived. It is known, too, that Shakespeare's own son who died at an early age bore the name of 'Hamnet', which is identical with 'Hamlet'. Just as *Hamlet* deals with the relation of a son to his parents, so *Macbeth* (written at approximately the same period) is concerned with the subject of childlessness. But just as all neurotic symptoms, and, for that matter, dreams, are capable of being 'over-interpreted' and indeed need to be, if they are to be fully understood, so all genuinely creative writings are the product of more than a single motive and more than a single impulse in the poet's mind, and are open to more than a single interpretation. In

9. Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and novelist.

1. *Hamlet* (ca. 1600), 3.1.87.

what I have written I have only attempted to interpret the deepest layer of impulses in the mind of the creative writer.³

* * *

From *Chapter VI. The Dream-Work*

Every attempt that has hitherto been made to solve the problem of dreams has dealt directly with their *manifest* content as it is presented in our memory. All such attempts have endeavoured to arrive at an interpretation of dreams from their manifest content or (if no interpretation was attempted) to form a judgement as to their nature on the basis of that same manifest content. We are alone in taking something else into account. We have introduced a new class of psychical material between the manifest content of dreams and the conclusions of our enquiry: namely, their *latent* content, or (as we say) the 'dream-thoughts', arrived at by means of our procedure. It is from these dream-thoughts and not from a dream's manifest content that we disentangle its meaning. We are thus presented with a new task which had no previous existence: the task, that is, of investigating the relations between the manifest content of dreams and the latent dream-thoughts, and of tracing out the processes by which the latter have been changed into the former.

The dream-thoughts and the dream-content are presented to us like two versions of the same subject-matter in two different languages. Or, more properly, the dream-content seems like a transcript of the dream-thoughts into another mode of expression, whose characters and syntactic laws it is our business to discover by comparing the original and the translation. The dream-thoughts are immediately comprehensible, as soon as we have learnt them. The dream-content, on the other hand, is expressed as it were in a pictographic script, the characters of which have to be transposed individually into the language of the dream-thoughts. If we attempted to read these characters according to their pictorial value instead of according to their symbolic relation, we should clearly be led into error. Suppose I have a picture-puzzle, a rebus, in front of me. It depicts a house with a boat on its roof, a single letter of the alphabet, the figure of a running man whose head has been conjured away, and so on. Now I might be misled into raising objections and declaring that the picture as a whole and its component parts are nonsensical. A boat has no business to be on the roof of a house, and a headless man cannot run. Moreover, the man is bigger than the house; and if the whole picture is intended to represent a landscape, letters of the alphabet are out of place in it since such objects do not occur in nature. But obviously we can only form a proper judgement of the rebus if we put aside criticisms such as these of the whole composition and its parts and if, instead, we try to replace each separate element by a syllable or word that can be represented by that element in some way or other. The words which are put together in this way are no longer nonsensical but may form a poetical phrase of the greatest beauty and significance. A dream is a picture-puzzle of this sort and

3. [Footnote added 1919:] The above indications of a psycho-analytic explanation of *Hamlet* have since been amplified by Ernest Jones and defended against the alternative views put forward in the literature of the subject. (See Jones, *Hamlet and*

Oedipus, 1910 [and, in a completer form, 1949].)—[Added 1930:] Incidentally, I have in the meantime ceased to believe that the author of Shakespeare's works was the man from Stratford [Freud's note].

our predecessors in the field of dream-interpretation have made the mistake of treating the rebus as a pictorial composition: and as such it has seemed to them nonsensical and worthless.

(A). THE WORK OF CONDENSATION

The first thing that becomes clear to anyone who compares the dream-content with the dream-thoughts is that a work of *condensation* on a large scale has been carried out. Dreams are brief, meagre and laconic in comparison with the range and wealth of the dream-thoughts. If a dream is written out it may perhaps fill half a page. The analysis setting out the dream-thoughts underlying it may occupy six, eight or a dozen times as much space. This relation varies with different dreams; but so far as my experience goes its direction never varies. As a rule one underestimates the amount of compression that has taken place, since one is inclined to regard the dream-thoughts that have been brought to light as the complete material, whereas if the work of interpretation is carried further it may reveal still more thoughts concealed behind the dream. I have already had occasion to point out that it is in fact never possible to be sure that a dream has been completely interpreted. Even if the solution seems satisfactory and without gaps, the possibility always remains that the dream may have yet another meaning. Strictly speaking, then, it is impossible to determine the amount of condensation.

* * *

(B). THE WORK OF DISPLACEMENT

* * *

Among the thoughts that analysis brings to light are many which are relatively remote from the kernel of the dream and which look like artificial interpolations made for some particular purpose. That purpose is easy to divine. It is precisely *they* that constitute a connection, often a forced and far-fetched one, between the dream-content and the dream-thoughts; and if these elements were weeded out of the analysis the result would often be that the component parts of the dream-content would be left not only without overdetermination⁴ but without any satisfactory determination at all. We shall be led to conclude that the multiple determination which decides what shall be included in a dream is not always a primary factor in dream-construction but is often the secondary product of a psychical force which is still unknown to us. Nevertheless multiple determination must be of importance in choosing what particular elements shall enter a dream, since we can see that a considerable expenditure of effort is used to bring it about in cases where it does not arise from the dream-material unassisted.

It thus seems plausible to suppose that in the dream-work a psychical force is operating which on the one hand strips the elements which have a high psychical value of their intensity, and on the other hand, *by means of overdetermination*, creates from elements of low psychical value new values, which afterwards find their way into the dream-content. If that is so, a *trans-*

4. That is, multiple causal factors (a model for causality implying a network rather than the simply linear).

ference⁵ and displacement of psychical intensities occurs in the process of dream-formation, and it is as a result of these that the difference between the text of the dream-content and that of the dream-thoughts comes about. The process which we are here presuming is nothing less than the essential portion of the dream-work; and it deserves to be described as 'dream-displacement'. Dream-displacement and dream-condensation are the two governing factors to whose activity we may in essence ascribe the form assumed by dreams.

Nor do I think we shall have any difficulty in recognizing the psychical force which manifests itself in the facts of dream-displacement. The consequence of the displacement is that the dream-content no longer resembles the core of the dream-thoughts and that the dream gives no more than a distortion of the dream-wish which exists in the unconscious. But we are already familiar with dream-distortion. We traced it back to the censorship which is exercised by one psychical agency in the mind over another. Dream-displacement is one of the chief methods by which that distortion is achieved. *Is fecit cui profuit.*⁶ We may assume, then, that dream-displacement comes about through the influence of the same censorship—that is, the censorship of endopsychic defence.

The question of the interplay of these factors—of displacement, condensation and overdetermination—in the construction of dreams, and the question which is a dominant factor and which a subordinate one—all of this we shall leave aside for later investigation. But we can state provisionally a second condition which must be satisfied by those elements of the dream-thoughts which make their way into the dream: *they must escape the censorship imposed by resistance.* And henceforward in interpreting dreams we shall take dream-displacement into account as an undeniable fact.

(C). THE MEANS OF REPRESENTATION IN DREAMS

In the process of transforming the latent thoughts into the manifest content of a dream we have found two factors at work: dream-condensation and dream-displacement. As we continue our investigation we shall, in addition to these, come across two further determinants which exercise an undoubted influence on the choice of the material which is to find access to the dream.

* * *

We are here interested only in the essential dream-thoughts. These usually emerge as a complex of thoughts and memories of the most intricate possible structure, with all the attributes of the trains of thought familiar to us in waking life. They are not infrequently trains of thought starting out from more than one centre, though having points of contact. Each train of thought is almost invariably accompanied by its contradictory counterpart, linked with it by antithetical association.

5. A term that in psychoanalysis later comes to signify a displacement of psychical intensities from a person in the past to a person in the present (especially to the analyst, in the course of a

treatment).

6. The old legal tag: "He did the deed who gained by it" [(Latin); translator's note].

The different portions of this complicated structure stand, of course, in the most manifold logical relations to one another. They can represent foreground and background, digressions and illustrations, conditions, chains of evidence and counter-arguments. When the whole mass of these dream-thoughts is brought under the pressure of the dream-work, and its elements are turned about, broken into fragments and jammed together—almost like pack-ice—the question arises of what happens to the logical connections which have hitherto formed its framework. What representation do dreams provide for ‘if’, ‘because’, ‘just as’, ‘although’, ‘either—or’, and all the other conjunctions without which we cannot understand sentences or speeches?

In the first resort our answer must be that dreams have no means at their disposal for representing these logical relations between the dream-thoughts. For the most part dreams disregard all these conjunctions, and it is only the substantive content of the dream-thoughts that they take over and manipulate. The restoration of the connections which the dream-work has destroyed is a task which has to be performed by the interpretative process.

The incapacity of dreams to express these things must lie in the nature of the psychical material out of which dreams are made. The plastic arts of painting and sculpture labour, indeed, under a similar limitation as compared with poetry, which can make use of speech; and here once again the reason for their incapacity lies in the nature of the material which these two forms of art manipulate in their effort to express something. Before painting became acquainted with the laws of expression by which it is governed, it made attempts to get over this handicap. In ancient paintings small labels were hung from the mouths of the persons represented, containing in written characters the speeches which the artist despaired of representing pictorially.

At this point an objection may perhaps be raised in dispute of the idea that dreams are unable to represent logical relations. For there are dreams in which the most complicated intellectual operations take place, statements are contradicted or confirmed, ridiculed or compared, just as they are in waking thought. But here again appearances are deceitful. If we go into the interpretation of dreams such as these, we find that the whole of this is *part of the material of the dream-thoughts and is not a representation of intellectual work performed during the dream itself*. What is reproduced by the ostensible thinking in the dream is the *subject-matter* of the dream-thoughts and not the *mutual relations between them*, the assertion of which constitutes thinking. I shall bring forward some instances of this. But the easiest point to establish in this connection is that all spoken sentences which occur in dreams and are specifically described as such are unmodified or slightly modified reproductions of speeches which are also to be found among the recollections in the material of the dream-thoughts. A speech of this kind is often no more than an allusion to some event included among the dream-thoughts, and the meaning of the dream may be a totally different one.

* * *

What means does the dream-work possess for indicating these relations in the dream-thoughts which it is so hard to represent? I will attempt to enumerate them one by one.

In the first place, dreams take into account in a general way the connection which undeniably exists between all the portions of the dream-thoughts

by combining the whole material into a single situation or event. They reproduce *logical connection* by *simultaneity in time*. Here they are acting like the painter who, in a picture of the School of Athens or of Parnassus,⁷ represents in one group all the philosophers or all the poets. It is true that they were never in fact assembled in a single hall or on a single mountain-top; but they certainly form a group in the conceptual sense.

Dreams carry this method of reproduction down to details. Whenever they show us two elements close together, this guarantees that there is some specially intimate connection between what correspond to them among the dream-thoughts. In the same way, in our system of writing, 'ab' means that the two letters are to be pronounced in a single syllable. If a gap is left between the 'a' and the 'b', it means that the 'a' is the last letter of one word and the 'b' is the first of the next one. So, too, collocations in dreams do not consist of any chance, disconnected portions of the dream-material, but of portions which are fairly closely connected in the dream-thoughts as well.

For representing *causal relations* dreams have two procedures which are in essence the same. Suppose the dream-thoughts run like this: 'Since this was so and so, such and such was bound to happen.' Then the commoner method of representation would be to introduce the dependent clause as an introductory dream and to add the principal clause as the main dream. If I have interpreted aright, the temporal sequence may be reversed. But the more extensive part of the dream always corresponds to the principal clause.

* * *

The alternative 'either-or' cannot be expressed in dreams in any way whatever. Both of the alternatives are usually inserted in the text of the dream as though they were equally valid. The dream of Irma's injection contains a classic instance of this.⁸ Its latent thoughts clearly ran: 'I am not responsible for the persistence of Irma's pains; the responsibility lies *either* in her recalcitrance to accepting my solution, *or* in the unfavourable sexual conditions under which she lives and which I cannot alter, *or* in the fact that her pains are not hysterical at all but of an organic nature.' The dream, on the other hand, fulfilled *all* of these possibilities (which were almost mutually exclusive), and did not hesitate to add a fourth solution, based on the dream-wish. After interpreting the dream, I proceeded to insert the 'either-or' into the context of the dream-thoughts.

If, however, in reproducing a dream, its narrator feels inclined to make use of an 'either-or'—e.g. 'it was either a garden or a sitting-room'—what was present in the dream-thoughts was not an alternative but an 'and', a simple addition. An 'either-or' is mostly used to describe a dream-element that has a quality of vagueness—which, however, is capable of being resolved. In such cases the rule for interpretation is: treat the two apparent alternatives as of equal validity and link them together with an 'and'.

7. A mountain in Greece sacred to Apollo and the Muses and hence the region of poetry. The School of Athens: Raphael's famous fresco of this title (1509–11) depicts philosophers of very different times as if they were contemporaries.

8. Freud has previously described a dream in which he tells a patient, Irma, "If you still get pains, it's really only your fault"; it is that dream that Freud calls "the specimen dream of psychoanalysis."

For instance, on one occasion a friend of mine was stopping in Italy and I had been without his address for a considerable time. I then had a dream of receiving a telegram containing this address. I saw it printed in blue on the telegraph form. The first word was vague:

'Via', perhaps
 or 'Villa'
 or possibly even ('Casa')

} ; the second was clear: '*Secerno*'.

The second word sounded like some Italian name and reminded me of discussions I had had with my friend on the subject of etymology. It also expressed my anger with him for having kept his address *secret* from me for so long.⁹ On the other hand, each of the three alternatives for the first word turned out on analysis to be an independent and equally valid starting-point for a chain of thoughts.¹

During the night before my father's funeral I had a dream of a printed notice, placard or poster—rather like the notices forbidding one to smoke in railway waiting-rooms—on which appeared either

or, 'You are requested to close the eyes'
'You are requested to close an eye'.

I usually write this in the form:

'You are requested to close the eye(s).'
an

Each of these two versions had a meaning of its own and led in a different direction when the dream was interpreted. I had chosen the simplest possible ritual for the funeral, for I knew my father's own views on such ceremonies. But some other members of the family were not sympathetic to such puritanical simplicity and thought we should be disgraced in the eyes of those who attended the funeral. Hence one of the versions: 'You are requested to close an eye', i.e. to 'wink at' or 'overlook'. Here it is particularly easy to see the meaning of the vagueness expressed by the 'either-or'. The dream-work failed to establish a unified wording for the dream-thoughts which could at the same time be ambiguous, and the two main lines of thought consequently began to diverge even in the manifest content of the dream.²

In a few instances the difficulty of representing an alternative is got over by dividing the dream into two pieces of equal length.

The way in which dreams treat the category of contraries and contradictions is highly remarkable. It is simply disregarded. 'No' seems not to exist so far as dreams are concerned. They show a particular preference for com-

9. The Italian word meaning “secret” is *segreto*; the verb *secernere* means “to secrete,” in the sense of giving off a secretion.

1. This dream will be found described in greater detail in Freud's letter to [Wilhelm] Fliess (the friend in question) of April 28, 1897 [translator's note].

2. This dream is reported by Freud in a letter to Fliess of November 2, 1896. It is there stated to have occurred during the night *after* the funeral. In its first wording the dream referred to closing the dead man's eyes as a filial duty [translator's note].

binning contraries into a unity or for representing them as one and the same thing. Dreams feel themselves at liberty, moreover, to represent any element by its wishful contrary; so that there is no way of deciding at a first glance whether any element that admits of a contrary is present in the dream-thoughts as a positive or as a negative.³

1900, 1929

From The "Uncanny"¹

I

It is only rarely that a psycho-analyst feels impelled to investigate the subject of aesthetics, even when aesthetics is understood to mean not merely the theory of beauty but the theory of the qualities of feeling. He works in other strata of mental life and has little to do with the subdued emotional impulses which, inhibited in their aims and dependent on a host of concurrent factors, usually furnish the material for the study of aesthetics. But it does occasionally happen that he has to interest himself in some particular province of that subject; and this province usually proves to be a rather remote one, and one which has been neglected in the specialist literature of aesthetics.

The subject of the 'uncanny'² is a province of this kind. It is undoubtedly related to what is frightening—to what arouses dread and horror; equally certainly, too, the word is not always used in a clearly definable sense, so that it tends to coincide with what excites fear in general. Yet we may expect that a special core of feeling is present which justifies the use of a special conceptual term. One is curious to know what this common core is which allows us to distinguish as 'uncanny' certain things which lie within the field of what is frightening.

As good as nothing is to be found upon this subject in comprehensive treatises on aesthetics, which in general prefer to concern themselves with what is beautiful, attractive and sublime—that is, with feelings of a positive nature—and with the circumstances and the objects that call them forth, rather than with the opposite feelings of repulsion and distress. I know of only one attempt in medico-psychological literature, a fertile but not exhaustive paper by Jentsch (1906).³ But I must confess that I have not made a very

3. [Footnote added 1911:] I was astonished to learn from a pamphlet by K. Abel, *The Antithetical Meaning of Primal Words* (1884) (cf. my review of it, 1910)—and the fact has been confirmed by other philologists—that the most ancient languages behave exactly like dreams in this respect. In the first instance they have only a single word to describe the two contraries at the extreme ends of a series of qualities or activities (e.g., "strong-weak," "old-young," "far-near," "bind-sever"); they only form distinct terms for the two contraries by a secondary process of making small modifications in the common word. Abel demonstrates this particularly from Ancient Egyptian; but he shows

that there are distinct traces of the same course of development in the Semitic and Indo-Germanic languages as well [Freud's note].

1. Translated by Alix Strachey, who sometimes adds a word or phrase in square brackets in the text for clarification.

2. The German word, translated throughout this paper by the English "uncanny," is *unheimlich*, literally "unhomely." The English term is not, of course, an exact equivalent of the German one [translator's note].

3. "On the Psychology of the Uncanny," by the German psychologist Ernst Jentsch (1867–1919).

thorough examination of the literature, especially the foreign literature, relating to this present modest contribution of mine, for reasons which, as may easily be guessed, lie in the times in which we live;⁴ so that my paper is presented to the reader without any claim to priority.

In his study of the 'uncanny' Jentsch quite rightly lays stress on the obstacle presented by the fact that people vary so very greatly in their sensitivity to this quality of feeling. The writer of the present contribution, indeed, must himself plead guilty to a special obtuseness in the matter, where extreme delicacy of perception would be more in place. It is long since he has experienced or heard of anything which has given him an uncanny impression, and he must start by translating himself into that state of feeling, by awakening in himself the possibility of experiencing it. Still, such difficulties make themselves powerfully felt in many other branches of aesthetics; we need not on that account despair of finding instances in which the quality in question will be unhesitatingly recognized by most people.

Two courses are open to us at the outset. Either we can find out what meaning has come to be attached to the word 'uncanny' in the course of its history; or we can collect all those properties of persons, things, sense-impressions, experiences and situations which arouse in us the feeling of uncanniness, and then infer the unknown nature of the uncanny from what all these examples have in common. I will say at once that both courses lead to the same result: the uncanny is that class of the frightening which leads back to what is known of old and long familiar. How this is possible, in what circumstances the familiar can become uncanny and frightening, I shall show in what follows. Let me also add that my investigation was actually begun by collecting a number of individual cases, and was only later confirmed by an examination of linguistic usage. In this discussion, however, I shall follow the reverse course.

The German word '*unheimlich*' is obviously the opposite of '*heimlich*' [homely], '*heimisch*' ['native']—the opposite of what is familiar; and we are tempted to conclude that what is 'uncanny' is frightening precisely because it is *not* known and familiar. Naturally not everything that is new and unfamiliar is frightening, however; the relation is not capable of inversion. We can only say that what is novel can easily become frightening and uncanny; some new things are frightening but not by any means all. Something has to be added to what is novel and unfamiliar in order to make it uncanny.

On the whole, Jentsch did not get beyond this relation of the uncanny to the novel and unfamiliar. He ascribes the essential factor in the production of the feeling of uncanniness to intellectual uncertainty; so that the uncanny would always, as it were, be something one does not know one's way about in. The better oriented in his environment a person is, the less readily will he get the impression of something uncanny in regard to the objects and events in it.

It is not difficult to see that this definition is incomplete, and we will therefore try to proceed beyond the equation 'uncanny' = 'unfamiliar'. We will first turn to other languages. But the dictionaries that we consult tell us nothing new, perhaps only because we ourselves speak a language that is

4. An allusion to the First World War only just concluded [translator's note].

foreign. Indeed, we get an impression that many languages are without a word for this particular shade of what is frightening.

* * *

Let us therefore return to the German language. In Daniel Sanders's *Wörterbuch der Deutschen Sprache* (1860, 1:729), the following entry, which I here reproduce in full, is to be found under the word '*heimlich*'. I have laid stress on one or two passages by italicizing them.

Heimlich, adj., subst. *Heimlichkeit* (pl. *Heimlichkeiten*): I. Also *heimelich*, *heimelig*, belonging to the house, not strange, familiar, tame, intimate, friendly, etc.

(a) (Obsolete) belonging to the house or the family, or regarded as so belonging (cf. Latin *familiaris*, familiar): *Die Heimlichen*, the members of the household; *Der heimliche Rat* (Gen. xli, 45; 2 Sam. xxiii. 23; 1 Chron. xii. 25; Wisd. viii. 4), now more usually *Geheimer Rat* [Privy Councillor].

(b) Of animals: tame, companionable to man. As opposed to wild, e.g. 'Animals which are neither wild nor *heimlich*', etc. 'Wild animals . . . that are trained to be *heimlich* and accustomed to men.' 'If these young creatures are brought up from early days among men they become quite *heimlich*, friendly' etc.—So also: 'It (the lamb) is so *heimlich* and eats out of my hand.' 'Nevertheless, the stork is a beautiful, *heimelich* bird.'

(c) Intimate, friendly, comfortable; the enjoyment of quiet content, etc., arousing a sense of agreeable restfulness and security as in one within the four walls of his house. 'Is it still *heimlich* to you in your country where strangers are felling your woods?' 'She did not feel too *heimlich* with him.' 'Along a high, *heimlich*, shady path . . . , beside a purling, gushing and babbling woodland brook.' 'To destroy the *Heimlichkeit* of the home.' 'I could not readily find another spot so intimate and *heimlich* as this.' 'We pictured it so comfortable, so nice, so cosy and *heimlich*.' * * * 'You go to sleep there so soft and warm, so wonderfully *heim'lig*.'—*This form of the word deserves to become general in order to protect this perfectly good sense of the word from becoming obsolete through an easy confusion with II* [see below]. Cf: "'The Zecks [a family name] are all '*heimlich*'." (in sense II) "'*Heimlich*? . . . What do you understand by '*heimlich*'?" "Well, . . . they are like a buried spring or a dried-up pond. One cannot walk over it without always having the feeling that water might come up there again." "Oh, we call it '*unheimlich*'; you call it '*heimlich*'. Well, what makes you think that there is something secret and untrustworthy about this family?"' (Gutzkow).⁵

(d) Especially in Silesia: gay, cheerful; also of the weather.

II. Concealed, kept from sight, so that others do not get to know of or about it, withheld from others. To do something *heimlich*, i.e. behind someone's back; to steal away *heimlich*; *heimlich* meetings and appointments; to look on with *heimlich* pleasure at someone's discomfiture; to sigh or weep *heimlich*; to behave *heimlich*, as though there was something to conceal; *heimlich* love-affair, love, sin; *heimlich* places (which good manners oblige us to conceal) (1 Sam. v. 6). 'The *heimlich* chamber' (privy) (2 Kings x. 27). Also, 'the *heimlich* chair'. 'To throw into pits or *Heimlichkeiten*'.—'Led the

steeds *heimlich* before Laomedon.'—'As secretive, *heimlich*, deceitful and malicious towards cruel masters . . . as frank, open, sympathetic and helpful towards a friend in misfortune.' 'You have still to learn what is *heimlich* holiest to me.' 'The *heimlich* art' (magic). * * *

For compounds see above, Ic. Note especially the negative '*un-*': eerie, weird, arousing gruesome fear: 'Seeming quite *unheimlich* and ghostly to him.' 'The *unheimlich*, fearful hours of night.' 'I had already long since felt an *unheimlich*, even gruesome feeling.' 'Now I am beginning to have an *unheimlich* feeling' . . . 'Feels an *unheimlich* horror.' '*Unheimlich* and motionless like a stone image.' 'The *unheimlich* mist called hill-fog.' 'These pale youths are *unheimlich* and are brewing heaven knows what mischief.' '*"Unheimlich" is the name for everything that ought to have remained . . . secret and hidden but has come to light*' (Schelling).⁶—'To veil the divine, to surround it with a certain *Unheimlichkeit*.'—*Unheimlich* is not often used as opposite to meaning II (above).

What interests us most in this long extract is to find that among its different shades of meaning the word '*heimlich*' exhibits one which is identical with its opposite, '*unheimlich*'. What is *heimlich* thus comes to be *unheimlich*. (Cf. the quotation from Gutzkow: 'We call it "*unheimlich*"; you call it "*heimlich*".') In general we are reminded that the word '*heimlich*' is not unambiguous, but belongs to two sets of ideas, which, without being contradictory, are yet very different: on the one hand it means what is familiar and agreeable, and on the other, what is concealed and kept out of sight.⁷ '*Unheimlich*' is customarily used, we are told, as the contrary only of the first signification of '*heimlich*', and not of the second. Sanders tells us nothing concerning a possible genetic connection between these two meanings of *heimlich*. On the other hand, we notice that Schelling says something which throws quite a new light on the concept of the *Unheimlich*, for which we were certainly not prepared. According to him, everything is *unheimlich* that ought to have remained secret and hidden but has come to light.

Some of the doubts that have thus arisen are removed if we consult Grimm's dictionary. (1877, 4.2:873ff.)

We read:

Heimlich; adj. and adv. *vernaculus, occultus*; MHG. *heimelîch, heimlich*. (P. 874.) In a slightly different sense: 'I feel *heimlich*, well, free from fear.' . . .

[3] (*b*) *Heimlich* is also used of a place free from ghostly influences . . . familiar, friendly, intimate.

(P. 875: *β*) Familiar, amicable, unreserved.

4. From the idea of 'homelike', 'belonging to the house', the further idea is developed of something withdrawn from the eyes of strangers, something concealed, secret; and this idea is expanded in many ways . . .

* * *

6. Friedrich von Schelling (1775–1854), German philosopher; quoted from *Philosophy of Mythology* (published 1856).

7. According to the *Oxford English Dictionary*, a

similar ambiguity attaches to the English "canny," which may mean not only "cosy" but also "endowed with occult or magical powers" [translator's note].

9. The notion of something hidden and dangerous, which is expressed in the last paragraph, is still further developed, so that 'heimlich' comes to have the meaning usually ascribed to 'unheimlich'. Thus: 'At times I feel like a man who walks in the night and believes in ghosts; every corner is heimlich and full of terrors for him'. (Klinger,⁸ Theater, 3:298.)

Thus *heimlich* is a word the meaning of which develops in the direction of ambivalence, until it finally coincides with its opposite, *unheimlich*. *Unheimlich* is in some way or other a sub-species of *heimlich*. Let us bear this discovery in mind, though we cannot yet rightly understand it, alongside of Schelling's definition of the *Unheimlich*. If we go on to examine individual instances of uncanniness, these hints will become intelligible to us.

II

When we proceed to review the things, persons, impressions, events and situations which are able to arouse in us a feeling of the uncanny in a particularly forcible and definite form, the first requirement is obviously to select a suitable example to start on. Jentsch has taken as a very good instance 'doubts whether an apparently animate being is really alive; or conversely, whether a lifeless object might not be in fact animate'; and he refers in this connection to the impression made by waxwork figures, ingeniously constructed dolls and automata. To these he adds the uncanny effect of epileptic fits, and of manifestations of insanity, because these excite in the spectator the impression of automatic, mechanical processes at work behind the ordinary appearance of mental activity. Without entirely accepting this author's view, we will take it as a starting-point for our own investigation because in what follows he reminds us of a writer who has succeeded in producing uncanny effects better than anyone else.

Jentsch writes: 'In telling a story, one of the most successful devices for easily creating uncanny effects is to leave the reader in uncertainty whether a particular figure in the story is a human being or an automaton, and to do it in such a way that his attention is not focused directly upon his uncertainty, so that he may not be led to go into the matter and clear it up immediately. That, as we have said, would quickly dissipate the peculiar emotional effect of the thing. E. T. A. Hoffmann⁹ has repeatedly employed this psychological artifice with success in his fantastic narratives.'

This observation, undoubtedly a correct one, refers primarily to the story of 'The Sand-Man' in Hoffmann's *Nachtstücken*,¹ which contains the original of Olympia, the doll that appears in the first act of Offenbach's opera, *Tales of Hoffmann*.² But I cannot think—and I hope most readers of the story will agree with me—that the theme of the doll Olympia, who is to all appearances a living being, is by any means the only, or indeed the most important, element that must be held responsible for the quite unparalleled atmosphere of

8. Friedrich von Klinger (1752–1831), German dramatist and novelist.

9. German author of fantastic and often humorous tales (1776–1822).

1. *Night Pieces* (1816–17); "The Sandman" was

published in vol. 1 (1816).

2. An 1881 opera based on three tales by Hoffmann, by Jacques Offenbach (1819–1880), a German-born French composer of many light operas.

uncanniness evoked by the story. Nor is this atmosphere heightened by the fact that the author himself treats the episode of Olympia with a faint touch of satire and uses it to poke fun at the young man's idealization of his mistress. The main theme of the story is, on the contrary, something different, something which gives it its name, and which is always re-introduced at critical moments: it is the theme of the 'Sand-Man' who tears out children's eyes.

This fantastic tale opens with the childhood recollections of the student Nathaniel. In spite of his present happiness, he cannot banish the memories associated with the mysterious and terrifying death of his beloved father. On certain evenings his mother used to send the children to bed early, warning them that 'the Sand-Man was coming'; and, sure enough, Nathaniel would not fail to hear the heavy tread of a visitor, with whom his father would then be occupied for the evening. When questioned about the Sand-Man, his mother, it is true, denied that such a person existed except as a figure of speech; but his nurse could give him more definite information: 'He's a wicked man who comes when children won't go to bed, and throws handfuls of sand in their eyes so that they jump out of their heads all bleeding. Then he puts the eyes in a sack and carries them off to the half-moon to feed his children. They sit up there in their nest, and their beaks are hooked like owls' beaks, and they use them to peck up naughty boys' and girls' eyes with.'

Although little Nathaniel was sensible and old enough not to credit the figure of the Sand-Man with such gruesome attributes, yet the dread of him became fixed in his heart. He determined to find out what the Sand-Man looked like; and one evening, when the Sand-Man was expected again, he hid in his father's study. He recognized the visitor as the lawyer Coppelius, a repulsive person whom the children were frightened of when he occasionally came to a meal; and he now identified this Coppelius with the dreaded Sand-Man. As regards the rest of the scene, Hoffmann already leaves us in doubt whether what we are witnessing is the first delirium of the panic-stricken boy, or a succession of events which are to be regarded in the story as being real. His father and the guest are at work at a brazier with glowing flames. The little eavesdropper hears Coppelius call out: 'Eyes here! Eyes here!' and betrays himself by screaming aloud. Coppelius seizes him and is on the point of dropping bits of red-hot coal from the fire into his eyes, and then of throwing them into the brazier, but his father begs him off and saves his eyes. After this the boy falls into a deep swoon; and a long illness brings his experience to an end. Those who decide in favour of the rationalistic interpretation of the Sand-Man will not fail to recognize in the child's phantasy the persisting influence of his nurse's story. The bits of sand that are to be thrown into the child's eyes turn into bits of red-hot coal from the flames; and in both cases they are intended to make his eyes jump out. In the course of another visit of the Sand-Man's, a year later, his father is killed in his study by an explosion. The lawyer Coppelius disappears from the place without leaving a trace behind.

Nathaniel, now a student, believes that he has recognized this phantom of horror from his childhood in an itinerant optician, an Italian called Giuseppe Coppola, who at his university town, offers him weather-glasses for sale. When Nathaniel refuses, the man goes on: 'Not weather-glasses? not weather-glasses? also got fine eyes, fine eyes!' The student's terror is allayed when he finds that the proffered eyes are only harmless spectacles, and he buys a

pocket spy-glass from Coppola. With its aid he looks across into Professor Spalanzani's house opposite and there spies Spalanzani's beautiful, but strangely silent and motionless daughter, Olympia. He soon falls in love with her so violently that, because of her, he quite forgets the clever and sensible girl to whom he is betrothed. But Olympia is an automaton whose clock-work has been made by Spalanzani, and whose eyes have been put in by Coppola, the Sand-Man. The student surprises the two Masters quarrelling over their handiwork. The optician carries off the wooden eyeless doll; and the mechanic, Spalanzani, picks up Olympia's bleeding eyes from the ground and throws them at Nathaniel's breast, saying that Coppola had stolen them from the student. Nathaniel succumbs to a fresh attack of madness, and in his delirium his recollection of his father's death is mingled with this new experience. 'Hurry up! hurry up! ring of fire!' he cries. 'Spin about, ring of fire—Hurrah! Hurry up, wooden doll! lovely wooden doll, spin about—.' He then falls upon the professor, Olympia's 'father', and tries to strangle him.

Rallying from a long and serious illness, Nathaniel seems at last to have recovered. He intends to marry his betrothed, with whom he has become reconciled. One day he and she are walking through the city market-place, over which the high tower of the Town Hall throws its huge shadow. On the girl's suggestion, they climb the tower, leaving her brother, who is walking with them, down below. From the top, Clara's attention is drawn to a curious object moving along the street. Nathaniel looks at this thing through Coppola's spy-glass, which he finds in his pocket, and falls into a new attack of madness. Shouting 'Spin about, wooden doll!' he tries to throw the girl into the gulf below. Her brother, brought to her side by her cries, rescues her and hastens down with her to safety. On the tower above, the madman rushes round, shrieking 'Ring of fire, spin about!'—and we know the origin of the words. Among the people who begin to gather below there comes forward the figure of the lawyer Coppelius, who has suddenly returned. We may suppose that it was his approach, seen through the spy-glass, which threw Nathaniel into his fit of madness. As the onlookers prepare to go up and overpower the madman, Coppelius laughs and says: 'Wait a bit; he'll come down of himself.' Nathaniel suddenly stands still, catches sight of Coppelius, and with a wild shriek 'Yes! "Fine eyes—fine eyes"!' flings himself over the parapet. While he lies on the paving-stones with a shattered skull the Sand-Man vanishes in the throng.

This short summary leaves no doubt, I think, that the feeling of something uncanny is directly attached to the figure of the Sand-Man, that is, to the idea of being robbed of one's eyes, and that Jentsch's point of an intellectual uncertainty has nothing to do with the effect. Uncertainty whether an object is living or inanimate, which admittedly applied to the doll Olympia, is quite irrelevant in connection with this other, more striking instance of uncanniness. It is true that the writer creates a kind of uncertainty in us in the beginning by not letting us know, no doubt purposely, whether he is taking us into the real world or into a purely fantastic one of his own creation. He has, of course, a right to do either; and if he chooses to stage his action in a world peopled with spirits, demons and ghosts, as Shakespeare does in *Hamlet*, in *Macbeth* and, in a different sense, in *The Tempest* and *A Midsummer-Night's Dream*, we must bow to his decision and treat his setting as though it were real for as long as we put ourselves into his hands.

But this uncertainty disappears in the course of Hoffmann's story, and we perceive that he intends to make us, too, look through the demon optician's spectacles or spy-glass—perhaps, indeed, that the author in his very own person once peered through such an instrument. For the conclusion of the story makes it quite clear that Coppola the optician really is the lawyer Coppelius³ and also, therefore, the Sand-Man.

There is no question therefore, of any intellectual uncertainty here: we know now that we are not supposed to be looking on at the products of a madman's imagination, behind which we, with the superiority of rational minds, are able to detect the sober truth; and yet this knowledge does not lessen the impression of uncanniness in the least degree. The theory of intellectual uncertainty is thus incapable of explaining that impression.

We know from psycho-analytic experience, however, that the fear of damaging or losing one's eyes is a terrible one in children. Many adults retain their apprehensiveness in this respect, and no physical injury is so much dreaded by them as an injury to the eye. We are accustomed to say, too, that we will treasure a thing as the apple of our eye. A study of dreams, phantasies and myths has taught us that anxiety about one's eyes, the fear of going blind, is often enough a substitute for the dread of being castrated. The self-blinding of the mythical criminal, Oedipus,⁴ was simply a mitigated form of the punishment of castration—the only punishment that was adequate for him by the *lex talionis*.⁵ We may try on rationalistic grounds to deny that fears about the eye are derived from the fear of castration, and may argue that it is very natural that so precious an organ as the eye should be guarded by a proportionate dread. Indeed, we might go further and say that the fear of castration itself contains no other significance and no deeper secret than a justifiable dread of this rational kind. But this view does not account adequately for the substitutive relation between the eye and the male organ which is seen to exist in dreams and myths and phantasies; nor can it dispel the impression that the threat of being castrated in especial excites a peculiarly violent and obscure emotion, and that this emotion is what first gives the idea of losing other organs its intense colouring. All further doubts are removed when we learn the details of their 'castration complex' from the analysis of neurotic patients, and realize its immense importance in their mental life.

Moreover, I would not recommend any opponent of the psycho-analytic view to select this particular story of the Sand-Man with which to support his argument that anxiety about the eyes has nothing to do with the castration complex. For why does Hoffmann bring the anxiety about eyes into such intimate connection with the father's death? And why does the Sand-Man always appear as a disturber of love? He separates the unfortunate Nathaniel from his betrothed and from her brother, his best friend; he destroys the second object of his love, Olympia, the lovely doll; and he drives him into suicide at the moment when he has won back his Clara and is about to be happily

3. Frau Dr. Rank has pointed out the association of the name with *coppella* = crucible, connecting it with the chemical operations that caused the father's death; and also with *coppo* = eye-socket [Freud's note]. Psychoanalytical Society.

4. Oedipus, a favorite subject of Greek tragedy and vase painting, was king of Thebes; he blinded himself when he realized that he had killed his father and married his mother.

5. Law of retaliation in kind (Latin).

united to her. Elements in the story like these, and many others, seem arbitrary and meaningless so long as we deny all connection between fears about the eye and castration; but they become intelligible as soon as we replace the Sand-Man by the dreaded father at whose hands castration is expected.⁶

We shall venture, therefore, to refer the uncanny effect of the Sand-Man to the anxiety belonging to the castration complex of childhood. But having reached the idea that we can make an infantile factor such as this responsible for feelings of uncanniness, we are encouraged to see whether we can apply it to other instances of the uncanny. We find in the story of the Sand-Man the other theme on which Jentsch lays stress, of a doll which appears to be alive. Jentsch believes that a particularly favourable condition for awakening uncanny feelings is created when there is intellectual uncertainty whether an object is alive or not, and when an inanimate object becomes too much like an animate one. Now, dolls are of course rather closely connected with childhood life. We remember that in their early games children do not distinguish at all sharply between living and inanimate objects, and that they are especially fond of treating their dolls like live people. In fact, I have occasionally heard a woman patient declare that even at the age of eight she had still been convinced that her dolls would be certain to come to life if she were to look at them in a particular, extremely concentrated, way. So that here, too, it is not difficult to discover a factor from childhood. But, curiously enough, while the Sand-Man story deals with the arousing of an early childhood fear, the idea of a 'living doll' excites no fear at all; children have no fear of their dolls coming to life, they may even desire it. The source of

6. In fact, Hoffmann's imaginative treatment of his material has not made such wild confusion of its elements that we cannot reconstruct their original arrangement. In the story of Nathaniel's childhood, the figures of his father and Coppeliu represent the two opposites into which the father-imago is split by his ambivalence; whereas the one threatens to blind him—that is, to castrate him,—the other, the "good" father, intercedes for his sight. The part of the complex which is most strongly repressed, the death-wish against the "bad" father, finds expression in the death of the "good" father, and Coppeliu is made answerable for it. This pair of fathers is represented later, in his student days, by Professor Spalanzani and Coppola the optician. The Professor is in himself a member of the father-series, and Coppola is recognized as identical with Coppeliu the lawyer. Just as they used before to work together over the secret brazier, so now they have jointly created the doll Olympia; the Professor is even called the father of Olympia. This double occurrence of activity in common betrays them as divisions of the father-imago: both the mechanician and the optician were the father of Nathaniel (and of Olympia as well). In the frightening scene in childhood, Coppeliu, after sparing Nathaniel's eyes, had screwed off his arms and legs as an experiment; that is, he had worked on him as a mechanician would on a doll. This singular feature, which seems quite outside the picture of the Sand-Man, introduces a new castration equivalent; but it also points to the inner identity of Coppeliu with his later counterpart, Spalanzani the mechanician, and prepares us for the interpret-

ation of Olympia. This automatic doll can be nothing else than a materialization of Nathaniel's feminine attitude towards his father in his infancy. Her fathers, Spalanzani and Coppola, are, after all, nothing but new editions, reincarnations of Nathaniel's pair of fathers. Spalanzani's otherwise incomprehensible statement that the optician has stolen Nathaniel's eyes, so as to set them in the doll, now becomes significant as supplying evidence of the identity of Olympia and Nathaniel. Olympia is, as it were, a dissociated complex of Nathaniel's which confronts him as a person, and Nathaniel's enslavement to this complex is expressed in his senseless obsessive love for Olympia. We may with justice call love of this kind narcissistic, and we can understand why someone who has fallen victim to it should relinquish the real, external object of his love. The psychological truth of the situation in which the young man, fixated upon his father by his castration complex, becomes incapable of loving a woman, is amply proved by numerous analyses of patients whose story, though less fantastic, is hardly less tragic than that of the student Nathaniel.

Hoffmann was the child of an unhappy marriage. When he was three years old, his father left his small family, and was never united to them again. According to Grisebach, in his biographical introduction to Hoffmann's works, the writer's relation to his father was always a most sensitive subject with him [Freud's note]. Eduard Grisebach (1845–1906), German diplomat, editor, and literary historian; his edition of Hoffmann's *Complete Works* was published in 1905.

uncanny feelings would not, therefore, be an infantile fear in this case, but rather an infantile wish or even merely an infantile belief. There seems to be a contradiction here; but perhaps it is only a complication, which may be helpful to us later on.

* * *

At this point I will put forward two considerations which, I think, contain the gist of this short study. In the first place, if psycho-analytic theory is correct in maintaining that every affect belonging to an emotional impulse, whatever its kind, is transformed, if it is repressed, into anxiety, then among instances of frightening things there must be one class in which the frightening element can be shown to be something repressed which *recurs*. This class of frightening things would then constitute the uncanny; and it must be a matter of indifference whether what is uncanny was itself originally frightening or whether it carried some *other* affect. In the second place, if this is indeed the secret nature of the uncanny, we can understand why linguistic usage has extended *das Heimliche* ['homely'] into its opposite, *das Unheimliche*; for this uncanny is in reality nothing new or alien, but something which is familiar and old-established in the mind and which has become alienated from it only through the process of repression. This reference to the factor of repression enables us, furthermore, to understand Schelling's definition of the uncanny as something which ought to have remained hidden but has come to light.

It only remains for us to test our new hypothesis on one or two more examples of the uncanny.

Many people experience the feeling in the highest degree in relation to death and dead bodies, to the return of the dead, and to spirits and ghosts. As we have seen some languages in use to-day can only render the German expression 'an *unheimlich* house' by 'a *haunted* house'. We might indeed have begun our investigation with this example, perhaps the most striking of all, of something uncanny, but we refrained from doing so because the uncanny in it is too much intermixed with what is purely gruesome and is in part overlaid by it. There is scarcely any other matter, however, upon which our thoughts and feelings have changed so little since the very earliest times, and in which discarded forms have been so completely preserved under a thin disguise, as our relation to death. Two things account for our conservatism: the strength of our original emotional reaction to death and the insufficiency of our scientific knowledge about it. Biology has not yet been able to decide whether death is the inevitable fate of every living being or whether it is only a regular but yet perhaps avoidable event in life. It is true that the statement 'All men are mortal' is paraded in text-books of logic as an example of a general proposition; but no human being really grasps it, and our unconscious has as little use now as it ever had for the idea of its own mortality. Religions continue to dispute the importance of the undeniable fact of individual death and to postulate a life after death; civil governments still believe that they cannot maintain moral order among the living if they do not uphold the prospect of a better life hereafter as a recompense for mundane existence. In our great cities, placards announce lectures that undertake to tell us how to get into touch with the souls of the departed; and it cannot be denied that not a few of the most able and penetrating minds among our men of science have

come to the conclusion, especially towards the close of their own lives, that a contact of this kind is not impossible. Since almost all of us still think as savages do on this topic, it is no matter for surprise that the primitive fear of the dead is still so strong within us and always ready to come to the surface on any provocation. Most likely our fear still implies the old belief that the dead man becomes the enemy of his survivor and seeks to carry him off to share his new life with him. Considering our unchanged attitude towards death, we might rather enquire what has become of the repression, which is the necessary condition of a primitive feeling recurring in the shape of something uncanny. But repression is there, too. All supposedly educated people have ceased to believe officially that the dead can become visible as spirits, and have made any such appearances dependent on improbable and remote conditions; their emotional attitude towards their dead, moreover, once a highly ambiguous and ambivalent one, has been toned down in the higher strata of the mind into an unambiguous feeling of piety.

We have now only a few remarks to add—for animism, magic and sorcery, the omnipotence of thoughts, man's attitude to death, involuntary repetition and the castration complex comprise practically all the factors which turn something frightening into something uncanny.

We can also speak of a living person as uncanny, and we do so when we ascribe evil intentions to him. But that is not all; in addition to this we must feel that his intentions to harm us are going to be carried out with the help of special powers. A good instance of this is the 'Gettatore',⁷ that uncanny figure of Romanic superstition which Schaeffer,⁸ with intuitive poetic feeling and profound psycho-analytic understanding, has transformed into a sympathetic character in his *Josef Montfort*. But the question of these secret powers brings us back again to the realm of animism. It was the pious Gretchen's intuition that Mephistopheles possessed secret powers of this kind that made him so uncanny to her.

Sie fühlt dass ich ganz sicher ein Genie,
Vielleicht sogar der Teufel bin.⁹

The uncanny effect of epilepsy and of madness has the same origin. The layman sees in them the working of forces hitherto unsuspected in his fellow-men, but at the same time he is dimly aware of them in remote corners of his own being. The Middle Ages quite consistently ascribed all such maladies to the influence of demons, and in this their psychology was almost correct. Indeed, I should not be surprised to hear that psycho-analysis, which is concerned with laying bare these hidden forces, has itself become uncanny to many people for that very reason. In one case, after I had succeeded—though none too rapidly—in effecting a cure in a girl who had been an invalid for many years, I myself heard this view expressed by the patient's mother long after her recovery.

7. Literally "thrower" (of bad luck), or "one who casts" (the evil eye) [translator's note].

8. Albrecht Schaeffer (1885–1950), who published the novel *Josef Montfort* in 1918.

9. "She feels that surely I'm a genius now,—Perhaps the very Devil indeed!" Goethe, *Faust*, Part I [1808], scene 16; Bayard Taylor's transla-

tion [1870–71; translator's note]. Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and dramatist. Mephistopheles is the spirit to whom the old Faust promises his soul; Gretchen is the young girl whom Faust, made young again, falls in love with and seduces.

Dismembered limbs, a severed head, a hand cut off at the wrist, as in a fairy tale of Hauff's,¹ feet which dance by themselves, as in the book by Schaeffer which I mentioned above—all these have something peculiarly uncanny about them, especially when, as in the last instance, they prove capable of independent activity in addition. As we already know, this kind of uncanniness springs from its proximity to the castration complex. To some people the idea of being buried alive by mistake is the most uncanny thing of all. And yet psycho-analysis has taught us that this terrifying phantasy is only a transformation of another phantasy which had originally nothing terrifying about it at all, but was qualified by a certain lasciviousness—the phantasy, I mean, of intra-uterine existence.

There is one more point of general application which I should like to add, though, strictly speaking, it has been included in what has already been said about animism and modes of working of the mental apparatus that have been surmounted; for I think it deserves special emphasis. This is that an uncanny effect is often and easily produced when the distinction between imagination and reality is effaced, as when something that we have hitherto regarded as imaginary appears before us in reality, or when a symbol takes over the full functions of the thing it symbolizes, and so on. It is this factor which contributes not a little to the uncanny effect attaching to magical practices. The infantile element in this, which also dominates the minds of neurotics, is the over-accentuation of psychical reality in comparison with material reality—a feature closely allied to the belief in the omnipotence of thoughts. In the middle of the isolation of war-time a number of the English *Strand Magazine* fell into my hands; and, among other somewhat redundant matter, I read a story about a young married couple who move into a furnished house in which there is a curiously shaped table with carvings of crocodiles on it. Towards evening an intolerable and very specific smell begins to pervade the house; they stumble over something in the dark; they seem to see a vague form gliding over the stairs—in short, we are given to understand that the presence of the table causes ghostly crocodiles to haunt the place, or that the wooden monsters come to life in the dark, or something of the sort. It was a naïve enough story, but the uncanny feeling it produced was quite remarkable.

To conclude this collection of examples, which is certainly not complete, I will relate an instance taken from psycho-analytic experience; if it does not rest upon mere coincidence, it furnishes a beautiful confirmation of our theory of the uncanny. It often happens that neurotic men declare that they feel there is something uncanny about the female genital organs. This *unheimlich* place, however, is the entrance to the former *Heim* [home] of all human beings, to the place where each one of us lived once upon a time and in the beginning. There is a joking saying that 'Love is home-sickness'; and whenever a man dreams of a place or a country and says to himself, while he is still dreaming: 'this place is familiar to me, I've been here before', we may interpret the place as being his mother's genitals or her body. In this case too, then, the *unheimlich* is what was once *heimisch*, familiar; the prefix 'un-' ['un-'] is the token of repression.

1. *Die Geschichte von der abgehauenen Hand* (The Story of the Severed Hand) [translator's note]. Wilhelm Hauff (1802–1827), German novelist.

III

In the course of this discussion the reader will have felt certain doubts arising in his mind; and he must now have an opportunity of collecting them and bringing them forward.

It may be true that the uncanny [*unheimlich*] is something which is secretly familiar [*heimlich-heimisch*], which has undergone repression and then returned from it, and that everything that is uncanny fulfils this condition. But the selection of material on this basis does not enable us to solve the problem of the uncanny. For our proposition is clearly not convertible. Not everything that fulfils this condition—not everything that recalls repressed desires and surmounted modes of thinking belonging to the pre-history of the individual and of the race—is on that account uncanny.

Nor shall we conceal the fact that for almost every example adduced in support of our hypothesis one may be found which rebuts it. The story of the severed hand in Hauff's fairy tale certainly has an uncanny effect, and we have traced that effect back to the castration complex; but most readers will probably agree with me in judging that no trace of uncanniness is provoked by Herodotus's story of the treasure of Rhampsinitus,² in which the master-thief, whom the princess tries to hold fast by the hand, leaves his brother's severed hand behind with her instead. Again, the prompt fulfilment of the wishes of Polycrates³ undoubtedly affects us in the same uncanny way as it did the king of Egypt; yet our own fairy stories are crammed with instantaneous wish-fulfilments which produce no uncanny effect whatever. In the story of 'The Three Wishes', the woman is tempted by the savoury smell of a sausage to wish that she might have one too, and in an instant it lies on a plate before her. In his annoyance at her hastiness her husband wishes it may hang on her nose. And there it is, dangling from her nose. All this is very striking but not in the least uncanny. Fairy tales quite frankly adopt the animistic standpoint of the omnipotence of thoughts and wishes, and yet I cannot think of any genuine fairy story which has anything uncanny about it. We have heard that it is in the highest degree uncanny when an inanimate object—a picture or a doll—comes to life; nevertheless in Hans Andersen's⁴ stories the household utensils, furniture and tin soldiers are alive, yet nothing could well be more remote from the uncanny. And we should hardly call it uncanny when Pygmalion's beautiful statue comes to life.⁵

Apparent death and the re-animation of the dead have been represented as most uncanny themes. But things of this sort too are very common in fairy stories. Who would be so bold as to call it uncanny, for instance, when Snow-White opens her eyes once more?⁶ And the resuscitation of the dead in accounts of miracles, as in the New Testament, elicits feelings quite unrelated to the uncanny. Then, too, the theme that achieves such an indubitably uncanny effect, the unintended recurrence of the same thing, serves other

2. See Herodotus (Greek historian, ca. 484–ca. 425 B.C.E.) 2.121. Rhampsinitus was the king of Egypt.

4. Hans Christian Andersen (1805–1875), Danish

writer best known for his fairy tales.

5. In *Metamorphoses* (ca. 10 C.E.), 10.243–97, the Roman poet Ovid tells the story of the sculptor Pygmalion, who fell in love with his own creation.

6. Snow White, believed dead, comes back to life when the poisoned apple is dislodged from her throat.

and quite different purposes in another class of cases. We have already come across one example in which it is employed to call up a feeling of the comic;⁷ and we could multiply instances of this kind. Or again, it works as a means of emphasis, and so on. And once more: what is the origin of the uncanny effect of silence, darkness and solitude? Do not these factors point to the part played by danger in the genesis of what is uncanny, notwithstanding that in children these same factors are the most frequent determinants of the expression of fear [rather than of the uncanny]? And are we after all justified in entirely ignoring intellectual uncertainty as a factor, seeing that we have admitted its importance in relation to death?

It is evident therefore, that we must be prepared to admit that there are other elements besides those which we have so far laid down as determining the production of uncanny feelings. We might say that these preliminary results have satisfied *psycho-analytic* interest in the problem of the uncanny, and that what remains probably calls for an *aesthetic* enquiry. But that would be to open the door to doubts about what exactly is the value of our general contention that the uncanny proceeds from something familiar which has been repressed.

We have noticed one point which may help us to resolve these uncertainties: nearly all the instances that contradict our hypothesis are taken from the realm of fiction, of imaginative writing. This suggests that we should differentiate between the uncanny that we actually experience and the uncanny that we merely picture or read about.

What is *experienced* as uncanny is much more simply conditioned but comprises far fewer instances. We shall find, I think, that it fits in perfectly with our attempt at a solution, and can be traced back without exception to something familiar that has been repressed. But here, too, we must make a certain important and psychologically significant differentiation in our material, which is best illustrated by turning to suitable examples.

Let us take the uncanny associated with the omnipotence of thoughts, with the prompt fulfilment of wishes, with secret injurious powers and with the return of the dead. The condition under which the feeling of uncanniness arises here is unmistakable. We—or our primitive forefathers—once believed that these possibilities were realities, and were convinced that they actually happened. Nowadays we no longer believe in them, we have *surmounted* these modes of thought; but we do not feel quite sure of our new beliefs, and the old ones still exist within us ready to seize upon any confirmation. As soon as something *actually happens* in our lives which seems to confirm the old, discarded beliefs we get a feeling of the uncanny; it is as though we were making a judgement something like this: 'So, after all, it is *true* that one can kill a person by the mere wish!' or, 'So the dead *do* live on and appear on the scene of their former activities!' and so on. Conversely, anyone who has completely and finally rid himself of animistic beliefs will be insensible to this type of the uncanny. The most remarkable coincidences of wish and fulfilment, the most mysterious repetition of similar experiences in a particular place or on a particular date, the most deceptive sights and suspicious noises—none of these things will disconcert him or raise the kind of fear which can be described as

7. That is, in Mark Twain's *A Tramp Abroad* (1880), mentioned in a passage omitted from our selection.

'a fear of something uncanny'. The whole thing is purely an affair of 'reality-testing', a question of the material reality of the phenomena.⁸

The state of affairs is different when the uncanny proceeds from repressed infantile complexes, from the castration complex, womb-phantasies, etc.; but experiences which arouse this kind of uncanny feeling are not of very frequent occurrence in real life. The uncanny which proceeds from actual experience belongs for the most part to the first group [the group dealt with in the previous paragraph]. Nevertheless the distinction between the two is theoretically very important. Where the uncanny comes from infantile complexes the question of material reality does not arise; its place is taken by psychical reality. What is involved is an actual repression of some content of thought and a return of this repressed content, not a cessation of *belief in the reality* of such a content. We might say that in the one case what had been repressed is a particular ideational content, and in the other the belief in its (material) reality. But this last phrase no doubt extends the term 'repression' beyond its legitimate meaning. It would be more correct to take into account a psychological distinction which can be detected here, and to say that the animistic beliefs of civilized people are in a state of having been (to a greater or lesser extent) *surmounted* [rather than repressed]. Our conclusion could then be stated thus: an uncanny experience occurs either when infantile complexes which have been repressed are once more revived by some impression, or when primitive beliefs which have been surmounted seem once more to be confirmed. Finally, we must not let our predilection for smooth solutions and lucid exposition blind us to the fact that these two classes of uncanny experience are not always sharply distinguishable. When we consider that primitive beliefs are most intimately connected with infantile complexes, and are, in fact, based on them, we shall not be greatly astonished to find that the distinction is often a hazy one.

The uncanny as it is depicted in *literature*, in stories and imaginative productions, merits in truth a separate discussion. Above all, it is a much more fertile province than the uncanny in real life, for it contains the whole of the latter and something more besides, something that cannot be found in real life. The contrast between what has been repressed and what has been surmounted cannot be transposed on to the uncanny in fiction without profound modification; for the realm of phantasy depends for its effect on the fact that its content is not submitted to reality-testing. The somewhat paradoxical

8. Since the uncanny effect of a "double" also belongs to this same group it is interesting to observe what the effect is of meeting one's own image unbidden and unexpected. Ernst Mach has related two such observations in his *Analyse der Empfindungen* (1900 [Analysis of Sensations]). On the first occasion he was not a little startled when he realized that the face before him was his own. The second time he formed a very unfavorable opinion about the supposed stranger who had entered the omnibus, and thought "What a shabby-looking school-master that man is who is getting in!"—I can report a similar adventure. I was sitting alone in my *wagon-lit* compartment when a more than usually violent jolt of the train swung back the door of the adjoining washing-cabinet, and an elderly gentleman in a dressing-

gown and a travelling cap came in. I assumed that in leaving the washing-cabinet, which lay between the two compartments, he had taken the wrong direction and come into my cabinet by mistake. Jumping up with the intention of putting him right, I at once realized to my dismay that the intruder was nothing but my own reflection in the looking-glass on the open door. I can still recollect that I thoroughly disliked his appearance. Instead, therefore, of being *frightened* by our doubles, both Mach and I simply failed to recognize them as such. Is it not possible, though, that our dislike of them was a vestigial trace of the archaic reaction which feels the "double" to be something uncanny? [Freud's note]. Mach (1838–1916), Austrian physicist and philosopher. *Wagon-lit*: sleeping car (French).

result is that *in the first place a great deal that is not uncanny in fiction would be so if it happened in real life; and in the second place that there are many more means of creating uncanny effects in fiction than there are in real life.*

The imaginative writer has this licence among many others, that he can select his world of representation so that it either coincides with the realities we are familiar with or departs from them in what particulars he pleases. We accept his ruling in every case. In fairy tales, for instance, the world of reality is left behind from the very start, and the animistic system of beliefs is frankly adopted. Wish-fulfilments, secret powers, omnipotence of thoughts, animation of inanimate objects, all the elements so common in fairy stories, can exert no uncanny influence here; for, as we have learnt, that feeling cannot arise unless there is a conflict of judgement as to whether things which have been 'surmounted' and are regarded as incredible may not, after all, be possible; and this problem is eliminated from the outset by the postulates of the world of fairy tales. Thus we see that fairy stories, which have furnished us with most of the contradictions to our hypothesis of the uncanny, confirm the first part of our proposition—that in the realm of fiction many things are not uncanny which would be so if they happened in real life. In the case of these stories there are other contributory factors, which we shall briefly touch upon later.

The creative writer can also choose a setting which though less imaginary than the world of fairy tales, does yet differ from the real world by admitting superior spiritual beings such as daemonic spirits or ghosts of the dead. So long as they remain within their setting of poetic reality, such figures lose any uncanniness which they might possess. The souls in Dante's *Inferno*, or the supernatural apparitions in Shakespeare's *Hamlet*, *Macbeth* or *Julius Caesar*, may be gloomy and terrible enough, but they are no more really uncanny than Homer's jovial world of gods.⁹ We adapt our judgement to the imaginary reality imposed on us by the writer, and regard souls, spirits and ghosts as though their existence had the same validity as our own has in material reality. In this case too we avoid all trace of the uncanny.

The situation is altered as soon as the writer pretends to move in the world of common reality. In this case he accepts as well all the conditions operating to produce uncanny feelings in real life; and everything that would have an uncanny effect in reality has it in his story. But in this case he can even increase his effect and multiply it far beyond what could happen in reality, by bringing about events which never or very rarely happen in fact. In doing this he is in a sense betraying us to the superstitiousness which we have ostensibly surmounted; he deceives us by promising to give us the sober truth, and then after all overstepping it. We react to his inventions as we would have reacted to real experiences; by the time we have seen through his trick it is already too late and the author has achieved his object. But it must be added that his success is not unalloyed. We retain a feeling of dissatisfaction, a kind of grudge against the attempted deceit. I have noticed this particularly after reading Schnitzler's *Die Weissagung* [*The Prophecy*]¹ and similar sto-

9. Freud names writers from a range of cultures and times: DANTE ALIGHIERI (1265–1321) visits the dead in hell in *Inferno*, the first volume of his *Divine Comedy*; in the tragedies of William Shakespeare (1564–1616) named here, ghosts

appear; and in Homer's *Iliad* and *Odyssey* (ca. 8th c. B.C.E.), the gods play active roles.

1. A short story (1905) by the Austrian playwright and novelist Arthur Schnitzler (1862–1931).

ries which flirt with the supernatural. However, the writer has one more means which he can use in order to avoid our recalcitrance and at the same time to improve his chances of success. He can keep us in the dark for a long time about the precise nature of the presuppositions on which the world he writes about is based, or he can cunningly and ingeniously avoid any definite information on the point to the last. Speaking generally, however, we find a confirmation of the second part of our proposition—that fiction presents more opportunities for creating uncanny feelings than are possible in real life.

Strictly speaking, all these complications relate only to that class of the uncanny which proceeds from forms of thought that have been surmounted. The class which proceeds from repressed complexes is more resistant and remains as powerful in fiction as in real experience, subject to one exception. The uncanny belonging to the first class—that proceeding from forms of thought that have been surmounted—retains its character not only in experience but in fiction as well, so long as the setting is one of material reality; but where it is given an arbitrary and artificial setting in fiction, it is apt to lose that character.

We have clearly not exhausted the possibilities of poetic licence and the privileges enjoyed by story-writers in evoking or in excluding an uncanny feeling. In the main we adopt an unvarying passive attitude towards real experience and are subject to the influence of our physical environment. But the story-teller has a *peculiarly* directive power over us; by means of the moods he can put us into, he is able to guide the current of our emotions, to dam it up in one direction and make it flow in another, and he often obtains a great variety of effects from the same material. All this is nothing new, and has doubtless long since been fully taken into account by students of aesthetics. We have drifted into this field of research half involuntarily, through the temptation to explain certain instances which contradicted our theory of the causes of the uncanny. Accordingly we will now return to the examination of a few of those instances.

We have already asked why it is that the severed hand in the story of the treasure of Rhampsinitus has no uncanny effect in the way that the severed hand has in Hauff's story. The question seems to have gained in importance now that we have recognized that the class of the uncanny which proceeds from repressed complexes is the more resistant of the two. The answer is easy. In the Herodotus story our thoughts are concentrated much more on the superior cunning of the master-thief than on the feelings of the princess. The princess may very well have had an uncanny feeling, indeed she very probably fell into a swoon; but *we* have no such sensations, for we put ourselves in the thief's place, not in hers. In Nestroy's farce, *Der Zerrissene* [*The Torn Man*],² another means is used to avoid any impression of the uncanny in the scene in which the fleeing man, convinced that he is a murderer, lifts up one trapdoor after another and each time sees what he takes to be the ghost of his victim rising up out of it. He calls out in despair, 'But I've only killed *one* man. Why this ghastly multiplication?' We know what went before this scene and do not share his error, so what must be uncanny to him has an irresistibly comic effect on us. Even a 'real' ghost, as in Oscar Wilde's

2. An 1845 production by the Austrian playwright Johann Nestroy (1801–1862).

Canterville Ghost,³ loses all power of at least arousing *gruesome* feelings in us as soon as the author begins to amuse himself by being ironical about it and allows liberties to be taken with it. Thus we see how independent emotional effects can be of the actual subject-matter in the world of fiction. In fairy stories feelings of fear—including therefore uncanny feelings—are ruled out altogether. We understand this, and that is why we ignore any opportunities we find in them for developing such feelings.

Concerning the factors of silence, solitude and darkness, we can only say that they are actually elements in the production of the infantile anxiety from which the majority of human beings have never become quite free. This problem has been discussed from a psycho-analytic point of view elsewhere.

1919

Fetishism¹

In the last few years I have had an opportunity of studying analytically a number of men whose object-choice was dominated by a fetish. There is no need to expect that these people came to analysis on account of their fetish. For though no doubt a fetish is recognized by its adherents as an abnormality, it is seldom felt by them as the symptom of an ailment accompanied by suffering. Usually they are quite satisfied with it, or even praise the way in which it eases their erotic life. As a rule, therefore, the fetish made its appearance in analysis as a subsidiary finding.

For obvious reasons the details of these cases must be withheld from publication; I cannot, therefore, show in what way accidental circumstances have contributed to the choice of a fetish. The most extraordinary case seemed to me to be one in which a young man had exalted a certain sort of 'shine on the nose' into a fetishistic precondition. The surprising explanation of this was that the patient had been brought up in an English nursery but had later come to Germany, where he forgot his mother-tongue almost completely. The fetish, which originated from his earliest childhood, had to be understood in English, not German. The 'shine on the nose' [in German '*Glanz auf der Nase*']—was in reality a '*glance* at the nose'. The nose was thus the fetish, which, incidentally, he endowed at will with the luminous shine which was not perceptible to others.

In every instance, the meaning and the purpose of the fetish turned out, in analysis, to be the same. It revealed itself so naturally and seemed to me so compelling that I am prepared to expect the same solution in all cases of fetishism. When now I announce that the fetish is a substitute for the penis, I shall certainly create disappointment; so I hasten to add that it is not a substitute for any chance penis, but for a particular and quite special penis that had been extremely important in early childhood but had later been lost. That is to say, it should normally have been given up, but the fetish is precisely designed to preserve it from extinction. To put it more

adds a word or phrase in square brackets in the text for clarification.

plainly: the fetish is a substitute for the woman's (the mother's) penis that the little boy once believed in and—for reasons familiar to us—does not want to give up.²

What happened, therefore, was that the boy refused to take cognizance of the fact of his having perceived that a woman does not possess a penis. No, that could not be true: for if a woman had been castrated, then his own possession of a penis was in danger; and against that there rose in rebellion the portion of his narcissism which Nature has, as a precaution, attached to that particular organ. In later life a grown man may perhaps experience a similar panic when the cry goes up that Throne and Altar are in danger, and similar illogical consequences will ensue. If I am not mistaken, Laforgue would say in this case that the boy 'scotomizes' his perception of the woman's lack of a penis.³ A new technical term is justified when it describes a new fact or emphasizes it. This is not so here. The oldest word in our psycho-analytic terminology, 'repression', already relates to this pathological process. If we wanted to differentiate more sharply between the vicissitude of the *idea* as distinct from that of the *affect* and reserve the word '*Verdrängung*' ['repression'] for the affect, then the correct German word for the vicissitude of the *idea* would be '*Verleugnung*' ['disavowal']. 'Scotomization' seems to me particularly unsuitable, for it suggests that the perception is entirely wiped out, so that the result is the same as when a visual impression falls on the blind spot in the retina. In the situation we are considering, on the contrary, we see that the perception has persisted, and that a very energetic action has been undertaken to maintain the disavowal. It is not true that, after the child has made his observation of the woman, he has preserved unaltered his belief that women have a phallus. He has retained that belief, but he has also given it up. In the conflict between the weight of the unwelcome perception and the force of his counter-wish, a compromise has been reached, as is only possible under the dominance of the unconscious laws of thought—the primary processes. Yes, in his mind the woman *has* got a penis, in spite of everything; but this penis is no longer the same as it was before. Something else has taken its place, has been appointed its substitute, as it were, and now inherits the interest which was formerly directed to its predecessor. But this interest suffers an extraordinary increase as well, because the horror of castration has set up a memorial to itself in the creation of this substitute. Furthermore, an aversion, which is never absent in any fetishist, to the real female genitals remains a *stigma indelebile*⁴ of the repression that has taken place. We can now see what the fetish achieves and what it is that maintains it. It remains a token of triumph over the threat of castration and a protection against it. It also saves the fetishist from becoming a homosexual, by endowing women with the characteristic which makes them tolerable as sexual objects. In later

2. This interpretation was made as early as 1910, in my study on Leonardo da Vinci [*Leonardo da Vinci and a Memory of His Childhood*], without any reasons being given for it [Freud's note].

3. I correct myself, however, by adding that I have the best reasons for supposing that Laforgue would not say anything of the sort. It is clear from his own remarks [in "Repression and Scotomization," 1926] that "scotomization" is a term which derives from descriptions of dementia praecox

[schizophrenia], which does not arise from a carrying-over of psycho-analytic concepts to the psychoses and which has no application to developmental processes or to the formation of neuroses. In his exposition in the text of his paper, the author has been at pains to make this incompatibility clear [Freud's note]. René Laforgue (1894–1962), French psychoanalyst. "Scotomize": to form a mental blind spot about.

4. Indelible mark (Latin).

life, the fetishist feels that he enjoys yet another advantage from his substitute for a genital. The meaning of the fetish is not known to other people, so the fetish is not withheld from him: it is easily accessible and he can readily obtain the sexual satisfaction attached to it. What other men have to woo and make exertions for can be had by the fetishist with no trouble at all.

Probably no male human being is spared the fright of castration at the sight of a female genital. Why some people become homosexual as a consequence of that impression, while others fend it off by creating a fetish, and the great majority surmount it, we are frankly not able to explain. It is possible that, among all the factors at work, we do not yet know those which are decisive for the rare pathological results. We must be content if we can explain what has happened, and may for the present leave on one side the task of explaining why something has *not* happened.

One would expect that the organs or objects chosen as substitutes for the absent female phallus would be such as appear as symbols of the penis in other connections as well. This may happen often enough, but is certainly not a deciding factor. It seems rather that when the fetish is instituted some process occurs which reminds one of the stopping of memory in traumatic amnesia. As in this latter case, the subject's interest comes to a halt halfway, as it were; it is as though the last impression before the uncanny and traumatic one is retained as a fetish. Thus the foot or shoe owes its preference as a fetish—or a part of it—to the circumstance that the inquisitive boy peered at the woman's genitals from below, from her legs up; fur and velvet—as has long been suspected—are a fixation of the sight of the pubic hair, which should have been followed by the longed-for sight of the female member; pieces of underclothing, which are so often chosen as a fetish, crystallize the moment of undressing, the last moment in which the woman could still be regarded as phallic. But I do not maintain that it is invariably possible to discover with certainty how the fetish was determined.

An investigation of fetishism is strongly recommended to anyone who still doubts the existence of the castration complex or who can still believe that fright at the sight of the female genital has some other ground—for instance, that it is derived from a supposed recollection of the trauma of birth.⁵

For me, the explanation of fetishism had another point of theoretical interest as well. Recently, along quite speculative lines, I arrived at the proposition that the essential difference between neurosis and psychosis was that in the former the ego, in the service of reality, suppresses a piece of the id,⁶ whereas in a psychosis it lets itself be induced by the id to detach itself from a piece of reality. I returned to this theme once again later on.⁷ But soon after this I had reason to regret that I had ventured so far. In the analysis of two young men I learned that each—one when he was two years old and the other when he was ten—had failed to take cognizance of the death of his beloved father—had 'scotomized' it—and yet neither of them

5. This argument was made by the Austrian psychotherapist Otto Rank in *The Trauma of Birth* (1924).

6. The unconscious (literally, "it"). In the Standard Edition, Freud's German terms *das Ich* ("the I," or "ego," referring to the conscious self) and *das*

Es ("the it") are rendered in Latin, as is *das Uber-Ich* (the superego), the internalized voice of conscience and judgment directed toward the ego.

7. "Neurosis and Psychosis" (1924) and "The Loss of Reality in Neurosis and Psychosis" (1924) [Freud's note].

had developed a psychosis. Thus a piece of reality which was undoubtedly important had been disavowed by the ego, just as the unwelcome fact of women's castration is disavowed in fetishists. I also began to suspect that similar occurrences in childhood are by no means rare, and I believed that I had been guilty of an error in my characterization of neurosis and psychosis. It is true that there was one way out of the difficulty. My formula needed only to hold good where there was a higher degree of differentiation in the psychical apparatus; things might be permissible to a child which would entail severe injury to an adult.

But further research led to another solution of the contradiction. It turned out that the two young men had no more 'scotomized' their father's death than a fetishist does the castration of women. It was only one current in their mental life that had not recognized their father's death; there was another current which took full account of that fact. The attitude which fitted in with the wish and the attitude which fitted in with reality existed side by side. In one of my two cases this split had formed the basis of a moderately severe obsessional neurosis. The patient oscillated in every situation in life between two assumptions: the one, that his father was still alive and was hindering his activities; the other, opposite one, that he was entitled to regard himself as his father's successor. I may thus keep to the expectation that in a psychosis the one current—that which fitted in with reality—would have in fact been absent.

Returning to my description of fetishism, I may say that there are many and weighty additional proofs of the divided attitude of fetishists to the question of the castration of women. In very subtle instances both the disavowal and the affirmation of the castration have found their way into the construction of the fetish itself. This was so in the case of a man whose fetish was an athletic support-belt which could also be worn as bathing drawers. This piece of clothing covered up the genitals entirely and concealed the distinction between them. Analysis showed that it signified that women were castrated and that they were not castrated; and it also allowed of the hypothesis that men were castrated, for all these possibilities could equally well be concealed under the belt—the earliest rudiment of which in his childhood had been the fig-leaf on a statue. A fetish of this sort, doubly derived from contrary ideas, is of course especially durable. In other instances the divided attitude shows itself in what the fetishist does with his fetish, whether in reality or in his imagination. To point out that he reveres his fetish is not the whole story; in many cases he treats it in a way which is obviously equivalent to a representation of castration. This happens particularly if he has developed a strong identification with his father and plays the part of the latter; for it is to him that as a child he ascribed the woman's castration. Affection and hostility in the treatment of the fetish—which run parallel with the disavowal and the acknowledgment of castration—are mixed in unequal proportions in different cases, so that the one or the other is more clearly recognizable. We seem here to approach an understanding, even if a distant one, of the behaviour of the *'coupeur de nattes'*.⁸ In him the need to carry out the castration which he disavows has come to the front. His action contains in itself the two mutually

8. A pervert who enjoys cutting off the hair of females [translator's note].

incompatible assertions: 'the woman has still got a penis' and 'my father has castrated the woman'. Another variant, which is also a parallel to fetishism in social psychology, might be seen in the Chinese custom of mutilating the female foot⁹ and then revering it like a fetish after it has been mutilated. It seems as though the Chinese male wants to thank the woman for having submitted to being castrated.

In conclusion we may say that the normal prototype of fetishes is a man's penis, just as the normal prototype of inferior organs is a woman's real small penis, the clitoris.¹

FERDINAND DE SAUSSURE

1857–1913

Ferdinand de Saussure gave birth to structuralism by means of a book he never wrote. The *Course in General Linguistics*, based on student notes, was compiled by colleagues in 1916 after Saussure's death. Always described as being born into a "Swiss family distinguished for its intellectual achievements," Saussure, it seems, had no biography apart from the universities in which he studied or taught and the books he failed to write. In fact, Saussure's untimely death at age fifty-six is considered one of the few notable facts about him. Yet this man without a life came to be known as "the father of modern linguistics," and his intellectual progeny affected mid-twentieth-century thought in a wide variety of fields. After Saussure, the very idea of what it meant to study language was transformed.

In the late eighteenth century, the European study of languages had been revolutionized by the encounter with Sanskrit (brought about by the British colonization of India). Comparison between Sanskrit, Greek, and Latin suggested a common ancestor behind all three, which scholars dubbed Proto-Indo-European. Comparative philologists sought to map languages as comparative anatomists had mapped organisms. But the generation of Saussure's teachers, the Neogrammarians, had begun to explore the rules of affinity and transformation in a more truly historical way. Saussure studied historical linguistics with some of them at the University of Leipzig, where he published his only book, *Mémoire sur le système primitif des voyelles dans les langues indo-européennes* (*Memoir on the Primitive System of Vowels in Indo-European Languages*) in 1878, while he was still a graduate student. His precocity was recognized by scholars in the field, and his purely theoretical description of an unknown vowel was later confirmed by studies of the Hittite language.

After spending a year studying in Berlin and receiving his doctorate from the University of Leipzig in 1880, he became a senior lecturer at the École des Hautes Études (School for Advanced Study) in Paris, where he began by teaching Gothic and Old High German, later adding Sanskrit (which he had studied since 1874), Latin, Persian, and Lithuanian. In 1891 he accepted a professorship at the University of Geneva, teaching there for the rest of his life. It was in 1906 that, after the death of a

colleague, he was asked to add “general linguistics” to his teaching in historical and comparative linguistics.

In a letter written in 1894 to fellow linguist Antoine Meillet, Saussure outlined his dissatisfaction with linguistic theory as he knew it:

For a long time I have been above all preoccupied with the logical classification of linguistic facts and with the classification of the points of view from which we treat them; and I am more and more aware of the immense amount of work that would be required to show the linguist *what he is doing*. . . . The utter inadequacy of current terminology, the need to reform it and, in order to do that, to demonstrate what sort of object language is, continually spoil my pleasure in philology, though I have no dearer wish than not to be made to think about the nature of language in general.

Seldom has the condition for a real theoretical breakthrough been described so movingly. Saussure had taken “current terminology” to the point where it began to raise questions it could not answer. The need to study “the nature of language in general” was lived as a spoiled pleasure in philology.

As Saussure’s originality increased, his scholarly productivity slowed. Searching for the best approach, he taught general linguistics in three different ways. Not only did he not write up his course, but he did not even keep his lecture notes, starting afresh each time. After his death, his young colleagues found themselves fabricating a synthesis of three fragmentary sets of student notes, with the result that the Saussure who is the author of the *Course in General Linguistics* is a function of the edited text, not its origin. Yet that was the Saussure who changed intellectual history.

What was Saussure’s new theory of language? The diversity of languages, often thought to indicate a falling away from one original language (as in the story of Babel), indicated to Saussure not a story but a principle: the principle of the “arbitrary” (purely conventional) nature of the sign. Since there are thousands of human languages, the relation between words and things cannot be based on natural resemblances. For example, no inherent affinity or motivation leads people to call an avian creature *bird* or *oiseau*. Not only that, Saussure went on, but *language is not a nomenclature*. Rather than the world consisting of things that need names (the Adamic conception), each language brings into being, by describing, a world that it then knows as external. To be sure, the external world exists—but its reality remains quite nebulous until language articulates it. The way lines divide concepts and phrases, the way even concrete items are viewed, is specific to each language; each covers all that needs to be said, but in its different way.

Saussure’s own theory illustrates this point: his terms *langage*, *langue*, and *parole* have never been satisfactorily translated into English. *Le langage* (in English, “language”) is a general human faculty, that which enables us to speak of “body language” or “the language of fashion.” *La langue*, which in English is also called “language,” is the name for specific languages (*la langue anglaise*, the English language); but it is also the most general term for language itself, the term Saussure uses to name the object of linguistics. *La langue* in this sense does not exist: it is a theoretical object abstracted from the structures of specific languages. *La parole* (speech) is what Saussure calls “the executive side”: the concrete utterances that constitute all acts of language. These individual utterances are excluded from his theory of language insofar as they only “execute” possibilities that exist in language already, or depart from it for creative purposes without fundamentally changing it. But where Saussure uses three terms for these distinctions, English possesses only two.

Language, for Saussure, is a structured system of conventional signs, studied in their internal complexity as if frozen in time (synchronically) rather than as changing over time (diachronically). Saussure saw the study of language as eventually forming part of a larger science of signs in culture, which he called *semiology*,

a field that later scholars (see ROLAND BARTHES) went on to develop. The atom of language is the sign, which is functionally split into two parts: a *signifier* (sound-image) and a *signified* (concept), brought inseparably together like the two sides of a sheet of paper. The relation between the signifier and the signified is “arbitrary,” not “motivated” (by natural resemblance), even in cases of onomatopoeia (words that sound like what they mean). The word *arbitrary* means not that individual speakers can just make language up, but precisely that they can’t: the sign is a convention that has to be learned and is not subject to individual will. The point is not that languages do not change (they are changing all the time), but that the changes themselves follow paths that have more to do with the overall structure of the language than with any intentional intervention by its speakers.

Though the signifier and the signified seem to function together as a unit to produce signification, each has *value* only by virtue of the ways in which it differs from other terms. Here, the chain of signifiers and the chain of signifieds diverge. A signifier differs from other signifiers while its signified distinguishes itself from other signifieds, and the networks of connection and distinction are not parallel, as Saussure’s misleading diagram of the two realms might suggest. Saussure’s distinction between “signification” and “value” is similar to KARL MARX’s distinction between “use value” and “exchange value”: the first appears tied to the characteristics of the object or term, whereas the second is entirely a function of the system of exchange or of language. Saussure goes so far as to say that *everything* in language is relational: “in language there are only differences. Even more important: a difference generally implies positive terms between which the difference is set up; but in language there are only differences *without positive terms*” (Saussure’s emphasis). In other words, neither ideas nor sounds exist prior to their combination. This description of a difference that does not depend on the prior existence of knowable entities is one of Saussure’s most radical declarations.

Jokes often play on the purely differential aspect of language. A homeowner answering the phone and hearing that “The viper is coming” might feel fear, but when the voice on the line explains that “he’s coming to vipe your vindows,” what had initially been a serpent becomes a benign household maintenance worker. A foreign accent changes the sounds in a language without changing the system of differences. The sound *v* takes on the differential role of *w* in this joke as soon as it becomes clear *to what* it is being opposed.

Nevertheless, once combined, the signifier and signified do become a unit, an *articulus* in a system of articulations. The articulations are positive facts—the only kind of facts language possesses, since, as Saussure stresses, *language is a form and not a substance*. Once the differential structure has severed any natural connection between language and things, the sign becomes a building block of a system of oppositions: singular, plural; past, present, future; voiced, unvoiced; masculine, feminine. Saussure’s favorite metaphor for the kind of structure he has in mind is chess: a rule-bound system of oppositions and differences that governs a closed but infinite set of operations.

In Saussure’s conception of language, the sign is not only arbitrary but also linear (he thus uses a spatial term for what is in fact temporal, the succession of signs as they unfold in time during speech). Signs are combined like links in a chain to form the line of language according to two relations: the *syntagmatic* (all units present in their articulation) and the *associative* (all related units present in the mind but absent from the actual sequence). This distinction, later called *syntagmatic* and *paradigmatic*, would form an important part of ROMAN JAKOBSON’s theory of metaphor and metonymy (see below). For Saussure, some syntagmatic relations beyond mere grammatical rules count as *language* rather than *speech*. Far from being freely chosen by each speaker, they constitute the “idioms” that a newcomer must master in order to “know” a language.

At the end of his life, Saussure was working on another project in which he had even less confidence than in his theory of general linguistics. According to notebooks published by Jean Starobinski starting in 1964 and eventually collected as *Les Mots sous les mots* (1971; trans. 1979, *Words upon Words*), Saussure was fascinated by the idea that within the verses written by certain Latin poets, deliberately concealed anagrams of proper names could be detected. Thus, a hidden poetics of names generated textual patterns that appeared to be dictated by the surface meanings of the words used as “carriers” for the letters. But Saussure could never be sure of what he found, and the notebooks remained hidden away. To compound the difficulty, the anagram project entailed a displacement of a major principle of the *Course*: while the *Course* treated the signifier-signified relation as a unit, the anagrams implied that signifiers and signifieds could function separately, that a signifier could serve more than one function, and that the signifier could take the lead in the organization of a text. These implications, which Saussure viewed with incredulity, had a profound impact on later textual theory.

Saussure's work provided the groundwork for both structuralism and poststructuralism. It was part of the larger “linguistic turn” in twentieth-century philosophy, history, anthropology, psychoanalysis, and literary studies. CLAUDE LÉVI-STRAUSS, for example, studied myths and kinship systems within different cultures as a system of signs to be interpreted. Roland Barthes explored the semiology of fashion, advertising, travel, and many other cultural phenomena. JACQUES DERRIDA, while critiquing Saussure's privileging of spoken language (Saussure called writing secondary, pathological, even monstrous with respect to the speech it records), nevertheless took up many aspects of Saussure's system of differences into what he called *différance*. LOUIS ALTHUSSER understood, on the basis of what Saussure says about language as a system, that economic and social structures, too, possess structural (rather than transitive) causality. And finally, JACQUES LACAN used Saussure to reformulate SIGMUND FREUD in linguistic terms, while JULIA KRISTEVA developed a theory of the anagrammatical nature of literature.

Of course, the very things that made Saussure's thought so revealing and influential also led to the most serious objections. By focusing on the relation between signifier and signified, he gained insight into linguistic structure yet eliminated the world. “Bracketing the referent”—that is, leaving out the third dimension of the sign, that to which it refers—has been criticized by those, like TERRY EAGLETON, who find it impossible to speak of language without speaking of reference, things, history. After all, they argue, language is not chess. How can it be studied apart from the world to which it refers? How can reference not have a role in structure? In addition, language is neither unified nor closed, as deconstructors and poststructuralists were quick to point out. Even if it is frozen in time, conflict remains unresolved and essential within the system. And the later postmodern critique of the “universal subject” has emphasized that speakers are placed in very different positions within language by class, gender, race, geography, and so on. In our “viper” joke, for example, a small linguistic difference points to a whole system of class, property, ethnicity, and, varying with the gender of the homeowner, sexual politics—including an echo of the story of Adam, Eve, and the serpent.

Despite these criticisms, the *Course in General Linguistics* opened up as never before the question of the role of signs in culture and the role of language in the mind. As Jonathan Culler put it in *Ferdinand de Saussure* (1986), “What the study of language reveals about mind is not a set of primitive conceptions or natural ideas but the general structuring and differentiating operations by which things are made to signify.”

*From Course in General Linguistics*¹From *Introduction*

FROM CHAPTER III. THE OBJECT OF LINGUISTICS

2. *Place of Language in the Facts of Speech*

* * *

To summarize, these are the characteristics of language:

(1) Language is a well-defined object in the heterogeneous mass of speech facts. It can be localized in the limited segment of the speaking-circuit where an auditory image becomes associated with a concept. It is the social side of speech, outside the individual who can never create nor modify it by himself; it exists only by virtue of a sort of contract signed by the members of a community. Moreover, the individual must always serve an apprenticeship in order to learn the functioning of language; a child assimilates it only gradually. It is such a distinct thing that a man deprived of the use of speaking retains it provided that he understands the vocal signs that he hears.

(2) Language, unlike speaking, is something that we can study separately. Although dead languages are no longer spoken, we can easily assimilate their linguistic organisms. We can dispense with the other elements of speech; indeed, the science of language is possible only if the other elements are excluded.

(3) Whereas speech is heterogeneous, language, as defined, is homogeneous. It is a system of signs in which the only essential thing is the union of meanings and sound-images, and in which both parts of the sign are psychological.

(4) Language is concrete, no less so than speaking; and this is a help in our study of it. Linguistic signs, though basically psychological, are not abstractions; associations which bear the stamp of collective approval—and which added together constitute language—are realities that have their seat in the brain. Besides, linguistic signs are tangible; it is possible to reduce them to conventional written symbols, whereas it would be impossible to provide detailed photographs of acts of speaking [*actes de parole*]²; the pronunciation of even the smallest word represents an infinite number of muscular movements that could be identified and put into graphic form only with great difficulty. In language, on the contrary, there is only the sound-image, and the latter can be translated into a fixed visual image. For if we disregard the vast number of movements necessary for the realization of sound-images in speaking, we see that each sound-image is nothing more than the sum of a limited number of elements or phonemes² that can in turn be called up by a corresponding number of written symbols. The very possibility of putting the things that relate to language into graphic form allows dictionaries and grammars to represent it accurately, for language is a storehouse of sound-images, and writing is the tangible form of those images.

1. Edited by Charles Bally and Albert Sechehaye in collaboration with Albert Riedlinger; translated by Wade Baskin, who occasionally includes

the French in square brackets.

2. The smallest distinctive unit of sound in a spoken language.

3. *Place of Language in Human Facts: Semiology*

The foregoing characteristics of language reveal an even more important characteristic. Language, once its boundaries have been marked off within the speech data, can be classified among human phenomena, whereas speech cannot.

We have just seen that language is a social institution; but several features set it apart from other political, legal, etc. institutions. We must call in a new type of facts in order to illuminate the special nature of language.

Language is a system of signs that express ideas, and is therefore comparable to a system of writing, the alphabet of deaf-mutes, symbolic rites, polite formulas, military signals, etc. But it is the most important of all these systems.

A science that studies the life of signs within society is conceivable; it would be a part of social psychology and consequently of general psychology; I shall call it *semiology* (from Greek *sēmeion* 'sign'). Semiology would show what constitutes signs, what laws govern them. Since the science does not yet exist, no one can say what it would be; but it has a right to existence, a place staked out in advance. Linguistics is only a part of the general science of semiology; the laws discovered by semiology will be applicable to linguistics, and the latter will circumscribe a well-defined area within the mass of anthropological facts.

To determine the exact place of semiology is the task of the psychologist. The task of the linguist is to find out what makes language a special system within the mass of semiological data. This issue will be taken up again later; here I wish merely to call attention to one thing: if I have succeeded in assigning linguistics a place among the sciences, it is because I have related it to semiology.

Why has semiology not yet been recognized as an independent science with its own object like all the other sciences? Linguists have been going around in circles: language, better than anything else, offers a basis for understanding the semiological problem; but language must, to put it correctly, be studied in itself; heretofore language has almost always been studied in connection with something else, from other viewpoints.

There is first of all the superficial notion of the general public: people see nothing more than a name-giving system in language, thereby prohibiting any research into its true nature.

Then there is the viewpoint of the psychologist, who studies the sign-mechanism in the individual; this is the easiest method, but it does not lead beyond individual execution and does not reach the sign, which is social.

Or even when signs are studied from a social viewpoint, only the traits that attach language to the other social institutions—those that are more or less voluntary—are emphasized; as a result, the goal is by-passed and the specific characteristics of semiological systems in general and of language in particular are completely ignored. For the distinguishing characteristic of the sign—but the one that is least apparent at first sight—is that in some way it always eludes the individual or social will.

In short, the characteristic that distinguishes semiological systems from all other institutions shows up clearly only in language where it manifests itself in the things which are studied least, and the necessity or specific value of a semiological science is therefore not clearly recognized. But to me the language problem is mainly semiological, and all developments derive their significance from that important fact. If we are to discover the true nature of language

we must learn what it has in common with all other semiological systems; linguistic forces that seem very important at first glance (e.g., the role of the vocal apparatus) will receive only secondary consideration if they serve only to set language apart from the other systems. This procedure will do more than to clarify the linguistic problem. By studying rites, customs, etc. as signs, I believe that we shall throw new light on the facts and point up the need for including them in a science of semiology and explaining them by its laws.

From *Part One. General Principles*

CHAPTER I. NATURE OF THE LINGUISTIC SIGN

1. *Sign, Signified, Signifier*

Some people regard language, when reduced to its elements, as a naming-process only—a list of words, each corresponding to the thing that it names. For example:³

This conception is open to criticism at several points. It assumes that ready-made ideas exist before words (on this point, see below); it does not tell us whether a name is vocal or psychological in nature (*arbor*, for instance, can be considered from either viewpoint); finally, it lets us assume that the linking of a name and a thing is a very simple operation—an assumption that is anything but true. But this rather naïve approach can bring us near the truth by showing us that the linguistic unit is a double entity, one formed by the associating of two terms.

We have seen in considering the speaking-circuit that both terms involved in the linguistic sign are psychological and are united in the brain by an associative bond. This point must be emphasized.

The linguistic sign unites, not a thing and a name, but a concept and a sound-image.⁴ The latter is not the material sound, a purely physical thing, but the psychological imprint of the sound, the impression that it makes on

3. In the figure, tree and horse (the more usual base form is *equus*), respectively (Latin).

4. The term sound-image may seem to be too restricted inasmuch as beside the representation of the sounds of a word there is also that of its articulation, the muscular image of the phonational act. But for F. de Saussure language is essentially a depositary, a thing received from

without. The sound-image is par excellence the natural representation of the word as a fact of potential language, outside any actual use of it in speaking. The motor side is thus implied or, in any event, occupies only a subordinate role with respect to the sound-image [Bally, Sechehaye, and Riedlinger's note].

our senses. The sound-image is sensory, and if I happen to call it "material," it is only in that sense, and by way of opposing it to the other term of the association, the concept, which is generally more abstract.

The psychological character of our sound-images becomes apparent when we observe our own speech. Without moving our lips or tongue, we can talk to ourselves or recite mentally a selection of verse. Because we regard the words of our language as sound-images, we must avoid speaking of the "phonemes" that make up the words. This term, which suggests vocal activity, is applicable to the spoken word only, to the realization of the inner image in discourse. We can avoid that misunderstanding by speaking of the *sounds* and *syllables* of a word provided we remember that the names refer to the sound-image.

The linguistic sign is then a two-sided psychological entity that can be represented by the drawing:

The two elements are intimately united, and each recalls the other. Whether we try to find the meaning of the Latin word *arbor* or the word that Latin uses to designate the concept "tree," it is clear that only the associations sanctioned by that language appear to us to conform to reality, and we disregard whatever others might be imagined.

Our definition of the linguistic sign poses an important question of terminology. I call the combination of a concept and a sound-image a *sign*, but in current usage the term generally designates only a sound-image, a word, for example (*arbor*, etc.). One tends to forget that *arbor* is called a sign only because it carries the concept "tree," with the result that the idea of the sensory part implies the idea of the whole.

Ambiguity would disappear if the three notions involved here were designated by three names, each suggesting and opposing the others. I propose to retain the word *sign* [*signe*] to designate the whole and to replace *concept* and *sound-image* respectively by *signified* [*signifié*] and *signifier* [*signifiant*]; the last two terms have the advantage of indicating the opposition that separates them from each other and from the whole of which they are parts. As regards *sign*, if I am satisfied with it, this is simply because I do not know of any word to replace it, the ordinary language suggesting no other.

The linguistic sign, as defined, has two primordial characteristics. In enunciating them I am also positing the basic principles of any study of this type.

2. Principle I: The Arbitrary Nature of the Sign

The bond between the signifier and the signified is arbitrary. Since I mean by sign the whole that results from the associating of the signifier with the signified, I can simply say: *the linguistic sign is arbitrary*.

The idea of “sister” is not linked by any inner relationship to the succession of sounds *s-ö-r* which serves as its signifier in French; that it could be represented equally by just any other sequence is proved by differences among languages and by the very existence of different languages: the signified “ox” has as its signifier *b-ö-f* on one side of the border and *o-k-s* (*Ochs*) on the other.⁵

No one disputes the principle of the arbitrary nature of the sign, but it is often easier to discover a truth than to assign to it its proper place. Principle I dominates all the linguistics of language; its consequences are numberless. It is true that not all of them are equally obvious at first glance; only after many detours does one discover them, and with them the primordial importance of the principle.

One remark in passing: when semiology becomes organized as a science, the question will arise whether or not it properly includes modes of expression based on completely natural signs, such as pantomime. Supposing that the new science welcomes them, its main concern will still be the whole group of systems grounded on the arbitrariness of the sign. In fact, every means of expression used in society is based, in principle, on collective behavior or—what amounts to the same thing—on convention. Polite formulas, for instance, though often imbued with a certain natural expressiveness (as in the case of a Chinese who greets his emperor by bowing down to the ground nine times), are nonetheless fixed by rule; it is this rule and not the intrinsic value of the gestures that obliges one to use them. Signs that are wholly arbitrary realize better than the others the ideal of the semiological process; that is why language, the most complex and universal of all systems of expression, is also the most characteristic; in this sense linguistics can become the master-pattern for all branches of semiology although language is only one particular semiological system.

The word *symbol* has been used to designate the linguistic sign, or more specifically, what is here called the signifier. Principle I in particular weighs against the use of this term. One characteristic of the symbol is that it is never wholly arbitrary; it is not empty, for there is the rudiment of a natural bond between the signifier and the signified. The symbol of justice, a pair of scales, could not be replaced by just any other symbol, such as a chariot.

The word *arbitrary* also calls for comment. The term should not imply that the choice of the signifier is left entirely to the speaker (we shall see below that the individual does not have the power to change a sign in any way once it has become established in the linguistic community); I mean that it is unmotivated, i.e. arbitrary in that it actually has no natural connection with the signified.

5. That is, in Germany.

In concluding let us consider two objections that might be raised to the establishment of Principle I:

(1) *Onomatopoeia* might be used to prove that the choice of the signifier is not always arbitrary. But onomatopoeic formations are never organic elements of a linguistic system. Besides, their number is much smaller than is generally supposed. Words like French *fouet* 'whip' or *glas* 'knell' may strike certain ears with suggestive sonority, but to see that they have not always had this property we need only examine their Latin forms (*fouet* is derived from *fāgus* 'beech-tree,' *glas* from *classicum* 'sound of a trumpet'). The quality of their present sounds, or rather the quality that is attributed to them, is a fortuitous result of phonetic evolution.

As for authentic onomatopoeic words (e.g. *glug-glug*, *tick-tock*, etc.), not only are they limited in number, but also they are chosen somewhat arbitrarily, for they are only approximate and more or less conventional imitations of certain sounds (cf. English *bow-wow* and French *ouaoua*). In addition, once these words have been introduced into the language, they are to a certain extent subjected to the same evolution—phonetic, morphological, etc.—that other words undergo (cf. *pigeon*, ultimately from Vulgar Latin *pīpiō*, derived in turn from an onomatopoeic formation): obvious proof that they lose something of their original character in order to assume that of the linguistic sign in general, which is unmotivated.

(2) *Interjections*, closely related to onomatopoeia, can be attacked on the same grounds and come no closer to refuting our thesis. One is tempted to see in them spontaneous expressions of reality dictated, so to speak, by natural forces. But for most interjections we can show that there is no fixed bond between their signified and their signifier. We need only compare two languages on this point to see how much such expressions differ from one language to the next (e.g. the English equivalent of French *âie!* is *ouch!*). We know, moreover, that many interjections were once words with specific meanings (cf. French *diable!*⁶ 'darn!' *mordieu!* 'golly!' from *mort Dieu* 'God's death,' etc.).

Onomatopoeic formations and interjections are of secondary importance, and their symbolic origin is in part open to dispute.

3. *Principle II: The Linear Nature of the Signifier*

The signifier, being auditory, is unfolded solely in time from which it gets the following characteristics: (a) it represents a span, and (b) the span is measurable in a single dimension; it is a line.

While Principle II is obvious, apparently linguists have always neglected to state it, doubtless because they found it too simple; nevertheless, it is fundamental, and its consequences are incalculable. Its importance equals that of Principle I; the whole mechanism of language depends upon it. In contrast to visual signifiers (nautical signals, etc.) which can offer simultaneous groupings in several dimensions, auditory signifiers have at their command only the dimension of time. Their elements are presented in succession; they form a chain. This feature becomes readily apparent when they are represented in writing and the spatial line of graphic marks is substituted for succession in time.

6. Literally, "devil."

Sometimes the linear nature of the signifier is not obvious. When I accent a syllable, for instance, it seems that I am concentrating more than one significant element on the same point. But this is an illusion; the syllable and its accent constitute only one phonational act. There is no duality within the act but only different oppositions to what precedes and what follows.

From *Part Two. Synchronic Linguistics*

CHAPTER IV. LINGUISTIC VALUE

1. *Language as Organized Thought Coupled with Sound*

To prove that language is only a system of pure values, it is enough to consider the two elements involved in its functioning: ideas and sounds.

Psychologically our thought—apart from its expression in words—is only a shapeless and indistinct mass. Philosophers and linguists have always agreed in recognizing that without the help of signs we would be unable to make a clear-cut, consistent distinction between two ideas. Without language, thought is a vague, uncharted nebula. There are no pre-existing ideas, and nothing is distinct before the appearance of language.

Against the floating realm of thought, would sounds by themselves yield predelimited entities? No more so than ideas. Phonic substance is neither more fixed nor more rigid than thought; it is not a mold into which thought must of necessity fit but a plastic substance divided in turn into distinct parts to furnish the signifiers needed by thought. The linguistic fact can therefore be pictured in its totality—i.e. language—as a series of contiguous subdivisions marked off on both the indefinite plane of jumbled ideas (A) and the equally vague plane of sounds (B). The following diagram gives a rough idea of it:

The characteristic role of language with respect to thought is not to create a material phonic means for expressing ideas but to serve as a link between thought and sound, under conditions that of necessity bring about the reciprocal delimitations of units. Thought, chaotic by nature, has to become ordered in the process of its decomposition. Neither are thoughts given material form nor are sounds transformed into mental entities; the somewhat mysterious fact is rather that “thought-sound” implies division, and that language works out its units while taking shape between two shapeless masses. Visualize the air in contact with a sheet of water; if the atmospheric pressure changes, the surface of the water will be broken up into a series of divisions, waves; the waves resemble the union or coupling of thought with phonic substance.

Language might be called the domain of articulations, using the word as it was defined earlier. Each linguistic term is a member, an *articulus* in which an idea is fixed in a sound and a sound becomes the sign of an idea.

Language can also be compared with a sheet of paper:⁷ thought is the front and the sound the back; one cannot cut the front without cutting the back at the same time; likewise in language, one can neither divide sound from thought nor thought from sound; the division could be accomplished only abstractedly, and the result would be either pure psychology or pure phonology.

Linguistics then works in the borderland where the elements of sound and thought combine; *their combination produces a form, not a substance*.

These views give a better understanding of what was said before about the arbitrariness of signs. Not only are the two domains that are linked by the linguistic fact shapeless and confused, but the choice of a given slice of sound to name a given idea is completely arbitrary. If this were not true, the notion of value would be compromised, for it would include an externally imposed element. But actually values remain entirely relative, and that is why the bond between the sound and the idea is radically arbitrary.

The arbitrary nature of the sign explains in turn why the social fact alone can create a linguistic system. The community is necessary if values that owe their existence solely to usage and general acceptance are to be set up; by himself the individual is incapable of fixing a single value.

In addition, the idea of value, as defined, shows that to consider a term as simply the union of a certain sound with a certain concept is grossly misleading. To define it in this way would isolate the term from its system; it would mean assuming that one can start from the terms and construct the system by adding them together when, on the contrary, it is from the interdependent whole that one must start and through analysis obtain its elements.

To develop this thesis, we shall study value successively from the viewpoint of the signified or concept (Section 2), the signifier (Section 3), and the complete sign (Section 4).

Being unable to seize the concrete entities or units of language directly, we shall work with words. While the word does not conform exactly to the definition of the linguistic unit, it at least bears a rough resemblance to the unit and has the advantage of being concrete; consequently, we shall use words as specimens equivalent to real terms in a synchronic system, and the principles that we evolve with respect to words will be valid for entities in general.

2. Linguistic Value from a Conceptual Viewpoint

When we speak of the value of a word, we generally think first of its property of standing for an idea, and this is in fact one side of linguistic value. But if this is true, how does *value* differ from *signification*? Might the two words be synonyms? I think not, although it is easy to confuse them, since the confusion results not so much from their similarity as from the subtlety of the distinction that they mark.

From a conceptual viewpoint, value is doubtless one element in signification, and it is difficult to see how signification can be dependent upon value

7. The French expression *une feuille de papier* literally means "a leaf of paper."

and still be distinct from it. But we must clear up the issue or risk reducing language to a simple naming-process.

Let us first take signification as it is generally understood. As the arrows in the drawing show, it is only the counterpart of the sound-image. Everything that occurs concerns only the sound-image and the concept when we look upon the word as independent and self-contained.

But here is the paradox: on the one hand the concept seems to be the counterpart of the sound-image, and on the other hand the sign itself is in turn the counterpart of the other signs of language.

Language is a system of interdependent terms in which the value of each term results solely from the simultaneous presence of the others, as in the diagram:

How, then, can value be confused with signification, i.e. the counterpart of the sound-image? It seems impossible to liken the relations represented here by horizontal arrows to those represented above by vertical arrows. Putting it another way—and again taking up the example of the sheet of paper that is cut in two—it is clear that the observable relation between the different pieces A, B, C, D, etc. is distinct from the relation between the front and back of the same piece as in A / A', B / B', etc.

To resolve the issue, let us observe from the outset that even outside language all values are apparently governed by the same paradoxical principle. They are always composed:

- (1) of a *dissimilar* thing that can be *exchanged* for the thing of which the value is to be determined; and
- (2) of *similar* things that can be *compared* with the thing of which the value is to be determined.

Both factors are necessary for the existence of a value. To determine what a five-franc piece is worth one must therefore know: (1) that it can be exchanged for a fixed quantity of a different thing, e.g. bread; and (2) that it can be compared with a similar value of the same system, e.g. a one-franc piece, or with coins of another system (a dollar, etc.). In the same way a word can be exchanged for something dissimilar, an idea; besides, it can be compared with something of the same nature, another word. Its value is therefore not fixed so long as one simply states that it can be “exchanged” for a given concept, i.e. that it has this or that signification: one must also compare it

with similar values, with other words that stand in opposition to it. Its content is really fixed only by the concurrence of everything that exists outside it. Being part of a system, it is endowed not only with a signification but also and especially with a value, and this is something quite different.

A few examples will show clearly that this is true. Modern French *mouton* can have the same signification as English *sheep* but not the same value, and this for several reasons, particularly because in speaking of a piece of meat ready to be served on the table, English uses *mutton* and not *sheep*. The difference in value between *sheep* and *mouton* is due to the fact that *sheep* has beside it a second term while the French word does not.

Within the same language, all words used to express related ideas limit each other reciprocally; synonyms like French *redouter* 'dread,' *craindre* 'fear,' and *avoir peur* 'be afraid' have value only through their opposition: if *redouter* did not exist, all its content would go to its competitors. Conversely, some words are enriched through contact with others: e.g. the new element introduced in *décrépit* (un *vieillard décrépit*) results from the co-existence of *décrépi* (un *mur décrépi*).⁸ The value of just any term is accordingly determined by its environment; it is impossible to fix even the value of the word signifying "sun" without first considering its surroundings: in some languages it is not possible to say "sit in the *sun*."

Everything said about words applies to any term of language, e.g. to grammatical entities. The value of a French plural does not coincide with that of a Sanskrit plural even though their signification is usually identical; Sanskrit has three numbers instead of two (*my eyes, my ears, my arms, my legs*, etc. are dual⁹); it would be wrong to attribute the same value to the plural in Sanskrit and in French; its value clearly depends on what is outside and around it.

If words stood for pre-existing concepts, they would all have exact equivalents in meaning from one language to the next; but this is not true. French uses *louer* (*une maison*) 'let (a house)' indifferently to mean both "pay for" and "receive payment for," whereas German uses two words, *mieten* and *vermieten*; there is obviously no exact correspondence of values. The German verbs *schätzen* and *urteilen*¹ share a number of significations, but that correspondence does not hold at several points.

Inflection offers some particularly striking examples. Distinctions of time, which are so familiar to us, are unknown in certain languages. Hebrew does not recognize even the fundamental distinctions between the past, present, and future. Proto-Germanic has no special form for the future; to say that the future is expressed by the present is wrong, for the value of the present is not the same in Germanic as in languages that have a future along with the present. The Slavic languages regularly single out two aspects of the verb: the perfective represents action as a point, complete in its totality; the imperfective represents it as taking place, and on the line of time. The categories are difficult for a Frenchman to understand, for they are unknown in French; if they were predetermined, this would not be true. Instead of pre-existing ideas then, we find in all the foregoing examples *values* emanating from the system. When they are said to correspond to concepts, it is

8. The words translated as "decrepit" in "a decrepit old man" and "a decrepit wall" come from two different sources: *décrépit* is derived from the Latin

dēcrepītus, *décrépi* from *crispus*.

9. A special form applied to 2 of something.

1. "To value, assess" and "to judge," respectively.

understood that the concepts are purely differential and defined not by their positive content but negatively by their relations with the other terms of the system. Their most precise characteristic is in being what the others are not.

Now the real interpretation of the diagram of the signal becomes apparent. Thus

means that in French the concept “to judge” is linked to the sound-image *juger*; in short, it symbolizes signification. But it is quite clear that initially the concept is nothing, that is only a value determined by its relations with other similar values, and that without them the signification would not exist. If I state simply that a word signifies something when I have in mind the associating of a sound-image with a concept, I am making a statement that may suggest what actually happens, but by no means am I expressing the linguistic fact in its essence and fullness.

3. Linguistic Value from a Material Viewpoint

The conceptual side of value is made up solely of relations and differences with respect to the other terms of language, and the same can be said of its material side. The important thing in the word is not the sound alone but the phonic differences that make it possible to distinguish this word from all others, for differences carry signification.

This may seem surprising, but how indeed could the reverse be possible? Since one vocal image is no better suited than the next for what it is commissioned to express, it is evident, even *a priori*, that a segment of language can never in the final analysis be based on anything except its noncoincidence with the rest. *Arbitrary* and *differential* are two correlative qualities.

The alteration of linguistic signs clearly illustrates this. It is precisely because the terms *a* and *b* as such are radically incapable of reaching the level of consciousness—one is always conscious of only the *a / b* difference—that each term is free to change according to laws that are unrelated to its signifying function. No positive sign characterizes the genitive plural in Czech *žen*; still the two forms *žena: žen* function as well as the earlier forms *žena: ženb*; *žen* has value only because it is different.

Here is another example that shows even more clearly the systematic role of phonic differences: in Greek, *éphēn* is an imperfect and *éstēn* an aorist² although both words are formed in the same way; the first belongs to the system of the present indicative of *phēmī* ‘I say,’ whereas there is no present **stēmī*; now it is precisely the relation *phēmī: éphēn* that corresponds to the relation between the

2. “Imperfect” and “aorist” are two past tenses of Greek verbs (representing an incomplete or continuing action and the simple occurrence of an action, respectively).

present and the imperfect (cf. *déiknūmi*: *edéiknūn*,³ etc.). Signs function, then, not through their intrinsic value but through their relative position.

In addition, it is impossible for sound alone, a material element, to belong to language. It is only a secondary thing, substance to be put to use. All our conventional values have the characteristic of not being confused with the tangible element which supports them. For instance, it is not the metal in a piece of money that fixes its value. A coin nominally worth five francs may contain less than half its worth of silver. Its value will vary according to the amount stamped upon it and according to its use inside or outside a political boundary. This is even more true of the linguistic signifier, which is not phonic but incorporeal—constituted not by its material substance but by the differences that separate its sound-image from all others.

The foregoing principle is so basic that it applies to all the material elements of language, including phonemes. Every language forms its words on the basis of a system of sonorous elements, each element being a clearly delimited unit and one of a fixed number of units. Phonemes are characterized not, as one might think, by their own positive quality but simply by the fact that they are distinct. Phonemes are above all else opposing, relative, and negative entities.

Proof of this is the latitude that speakers have between points of convergence in the pronunciation of distinct sounds. In French, for instance, general use of a dorsal *r* does not prevent many speakers from using a tongue-tip trill; language is not in the least disturbed by it; language requires only that the sound be different and not, as one might imagine, that it have an invariable quality. I can even pronounce the French *r* like German *ch* in *Bach*, *doch*, etc., but in German I could not use *r* instead of *ch*, for German gives recognition to both elements and must keep them apart. Similarly, in Russian there is no latitude for *t* in the direction of *t'* (palatalized *t*), for the result would be the confusing of two sounds differentiated by the language (cf. *govorit'* 'speak' and *govorit* 'he speaks'), but more freedom may be taken with respect to *th* (aspirated *t*) since this sound does not figure in the Russian system of phonemes.

Since an identical state of affairs is observable in writing, another system of signs, we shall use writing to draw some comparisons that will clarify the whole issue. In fact:

(1) The signs used in writing are arbitrary; there is no connection, for example, between the letter *t* and the sound that it designates.

(2) The value of letters is purely negative and differential. The same person can write *t*, for instance, in different ways:

The only requirement is that the sign for *t* not be confused in his script with the signs used for *l*, *d*, etc.

3. The present and imperfect, respectively, of the Greek verb "to show" (all the forms in this paragraph are 1st-person singular).

(3) Values in writing function only through reciprocal opposition within a fixed system that consists of a set number of letters. This third characteristic, though not identical to the second, is closely related to it, for both depend on the first. Since the graphic sign is arbitrary, its form matters little or rather matters only within the limitations imposed by the system.

(4) The means by which the sign is produced is completely unimportant, for it does not affect the system (this also follows from characteristic 1). Whether I make the letters in white or black, raised or engraved, with pen or chisel—all this is of no importance with respect to their signification.

4. *The Sign Considered in Its Totality*

Everything that has been said up to this point boils down to this: in language there are only differences. Even more important: a difference generally implies positive terms between which the difference is set up; but in language there are only differences *without positive terms*. Whether we take the signified or the signifier, language has neither ideas nor sounds that existed before the linguistic system, but only conceptual and phonic differences that have issued from the system. The idea or phonic substance that a sign contains is of less importance than the other signs that surround it. Proof of this is that the value of a term may be modified without either its meaning or its sound being affected, solely because a neighboring term has been modified.

But the statement that everything in language is negative is true only if the signified and the signifier are considered separately; when we consider the sign in its totality, we have something that is positive in its own class. A linguistic system is a series of differences of sound combined with a series of differences of ideas; but the pairing of a certain number of acoustical signs with as many cuts made from the mass of thought engenders a system of values; and this system serves as the effective link between the phonic and psychological elements within each sign. Although both the signified and the signifier are purely differential and negative when considered separately, their combination is a positive fact; it is even the sole type of facts that language has, for maintaining the parallelism between the two classes of differences is the distinctive function of the linguistic institution.

Certain diachronic facts are typical in this respect. Take the countless instances where alteration of the signifier occasions a conceptual change and where it is obvious that the sum of the ideas distinguished corresponds in principle to the sum of the distinctive signs. When two words are confused through phonetic alteration (e.g. French *décrépit* from *dēcrepitus* and *décrépi* from *crispus*), the ideas that they express will also tend to become confused if only they have something in common. Or a word may have different forms (cf. *chaise* 'chair' and *chaire* 'desk'⁴). Any nascent difference will tend invariably to become significant but without always succeeding or being successful on the first trial. Conversely, any conceptual difference perceived by the mind seeks to find expression through a distinct signifier, and two ideas that are no longer distinct in the mind tend to merge into the same signifier.

When we compare signs—positive terms—with each other, we can no longer speak of difference; the expression would not be fitting, for it applies only to the comparing of two sound-images, e.g. *father* and *mother*, or two

4. Both words derive from the Old French *chaiere*.

ideas, e.g. the idea "father" and the idea "mother"; two signs, each having a signified and signifier, are not different but only distinct. Between them there is only *opposition*. The entire mechanism of language, with which we shall be concerned later, is based on oppositions of this kind and on the phonic and conceptual differences that they imply.

What is true of value is true also of the unit. A unit is a segment of the spoken chain that corresponds to a certain concept; both are by nature purely differential.

Applied to units, the principle of differentiation can be stated in this way: *the characteristics of the unit blend with the unit itself*. In language, as in any semiological system, whatever distinguishes one sign from the others constitutes it. Difference makes character just as it makes value and the unit.

Another rather paradoxical consequence of the same principle is this: in the last analysis what is commonly referred to as a "grammatical fact" fits the definition of the unit, for it always expresses an opposition of terms; it differs only in that the opposition is particularly significant (e.g. the formation of German plurals of the type *Nacht: Nächte*). Each term present in the grammatical fact (the singular without umlaut or final *e* in opposition to the plural with umlaut and *-e*) consists of the interplay of a number of oppositions within the system. When isolated, neither *Nacht* nor *Nächte* is anything: thus everything is opposition. Putting it another way, the *Nacht: Nächte* relation can be expressed by an algebraic formula a / b in which *a* and *b* are not simple terms but result from a set of relations. Language, in a manner of speaking, is a type of algebra consisting solely of complex terms. Some of its oppositions are more significant than others; but units and grammatical facts are only different names for designating diverse aspects of the same general fact: the functioning of linguistic oppositions. This statement is so true that we might very well approach the problem of units by starting from grammatical facts. Taking an opposition like *Nacht: Nächte*, we might ask what are the units involved in it. Are they only the two words, the whole series of similar words, *a* and *ä*, or all singulars and plurals, etc.?

Units and grammatical facts would not be confused if linguistic signs were made up of something besides differences. But language being what it is, we shall find nothing simple in it regardless of our approach; everywhere and always there is the same complex equilibrium of terms that mutually condition each other. Putting it another way, *language is a form and not a substance*. This truth could not be overstressed, for all the mistakes in our terminology, all our incorrect ways of naming things that pertain to language, stem from the involuntary supposition that the linguistic phenomenon must have substance.

CHAPTER V. SYNTAGMATIC AND ASSOCIATIVE RELATIONS

1. Definitions

In a language-state everything is based on relations. How do they function?

Relations and differences between linguistic terms fall into two distinct groups, each of which generates a certain class of values. The opposition between the two classes gives a better understanding of the nature of each

class. They correspond to two forms of our mental activity, both indispensable to the life of language.

In discourse, on the one hand, words acquire relations based on the linear nature of language because they are chained together. This rules out the possibility of pronouncing two elements simultaneously. The elements are arranged in sequence on the chain of speaking. Combinations supported by linearity are *syntagms*.⁵ The syntagm is always composed of two or more consecutive units (e.g. French *re-lire* 're-read,' *contre tous* 'against everyone,' *la vie humaine* 'human life,' *Dieu est bon* 'God is good,' *s'il fait beau temps, nous sortirons* 'if the weather is nice, we'll go out,' etc.). In the syntagm a term acquires its value only because it stands in opposition to everything that precedes or follows it, or to both.

Outside discourse, on the other hand, words acquire relations of a different kind. Those that have something in common are associated in the memory, resulting in groups marked by diverse relations. For instance, the French word *enseignement* 'teaching' will unconsciously call to mind a host of other words (*enseigner* 'teach,' *renseigner* 'acquaint,' etc.; or, *armement* 'armament,' *changement* 'amendment,' etc.; or *éducation* 'education,' *apprentissage* 'apprenticeship,' etc.). All those words are related in some way.

We see that the co-ordinations formed outside discourse differ strikingly from those formed inside discourse. Those formed outside discourse are not supported by linearity. Their seat is in the brain; they are a part of the inner storehouse that makes up the language of each speaker. They are *associative relations*.

The syntagmatic relation is *in praesentia*.⁶ It is based on two or more terms that occur in an effective series. Against this, the associative relation unites terms *in absentia* in a potential mnemonic series.

From the associative and syntagmatic viewpoint a linguistic unit is like a fixed part of a building, e.g. a column. On the one hand, the column has a certain relation to the architrave that it supports; the arrangement of the two units in space suggests the syntagmatic relation. On the other hand, if the column is Doric, it suggests a mental comparison of this style with others (Ionic, Corinthian, etc.) although none of these elements is present in space: the relation is associative.

Each of the two classes of co-ordination calls for some specific remarks.

2. Syntagmatic Relations

The examples have already indicated that the notion of syntagm applies not only to words but to groups of words, to complex units of all lengths and types (compounds, derivatives, phrases, whole sentences).

It is not enough to consider the relation that ties together the different parts of syntagms (e.g. French *contre* 'against' and *tous* 'everyone' in *contre tous*, *contre* and *maître* 'master' in *contremaître* 'foreman'); one must also bear in mind the relation that links the whole to its parts (e.g. *contre tous* in opposition on the one hand to *contre* and on the other *tous*, or *contremaître* in opposition to *contre* and *maître*).

5. It is scarcely necessary to point out that the study of *syntagms* is not to be confused with syntax. Syntax is only one part of the study of

syntagms [Bally, Sechehaye, and Riedlinger's note].

6. Present (Latin).

An objection might be raised at this point. The sentence is the ideal type of syntagm. But it belongs to speaking, not to language.⁷ Does it not follow that the syntagm belongs to speaking? I do not think so. Speaking is characterized by freedom of combinations; one must therefore ask whether or not all syntagms are equally free.

It is obvious from the first that many expressions belong to language. These are the pat phrases in which any change is prohibited by usage, even if we can single out their meaningful elements (cf. *à quoi bon?* 'what's the use?' *allons donc!* 'nonsense!'). The same is true, though to a lesser degree, of expressions like *prendre la mouche*⁸ 'take offense easily,' *forcer la main à quelqu'un* 'force someone's hand,' *rompre une lance* 'break a lance,' or even *avoir mal (à la tête, etc.)* 'have (a headache, etc.),' *à force de (soins, etc.)* 'by dint of (care, etc.),' *que vous en semble?* 'how do you feel about it?' *pas n'est besoin de . . .* 'there's no need for . . .,' etc., which are characterized by peculiarities of signification or syntax. These idiomatic twists cannot be improvised; they are furnished by tradition. There are also words which, while lending themselves perfectly to analysis, are characterized by some morphological anomaly that is kept solely by dint of usage (cf. *difficulté* 'difficulty' beside *facilité* 'facility,' etc., and *mourrai* '[I] shall die' beside *dormirai* '[I] shall sleep').⁹

There are further proofs. To language rather than to speaking belong the syntagmatic types that are built upon regular forms. Indeed, since there is nothing abstract in language, the types exist only if language has registered a sufficient number of specimens. When a word like *indécorable*¹ arises in speaking, its appearance supposes a fixed type, and this type is in turn possible only through remembrance of a sufficient number of similar words belonging to language (*impardonable* 'unpardonable,' *intolérable* 'intolerable,' *infatigable* 'indefatigable,' etc.). Exactly the same is true of sentences and groups of words built upon regular patterns. Combinations like *la terre tourne* 'the world turns,' *que vous dit-il?* 'what does he say to you?' etc. correspond to general types that are in turn supported in the language by concrete remembrances.

But we must realize that in the syntagm there is no clear-cut boundary between the language fact, which is a sign of collective usage, and the fact that belongs to speaking and depends on individual freedom. In a great number of instances it is hard to class a combination of units because both forces have combined in producing it, and they have combined in indeterminate proportions.

3. Associative Relations

Mental association creates other groups besides those based on the comparing of terms that have something in common; through its grasp of the nature of the relations that bind the terms together, the mind creates as many associative series as there are diverse relations. For instance, in *enseignement* 'teaching,' *enseigner* 'teach,' *enseignons* '(we) teach,' etc., one element, the radical, is common to every term; the same word may occur in a

7. That is, it belongs to *la parole*, not to *la langue*, in Saussure's terms.

8. Literally, "lay hold of the fly."

9. The anomaly of the double *r* in the future

forms of certain verbs in French may be compared to irregular plurals like *oxen* in English [translator's note].

1. That is, a word coined by analogy.

different series formed around another common element, the suffix (cf. *enseignement*, *armement*, *changement*, etc.); or the association may spring from the analogy of the concepts signified (*enseignement*, *instruction*, *apprentissage*, *éducation*, etc.); or again, simply from the similarity of the sound-images (e.g. *enseignement* and *justement* 'precisely'). Thus there is at times a double similarity of meaning and form, at times similarity only of form or of meaning. A word can always evoke everything that can be associated with it in one way or another.

Whereas a syntagm immediately suggests an order of succession and a fixed number of elements, terms in an associative family occur neither in fixed numbers nor in a definite order. If we associate *painful*, *delightful*, *frightful*, etc. we are unable to predict the number of words that the memory will suggest or the order in which they will appear. A particular word is like the center of a constellation; it is the point of convergence of an indefinite number of co-ordinated terms.

But of the two characteristics of the associative series—indeterminate order and indefinite number—only the first can always be verified; the second may fail to meet the test. This happens in the case of inflectional paradigms, which are typical of associative groupings. Latin *dominus*, *dominī*, *dominō*, etc. is obviously an associative group formed around a common element, the noun theme *domin-*, but the series is not indefinite as in the case of *enseignement*, *changement*, etc.; the number of cases is definite. Against this, the words have no fixed order of succession, and it is by a purely arbitrary act that the grammarian groups them in one way rather than in another; in the mind of speakers the nominative case is by no means the first one in the declension,² and the order in which terms are called depends on circumstances.

1906–13

1916

2. In standard grammars of inflected languages such as Greek and Latin, tables illustrating the case endings of each declension, or class of nouns

or adjectives sharing the same forms, always begin with the nominative case (i.e., the form of the subject).

W. E. B. DU BOIS

1868–1963

W. E. B. Du Bois excelled in many disciplines and creative endeavors, from sociology to social commentary to poetry. He was one of the most accomplished scholar-activists and public intellectuals in American history, and his extraordinary life spanned ninety-five years. Born, raised, and educated in the latter decades of the nineteenth century, Du Bois was a Romantic visionary and Victorian professional writer who decades later grappled with the political tensions of the cold war. He was also an African American radical, a Pan-African leader, and eventually a defiant Marxist revolutionary.

William Edward Burghardt Du Bois was born in Great Barrington, a small town in western Massachusetts with few African American residents. Raised by his mother and her relatives, in his youth he became a lover of books, and he began writing early. Before even graduating from high school in 1885, Du Bois served as a correspondent for newspapers in Massachusetts and New York City.

As he explains in his *Autobiography* (published in 1968, five years after his death), Du Bois then “went South,” to “the South of slavery, rebellion, and black folk,” earning his B.A. at Fisk University, in Nashville, Tennessee, in 1888. Both as a student and as a teacher in rural schools during the summers, he came into contact with many African American families and communities, later recalling: “Into this world I leapt with enthusiasm. A new loyalty and allegiance replaced my Americanism: henceforward I was a Negro.”

Du Bois next attended Harvard University, receiving a second B.A. in 1890 and doing graduate work (M.A., 1891; Ph.D., 1895). He also studied at the University of Berlin (1892–94), where he “began to see the race problem in America, the problem of the peoples of Africa and Asia, and the political development of Europe as one.”

In the 1890s there were few professional careers open to African Americans. Du Bois taught and did research, eventually joining the faculty of Atlanta University, in Georgia, where he instructed its African American student body in economics, history, and sociology (1897–1910, 1933–44).

Du Bois’s first book, based on his dissertation, was *The Suppression of the African Slave Trade to the United States of America, 1638–1870* (1896). He was a serious and well-trained scholar. But his belief in the transformative power of social scientific knowledge was shattered by the virulent racism of turn-of-the-century America, when segregation laws proliferated and anti-black terror and lynching intensified.

By 1900 Du Bois had already begun to project his vision of race relations outward from America’s shores, becoming active in Pan-African organizations and congresses. In his major work *The Souls of Black Folk* (1903), he not only examines the history of slavery and segregation in the United States but also emphasizes, more generally, that “the problem of the Twentieth Century is the problem of the color line.” Still, his focus is American; *The Souls of Black Folk* includes essays, sketches, and stories on African American politics, history, education, music, and culture. In the excerpt below, Du Bois speaks evocatively of “the veil” that separates blacks from whites, and he describes the “double consciousness” that defines African American identity: “One ever feels his twoness—an American, a Negro; two souls, two thoughts, two unreconciled strivings; two warring ideals in one dark body, whose dogged strength alone keeps it from being torn asunder.” *The Souls of Black Folk* is the foremost work in the African American literary canon—“the pre-eminent text,” the scholar Eric J. Sundquist has said, “of African American cultural consciousness.”

Ernest Hemingway famously referred to Twain's *Adventures of Huckleberry Finn* (1884) as the book from which "all modern American literature" derived, and many African American critics, writers, and intellectuals have echoed his claim to stress the similar importance for the African American tradition of *The Souls of Black Folk*, with its multiple forms of style and registers of voice, its array of topics, and above all its brooding emphasis on the African American's "double consciousness." Du Bois was not the first to use this striking phrase. It appears, for example, in RALPH WALDO EMERSON's essay "The Transcendentalist" (1843), where it evokes the challenge faced by a person who experiences "moments of illumination" that he or she cannot reconcile with the trivial facts and mean demands of daily life. It was used too in other texts and fields of discourse in the nineteenth century: for instance, in *The Principles of Psychology* (1890) by William James, one of Du Bois's most important teachers during his period of undergraduate and undergraduate study at Harvard. Du Bois's seminal contribution was to apply this term to the conflicted self-definition of himself and his people, at once both American and African. In a sense his intention throughout *The Souls of Black Folk* was to take account of, subject to critique, and move through and beyond the decision made in 1896 by the U.S. Supreme Court in *Plessy v. Ferguson*, which affirmed the constitutionality of state laws requiring racial segregation in public facilities under the doctrine of "separate but equal." Du Bois sought to recontextualize the dominant terms of his era for racial classification and forthrightly shift them from black and white to African and American.

Du Bois sees "double consciousness" as a source of pain and anguish: there are two souls, thoughts, and strivings at war with one another. But he stresses that African Americans' special strength is that they have endured amid suffering and have not been "torn asunder." The story of African Americans, according to Du Bois, is sorrow laden yet also inspirational, for there is always among them the urge to express a better self and bring a message of hope to the United States and the world. Du Bois does not underplay the brutalities of racism, but it is crucial for him that African Americans have never succumbed to the limitations that America has imposed on them: they are consoled and empowered by their religious commitment and vision. "For Du Bois," Dickson Bruce has noted (in "W. E. B. Du Bois and the Idea of Double Consciousness," 1992), "the essence of a distinctive African consciousness was its spirituality, a spirituality based in Africa but revealed among African Americans in their folklore, their history of patient suffering and their faith." In *The Souls of Black Folk*, Du Bois is at once a fierce, unrelenting critic of racist oppression, a fervent advocate of racial uplift, and a visionary dedicated to the goal of individual and national integration.

It is a tribute to the eloquence and power of Du Bois's writing, and especially to his concept of double consciousness, that nearly as many African American thinkers have criticized him as have praised him for his claims in this foundational text. The journalist George Schuyler, for example, declared in "The Negro-Art Hokum" (1926) that "aside from his color, which ranges from the very dark brown to pink, your American Negro is just plain American"; and the writer Jean Toomer maintained in "What I Believe" (1929) that the only race that really exists and that we should affirm is "the human race"—"we all belong to it." In "How It Feels to Be Colored Me" (1928), ZORA NEALE HURSTON insisted, in contrast to the mournful timbre in which Du Bois sometimes spoke and wrote: "I am not tragically colored. There is no great sorrow dammed up in my soul, nor lurking behind my eyes. I do not mind at all." The educator and sociologist C. Eric Lincoln, the novelist and essayist Ishmael Reed, and the Pan-African/Afrocentric scholar Molefi Kete Asante, among others, also have objected to Du Bois's term, calling attention to its status as a rhetorical construct (rather than a fact of nature) and to the narrowness that in their view results from such a stark binary opposition.

Whatever its limitations, *The Souls of Black Folk*, bearing witness throughout to Du Bois's double consciousness, has been and will remain an inevitable point of departure, discussion, and debate for creative and critical work in African American literature and culture. The book is of great historical importance, as Du Bois's biographer David Levering Lewis has stressed: "For the first time in the brutal, mocked, patronized, and embattled history of Negro life on the North American continent, there was now a revelation of the race's social and psychological realities and prospects of such lyricism, lucidity, and humanity as to leave its mark on a white America guilty of evasion, obfuscation, and hypocrisy." It is also perpetually modern and contemporary, for its central term "double consciousness" remains an essential concept for the exploration of African American identity.

Du Bois was perhaps best known in the early 1900s for his opposition to Booker T. Washington (1856–1915), the founder of Tuskegee Institute in Alabama and the leading spokesman on the national scene for African Americans; Du Bois argued in *The Souls of Black Folk* and elsewhere that Washington had been chosen for this position because he presented the accommodationist message that whites wanted to hear. Du Bois was far more militant; not satisfied with limited economic progress, he insisted on social and political rights, access to higher education, and the development of an elite African American intellectual and professional class (the "talented tenth").

Du Bois's opposition to Washington led him in 1905 to take a central role in the Niagara Movement for full rights for African Americans. He became editor of *Horizon: A Journal of the Color Line* (1907–10); he helped found the National Association for the Advancement of Colored People (NAACP) in 1909 and served as its director of publications and research; and he expanded his role in the international Pan-African movement. He was actively publishing books and articles, too, as a social critic and theorist, creative writer, and historian.

From 1910 to 1934 Du Bois was the editor of the NAACP's monthly magazine, *The Crisis*; by 1919 it reached an audience of 100,000 readers. He was an important influence on the writers and artists of the Harlem Renaissance and the "New Negro" movement of the 1920s. In the pages of *The Crisis*, he repeatedly urged readers to see "Beauty in Black," an imperative that a dazzling array of African American authors and artists sought to fulfill.

These diversely gifted men and women—LANGSTON HUGHES, Jean Toomer, Zora Neale Hurston, Duke Ellington, and many others—were forming the intellectual vanguard for which Du Bois had called. But because their emphasis was cultural rather than political, he had a mixed response to them. Du Bois welcomed their innovative creative work, but he regretted the dependence of African American authors, artists, and musicians on white patrons and audiences. While he called for greater openness and honesty about sexual themes, he was also quick to criticize some African American writers (for example, the poet and novelist Claude McKay) for reinforcing white stereotypes of black sexual behavior.

The Depression of the 1930s hit African Americans hard and provoked Du Bois to call for "voluntary segregation," which, he maintained, would lead to economic self-sufficiency, solidarity, and self-advancement in a country that was not seeking to reach the goal of racial integration. Because of his separatist views, Du Bois was forced out of the NAACP in 1934.

From the 1930s until his death in 1963, Du Bois remained an activist and a prolific author. His books include the epic historical study *Black Reconstruction in America, 1860–1880* (1935); *Dusk of Dawn* (1940), which he described as "the autobiography of a concept of race"; and *Color and Democracy: Colonies and Peace* (1945), one of many writings of the 1940s and 1950s that challenged imperialism and made the case for African independence. Such pioneering, uncompromising work

made him highly respected on the international scene. But together with his ever-deepening interest in Communism and admiration of the Soviet Union, it brought Du Bois under suspicion in the United States. In 1951 he was placed on trial for being an “unregistered foreign agent”; though he was acquitted, his passport was revoked from 1952 to 1958. Embittered by this treatment, in 1961 Du Bois joined the Communist Party, renounced his U.S. citizenship, and took up residence in Ghana. There, at work on a multivolume *Encyclopedia Africana*, he died in Accra, two years later.

Du Bois's writings in literary criticism and theory from the decades after *The Souls of Black Folk* blend genteel Victorianism, literary realism and naturalism, and radical politics. As our second selection, “Criteria of Negro Art” (1926), indicates, Du Bois believed that “all Art is propaganda and ever must be.” In this address he tells African American writers and artists to strive for Truth and Beauty. He also stresses the marketplace conditions, and the racism, that block and undercut African American literary and cultural achievement, and he insists on the need for art to function as agitation, protest, and racial propaganda. Underlying his argument is the problem that confronts literary intellectuals who maintain strong political views: how to resolve the dual demands of art and politics. Du Bois affirms that the central duty of African American writers and artists is to advance the cause of the race; at the same time, he insists that they express the truth about African American life. But someone looking ahead several decades to reader-response theory (see, for example, STANLEY FISH and WOLFGANG ISENER) might nonetheless propose that Du Bois's real concern is as much with a work's reception as with its production: How does the work of art affect the general American perception of African Americans? What will be the impact of the text on the social and political attitudes of readers?

The weakness in Du Bois's position lies in his extreme demand that art must be used for propaganda and for nothing else. No doubt he believes that the needs of his people mandate this requirement. Yet in “Criteria of Negro Art” it clashes with his earlier evocation of the splendid beauty of Cologne's cathedral and the Venus de Milo, which he seems to value for their own sake rather than for any propagandistic service they did or might perform. Du Bois's vision is inclusive, and challengingly so: he links the cathedral and the famous Greek statue with a village in West Africa and a Negro song or spiritual. But he appears not to recognize the reductive nature of his fiery dismissal: “I do not care a damn for any art that is not used for propaganda.”

Du Bois is one voice in a complex, ongoing African American debate. His address can be placed alongside and measured against the literary critical ideas that Zora Neale Hurston and Richard Wright articulate, and to which other twentieth-century authors—notably James Baldwin, Ralph Ellison, Amiri Baraka, and TONI MORRISON—contributed. All, in their writings, have acknowledged Du Bois's majestic stature as an intellectual and cultural critic and historian. But all of them are also primarily creative writers—Du Bois was not—and they call for and exemplify forms of freedom in artistic expression that for political reasons he could not wholly share.

From The Souls of Black Folk¹

From Chapter I. Of Our Spiritual Strivings

O water, voice of my heart, crying in the sand,
 All night long crying with a mournful cry,
 As I lie and listen, and cannot understand
 The voice of my heart in my side or the voice of the sea,
 O water, crying for rest, is it I, is it I?
 All night long the water is crying to me.

Unresting water, there shall never be rest
 Till the last moon droop and the last tide fail,
 And the fire of the end begin to burn in the west;
 And the heart shall be weary and wonder and cry like the sea,
 All life long crying without avail,
 As the water all night long is crying to me.

—Arthur Symons²

Between me and the other world³ there is ever an unasked question: unasked by some through feelings of delicacy; by others through the difficulty of rightly framing it. All, nevertheless, flutter round it. They approach me in a half-hesitant sort of way, eye me curiously or compassionately, and then, instead of saying directly, How does it feel to be a problem? They say, I know an excellent colored man in my town; or, I fought at Mechanicsville;⁴ or, Do not these Southern outrages make your blood boil? At these I smile, or am interested, or reduce the boiling to a simmer, as the occasion may require. To the real question, How does it feel to be a problem? I answer seldom a word.

And yet, being a problem is a strange experience,—peculiar even for one who has never been anything else, save perhaps in babyhood and in Europe. It is in the early days of rollicking boyhood that the revelation first bursts upon one, all in a day, as it were. I remember well when the shadow swept across me. I was a little thing, away up in the hills of New England, where the dark Housatonic winds between Hoosac and Taghkanic⁵ to the sea. In a wee wooden schoolhouse, something put it into the boys' and girls' heads

1. Du Bois based these pages in *The Souls of Black Folk* on an essay titled "Strivings of the Negro People," which he published in the *Atlantic Monthly* 80 (August 1897): 194–97.

2. English poet, critic, and editor (1865–1945); his poem is titled "The Crying of Water" (1902). The music below is the opening bars of "Nobody Knows the Trouble I've Seen," a well-known spiritual first published as "Nobody Knows the Trouble I've Had" in *Slave Songs of the United States*, edited by William Francis Allen, Charles Pickard Ware, and Lucy McKim Garrison (1867). Each

essay in DuBois's book begins with an epigraph, followed by a musical bar from a "sorrow song" or slave spiritual.

3. That is, the white world.

4. A town near Richmond, Virginia; the site of an 1862 Civil War battle (which the Confederate Army lost).

5. A river and two ranges of hills in the Berkshires, close to Du Bois's childhood home in western Massachusetts. The "Taghkanic" is better known as the Taconic.

to buy gorgeous visiting-cards—ten cents a package—and exchange.⁶ The exchange was merry, till one girl, a tall newcomer, refused my card,—refused it peremptorily, with a glance. Then it dawned upon me with a certain suddenness that I was different from the others; or like, mayhap, in heart and life and longing, but shut out from their world by a vast veil. I had thereafter no desire to tear down that veil, to creep through; I held all beyond it in common contempt, and lived above it in a region of blue sky and great wandering shadows. That sky was bluest when I could beat my mates at examination-time, or beat them at a foot-race, or even beat their stringy heads. Alas, with the years all this fine contempt began to fade; for the worlds I longed for, and all their dazzling opportunities, were theirs, not mine. But they should not keep these prizes, I said; some, all, I would wrest from them. Just how I would do it I could never decide: by reading law, by healing the sick, by telling the wonderful tales that swam in my head,—some way. With other black boys the strife was not so fiercely sunny: their youth shrunk into tasteless sycophancy, or into silent hatred of the pale world about them and mocking distrust of everything white; or wasted itself in a bitter cry, Why did God make me an outcast and a stranger in mine own house?⁷ The shades of the prison-house⁸ closed round about us all: walls strait and stubborn to the whitest, but relentlessly narrow, tall, and unscalable to sons of night who must plod darkly on in resignation, or beat unavailing palms against the stone, or steadily, half hopelessly, watch the streak of blue above.

After the Egyptian and Indian, the Greek and Roman, the Teuton and Mongolian,⁹ the Negro is a sort of seventh son, born with a veil,¹ and gifted with second-sight in this American world,—a world which yields him no true self-consciousness, but only lets him see himself through the revelation of the other world. It is a peculiar sensation, this double-consciousness, this sense of always looking at one's self through the eyes of others, of measuring one's soul by the tape of a world that looks on in amused contempt and pity. One ever feels his two-ness,—an American, a Negro; two souls, two thoughts, two unreconciled strivings; two warring ideals in one dark body, whose dogged strength alone keeps it from being torn asunder.

The history of the American Negro is the history of this strife,—this longing to attain self-conscious manhood, to merge his double self into a better and truer self. In this merging he wishes neither of the older selves to be lost. He would not Africanize America, for America has too much to teach the world and Africa. He would not bleach his Negro soul in a flood of white Americanism, for he knows that Negro blood has a message for the world. He simply wishes to make it possible for a man to be both a Negro and an American, without being cursed and spit upon by his fellows, without having the doors of Opportunity closed roughly in his face.

6. Visiting cards were an important part of middle-class American and European social etiquette in the 19th century, with elaborate rules for their use and exchange.

7. See Exodus 2.22; Psalm 69.8.

8. An echo of WILLIAM WORDSWORTH, "Ode: Intimations of Immortality" (1807), lines 67–68.

9. A member of a tribal people of Central Asia.

"Teuton": one of the Germanic peoples of Scandinavia and northern Germany.

1. In European folklore, babies born with their heads covered by a caul ("veil"), or membrane that is part of the amniotic sac, have psychic powers; seventh sons who have no sisters born in between are believed to be similarly gifted.

Criteria of Negro Art

*So many persons have asked for the complete text of the address delivered by Dr. Du Bois at the Chicago Conference of the National Association for the Advancement of Colored People that we are publishing the address here.*¹

I do not doubt but there are some in this audience who are a little disturbed at the subject of this meeting, and particularly at the subject I have chosen. Such people are thinking something like this: "How is it that an organization like this, a group of radicals trying to bring new things into the world, a fighting organization which has come up out of the blood and dust of battle, struggling for the right of black men to be ordinary human beings—how is it that an organization of this kind can turn aside to talk about Art? After all, what have we who are slaves and black to do with Art?"

Or perhaps there are others who feel a certain relief and are saying, "After all it is rather satisfactory after all this talk about rights and fighting to sit and dream of something which leaves a nice taste in the mouth."

Let me tell you that neither of these groups is right. The thing we are talking about tonight is part of the great fight we are carrying on and it represents a forward and an upward look—a pushing onward. You and I have been breasting hills; we have been climbing upward; there has been progress and we can see it day by day looking back along blood-filled paths. But as you go through the valleys and over the foothills, so long as you are climbing, the direction,—north, south, east or west,—is of less importance. But when gradually the vista widens and you begin to see the world at your feet and the far horizon, then it is time to know more precisely whither you are going and what you really want.

What do we want? What is the thing we are after? As it was phrased last night it had a certain truth: We want to be Americans, full-fledged Americans, with all the rights of other American citizens. But is that all? Do we want simply to be Americans? Once in a while through all of us there flashes some clairvoyance, some clear idea, of what America really is. We who are dark can see America in a way that white Americans can not. And seeing our country thus, are we satisfied with its present goals and ideals?

In the high school where I studied we learned most of Scott's "Lady of the Lake"² by heart. In after life once it was my privilege to see the lake. It was Sunday. It was quiet. You could glimpse the deer wandering in unbroken forests; you could hear the soft ripple of romance on the waters. Around me fell the cadence of that poetry of my youth. I fell asleep full of the enchantment of the Scottish border. A new day broke and with it came a sudden rush of excursionists. They were mostly Americans and they were loud and strident. They poured upon the little pleasure boat,—men with their hats a little on one side and drooping cigars in the wet corners of their mouths; women who shared their conversation with the world. They all tried to get everywhere first. They pushed other people out of the way. They made all sorts of incoherent noises and gestures so that the quiet home folk and the visitors from other lands silently and half-wonderingly gave way before

1. *The Crisis*; the address was delivered in 1926.
2. A poem in 6 cantos about early 16th-century

knights and ladies (1810), by Sir Walter Scott (1771–1832).

them. They struck a note not evil but wrong. They carried, perhaps, a sense of strength and accomplishment, but their hearts had no conception of the beauty which pervaded this holy place.

If you tonight suddenly should become full-fledged Americans; if your color faded, or the color line here in Chicago was miraculously forgotten; suppose, too, you became at the same time rich and powerful:—what is it that you would want? What would you immediately seek? Would you buy the most powerful of motor cars and outrace Cook County?³ Would you buy the most elaborate estate on the North Shore? Would you be a Rotarian or a Lion or a What-not of the very last degree?⁴ Would you wear the most striking clothes, give the richest dinners and buy the longest press notices?

Even as you visualize such ideals you know in your hearts that these are not the things you really want. You realize this sooner than the average white American because, pushed aside as we have been in America, there has come to us not only a certain distaste for the tawdry and flamboyant but a vision of what the world could be if it were really a beautiful world; if we had the true spirit; if we had the Seeing Eye, the Cunning Hand, the Feeling Heart; if we had, to be sure, not perfect happiness, but plenty of good hard work, the inevitable suffering that always comes with life; sacrifice and waiting, all that—but, nevertheless, lived in a world where men know, where men create, where they realize themselves and where they enjoy life. It is that sort of a world we want to create for ourselves and for all America.

After all, who shall describe Beauty? What is it? I remember tonight four beautiful things: The Cathedral at Cologne,⁵ a forest in stone, set in light and changing shadow, echoing with sunlight and solemn song; a village of the Veys⁶ in West Africa, a little thing of mauve and purple quiet, lying content and shining in the sun; a black and velvet room where on a throne rests, in old and yellowing marble; the broken curves of the Venus of Milo;⁷ a single phrase of music in the Southern South—utter melody, haunting and appealing, suddenly arising out of night and eternity, beneath the moon.

Such is Beauty. Its variety is infinite, its possibility is endless. In normal life all may have it and have it yet again. The world is full of it; and yet today the mass of human beings are choked away from it, and their lives distorted and made ugly. This is not only wrong, it is silly. Who shall right this well-nigh universal failing? Who shall let this world be beautiful? Who shall restore to men the glory of sunsets and the peace of quiet sleep?

We black folk may help for we have within us as a race new stirrings, stirrings of the beginning of a new appreciation of joy, of a new desire to create, of a new will to be; as though in this morning of group life we had awakened from some sleep that at once dimly mourns the past and dreams a splendid future; and there has come the conviction that the Youth that is here today, the Negro Youth, is a different kind of Youth, because in some new way it bears this mighty prophecy on its breast, with a new realization of itself, with new determination for all mankind.

3. County in which Chicago is located.

4. The Rotary and Lions clubs are national service organizations; Freemasons, a fraternal organization with many members in the United States and abroad, are described as achieving certain degrees.

5. Magnificent Gothic cathedral in Cologne,

Germany, begun in 1248 and consecrated in 1322.

6. One of the Mandingo peoples of Senegal, West Africa.

7. Famous classical statue of Aphrodite, Greek goddess of love (2d c. B.C.E. copy of a 4th c. original), now armless.

What has this Beauty to do with the world? What has Beauty to do with Truth and Goodness—with the facts of the world and the right actions of men? “Nothing,” the artists rush to answer. They may be right. I am but an humble disciple of art and cannot presume to say. I am one who tells the truth and exposes evil and seeks with Beauty and for Beauty to set the world right. That somehow, somewhere eternal and perfect Beauty sits above Truth and Right I can conceive, but here and now and in the world in which I work they are for me unseparated and inseparable.

This is brought to us peculiarly when as artists we face our own past as a people. There has come to us—and it has come especially through the man we are going to honor tonight⁸—a realization of that past, of which for long years we have been ashamed, for which we have apologized. We thought nothing could come out of that past which we wanted to remember; which we wanted to hand down to our children. Suddenly, this same past is taking on form, color and reality, and in a half shamefaced way we are beginning to be proud of it. We are remembering that the romance of the world did not die and lie forgotten in the Middle Age; that if you want romance to deal with you must have it here and now and in your own hands.

I once knew a man and woman. They had two children, a daughter who was white and a daughter who was brown; the daughter who was white married a white man; and when her wedding was preparing the daughter who was brown prepared to go and celebrate. But the mother said, “No!” and the brown daughter went into her room and turned on the gas and died. Do you want Greek tragedy swifter than that?

Or again, here is a little Southern Town and you are in the public square. On one side of the square is the office of a colored lawyer and on all the other sides are men who do not like colored lawyers. A white woman goes into the black man’s office and points to the white-filled square and says, “I want five hundred dollars now and if I do not get it I am going to scream.”

Have you heard the story of the conquest of German East Africa?⁹ Listen to the untold tale: There were 40,000 black men and 4,000 white men who talked German. There were 20,000 black men and 12,000 white men who talked English. There were 10,000 black men and 400 white men who talked French. In Africa then where the Mountains of the Moon raised their white and snow-capped heads into the mouth of the tropic sun, where Nile and Congo rise and the Great Lakes swim, these men fought; they struggled on mountain, hill and valley, in river, lake and swamp, until in masses they sickened, crawled and died; until the 4,000 white Germans had become mostly bleached bones; until nearly all the 12,000 white Englishmen had returned to South Africa, and the 400 Frenchmen to Belgium and Heaven; all except a mere handful of the white men died; but thousands of black men from East, West and South Africa, from Nigeria and the Valley of the Nile, and from the West Indies still struggled, fought and died. For four years they fought and won and lost German East Africa; and all you hear about it is that England and Belgium conquered German Africa for the allies!

8. Carter G. Woodson (1875–1950), to whom the NAACP in 1926 awarded the Spingarn Medal for African American achievement, was an Afri-

can American educator and historian who in 1916 founded the *Journal of Negro History*.
9. Du Bois recounts events of World War I.

Such is the true and stirring stuff of which Romance is born and from this stuff come the stirrings of men who are beginning to remember that this kind of material is theirs; and this vital life of their own kind is beckoning them on.

The question comes next as to the interpretation of these new stirrings, of this new spirit: Of what is the colored artist capable? We have had on the part of both colored and white people singular unanimity of judgment in the past. Colored people have said: "This work must be inferior because it comes from colored people." White people have said: "It is inferior because it is done by colored people." But today there is coming to both the realization that the work of the black man is not always inferior. Interesting stories come to us. A professor in the University of Chicago read to a class that had studied literature a passage of poetry and asked them to guess the author. They guessed a goodly company from Shelley and Robert Browning down to Tennyson and Masfield. The author was Countée Cullen.¹ Or again the English critic John Drinkwater² went down to a Southern seminary, one of the sort which "finishes" young white women of the South. The students sat with their wooden faces while he tried to get some response out of them. Finally he said, "Name me some of your Southern poets." They hesitate. He said finally, "I'll start out with your best: Paul Laurence Dunbar!"³

With the growing recognition of Negro artists in spite of the severe handicaps, one comforting thing is occurring to both white and black. They are whispering, "Here is a way out. Here is the real solution of the color problem. The recognition accorded Cullen, Hughes, Fauset, White⁴ and others shows there is no real color line. Keep quiet! Don't complain! Work! All will be well!"

I will not say that already this chorus amounts to a conspiracy. Perhaps I am naturally too suspicious. But I will say that there are today a surprising number of white people who are getting great satisfaction out of these younger Negro writers because they think it is going to stop agitation of the Negro question. They say, "What is the use of your fighting and complaining; do the great thing and the reward is there." And many colored people are all too eager to follow this advice; especially those who are weary of the eternal struggle along the color line, who are afraid to fight and to whom the money of philanthropists and the alluring publicity are subtle and deadly bribes. They say, "What is the use of fighting? Why not show simply what we deserve and let the reward come to us?"

And it is right here that the National Association for the Advancement of Colored People comes upon the field, comes with its great call to a new battle, a new fight and new things to fight before the old things are wholly won; and to say that the Beauty of Truth and Freedom which shall some day be our heritage and the heritage of all civilized men is not in our hands yet and that we ourselves must not fail to realize.

1. African American poet (1903–1946); his first book, *Color* (1925), used forms such as the sonnet. Du Bois locates him in the company of the English poets PERCY BYSSHE SHELLEY (1792–1822), Robert Browning (1812–1889), Alfred, Lord Tennyson (1809–1892), and John Masfield (1878–1967).
2. English poet, dramatist, and critic (1882–1937).

3. African American short story writer and poet (1872–1906).

4. Walter White (1893–1955), NAACP leader and novelist. LANGSTON HUGHES (1902–1967), poet, fiction writer, and playwright. Jessie Redmon Fauset (ca. 1884–1961), novelist and editor.

There is in New York tonight a black woman molding clay by herself in a little bare room, because there is not a single school of sculpture in New York where she is welcome. Surely there are doors she might burst through, but when God makes a sculpture He does not always make the pushing sort of person who beats his way through doors thrust in his face. This girl is working her hands off to get out of this country so that she can get some sort of training.

There was Richard Brown.⁵ If he had been white he would have been alive today instead of dead of neglect. Many helped him when he asked but he was not the kind of boy that always asks. He was simply one who made colors sing.

There is a colored woman in Chicago who is a great musician. She thought she would like to study at Fontainebleau this summer where Walter Damrosch⁶ and a score of leaders of Art have an American school of music. But the application blank of this school says: "I am a white American and I apply for admission to the school."

We can go on the stage; we can be just as funny as white Americans wish us to be; we can play all the sordid parts that America likes to assign to Negroes; but for any thing else there is still small place for us.

And so I might go on. But let me sum up with this: Suppose the only Negro who survived some centuries hence was the Negro painted by white Americans in the novels and essays they have written. What would people in a hundred years say of black Americans? Now turn it around. Suppose you were to write a story and put in it the kind of people you know and like and imagine. You might get it published and you might not. And the "might not" is still far bigger than the "might." The white publishers catering to white folk would say, "It is not interesting"—to white folk, naturally not. They want Uncle Toms, Topsies,⁷ good "darkies" and clowns. I have in my office a story with all the earmarks of truth. A young man says that he started out to write and had his stories accepted. Then he began to write about the things he knew best about, that is, about his own people. He submitted a story to a magazine which said, "We are sorry, but we cannot take it." "I sat down and revised my story, changing the color of the characters and the locale and sent it under an assumed name with a change of address and it was accepted by the same magazine that had refused it, the editor promising to take anything else I might send in providing it was good enough."

We have, to be sure, a few recognized and successful Negro artists; but they are not all those fit to survive or even a good minority. They are but the remnants of that ability and genius among us whom the accidents of education and opportunity have raised on the tidal waves of chance. We black folk are not altogether peculiar in this. After all, in the world at large, it is only the accident, the remnant, that gets the chance to make the most of itself; but if this is true of the white world it is infinitely more true of the colored world. It is not simply the great clear tenor of Roland Hayes⁸ that opened the ears of America. We have had many voices of all kinds as fine as his and

5. An African American artist (d. 1917).

6. German American conductor and composer (1862–1950). Fontainebleau: a French resort.

7. Uncle Tom and Topsy are African American characters, a saintly and an impish slave, respec-

tively, in Harriet Beecher Stowe's novel *Uncle Tom's Cabin* (1852).

8. African American singer of classical works and spirituals (1887–1976), the son of former slaves.

America was and is as deaf as she was for years to him. Then a foreign land heard Hayes and put its imprint on him and immediately America with all its imitative snobbery woke up. We approved Hayes because London, Paris and Berlin approved him and not simply because he was a great singer.

Thus it is the bounden duty of black America to begin this great work of the creation of Beauty, of the preservation of Beauty, of the realization of Beauty, and we must use in this work all the methods that men have used before. And what have been the tools of the artists in times gone by? First of all, he has used the Truth—not for the sake of truth, not as a scientist seeking truth, but as one upon whom Truth eternally thrusts itself as the highest handmaid of imagination, as the one great vehicle of universal understanding. Again artists have used Goodness—goodness in all its aspects of justice, honor and right—not for sake of an ethical sanction but as the one true method of gaining sympathy and human interest.

The apostle of Beauty thus becomes the apostle of Truth and Right not by choice but by inner and outer compulsion. Free he is but his freedom is ever bounded by Truth and Justice; and slavery only dogs him when he is denied the right to tell the Truth or recognize an ideal of Justice.

Thus all Art is propaganda and ever must be, despite the wailing of the purists. I stand in utter shamelessness and say that whatever art I have for writing has been used always for propaganda for gaining the right of black folk to love and enjoy. I do not care a damn for any art that is not used for propaganda. But I do care when propaganda is confined to one side while the other is stripped and silent.

In New York we have two plays: "White Cargo" and "Congo."⁹ In "White Cargo" there is a fallen woman. She is black. In "Congo" the fallen woman is white. In "White Cargo" the black woman goes down further and further and in "Congo" the white woman begins with degradation but in the end is one of the angels of the Lord.

You know the current magazine story: A young white man goes down to Central America and the most beautiful colored woman there falls in love with him. She crawls across the whole isthmus to get to him. The white man says nobly, "No." He goes back to his white sweetheart in New York.

In such cases, it is not the positive propaganda of people who believe white blood divine, infallible and holy to which I object. It is the denial of a similar right of propaganda to those who believe black blood human, lovable and inspired with new ideals for the world. White artists themselves suffer from this narrowing of their field. They cry for freedom in dealing with Negroes because they have so little freedom in dealing with whites. DuBose Heyward writes "Porgy"¹ and writes beautifully of the black Charleston underworld. But why does he do this? Because he cannot do a similar thing for the white people of Charleston, or they would drum him out of town. The only chance he had to tell the truth of pitiful human degradation was to tell it of colored people. I should not be surprised if Octavus Roy Cohen² had approached the *Saturday Evening Post* and asked permission to write

9. *Kongo* (1926), by Kilbourn Gordon and Chester DeVonde. *White Cargo: White Cargo: A Play of the Primitive* (1925), by Leon Gordon.

1. The 1925 novel by Heyward (1885–1940) that

was the basis for the later opera *Porgy and Bess* (1935).

2. South Carolina playwright, novelist, short story writer, and humorist (1891–1959).

about a different kind of colored folk than the monstrosities he has created: but if he has, the *Post* has replied. "No. You are getting paid to write about the kind of colored people you are writing about."

In other words, the white public today demands from its artists, literary and pictorial, racial pre-judgment which deliberately distorts Truth and Justice, as far as colored races are concerned, and it will pay for no other.

On the other hand, the young and slowly growing black public still wants its prophets almost equally unfree. We are bound by all sorts of customs that have come down as second-hand soul clothes of white patrons. We are ashamed of sex and we lower our eyes when people will talk of it. Our religion holds us in superstition. Our worst side has been so shamelessly emphasized that we are denying we have or ever had a worst side. In all sorts of ways we are hemmed in and our new young artists have to fight their way to freedom.

The ultimate judge has got to be you and you have got to build yourselves up into that wide judgment, that catholicity of temper³ which is going to enable the artist to have his widest chance for freedom. We can afford the Truth. White folk today cannot. As it is now we are handing everything over to a white jury. If a colored man wants to publish a book, he has got to get a white publisher and a white newspaper to say it is great; and then you and I say so. We must come to the place where the work of art when it appears is reviewed and acclaimed by our own free and unfettered judgment. And we are going to have a real and valuable and eternal judgment only as we make ourselves free of mind, proud of body and just of soul to all men.

And then do you know what will be said? It is already saying. Just as soon as true Art emerges; just as soon as the black artist appears, someone touches the race on the shoulder and says, "He did that because he was an American, not because he was a Negro; he was born here; he was trained here; he is not a Negro—what is a Negro anyhow? He is just human; it is the kind of thing you ought to expect."

I do not doubt that the ultimate art coming from black folk is going to be just as beautiful, and beautiful largely in the same ways, as the art that comes from white folk, or yellow, or red; but the point today is that until the art of the black folk compels recognition they will not be rated as human. And when through art they compel recognition then let the world discover if it will that their art is as new as it is old and as old as new.

I had a classmate once who did three beautiful things and died. One of them was a story of a folk who found fire and then went wandering in the gloom of night seeking again the stars they had once known and lost; suddenly out of blackness they looked up and there loomed the heavens; and what was it that they said? They raised a mighty cry: "It is the stars, it is the ancient stars, it is the young and everlasting stars!"

1926

VIRGINIA WOOLF

1882–1941

Invited to address the topic of “women and fiction” at Cambridge University’s Newnham and Girton Colleges in October of 1928, Virginia Woolf presented two lectures that would later become, after considerable expansion and revision, her celebrated book *A Room of One’s Own* (1929). Working at the intersection of modernism and feminism, both of which she stood for, Woolf analyzed the differences between women as *objects* of representation and women as *authors* of representation, and invited her audience to think about “the books that are not there.” In the process, she opened up the entire territory of modern feminist criticism.

Woolf was a member of a highly literate and artistic family. Born Adeline Virginia Stephen, she was the daughter of Leslie Stephen, a distinguished Victorian literary figure, and Julia Jackson Duckworth Stephen, a beauty who had once frequented pre-Raphaelite circles. It was the second marriage for both. The resultant blended family included three Duckworths (George, Stella, and Gerald), one Stephen from the first marriage (Laura, mentally incapacitated and later institutionalized), and four new Stephens (Vanessa, Thoby, Virginia, and Adrian). Leslie Stephen lived in a world of letters: his first wife was the daughter of novelist William Makepeace Thackeray; he possessed a large library (in which Virginia got her education); he published several books of philosophy and literary history; and he became, partly for financial reasons, the first editor of the multivolume *Dictionary of National Biography* in 1882, the year of Virginia’s birth. The Stephen family was organized in a typically Victorian way, the father occupying himself with money and intellectual matters and the mother attending to the emotional and social needs of her husband and eight children.

Her mother’s death in 1895 was for thirteen-year-old Virginia a terrible loss. When Sir Leslie died nine years later, twenty-two-year-old Virginia felt an intense though ambivalent liberation, and began to write. The Stephen children moved across London to Gordon Square, Bloomsbury, where they were surrounded by Thoby’s Cambridge friends, many of whom had been members of a college group known as the Apostles, and who later would become well known: Lytton Strachey, a biographer and historian; John Maynard Keynes, an economist; Clive Bell, a critic of art and literature; and Leonard Woolf, a writer of novels and political science.

In 1906, however, the circle was devastated by the unexpected loss of its connecting link: Thoby Stephen died of typhoid fever. Two days after Thoby’s death, Vanessa agreed to marry Clive Bell. Virginia and her remaining brother, Adrian, moved to 29 Fitzroy Square (London), where Virginia began working on a novel. She had also begun to publish reviews for money and do some (unpaid) teaching in a working-class college. When she inherited £2,500 from an aunt, she acquired an important economic safety net.

In 1912 Virginia married Leonard Woolf, who had just returned from serving as an administrator in Ceylon (now Sri Lanka). They shared many intellectual interests and both felt themselves to be outsiders within their social circle. In response to Virginia’s periodic nervous breakdowns, Leonard was both attentive and controlling: she relied on, and raged against, his prescriptions. In the 1920s, Virginia had an affair with Victoria (“Vita”) Sackville-West, a fellow writer, who was married to Harold Nicolson, a diplomat. The relationship coincided with a period of great productivity and originality in Woolf’s writing.

In 1917 Leonard had had the inspired idea of buying a printing press, originally to provide a therapeutic hobby. The Hogarth Press, born of a machine small enough to fit on a kitchen table, soon became an important disseminator of modernist texts. It published brightly covered books, often designed by Vanessa Bell or Roger Fry, and

launched T. S. Eliot's *Waste Land* (1922); fiction by Maksim Gorky, E. M. Forster, and Katherine Mansfield; all the works of Virginia Woolf, beginning with *Jacob's Room* (1922); and the complete twenty-four-volume translation of the works of SIGMUND FREUD. The "Woolves," as their friends called them, had found their outlet.

Starting with *The Voyage Out*, her first novel (1915), Woolf wrote a great deal. Her novels experiment increasingly with form and style: *Mrs. Dalloway* (1925), her fourth, is set, like James Joyce's *Ulysses* in Dublin, in a single day in London, pairing the war and the drawing room; *To the Lighthouse* (1927) is a radical rethinking of what a novel can do, a fictional biography of her parents relying on a stream of consciousness narrative. Her later novels take diverse approaches to expanding the form, and she published three very different "biographies," including *Orlando* (1928, a novel celebrating her relationship with Vita), whose three-hundred-year-old protagonist changes sex in midlife, and *Flush* (1933), about the life of Elizabeth Barrett Browning's spaniel. Woolf also wrote more than four volumes' worth of essays and short fiction and two groundbreaking feminist works: *A Room of One's Own* and *Three Guineas* (1938).

Her productivity was all the more remarkable in that it was often punctuated by nervous illnesses and by treatments, of dubious effectiveness, that required her to stop writing. In 1941, with the voices in her head becoming more insistent and the war in Europe ever more threatening (she and Leonard, who was Jewish, had made provisions to kill themselves in the event of a Nazi invasion), she drowned herself.

People attempting to explain the sources of Woolf's creativity have written a great deal on several topics: her sexuality, her class position, and her madness. Much has been said about her sexuality: she had too much of it or too little; her androgyny obscured her bisexuality, or vice versa; she idealized motherhood, or feared it, or resented Leonard, who was afraid of inherited insanity, for deciding that they shouldn't have children; and so on. Evidence for these arguments comes, of course, from her writing itself; their contradictions indicate her success in finding textual forms—in her diaries and letters, her fiction and essays—that would allow all these forces to do battle.

Both of her feminist treatises link women and money. As one of the "daughters of educated men" (as she puts it in *Three Guineas*), she belonged to a culturally, if not economically, privileged class. In *A Room of One's Own* she argues that women need £500 a year (an amount somewhere between subsistence and comfort), and in *Three Guineas*—a meditation on the ties between war and patriarchal values—she responds to a solicitation to sign a petition and contribute money to a society for the prevention of war. On the one hand, the link she makes between freedom and property can be critiqued from a Marxist perspective; on the other, society's denial of women's independent rights over property marks a resistance to women's freedom. It is clear that Woolf is breaking a gender taboo, rather than merely claiming a class privilege, by going into the economic details of women's lives.

Woolf has also been seen as a representative of the sexual sea change that came after, and out of, the Victorian era. She grew up, like many others, in a world of exaggerated gender roles, secret transgressions, and repressive silence about sexual matters (she was apparently abused in childhood by her two stepbrothers). The Bloomsbury group, in contrast, broke gender taboos spectacularly—almost all of them had relations with both sexes, and they sometimes lived with the people they were *not* sleeping with. Nevertheless, even in liberated Bloomsbury, female creativity could still be categorized as "madness" whenever it became too hard to handle (this is the premise behind *The Madwoman in the Attic*, the influential 1979 study by SANDRA M. GILBERT and SUSAN GUBAR). The line between psychopathology and impeded gifts is very hard to draw, as Woolf makes clear in her parable of Shakespeare's sister.

Our selection contains three celebrated moments from *A Room of One's Own*, which we have labeled "Shakespeare's Sister," "Chloe Liked Olivia," and "Androgyny." What would have happened, Woolf asks in the first, if Shakespeare had had a

sister as gifted as himself? She would have lacked even the education *he* had, she answers. Shakespeare's sister would have been excluded from the Renaissance stage (on which all the parts were played by males); she would probably have found herself with child by some man who had taken pity on her; and, crazed by her gifts and her prospects, she would probably have ended up committing suicide. Judith Shakespeare thus represents one kind of "book that isn't there."

A second kind of missing book may be lurking behind the cover of the fictitious novel Woolf is about to open in our second section, Mary Carmichael's *Life's Adventure*. "Chloe liked Olivia," she reads, and looks about her to make sure the room contains only women. By wondering whether "that red curtain over there" conceals the figure of Sir Chartres Biron—the magistrate presiding at that very moment over the censorship trial of Radclyffe Hall's lesbian novel *The Well of Loneliness* (1928)—Woolf implies that one of the things that keeps women unfree is the law's policing of the relations women can have with women. Women in literature have almost always been imagined as *only* sexual, she argues, and usually only in their relations or non-relations to men, leaving no dealings with each other but as rivals ("Cleopatra did not like Octavia"). But, Woolf exclaims, how small a part of any woman's life is the part seen by the other sex and in relation to the other sex! Women as authors now have the opportunity to depict "that vast chamber where nobody has yet been."

Woolf's idealization of authorial "androgyny" in our third passage would seem to fly in the face of her descriptions earlier in the essay of male and female sentences or male and female plots. How can she argue both that the exclusion of women from the canon has made a difference and that great authors are androgynous? Two clarifications need to be made. First, the "woman" in Shakespeare's brain is not the same as the "women" who did not write in history. But second, the women entering literature do more than fill up an absence. If the greatest authors used both "sides" of their brain, the new authors must do so as well. Her warning that "consciousness of sex" destroys literature can be interpreted as both feminist and antifeminist. Writing with "unconsciousness of sex" may very well be taken as "indifference to sex"—often seen as a modernist privileging of style over politics. Yet this unconsciousness does not preclude gender difference, mandating simply that the gender differences that inform good writing not become *conscious*. If women were free to write, would they not open a window on a world of experiences that have remained invisible, even to themselves? A world too quickly dismissed or devalued, a world that would *require* different sentences? Woolf presents *men*, not women, as having become overly conscious of their sex as a result of feminism. In arguing for a new writerly androgyny, Woolf comes close to what HÉLÈNE CIXOUS later calls "the other bisexuality."

A Room of One's Own is one of the most imitated titles ever devised. Written during the trial of Radclyffe Hall's lesbian novel and published during the same month as the stock market crash of 1929, *A Room of One's Own* marks an upheaval more subtle, yet in some ways as profound, as these. The time was right for it: the book was so successful that the proceeds enabled Virginia Woolf to add a room of her own onto her house in Sussex.

***A Room of One's Own* Keywords:** Authorship, Feminist Criticism, Gender, Literary History, Modernity, Queer Theory, Women's Literature

From A Room of One's Own

[SHAKESPEARE'S SISTER]

Let me imagine, since facts are so hard to come by, what would have happened had Shakespeare had a wonderfully gifted sister, called Judith, let us say. Shakespeare himself went, very probably—his mother was an heiress—to the grammar school, where he may have learnt Latin—Ovid, Virgil and Horace¹—and the elements of grammar and logic. He was, it is well known, a wild boy who poached rabbits, perhaps shot a deer, and had, rather sooner than he should have done, to marry a woman in the neighborhood, who bore him a child rather quicker than was right. That escapade sent him to seek his fortune in London. He had, it seemed, a taste for the theatre; he began by holding horses at the stage door. Very soon he got work in the theatre, became a successful actor, and lived at the hub of the universe, meeting everybody, knowing everybody, practising his art on the boards, exercising his wits in the streets, and even getting access to the palace of the queen. Meanwhile his extraordinarily gifted sister, let us suppose, remained at home. She was as adventurous, as imaginative, as agog to see the world as he was. But she was not sent to school. She had no chance of learning grammar and logic, let alone of reading Horace and Virgil. She picked up a book now and then, one of her brother's perhaps, and read a few pages. But then her parents came in and told her to mend the stockings or mind the stew and not moon about with books and papers. They would have spoken sharply but kindly, for they were substantial people who knew the conditions of life for a woman and loved their daughter—indeed, more likely than not she was the apple of her father's eye. Perhaps she scribbled some pages up in an apple loft on the sly, but was careful to hide them or set fire to them. Soon, however, before she was out of her teens, she was to be betrothed to the son of a neighboring wool-stapler. She cried out that marriage was hateful to her, and for that she was severely beaten by her father. Then he ceased to scold her. He begged her instead not to hurt him, not to shame him in this matter of her marriage. He would give her a chain of beads or a fine petticoat, he said; and there were tears in his eyes. How could she disobey him? How could she break his heart? The force of her own gift alone drove her to it. She made up a small parcel of her belongings, let herself down by a rope one summer's night and took the road to London. She was not seventeen. The birds that sang in the hedge were not more musical than she was. She had the quickest fancy, a gift like her brother's, for the tune of words. Like him, she had a taste for the theatre. She stood at the stage door; she wanted to act, she said. Men laughed in her face. The manager—a fat, loose-lipped man—guffawed. He bellowed something about poodles dancing and women acting—no woman, he said, could possibly be an actress.² He hinted—you can imagine what. She could get no training in her craft. Could she even seek her dinner in a tavern or roam

1. The three Roman poets—Ovid (43 B.C.E.–17 C.E.), Virgil (70–19 B.C.E.), and HORACE (65–8 B.C.E.)—were standard authors studied by boys

in schools from the Renaissance on.

2. In the Elizabethan theater, women's roles were played by boys.

the streets at midnight? Yet her genius was for fiction and lusted to feed abundantly upon the lives of men and women and the study of their ways. At last—for she was very young, oddly like Shakespeare the poet in her face, with the same grey eyes and rounded brows—at last Nick Greene³ the actor-manager took pity on her; she found herself with child by that gentleman and so—who shall measure the heat and violence of the poet's heart when caught and tangled in a woman's body?—killed herself one winter's night and lies buried at some cross-roads where the omnibuses now stop outside the Elephant and Castle.⁴

That, more or less, is how the story would run, I think, if a woman in Shakespeare's day had had Shakespeare's genius. But for my part, I agree with the deceased bishop,⁵ if such he was—it is unthinkable that any woman in Shakespeare's day should have had Shakespeare's genius. For genius like Shakespeare's is not born among labouring, uneducated, servile people. It was not born in England among the Saxons and the Britons. It is not born today among the working classes. How, then, could it have been born among women whose work began, according to Professor Trevelyan,⁶ almost before they were out of the nursery, who were forced to it by their parents and held to it by all the power of law and custom? Yet genius of a sort must have existed among women as it must have existed among the working classes. Now and again an Emily Brontë or a Robert Burns⁷ blazes out and proves its presence. But certainly it never got itself on to paper. When, however, one reads of a witch being ducked, of a woman possessed by devils, of a wise woman selling herbs, or even of a very remarkable man who had a mother, then I think we are on the track of a lost novelist, a suppressed poet, of some mute and inglorious Jane Austen,⁸ some Emily Brontë who dashed her brains out on the moor or mopped and mowed about the highways crazed with the torture that her gift had put her to. Indeed, I would venture to guess that Anon, who wrote so many poems without signing them, was often a woman. It was a woman Edward Fitzgerald,⁹ I think, suggested who made the ballads and the folk-songs, crooning them to her children, beguiling her spinning with them, or the length of the winter's night.

This may be true or it may be false—who can say?—but what is true in it, so it seemed to me, reviewing the story of Shakespeare's sister as I had made it, is that any woman born with a great gift in the sixteenth century would certainly have gone crazed, shot herself, or ended her days in some lonely cottage outside the village, half witch, half wizard, feared and mocked at. For it needs little skill in psychology to be sure that a highly gifted girl who had tried to use her gift for poetry would have been so thwarted and hindered

3. Possibly modeled on Robert Greene (1558–1592), a dramatist whose 1592 pamphlet contains the first literary reference to Shakespeare (an attack).

4. Suicides were often buried at crossroads to prevent their spirits from returning. The Elephant and Castle was a famous tavern, bombed during World War II, that stood at one of the busiest intersections in London.

5. An "old gentleman" who earlier in the essay is said to have "declared that it was impossible for any woman past, present, or to come, to have the genius of Shakespeare."

6. George Macaulay Trevelyan (1876–1962), English historian; Woolf has already referred to his *History of England* (1926).

7. Scottish poet (1759–1796). Brontë (1818–1848), English novelist and poet.

8. Probably the most canonical of English women novelists (1775–1817); the phrase "some mute and inglorious Jane Austen" echoes "some mute inglorious Milton," in Thomas Gray's "Elegy Written in a Country Churchyard" (1751).

9. English scholar and poet (1809–1883), who anonymously translated *The Rubā'iyāt of Omar Khayyam* (1859).

by other people, so tortured and pulled asunder by her own contrary instincts, that she must have lost her health and sanity to a certainty.

[CHLOE LIKED OLIVIA]

I am almost sure, I said to myself, that Mary Carmichael¹ is playing a trick on us. For I feel as one feels on a switchback railway when the car, instead of sinking, as one has been led to expect, swerves up again. Mary is tampering with the expected sequence. First she broke the sentence; now she has broken the sequence. Very well, she has every right to do both these things if she does them not for the sake of breaking, but for the sake of creating. Which of the two it is I cannot be sure until she has faced herself with a situation. I will give her every liberty, I said, to choose what that situation shall be; she shall make it of tin cans and old kettles if she likes; but she must convince me that she believes it to be a situation; and then when she has made it she must face it. She must jump. And, determined to do my duty by her as reader if she would do her duty by me as writer, I turned the page and read . . . I am sorry to break off so abruptly. Are there no men present? Do you promise me that behind that red curtain over there the figure of Sir Chartres Biron² is not concealed? We are all women, you assure me? Then I may tell you that the very next words I read were these—“Chloe liked Olivia . . .” Do not start. Do not blush. Let us admit in the privacy of our own society that these things sometimes happen. Sometimes women do like women.

“Chloe liked Olivia,” I read. And then it struck me how immense a change was there. Chloe liked Olivia perhaps for the first time in literature. Cleopatra did not like Octavia.³ And how completely *Antony and Cleopatra* would have been altered had she done so! As it is, I thought, letting my mind, I am afraid, wander a little from *Life's Adventure*, the whole thing is simplified, conventionalised, if one dared say it, absurdly. Cleopatra's only feeling about Octavia is one of jealousy. Is she taller than I am? How does she do her hair? The play, perhaps, required no more. But how interesting it would have been if the relationship between the two women had been more complicated. All these relationships between women, I thought, rapidly recalling the splendid gallery of fictitious women, are too simple. So much has been left out, unattempted. And I tried to remember any case in the course of my reading where two women are represented as friends. There is an attempt at it in *Diana of the Crossways*.⁴ They are confidantes, of course, in Racine⁵ and the Greek tragedies. They are now and then mothers and daughters. But almost without exception they are shown in their relation to men. It was strange to think that all the great women of fiction were, until Jane Austen's day, not only seen by the other sex, but seen only in relation

1. Woolf's name for a fictitious contemporary author of a novel, *Life's Adventure*, which bears a resemblance to the novel published by Mary Stopes (under the name Mary Carmichael) titled *Love's Creation* (1928).

2. The magistrate (1863–1940) presiding over the trial that was to ban Radclyffe Hall's *Well of Loneliness* (1928) for depicting lesbianism.

3. In Shakespeare's *Antony and Cleopatra* (1606–07), Antony loves Cleopatra but marries Octavia to cement a political alliance; Cleopatra interrogates a messenger about Octavia's height, voice, gait, and hair color (3.3).

4. An 1885 novel by George Meredith, who had been a friend of Woolf's father.

5. Jean Racine (1639–1699), French dramatist.

to the other sex. And how small a part of a woman's life is that; and how little can a man know even of that when he observes it through the black or rosy spectacles which sex puts upon his nose. Hence, perhaps, the peculiar nature of woman in fiction; the astonishing extremes of her beauty and horror; her alternations between heavenly goodness and hellish depravity—for so a lover would see her as his love rose or sank, was prosperous or unhappy. This is not so true of the nineteenth-century novelists, of course. Woman becomes much more various and complicated there. Indeed it was the desire to write about women perhaps that led men by degrees to abandon the poetic drama which, with its violence, could make so little use of them, and to devise the novel as a more fitting receptacle. Even so it remains obvious, even in the writing of Proust,⁶ that a man is terribly hampered and partial in his knowledge of women, as a woman in her knowledge of men.

Also, I continued, looking down at the page again, it is becoming evident that women, like men, have other interests besides the perennial interests of domesticity. "Chloe liked Olivia. They shared a laboratory together. . . ." I read on and discovered that these two young women were engaged in mincing liver, which is, it seems, a cure for pernicious anaemia: although one of them was married and had—I think I am right in stating—two small children. Now all that, of course, has had to be left out, and thus the splendid portrait of the fictitious woman is much too simple and much too monotonous. Suppose, for instance, that men were only represented in literature as the lovers of women, and were never the friends of men, soldiers, thinkers, dreamers; how few parts in the plays of Shakespeare could be allotted to them; how literature would suffer! We might perhaps have most of Othello; and a good deal of Antony; but no Caesar, no Brutus, no Hamlet, no Lear, no Jaques⁷—literature would be incredibly impoverished, as indeed literature is impoverished beyond our counting by the doors that have been shut upon women. Married against their will, kept in one room, and to one occupation, how could a dramatist give a full or interesting or truthful account of them? Love was the only possible interpreter. The poet was forced to be passionate or bitter, unless indeed he chose to "hate women," which meant more often than not that he was unattractive to them.

Now if Chloe likes Olivia and they share a laboratory, which of itself will make their friendship more varied and lasting because it will be less personal; if Mary Carmichael knows how to write, and I was beginning to enjoy some quality in her style; if she has a room to herself, of which I am not quite sure; if she has five hundred a year of her own—but that remains to be proved—then I think that something of great importance has happened.

For if Chloe likes Olivia and Mary Carmichael knows how to express it she will light a torch in that vast chamber where nobody has yet been. It is all half lights and profound shadows like those serpentine caves where one goes with a candle peering up and down, not knowing where one is stepping. And I began to read the book again, and read how Chloe watched Olivia put a jar on a shelf and say how it was time to go home to her children. That is a sight that

6. Marcel Proust (1871–1922), French novelist, whose multivolume *À la recherche du temps perdu* (1913–27, *In Search of Lost Time*) Woolf read with great appreciation.

7. All characters in Shakespeare's plays, from *Othello*, *Antony and Cleopatra*, *Julius Caesar*, *Hamlet*, *King Lear*, and *As You Like It*.

has never been seen since the world began, I exclaimed. And I watched too, very curiously. For I wanted to see how Mary Carmichael set to work to catch those unrecorded gestures, those unsaid or half-said words, which form themselves, no more palpably than the shadows of moths on the ceiling, when women are alone, unlit by the capricious and coloured light of the other sex. She will need to hold her breath, I said, reading on, if she is to do it; for women are so suspicious of any interest that has not some obvious motive behind it, so terribly accustomed to concealment and suppression, that they are off at the flicker of an eye turned observingly in their direction. The only way for you to do it, I thought, addressing Mary Carmichael as if she were there, would be to talk of something else, looking steadily out of the window, and thus note, not with a pencil in a notebook, but in the shortest of shorthand, in words that are hardly syllabled yet, what happens when Olivia—this organism that has been under the shadow of the rock these million years—feels the light fall on it, and sees coming her way a piece of strange food—knowledge, adventure, art. And she reaches out for it, I thought, again raising my eyes from the page, and has to devise some entirely new combination of her resources, so highly developed for other purposes, so as to absorb the new into the old without disturbing the infinitely intricate and elaborate balance of the whole.

* * *

[ANDROGYNY]

But the sight of the two people getting into the taxi and the satisfaction it gave me made me also ask whether there are two sexes in the mind corresponding to the two sexes in the body, and whether they also require to be united in order to get complete satisfaction and happiness. And I went on amateurishly to sketch a plan of the soul so that in each of us two powers preside, one male, one female; and in the man's brain, the man predominates over the woman, and in the woman's brain, the woman predominates over the man. The normal and comfortable state of being is that when the two live in harmony together, spiritually cooperating. If one is a man, still the woman part of the brain must have effect; and a woman also must have intercourse with the man in her. Coleridge⁸ perhaps meant this when he said that a great mind is androgynous. It is when this fusion takes place that the mind is fully fertilised and uses all its faculties. Perhaps a mind that is purely masculine cannot create, any more than a mind that is purely feminine, I thought. But it would be well to test what one meant by man-womanly, and conversely by woman-manly, by pausing and looking at a book or two.

Coleridge certainly did not mean, when he said that a great mind is androgynous, that it is a mind that has any special sympathy with women; a mind that takes up their cause or devotes itself to their interpretation. Perhaps the androgynous mind is less apt to make these distinctions than the single-sexed mind. He meant, perhaps, that the androgynous mind is resonant and porous; that it transmits emotion without impediment; that it is naturally creative, incandescent and undivided. In fact one goes back to

8. SAMUEL TAYLOR COLERIDGE (1772–1834), English Romantic poet and critic; see *Table Talk*, September 1, 1832.

Shakespeare's mind as the type of the androgynous, of the man-womanly mind, though it would be impossible to say what Shakespeare thought of women. And if it be true that it is one of the tokens of the fully developed mind that it does not think specially or separately of sex, how much harder it is to attain that condition now than ever before. Here I came to the books by living writers, and there paused and wondered if this fact were not at the root of something that had long puzzled me. No age can ever have been as stridently sex-conscious as our own; those innumerable books by men about women in the British Museum⁹ are a proof of it. The Suffrage campaign¹ was no doubt to blame. It must have roused in men an extraordinary desire for self-assertion; it must have made them lay an emphasis upon their own sex and its characteristics which they would not have troubled to think about had they not been challenged. And when one is challenged, even by a few women in black bonnets, one retaliates, if one has never been challenged before, rather excessively. That perhaps accounts for some of the characteristics that I remember to have found here, I thought, taking down a new novel by Mr. A, who is in the prime of life and very well thought of, apparently, by the reviewers. I opened it. Indeed, it was delightful to read a man's writing again. It was so direct, so straightforward after the writing of women. It indicated such freedom of mind, such liberty of person, such confidence in himself. One had a sense of physical well-being in the presence of this well-nourished, well-educated, free mind, which had never been thwarted or opposed, but had had full liberty from birth to stretch itself in whatever way it liked. All this was admirable. But after reading a chapter or two a shadow seemed to lie across the page. It was a straight dark bar, a shadow shaped something like the letter "I." One began dodging this way and that to catch a glimpse of the landscape behind it. Whether that was indeed a tree or a woman walking² I was not quite sure. Back one was always hailed to the letter "I." One began to be tired of "I." Not but what this "I" was a most respectable "I"; honest and logical; as hard as a nut, and polished for centuries by good teaching and good feeding. I respect and admire that "I" from the bottom of my heart. But—here I turned a page or two, looking for something or other—the worst of it is that in the shadow of the letter "I" all is shapeless as mist. Is that a tree? No, it is a woman. But . . . she has not a bone in her body, I thought, watching Phoebe, for that was her name, coming across the beach. Then Alan got up and the shadow of Alan at once obliterated Phoebe. For Alan had views and Phoebe was quenched in the flood of his views. And then Alan, I thought, has passions; and here I turned page after page very fast, feeling that the crisis was approaching, and so it was. It took place on the beach under the sun. It was done very openly. It was done very vigorously. Nothing could have been more indecent. But . . . I had said "but" too often.³ One cannot go on saying "but." One must finish the sentence somehow, I rebuked myself. Shall I finish it, "But—I am bored!" But why was I bored? Partly because of the dominance of the letter "I" and the aridity, which, like the giant beech tree, it casts within its shade. Nothing will grow

9. That is, in the Reading Room of the British Museum (in Bloomsbury), where Woolf did her research.

1. The movement to obtain the vote for women succeeded in England in 1918.

2. Possibly an allusion to Mark 8.24: "I see men as trees, walking."

3. The first word of *A Room of One's Own* is "But."

there. And partly for some more obscure reason. There seemed to be some obstacle, some impediment of Mr. A's mind which blocked the fountain of creative energy and shored it within narrow limits. And remembering the lunch party at Oxbridge, and the cigarette ash and the Manx cat and Tennyson and Christina Rossetti⁴ all in a bunch, it seemed possible that the impediment lay there. As he no longer hums under his breath, "There has fallen a splendid tear from the passion-flower at the gate," when Phoebe crosses the beach, and she no longer replies, "My heart is like a singing bird whose nest is in a water'd shoot," when Alan approaches what can he do? Being honest as the day and logical as the sun, there is only one thing he can do. And that he does, to do him justice, over and over (I said, turning the pages) and over again. And that, I added, aware of the awful nature of the confession, seems somehow dull. Shakespeare's indecency uproots a thousand other things in one's mind, and is far from being dull. But Shakespeare does it for pleasure; Mr. A, as the nurses say, does it on purpose. He does it in protest. He is protesting against the equality of the other sex by asserting his own superiority. He is therefore impeded and inhibited and self-conscious as Shakespeare might have been if he too had known Miss Clough and Miss Davies.⁵ Doubtless Elizabethan literature would have been very different from what it is if the woman's movement had begun in the sixteenth century and not in the nineteenth.

What, then, it amounts to, if this theory of the two sides of the mind holds good, is that virility has now become self-conscious—men, that is to say, are now writing only with the male side of their brains. It is a mistake for a woman to read them, for she will inevitably look for something that she will not find. It is the power of suggestion that one most misses, I thought, taking Mr. B the critic in my hand and reading, very carefully and very dutifully, his remarks upon the art of poetry. Very able they were, acute and full of learning; but the trouble was, that his feelings no longer communicated; his mind seemed separated into different chambers; not a sound carried from one to the other. Thus, when one takes a sentence of Mr. B into the mind it falls plump to the ground—dead; but when one takes a sentence of Coleridge into the mind, it explodes and gives birth to all kinds of other ideas, and that is the only sort of writing of which one can say that it has the secret of perpetual life.

But whatever the reason may be, it is a fact that one must deplore. For it means—here I had come to rows of books by Mr. Galsworthy and Mr. Kipling⁶—that some of the finest works of our greatest living writers fall upon deaf ears. Do what she will a woman cannot find in them that fountain of perpetual life which the critics assure her is there. It is not only that

4. In the book's first chapter, Woolf discusses the missing tails of Manx cats along with the poems (quoted here) "Maud" (1855) by Alfred, Lord Tennyson (1809–1892), and "A Birthday" (1862), by Christina Rossetti (1830–1894), which represent what men and women, respectively, hummed at garden parties before the war. "Oxbridge": an invented place, blending Oxford and Cambridge Universities.

5. Anne Jemima Clough (1820–1892) and Emily Davies (1830–1921), leaders in the movement to

promote women's education. Clough was the first principal of Newnham Hall, the first institution for women at Cambridge University; Davies helped found and was the first mistress of Girton College, the second such institution at Cambridge.

6. Rudyard Kipling (1865–1936), English poet and novelist. John Galsworthy (1867–1933), English novelist and playwright. Jolyon, mentioned below, is a character in his *Forsyte Saga* (1906–22).

they celebrate male virtues, enforce male values and describe the world of men; it is that the emotion with which these books are permeated is to a woman incomprehensible. It is coming, it is gathering, it is about to burst on one's head, one begins saying long before the end. That picture will fall on old Jolyon's head; he will die of the shock; the old clerk will speak over him two or three obituary words; and all the swans on the Thames will simultaneously burst out singing. But one will rush away before that happens and hide in the gooseberry bushes, for the emotion which is so deep, so subtle, so symbolical to a man moves a woman to wonder. So with Mr. Kipling's officers who turn their backs; and his Sowers who sow the Seed; and his Men who are alone with their Works; and the Flag—one blushes at all these capital letters as if one had been caught eavesdropping at some purely masculine orgy. The fact is that neither Mr. Galsworthy nor Mr. Kipling has a spark of the woman in him. Thus all their qualities seem to a woman, if one may generalise, crude and immature. They lack suggestive power. And when a book lacks suggestive power, however hard it hits the surface of the mind it cannot penetrate within.

And in that restless mood in which one takes books out and puts them back again without looking at them I began to envisage an age to come of pure, of self-assertive virility, such as the letters of professors (take Sir Walter Raleigh's⁷ letters, for instance) seem to forebode, and the rulers of Italy have already brought into being. For one can hardly fail to be impressed in Rome by the sense of unmitigated masculinity; and whatever the value of unmitigated masculinity upon the state, one may question the effect of it upon the art of poetry. At any rate, according to the newspapers, there is a certain anxiety about fiction in Italy. There has been a meeting of academicians whose object it is "to develop the Italian novel." "Men famous by birth, or in finance, industry or the Fascist corporations" came together the other day and discussed the matter, and a telegram was sent to the Duce⁸ expressing the hope "that the Fascist era would soon give birth to a poet worthy of it." We may all join in that pious hope, but it is doubtful whether poetry can come out of an incubator. Poetry ought to have a mother as well as a father. The Fascist poem, one may fear, will be a horrid little abortion such as one sees in a glass jar in the museum of some county town. Such monsters never live long, it is said; one has never seen a prodigy of that sort cropping grass in a field. Two heads on one body do not make for length of life.

However, the blame for all this, if one is anxious to lay blame, rests no more upon one sex than upon the other. All seducers and reformers are responsible, Lady Bessborough when she lied to Lord Granville; Miss Davies when she told the truth to Mr. Greg.⁹ All who have brought about a state of sex-consciousness are to blame, and it is they who drive me, when I want to stretch my faculties on a book, to seek it in that happy age, before Miss Davies and Miss Clough were born, when the writer used both sides of his mind equally. One must turn back to Shakespeare then, for Shakespeare

7. English essayist and critic (1861–1922), the first professor of English literature at Oxford; his letters were published in 1926.

8. Benito Mussolini (1883–1945), Italian dictator.

9. Probably the English essayist William Rath-

bone Greg (1809–1891), who in a text of 1862 asked, "Why Are Women Redundant?" Lady Bessborough (1761–1821) is Henrietta, countess of Bessborough, the lover of Lord Granville Leveson-Gower (1773–1846).

was androgynous; and so was Keats and Sterne and Cowper and Lamb and Coleridge. Shelley perhaps was sexless. Milton and Ben Jonson had a dash too much of the male in them. So had Wordsworth and Tolstoi.¹ In our time Proust was wholly androgynous, if not perhaps a little too much of a woman. But that failing is too rare for one to complain of it, since without some mixture of the kind the intellect seems to predominate and the other faculties of the mind harden and become barren. However, I consoled myself with the reflection that this is perhaps a passing phase; much of what I have said in obedience to my promise to give you the course of my thoughts will seem out of date; much of what flames in my eyes will seem dubious to you who have not yet come of age.

Even so, the very first sentence that I would write here, I said, crossing over to the writing-table and taking up the page headed *Women and Fiction*, is that it is fatal for any one who writes to think of their sex. It is fatal to be a man or woman pure and simple; one must be woman-manly or man-womanly. It is fatal for a woman to lay the least stress on any grievance; to plead even with justice any cause; in any way to speak consciously as a woman. And fatal is no figure of speech; for anything written with that conscious bias is doomed to death. It ceases to be fertilised. Brilliant and effective, powerful and masterly, as it may appear for a day or two, it must wither at nightfall; it cannot grow in the minds of others. Some collaboration has to take place in the mind between the woman and the man before the act of creation can be accomplished. Some marriage of opposites has to be consummated. The whole of the mind must lie wide open if we are to get the sense that the writer is communicating his experience with perfect fullness. There must be freedom and there must be peace. Not a wheel must grate, not a light glimmer. The curtains must be close drawn. The writer, I thought, once his experience is over, must lie back and let his mind celebrate its nuptials in darkness. He must not look or question what is being done. Rather, he must pluck the petals from a rose or watch the swans float calmly down the river. And I saw again the current which took the boat and the undergraduate and the dead leaves; and the taxi took the man and the woman,² I thought, seeing them come together across the street, and the current swept them away, I thought, hearing far off the roar of London's traffic, into that tremendous stream.

1929

1. All canonical authors, in varying degrees: John Keats (1795–1821), English poet; Laurence Sterne (1713–1768), English novelist; William Cowper (1731–1800), English poet; Charles Lamb (1775–1834), English essayist and critic; PERCY BYSSHE SHELLEY (1792–1822), English poet; John Milton

(1608–1674), English poet; Ben Jonson (1572–1637), English poet and playwright; WILLIAM WORDSWORTH (1770–1850), English poet; and Leo Tolstoy (1828–1910), Russian novelist and moral philosopher.

2. Scenes described earlier in the book.

GYÖRGY LUKÁCS

1885–1971

The Marxist philosopher and aesthetician György Lukács played a fundamental role in the early development of Marxist literary and cultural theory. His original analysis of the commodity form in *History and Class Consciousness* (1923) continues to influence Marxist cultural theory, especially in the wide-ranging work of FREDRIC JAMESON. In the area of aesthetics, Lukács remains influential as well, not only because of his participation in the so-called realism debate of the 1930s, which involved such Marxist luminaries as THEODOR ADORNO, WALTER BENJAMIN, and Bertolt Brecht, but also because of his sophisticated historical approach to literature, best exemplified in *The Historical Novel* (1937).

Growing out of eighteenth-century realism, the historical novel in the early nineteenth century is, for Lukács, the product of the broad European social transformation initiated by the French Revolution and Napoleonic wars. The mass experience of history and the consolidation of nationalist sensibilities throughout Europe constitute the preconditions for the emergence of a new type of realist writing most notably exemplified by the works of Sir Walter Scott (1771–1832) and others such as Alessandro Manzoni (1785–1873), Aleksandr Pushkin (1799–1837), and Honoré de Balzac (1799–1850). According to Lukács, the historical novel of this time presents an expansive picture (the concrete totality) of society, including the class factions and struggles shaping it. History is no longer a mere element of decor or a pure object of abstraction as in Romantic and earlier literature: it is now a process assuming artistic form that shapes the past to comprehend the present and to sketch possible futures. To this aesthetic and political cause, Lukács devoted much of his professional life, securing his reputation as the most passionate defender of literary realism and critic of modernistic experimental work during the mid-twentieth century.

Born to an affluent Jewish family in Budapest, György Lukács displayed an early age a repugnance for his parents' middle-class values. His father, József Lowinger, was the director of the Hungarian General Credit Bank, a leading financial institution of Austria-Hungary; Lowinger changed his last name to Lukács in 1890 to reflect his assimilation to Hungarian culture. Lukács's mother, Adél Wertheimer, derived her ancestry from one of the oldest and wealthiest Jewish families in eastern Europe. In his youth Lukács embraced the fin de siècle attitudes inspired by the nineteenth-century writers Søren Kierkegaard, FRIEDRICH NIETZSCHE, and Fyodor Dostoyevsky, among others. His intellectual interests eventually took him to Germany, where he studied under the sociologists Georg Simmel and Max Weber. Characterized by an anguished Romanticism, this initial phase of Lukács's career is reflected in his two early works, *Soul and Form* (1911) and *The Theory of the Novel* (1916), both published in German under the German version of his name, Georg Lukács. With its typology of forms indebted to G. W. F. HEGEL, the latter work became influential in large part because it interestingly historicized the novel; but Lukács later renounced it for developing a bleak view of the novel as fragmentary and ironic.

The barbarism of World War I, the promise of the Russian Revolution of 1917, and the subsequent demise of the Austro-Hungarian Empire precipitated Lukács's conversion to Marxism in 1918. He was a deeply committed communist, but he often ran into trouble with the Communist Party. He found his *History and Class Consciousness*, for example, censured by the Comintern Congress in Moscow. In this crucial work, which later became an important text for the student uprisings of the 1960s, Lukács addressed the widespread sense of fragmentation and alienation under capitalism, out of which emerged his conception of "reification"—the sense of objectification experienced by individuals who are subordinated to the rationalizing processes of commodity production and reduced to the status of things. He

achieved an original synthesis of MARX's theory of commodity fetishism, Weber's concept of rationalization, and Hegel's philosophy of the dialectic. However, the Comintern objected to the unorthodox Hegelian (idealist) emphasis on the consciousness of the proletariat, thus setting the stage for Lukács's "autocriticisms," or public recantations of his own published writings.

From the 1930s onward, Lukács directed considerable effort toward the construction and defense of a Marxist realist aesthetic conceived in materialist terms and opposed to the idealist tradition from FRIEDRICH VON SCHILLER (1759–1805) to Arthur Schopenhauer (1788–1860). However, during Joseph Stalin's consolidation of power in the 1930s and up to the "thaw" of the 1950s, Lukács sometimes employed a coded language to express his unorthodox opinions on realism, because the theory and practice of literature in the Soviet Union had been increasingly regulated by the policy of Proletkult, the Bolshevik Party Central Committee, and the All Russian Association of Proletarian Writers (RAPP)—all of which endorsed the view that writers must serve the interests of the party. The result was a growing intolerance that prompted the exile of such figures as the revolutionary and cultural theorist Leon Trotsky and the noted Russian formalist ROMAN JAKOBSON. At issue was the theory of "socialist realism," which was devised by Maksim Gorky in consultation with Stalin, promulgated by A. A. Zhdanov, and sanctioned by the Congress of Soviet Writers in 1934. In theory, socialist realism insisted that realistic novels must be overtly didactic, serving the interests of socialism and the working class. Trotsky thought such a definition of realism was too narrow, and Lukács himself would have nothing to do with it because he opposed overt didacticism and admired such European novelists as Sir Walter Scott, Honoré de Balzac, and Thomas Mann (1875–1955), classifying them as "critical realists." After Stalin's death in 1953, Lukács was able to work more openly, summing up his views in *Die Eigenart des Ästhetischen* (1963, *The Specificity of the Aesthetic*).

In our selection from the first chapter of *The Historical Novel*, "The Classical Form of the Historical Novel," Lukács offers an orthodox Marxist analysis of the underlying socioeconomic and political conditions governing the rise of the historical novel in early nineteenth-century Europe. The emergence of bourgeois society and the simultaneous awakening of national sensibility during the Enlightenment entail, in Lukács's view, a decisive shift in the understanding of social existence from feudal absolutist inertia to modern democratic progress linked with increasing industrialization, urbanization, and capitalism. In the wake of the widespread revolutionary and independence movements triggered by the French Revolution and Napoleonic wars, broad segments of the European population begin to experience a growing sense of historical awareness. As modern warfare is integrated into society in the form of large national armies drawn from the population and shaped by political propaganda, people see their lives for the first time as historically embedded in a changing reality that is self-created rather than pregiven. Later FRANTZ FANON would confirm the role of war in the development of nation-states while similarly highlighting the internal tensions of class struggle, and BENEDICT ANDERSON would add spreading literacy as a key factor in the creation of nation-states and national consciousness during the nineteenth century.

The historical novel, according to Lukács, is a major catalyst of national cohesion and class consciousness. At its best, as exemplified by the novels of Sir Walter Scott, it reflects the totality of social relationships by creating "types" or representative characters. Unlike some Romantic literature, which offers reactionary descriptions of the past, abstract and idealistic, realist historical accounts are rooted in the concrete socioeconomic conditions of the present and are committed to the objective depiction of the socially formative forces in history. Lukács faults Romanticism for overlooking popular life as it superficially derives the spirit of an age from biographies of leading historical figures. At the same time, he praises Scott for placing at the center of his epic-scale narratives prosaic, mediocre heroes, who engage in

dialogue and typify social trends while displaying the political potential of the masses. Lukács here distinguishes between the complex reality depicted in Scott's novels and the author's own conservative political views, as he will later do with other novelists like Balzac. Unlike socialist realism, the historical novel in Lukács's handling is not a programmed genre directed by a political party. Like seismographs, the great historical realists register present social tremors and often those to come through instinct. For Lukács, historical realism constitutes an aesthetic vanguard of works whose portrayals anticipate where social developments are headed.

Moreover, historical realism is distinguished by Lukács not only from reactionary Romanticism but also from expressionism and other modernist artistic movements such as symbolism and surrealism, all of which regressively emphasize subjectivity, alienation, and fragmentation. In texts such as "Realism in the Balance" (1938), Lukács faults modernism, especially expressionism, for being content merely to depict immediate sense impressions and fragmentary subjective states, as demonstrated by its practitioners' preference for montage. In "juxtaposing heterogeneous, unrelated pieces of reality torn from their context," expressionism attends only to the uncomprehended surfaces and appearances of things, producing opaque, chaotic, and plotless works. It thus abandons the goal of mirroring objective reality and its underlying socioeconomic laws, becoming instead a passive depiction of the alienation of people under capitalism. More important, by universalizing alienation (rather than seeing it as an effect of capitalism), the movement provides no basis for progressive politics.

Lukács also distinguishes realism from other ostensibly realistic movements such as naturalism and impressionism, both of which focus on immediate and random sense perceptions. In his opinion, the entire historical progression of modern literary periods—naturalism, impressionism, symbolism, expressionism, and surrealism—marks an increasing dissolution of the objectivity of classic early nineteenth-century realism, as represented by Scott's and Balzac's fiction, which occupies the opposite end of the spectrum from James Joyce's decadent modernist fiction. The historical basis for this undermining of classic realism is fully developed in Lukács's *The Historical Novel*. His great hope is that twentieth-century realists like Thomas Mann can stem the tide of this reactionary process by providing the basis for a truly accessible popular literature attuned to objectivity and adaptable to leftist political coalitions and popular fronts.

Lukács's advocacy of realism came under immediate and persistent criticism. Perhaps best known is that of Bertolt Brecht, who accuses Lukács of inadvertently lapsing into formalism by privileging the form of an outdated nineteenth-century genre above all others. More severe are the criticisms directed at Lukács's central conceptions of totality and typicality. With the advent of postmodernism, totalizing theories in general have come under attack; for instance, the leading philosopher of the postmodern, JEAN-FRANÇOIS LYOTARD, famously urged his readers to "wage a war on totality" and to critique "grand narratives" that purport to explain everything within a single theoretical framework. Moreover, in light of the postmodern questioning of historical objectivity, exemplified by the work of HAYDEN WHITE, Lukács's theory of history can seem one-dimensional. In spite of all this, Lukács's work has made important contributions to contemporary debates; his influence is clear in the roles that reification, realism, and periodization play in the work of Fredric Jameson, the most important American theorist of postmodernism. Lukács's historical account of the gradual and complex rise of the modern middle class (the European nationalist bourgeoisies portrayed by leading realists) is stunning in its breadth and detail.

From The Historical Novel¹

From *Chapter One*.

The Classical Form of the Historical Novel

I. SOCIAL AND HISTORICAL CONDITIONS FOR THE RISE OF THE HISTORICAL NOVEL

The historical novel arose at the beginning of the nineteenth century at about the time of Napoleon's² collapse (Scott's *Waverley*³ appeared in 1814). Of course, novels with historical themes are to be found in the seventeenth and eighteenth centuries, too, and, should one feel inclined, one can treat medieval adaptations of classical history or myth as "precursors" of the historical novel and indeed go back still further to China or India. But one will find nothing here that sheds any real light on the phenomenon of the historical novel. The so-called historical novels of the seventeenth century (Scudéry, Calprenède,⁴ etc.) are historical only as regards their purely external choice of theme and costume. Not only the psychology of the characters, but the manners depicted are entirely those of the writer's own day. And in the most famous "historical novel" of the eighteenth century, Walpole's *Castle of Otranto*,⁵ history is likewise treated as mere costumery: it is only the curiosities and oddities of the *milieu* that matter, not an artistically faithful image of a concrete historical epoch. What is lacking in the so-called historical novel before Sir Walter Scott is precisely the specifically historical, that is, derivation of the individuality of characters from the historical peculiarity of their age. The great critic Boileau,⁶ who judged the historical novels of his contemporaries with much scepticism, insisted only that characters should be socially and psychologically true, demanding that a ruler make love differently from a shepherd, and so on. The question of historical truth in the artistic reflection of reality still lies beyond his horizon.

However, even the great realistic social novel of the eighteenth century, which in its portrayal of contemporary morals and psychology, accomplished a revolutionary breakthrough to reality for world literature is not concerned to show its characters as belonging to any concrete time. The contemporary world is portrayed with unusual plasticity and truth-to-life, but is accepted naïvely as something given: whence and how it has developed have not yet become problems for the writer. This abstractness in the portrayal of historical time also affects the portrayal of historical place. Thus Lesage⁷ is able to transfer his highly truthful pictures of the France of his day to Spain and still feel quite at ease. Similarly, Swift, Voltaire and even

1. Translated by Hannah and Stanley Mitchell.

2. Napoléon Bonaparte (1769–1821), French military and political leader who attempted to create a European empire.

3. The first in a long series of some two dozen books that would come to be called the *Waverley* Novels, by the Scottish historical novelist and poet Sir Walter Scott (1771–1832).

4. Gautier de Costes, seigneur de la Calprenède (ca. 1610–63), French novelist and dramatist.

Madeleine de Scudéry (1607–1701), French writer.

5. The pioneering Gothic novel (1764) by the English man of letters Horace Walpole (1717–1797).

6. Nicolas Boileau (1636–1711), French poet and critic.

7. Alain-René Lesage (1668–1747), French novelist and playwright.

Diderot⁸ set their satirical novels in a “never and nowhere” which nevertheless faithfully reflects the essential characteristics of contemporary England and France. These writers, then, grasp the salient features of their world with a bold and penetrating realism. But they do not see the specific qualities of their own age historically.

This basic attitude remains essentially unchanged despite the fact that realism continues to bring out the specific features of the present with ever greater artistic power. Think of novels like *Moll Flanders*, *Tom Jones*,⁹ etc. Their broad, realistic portrayal of the present takes in here and there important events of contemporary history which it links with the fortunes of the characters. In this way, particularly in Smollett¹ and Fielding, time and place of action acquire much greater concreteness than was customary in the earlier period of the social novel or in most contemporary French writing. Fielding indeed is to some extent aware of this development, this increasing concreteness of the novel in its grasp of the historical peculiarity of characters and events. His definition of himself as a writer is that of an historian of bourgeois society.²

Altogether, when analyzing the prehistory of the historical novel, one must break with the Romantic-reactionary legend which denies to the Enlightenment any sense or understanding of history and attributes the invention of historical sense to the opponents of the French Revolution, Burke, de Maistre,³ etc. One need only think of the extraordinary historical achievements of Montesquieu, Voltaire, Gibbon,⁴ etc., in order to cut this legend down to size.

What matters for us, however, is to concretize the particular character of this sense of history both before and after the French Revolution in order to see clearly what was the social and ideological basis from which the historical novel was able to emerge. And here we must stress that the history writing of the Enlightenment was, in its main trend, an ideological preparation for the French Revolution. The often superb historical construction, with its discovery of numerous new facts and connections, serves to demonstrate the necessity for transforming the “unreasonable” society of feudal absolutism; and the lessons of history provide the principles with whose help a “reasonable” society, a “reasonable” state may be created. For this reason the classical world⁵ is central to both the historical theory and the practice of the Enlightenment. To ascertain the causes of the greatness and decline of the classical states is one of the most important theoretical preliminaries for the future transformation of society.

This applies above all to France, the spiritual leader during the period of militant Enlightenment. The position in England is somewhat different.

8. Denis Diderot (1713–1784), French philosopher and writer. Jonathan Swift (1667–1745), Anglo-Irish satirist, poet, and cleric. Voltaire: pen name of François-Marie Arouet (1694–1778), French Enlightenment essayist and philosopher.

9. A comic novel (1749), by the English playwright and novelist Henry Fielding (1707–1754). *Moll Flanders* (1772), a novel by the English novelist and journalist Daniel Defoe (ca. 1660–1731).

1. Tobias George Smollett (1721–1771), Scottish author, best known for his picaresque novels.

2. That is, postfeudal middle-class society.

3. Joseph-Marie, comte de Maistre (1753–1821),

a French-speaking Savoyard diplomat and writer. EDMUND BURKE (1729–1797), Anglo-Irish statesman, political theorist, and philosopher. Both were conservatives who strongly opposed the aims of the French Revolution (1789–99).

4. Edward Gibbon (1737–1794), English historian and member of Parliament. Charles-Louis de Secondat, baron de La Brède et de Montesquieu (1689–1755), French Enlightenment social commentator and political theorist.

5. That is, the civilizations of ancient Greece and Rome (ca. 5th c. B.C.E.–ca. 5th c. C.E.).

Economically, eighteenth century England indeed finds itself in the midst of the greatest transformation, the creation of the economic and social pre-conditions for the Industrial Revolution. Politically, however, England is already a post-revolutionary country.⁶ Thus where it is a question of mastering bourgeois society theoretically and subjecting it to criticism, of working out the principles of political economy, history is grasped as history more concretely than in France. But where it is a question of conscious and consistent application of such specifically historical viewpoints, they occupy an episodic position in the development as a whole. The really dominating economic theorist towards the end of the eighteenth century is Adam Smith.⁷ James Steuart,⁸ who posed the problem of capitalist economy far more historically and who investigated the process by which capital came into being, was soon forgotten. Marx⁹ characterizes the difference between these two important economists in the following way: Steuart's "contribution to the concept of capital is to have shown how the process of separation takes place between the conditions of production, as the property of definite classes, and labour-power. He gives a great deal of attention to this *process of the birth of capital—without as yet directly comprehending it as such* (my italics G.L.), although he sees it as the condition of large-scale industry. He examines the process particularly in agriculture; and he correctly presents manufacturing industry proper as dependent on this prior process of separation in agriculture. In Adam Smith's works this process of separation is assumed as already completed." This unawareness of the significance of the historical sense already present in practice, of the possibility of generalizing the historical peculiarity of the immediate present, which had been correctly observed by instinct, characterizes the position which the great social novel of England occupies in the development of our problem. It drew the attention of writers to the concrete (i.e. historical) significance of time and place, to social conditions and so on, it created the realistic, literary means of expression for portraying this spatio-temporal (i.e. historical) character of people and circumstances. But this, as in the economics of Steuart, was a product of realistic instinct and did not amount to a clear understanding of history as a process, of history as the concrete precondition of the present.

It is only during the last phase of the Enlightenment that the problem of the artistic reflection of past ages emerges as a central problem of literature. This occurs in Germany. Initially, it is true, the ideology of the German Enlightenment follows in the wake of that of France and England: the great achievements of Winckelmann and Lessing¹ do not in the main diverge from the general trend of the Enlightenment. Lessing, whose important contributions to the clarification of the problem of historical drama we shall discuss at length later, still defines the relationship of writer to history entirely in

6. During the English Civil War (1642–49), royal forces were defeated by a parliamentary army, the monarchy and the House of Lords were temporarily abolished, the king was executed for treason, and a republican Commonwealth was established.

7. Scottish moral philosopher and pioneering political economist (1723–1790); his major work was *The Wealth of Nations* (1776).

8. Scottish lawyer and economist (1713–1780).

9. KARL MARX (1818–1883), German philosopher, political economist, and revolutionary; Lukács quotes from Marx's *Capital*, vol. 4 (1905), which discusses Steuart's *Inquiry into the Principles of Political Oeconomy* (1767).

1. GOTTHOLD EPHRAIM LESSING (1729–1781), German philosopher, dramatist, and art critic. Johann Joachim Winckelmann (1717–1768), German art historian and archaeologist.

the spirit of Enlightenment philosophy. He maintains that for the great dramatist history is no more than a "repertory" of names.

But soon after Lessing, in the *Sturm und Drang*,² the problem of the artistic mastery of history already appears as a conscious one. Goethe's *Götz von Berlichingen*³ not only ushers in a new flowering of historical drama, but has a direct and powerful influence on the rise of the historical novel in the work of Sir Walter Scott. This conscious growth of historicism, which receives its first theoretical expression in the writings of Herder,⁴ has its roots in the special position of Germany, in the discrepancy between Germany's economic and political backwardness and the ideology of the German Enlighteners, who, standing on the shoulders of their English and French predecessors, developed the ideas of the Enlightenment to a higher level. As a result not only do the general contradictions underlying the whole ideology of the Enlightenment appear more sharply there than in France, but the specific contrast between these ideas and German reality is thrust vigorously into the foreground.

In England and France, the economic, political and ideological preparation and completion of the bourgeois revolution and the setting-up of a national state are one and the same process. So that in looking to the past, however intense the bourgeois-revolutionary patriotism and however important the works it produces (Voltaire's *Henriade*⁵), the chief concern is inevitably the Enlightenment critique of the "unreasonable". Not so in Germany. Here revolutionary patriotism comes up against national division, against the political and economic fragmentation⁶ of a country which imports its cultural and ideological means of expression from France. For everything that was produced in the small German courts in the way of culture and particularly in the way of pseudo-culture was nothing more than a slavish imitation of the French court. Thus the small courts constitute not only a political obstacle to German unity, but also an ideological hindrance to the development of a culture stemming from the needs of German middle-class life. The German form of Enlightenment necessarily engages in sharp polemic with this French culture; and it preserves this note of revolutionary patriotism even where the real content of the ideological battle is simply the conflict between different stages in the development of the Enlightenment (Lessing's struggle against Voltaire).

The inevitable result of this situation is to turn to German history. Partly it is the reawakening of past national greatness which gives strength to hopes of national rebirth. It is a requirement of the struggle for this national greatness that the historical causes for the decline, the disintegration of Germany should be explored and artistically portrayed. As a result, in Germany, which in the preceding centuries had been no more than an object of historical changes, art becomes historical earlier and more radically than in the economically and politically more advanced countries of the West.

2. Storm and Stress (German), a movement in German literature and music (late 1760s–early 1780s) characterized by a focus on subjectivity and extremes of emotion.

3. *Götz of Berlichingen with the Iron Hand* (1773), a drama by the German poet, dramatist, novelist, and scientist Johann Wolfgang von Goethe (1749–1832).

4. Johann Gottfried von Herder (1744–1803), German philosopher, poet, and literary critic.

5. An epic poem on Henry IV of France (1723).

6. Germany's 25 states were not unified until 1871.

It was the French Revolution, the revolutionary wars and the rise and fall of Napoleon,⁷ which for the first time made history a *mass experience*, and moreover on a European scale. During the decades between 1789 and 1814 each nation of Europe underwent more upheavals than they had previously experienced in centuries. And the quick succession of these upheavals gives them a qualitatively distinct character, it makes their historical character far more visible than would be the case in isolated, individual instances: the masses no longer have the impression of a "natural occurrence". One need only read over Heine's reminiscences of his youth in *Buch le Grand*,⁸ to quote just one example, where it is vividly shown how the rapid change of governments affected Heine as a boy. Now if experiences such as these are linked with the knowledge that similar upheavals are taking place all over the world, this must enormously strengthen the feeling first that there is such a thing as history, that it is an uninterrupted process of changes and finally that it has a direct effect upon the life of every individual.

This change from quantity into quality appears, too, in the differences of these wars from all preceding ones. The wars of absolute states in the pre-Revolutionary period were waged by small professional armies. They were conducted so as to isolate the army as sharply as possible from the civilian population, supplies from depots, fear of desertion, etc. Not for nothing did Frederick II⁹ of Prussia declare that war should be waged in such a manner that the civilian population simply would not notice it. "To keep the peace is the first duty of the citizen" was the motto of the wars of absolutism.

This changes at one stroke with the French Revolution. In its defensive struggle against the coalition of absolute monarchies, the French Republic was compelled to create mass armies. The qualitative difference between mercenary and mass armies is precisely a question of their relations with the mass of the population. If in place of the recruitment or pressing into professional service of small contingents of the declassed, a mass army is to be created, then the content and purpose of the war must be made clear to the masses by means of propaganda. This happens not only in France itself during the defence of the Revolution and the later offensive wars. The other states, too, if they transfer to mass armies, are compelled to resort to the same means. (Think of the part played by German literature and philosophy in this propaganda after the battle of Jena.¹) Such propaganda cannot possibly, however, restrict itself to the individual, isolated war. It has to reveal the social content, the historical presuppositions and circumstances of the struggle, to connect up the war with the entire life and possibilities of the nation's development. It is sufficient to point to the importance of the defence of Revolutionary achievements in France and to the connection between the creation of a mass army and political and social reforms in Germany and in other countries.

The inner life of a nation is linked with the modern mass army in a way it could not have been with the absolutist armies of the earlier period. In France the estate barrier² between nobleman, officer and common soldier

8. *Ideas: The Book of Le Grand* (1827), a prose work by the German Romantic poet, journalist, and essayist Heinrich Heine (1797–1856).

9. King of Prussia (1712–1786; reigned 1740–86).

1. City in east-central Germany; in this battle, in

1806, the forces of Napoleon I defeated those of Frederick William III of Prussia.

2. That is, the division of classes; before the Revolution, the French legislative assembly represented the three estates: the clergy, nobles, and commons.

disappears: the highest positions in the army are open to all and it is well known that this barrier fell as a direct result of the Revolution. And even in those countries fighting against the Revolution, estate barriers were inevitably breached to some extent. One need only read the writings of Gneisenau³ to see how clearly these reforms were connected with the new historical situation created by the French Revolution. Further, the war inevitably destroyed the former separation of army from people. It is impossible to maintain mass armies on a depot basis. Since they have to maintain themselves by requisition they inevitably come into direct and permanent contact with the people of the country where the war is being waged. Of course, this contact very often consists of robbery and plunder. But not always. And it must not be forgotten that the wars of the Revolution and, to some extent, those of Napoleon were waged as conscious propaganda wars.

Finally, the enormous quantitative expansion of war plays a qualitatively new role, bringing with it an extraordinary broadening of horizons. Whereas the wars fought by the mercenary armies of absolutism consisted mostly of tiny manoeuvres around fortresses etc., now the whole of Europe becomes a war arena. French peasants fight first in Egypt, then in Italy, again in Russia; German and Italian auxiliary troops take part in the Russian campaign; German and Russian troops occupy Paris after Napoleon's defeat, and so forth. What previously was experienced only by isolated and mostly adventurous-minded individuals, namely an acquaintance with Europe or at least certain parts of it, becomes in this period the mass experience of hundreds of thousands, of millions.

Hence the concrete possibilities for men to comprehend their own existence as something historically conditioned, for them to see in history something which deeply affects their daily lives and immediately concerns them. There is no point in dealing here with the social transformations in France itself. It is quite obvious the extent to which the economic and cultural life of the entire nation was disrupted by the huge, rapidly successive changes of the period. It should be mentioned, however, that the Revolutionary armies and later those of Napoleon, too, did liquidate, completely or partially, the remnants of feudalism in many of the places they conquered, as for example in the Rhineland and Northern Italy. The social and cultural contrast between the Rhineland and the rest of Germany, still very noticeable at the time of the '48 Revolution,⁴ is a legacy handed down from the Napoleonic era, and the broad masses were conscious of the connection between these social changes and the French Revolution. To mention once again some of the literary reflexes: besides Heine's remembrances of his youth, it is most instructive to read the first chapters of Stendhal's *La Chartreuse de Parme*⁵ to see what a lasting impression was evoked by French rule in Northern Italy.

It is in the nature of a bourgeois revolution that, if seriously carried through to its conclusion, the national idea becomes the property of the broadest masses. In France it was only as a result of the Revolution and Napoleonic rule⁶ that a feeling of nationhood became the experience and property of the

6. The rule of Napoléon I (1799–1815).

peasantry, the lower strata of the petty bourgeoisie and so on. For the first time they experienced France as their own country, as their self-created motherland.

But the awakening of national sensibility and with it a feeling and understanding for national history occurs not only in France. The Napoleonic wars everywhere evoked a wave of national feeling, of national resistance to the Napoleonic conquests, an experience of enthusiasm for national independence. To be sure, these movements are mostly, as Marx says, a compound of "regeneration and reaction,"⁷ as in Spain, Germany etc. In Poland, on the other hand, the struggle for independence, the flare-up of national feeling is essentially progressive. But whatever the proportions of "regeneration and reaction" in individual national movements, it is clear that these movements—real mass movements—inevitably conveyed a sense and experience of history to broad masses. The appeal to national independence and national character is necessarily connected with a re-awakening of national history, with memories of the past, of past greatness, of moments of national dishonour, whether this results in a progressive or reactionary ideology.

Thus in this mass experience of history the national element is linked on the one hand with problems of social transformation; and on the other, more and more people become aware of the connection between national and world history. This increasing consciousness of the historical character of development begins to influence judgments on economic conditions and class struggle. In the eighteenth century it was only the odd critic of nascent capitalism, the wit and paradox-monger, who compared the exploitation of workers by Capital with forms of exploitation in earlier periods in order to expose Capitalism as the more inhumane form (Linguet⁸). In the ideological struggle against the French Revolution a similar comparison, admittedly shallow in economic terms and reactionary in tendency, between society before and after the Revolution or, on a wider scale, between Capitalism and Feudalism becomes the war-cry of Legitimist Romanticism.⁹ The inhumanity of Capitalism, the chaos of competition, the destruction of the small by the big, the debasement of culture by the transformation of all things into commodities—all this is contrasted, in a manner generally reactionary in tendency, with the social idyll of the Middle Ages, seen as a period of peaceful co-operation among all classes, an age of the organic growth of culture. But if mostly a reactionary tendency prevails in these polemical writings, it should not be forgotten that it was in this period that the notion of Capitalism as a definite, historical era of human development first arose, and this occurred not in the works of the great theorists of Capitalism, but in those of their enemies. It suffices to mention Sismondi¹ here, who despite theoretical confusion over fundamental questions, raised certain individual historical problems of economic development with great clarity. One has only to think of his dictum that while in antiquity the

Swiss economist and historian. For his dictum, cited by Marx both in vol. 1 of *Capital* (1867) and in the preface to the 2d ed. of *The Eighteenth Brumaire* of Louis Bonaparte (1869), see vol. 1 of *Studies in the Social Sciences* (1836).

proletariat lived at the expense of society, in modern times it is society which lives at the expense of the proletariat.

It is already clear from these remarks that the tendencies towards a conscious historicism reach their peak after the fall of Napoleon, at the time of the Restoration and the Holy Alliance.² Admittedly, the spirit of historicism which at first prevails and gains official status is reactionary and by its nature pseudo-historical. The historical interpretation, publicist writings and *belles lettres* of Legitimism develop the historical spirit in radical opposition to the Enlightenment and the ideas of the French Revolution. The ideal of Legitimism is to return to pre-Revolutionary conditions, that is, to eradicate from history the greatest historical events of the epoch.

According to this interpretation history is a silent, imperceptible, natural, "organic" growth, that is, a development of society which is basically stagnation, which alters nothing in the time-honoured, legitimate institutions of society and, above all, alters nothing consciously. Man's activity in history is ruled out completely. The German historical school of law even denies nations the right to make new laws for themselves, it prefers to leave the old motley feudal laws of custom to their "organic growth".

Thus under the banner of historicism and of a struggle against the "abstract, unhistorical" spirit of the Enlightenment, there arises a pseudo-historicism, an ideology of immobility, of return to the Middle Ages. In the interests of these reactionary political aims, historical development is ruthlessly distorted. And the inner falsity of the reactionary ideology is intensified by the fact that the Restoration in France is compelled for economic reasons to come to terms socially with the Capitalism which has grown up in the meantime, indeed even to seek its partial support, economically and politically. (The situation of the reactionary governments in Prussia, Austria etc. is similar.) These then are the foundations on which history is to be written afresh. Chateaubriand³ tries hard to revise classical history in order to depreciate historically the old revolutionary ideal of the Jacobin⁴ and Napoleonic period. He and other pseudo-historians of reaction furnish a falsely idyllic picture of the unsurpassed, harmonious society of the Middle Ages. This historical interpretation of the Middle Ages determines the portrayal of feudal times in the Romantic novel of the Restoration.

Despite this ideological mediocrity of Legitimist pseudo-historicism, it exerts an extraordinarily powerful influence. Admittedly distorted and mendacious, it is nevertheless an historically necessary expression of the great period of transformation which sets in with the French Revolution. And the new stage of development, which begins precisely with the Restoration, compels the defenders of human progress to forge for themselves a new ideological armour. We have seen with what undaunted vigour the Enlightenment fought the historical legitimacy and continuity of feudal survivals. Similarly, we have seen how post-Revolutionary Legitimism regarded

2. A somewhat vague agreement, initially signed in 1815 by the rulers of Russia, Austria, and Prussia, that was intended to reestablish order in Europe after the fall of Napoléon. Restoration: in French history, the restoration (1814–30) of the Bourbon dynasty after Napoléon.

(1768–1848), French writer, politician, and diplomat.

4. That is, the Reign of Terror (1793–94), a period marked by mass executions of "enemies of the revolution"; it was spearheaded by members of the Jacobin Club (1789–94), the largest and most powerful political club of the French Revolution.

precisely their conservation as the content of history. The defenders of progress after the French Revolution had necessarily to reach a conception which would prove the *historical necessity* of the latter, furnish evidence that it constituted a peak in a long and gradual historical development and not a sudden eclipse of human consciousness, not a Cuvier-like "natural catastrophe" in human history,⁵ and that this was the only course open to the future development of mankind.

This, however, means a big change of outlook in the interpretation of human progress in comparison with the Enlightenment. Progress is no longer seen as an essentially unhistorical struggle between humanist reason and feudal-absolutist unreason. According to the new interpretation the reasonableness of human progress develops ever increasingly out of the inner conflict of social forces in history itself; according to this interpretation history itself is the bearer and realizer of human progress. The most important thing here is the increasing historical awareness of the decisive role played in human progress by the struggle of classes in history. The new spirit of historical writing, which is most clearly visible in the important French historians of the Restoration period, concentrates precisely on this question: on showing historically how modern bourgeois society arose out of the class struggles between nobility and bourgeoisie, out of class struggles which raged throughout the entire "idyllic Middle Ages" and whose last decisive stage was the great French Revolution. These ideas produce the first attempt at a rational periodization of history, an attempt to comprehend the historical nature and origins of the present rationally and scientifically. The first large-scale attempt at such a periodization had already been undertaken by Condorcet⁶ in the middle of the French Revolution, in his historico-philosophical major work. These ideas are further developed and scientifically enlarged in the Restoration period. Indeed, in the works of the great Utopians⁷ the periodization of history already transcends the horizon of bourgeois society. And if this transition, this step beyond Capitalism follows fantastic paths, its critical-historical basis is nonetheless linked—especially in the case of Fourier⁸—with a devastating critique of the contradictions of bourgeois society. In Fourier, despite the fantastic nature of his ideas about Socialism and of the ways to Socialism, the picture of Capitalism is shown with such overwhelming clarity in all its contradiction that the idea of the transitory nature of this society appears tangibly and plastically before us.

This new phase in the ideological defence of human progress found its philosophical expression in Hegel.⁹ As we have seen, the central historical question was to demonstrate the necessity of the French Revolution, to show that revolution and historical development are not opposed to one another, as the apologists of feudal Legitimism maintained. The philosophy of Hegel

5. A cataclysmic event of the kind that—according to advocates of catastrophism, such as the French naturalist Georges Cuvier (1769–1832)—explained geological features and the extinction of species.

6. Jean-Antoine-Nicolas de Caritat, marquis de Condorcet (1743–1794), French philosopher, mathematician, and early political scientist; his "major work" was *Sketch for a Historical Picture*

of the Progress of the Human Mind (1795).

7. Proponents of utopian socialism, the dominant branch of socialism in the first quarter of the 19th century.

8. Charles Fourier (1772–1837), French utopian social philosopher.

9. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher.

provides the philosophic basis for this conception of history. Hegel's discovery of the universal law of transformation of quantity into quality is, seen historically, a philosophic methodology for the idea that revolutions constitute necessary, organic components of evolution and that without such a "nodal line of proportions"¹ true evolution is impossible in reality and unthinkable philosophically.

On this basis, the Enlightenment conception of man is philosophically cancelled, preserved and raised to a higher level (*aufgehoben*).² The greatest obstacle to an understanding of history lay in the Enlightenment's conception of man's unalterable nature. Thus, any change in the course of history had meant, in extreme cases, merely a change of costume and, in general, merely the moral ups and down of the same man. Hegelian philosophy draws all the inferences from the new progressive historicism. It sees man as a product of himself and of his own activity in history. And even if this historical process seems to stand idealistically upon its head, even if the bearer of the process is mystified into a "world spirit", Hegel nevertheless sees this world spirit as embodying the dialectics of historical development. "Thus the spirit opposes itself (i.e. in history G.L.) and has to overcome itself, as the really hostile obstacle to its own purpose: the evolution . . . in the spirit . . . is a hard, unceasing struggle against itself. What the spirit desires is to realize its own idea, yet it conceals this idea from itself, is proud and full of self-enjoyment in this alienation of its own self . . . With the spiritual form it is different (from what it is in nature G.L.); here the change takes place not merely on the surface, but in the idea. It is the idea itself which is corrected."³ Hegel gives an apt description here—admittedly in an idealist and abstract fashion—of the ideological change which has occurred in his age. The thought of the earlier period oscillated antinomously between a fatalistic law-conforming conception of all social occurrence and an over-estimation of the possibilities of conscious intervention in social development. But on both sides of the antinomy⁴ the principles were considered to be "supra-historical", stemming from the "eternal" nature of "reason". Hegel, however, sees a process in history, a process propelled, on the one hand, by the inner motive forces of history and which, on the other, extends its influence to all the phenomena of human life, including thought. He sees the total life of humanity as a great historical process.

Thus there arose, in both a concrete historical as well as philosophic manner, a new humanism, a new concept of progress. A humanism which wished to preserve the achievements of the French Revolution as the imperishable basis of future human development, which regarded the French Revolution (and revolutions in history altogether) as an indispensable component of human progress. Of course, this new historical humanism was itself a child of its age and unable to transcend the limits of that age—except in a fantastical form, as was the case with the great Utopians. The important bourgeois humanists of this period find themselves in a paradoxical situation: while they comprehend the necessity of revolutions in the

1. A phrase from Hegel's *Science of Logic* (1812–16).

2. A technical term from Hegelian dialectics, usually translated "sublation": the process by which a thesis, though canceled by its antithesis,

is partially preserved in a higher synthesis.

3. From Hegel, *Lectures on the Philosophy of History* (1837).

4. Mutual incompatibility of two terms.

past and see in them the foundation for all that is reasonable and worthy of affirmation in the present, nevertheless they interpret future development in terms of a henceforth peaceful evolution on the basis of these achievements. As M. Lifschitz very rightly shows in his article on Hegel's aesthetics,⁵ they seek the positive things in the new world order created by the French Revolution and do not consider any new revolution to be necessary for the final realization of these positive things.

This conception of the last great intellectual and artistic period of bourgeois humanism has nothing to do with the barren and shallow apologia of capitalism which sets in later (and to some extent simultaneously). It is founded upon a ruthlessly truthful investigation and disclosure of all the contradictions of progress. There is no criticism of the present from which it will shrink. And even if it cannot consciously transcend the spiritual horizon of its time, yet the constantly oppressive sense of the contradictions of its own historical situation casts a profound shadow over the whole historical conception. This feeling that—contrary to the consciously philosophic and historical conception which proclaims unceasing and peaceful progress—one is experiencing a last brief, irretrievable intellectual prime of humanity manifests itself in the greatest representatives of this period in very different ways, in keeping with the unconscious character of this feeling. Yet for the same reason the emotional accent is very similar. Think of the old Goethe's theory of "abnegation", of Hegel's "Owl of Minerva" which takes flight only at dusk, of Balzac's⁶ sense of universal doom, etc. It was the 1848 Revolution which for the first time placed before the surviving representatives of this epoch the choice of either recognizing the perspective held out by the new period in human development and of affirming it, even if with a tragic cleavage of spirit, like Heine, or of sinking into the position of apologists for declining capitalism, as Marx, immediately after the 1848 Revolution, critically demonstrated in the case of such important figures as Guizot and Carlyle.⁷

2. SIR WALTER SCOTT

Such was the historical basis upon which Sir Walter Scott's historical novel arose. But one must never think of this relationship in terms of the idealist "history of the spirit" (*Geistesgeschichte*). In the latter we should find shrewd hypotheses to show the devious routes by which Hegelian ideas, for example, found their way to Scott; and some forgotten writer would be discovered who contained the common source of Scott's and Hegel's historicism. It is certain that Scott had no knowledge of Hegel's philosophy and had he come across it would probably not have understood a word. The new historical conception of the great historians of the Restoration actually makes its appearance later than the works of Scott and some of its problems are influenced by them. The fashionable philosophic-cum-philologic hunting down

5. "Hegel's Aesthetics and Dialectical Materialism," written in 1931, on the centennial anniversary of Hegel's death, by the Russian philosopher and art historian Mikhail Lifschitz (1905–1983).
6. Honoré de Balzac (1799–1850), French novelist and playwright. Hegel wrote of the "Owl of

Minerva" (the Roman goddess of wisdom) in the preface to *Philosophy of Right* (1821).

7. Thomas Carlyle (1795–1881), Scottish essayist, satirist, and historian. François Pierre Guillaume Guizot (1787–1874), French historian, orator, and statesman.

of individual "influences" is no more fruitful for the writing of history than the old philological hunting down of the effects of individual writers on one another. With Scott, in particular, it was the fashion to quote a long list of second and third-rate writers (Radcliffe,⁸ etc.), who were supposed to be important literary forerunners of his. All of which brings us not a jot nearer to understanding what was *new* in Scott's art, that is in his historical novel.

We have attempted to outline the general framework of those economic and political transformations which occurred throughout Europe as a result of the French Revolution; in the preceding remarks we briefly sketched the latter's ideological consequences. These events, this transformation of men's existence and consciousness throughout Europe form the economic and ideological basis for Scott's historical novel. Biographical evidence of the individual instances which enabled Scott to become aware of these trends offers nothing of importance to the real history of the rise of the historical novel. The less so, as Scott ranks among those great writers whose depth is manifest mainly in their work, a depth which they often do not understand themselves, because it has sprung from a truly realistic mastery of their material in conflict with their personal views and prejudices.

Scott's historical novel is the direct continuation of the great realistic social novel of the eighteenth century. Scott's studies on eighteenth century writers, on the whole not very penetrating theoretically, reveal an intensive knowledge and detailed study of this literature. Yet his work, in comparison with theirs, signifies something entirely new. His great contemporaries clearly recognized this new quality. Pushkin⁹ writes of him: . . . "The influence of Walter Scott can be felt in every province of the literature of his age. The new school of French historians formed itself under the influence of the Scottish novelist. He showed them entirely new sources which had so far remained unknown despite the existence of the historical drama of Shakespeare¹ and Goethe . . ." And Balzac, in his criticism of Stendhal's *La Chartreuse de Parme*, emphasizes the new artistic features which Scott's novel introduced into epic literature: the broad delineation of manners and circumstances attendant upon events, the dramatic character of action and, in close connection with this, the new and important role of dialogue in the novel.

It is no accident that this new type of novel arose in England. We have already mentioned, in dealing with the literature of the eighteenth century, important realistic features in the English novel of this period, and we described them as necessary consequences of the post-revolutionary character of England's development at the time, in contrast to France and Germany. Now, in a period when the whole of Europe, including its progressive classes and their ideologists, are swayed (temporarily) by a post-revolutionary ideology, these features in England must stand out with more than usual distinctness. For England has now once more become the model land of development for the majority of continental ideologists, though of course in a different sense from that of the eighteenth century. Then, the fact that bourgeois freedoms had actually been realized, served as an example to the

8. Ann Radcliffe (1764–1823), English author who was a pioneer of the Gothic novel.

9. Aleksandr Sergeyevich Pushkin (1799–1837), Russian Romantic poet.

1. Many of the plays of William Shakespeare (1564–1616) treat history (especially English history).

Continental Enlighteners. Now, in the eyes of the historical ideologists of progress, England appears as the classic example of historical development in their sense. The fact that England had fought out its bourgeois revolution in the seventeenth century² and had from then on experienced a peaceful, upward development, lasting over centuries, on the basis of the Revolution's achievements, showed England to be the practical, model example for the new style of historical interpretation. The "Glorious Revolution" of 1688,³ likewise, inevitably presented itself as an ideal to the bourgeois ideologists who were combating the Restoration in the name of progress.

On the other hand, however, honest writers, keenly observant of the real facts of social development, like Scott, were made to see that this peaceful development was peaceful only as the ideal of an historical conception, only from the bird's-eye view of a philosophy of history. The organic character of English development is a resultant made up of the components of ceaseless class struggles and their bloody resolution in great or small, successful or abortive uprisings. The enormous political and social transformations of the preceding decades awoke in England, too, the feeling for history, the awareness of historical development.

T. S. ELIOT

1888–1965

T. S. Eliot is the central Anglo-American poet and critic of the twentieth century. He is the author of the most influential poem, *The Waste Land* (1922), and the most authoritative literary essays and reviews. In the history of literary theory and criticism, Eliot belongs—with SAMUEL JOHNSON, SAMUEL TAYLOR COLERIDGE, and MATTHEW ARNOLD—among the poet-critics who have defined the critical standards of an era, recast the literary tradition, and established key terms for analysis and evaluation. So immense was Eliot's authority that the poet Dylan Thomas referred to him as "the Pope" and the critic Delmore Schwartz dubbed him a "literary dictator."

Thomas Stearns Eliot was born in St. Louis, Missouri, the seventh and youngest child of Henry Ware Eliot, a businessman, and Charlotte Stearns Eliot, an amateur poet and volunteer social worker. From 1898 to 1905, Eliot attended Smith Academy in St. Louis, a preparatory school where his studies included Greek and Latin, rhetoric, French, and German, and during 1905–06 he was a student at Milton Academy, in Milton, Massachusetts. In 1906 he entered Harvard University, receiving his bachelor's degree in 1909 and his master's in 1910.

At Harvard, Eliot became interested in philosophy and comparative literature—DANTE's *Divine Comedy* was a sublime discovery for him. Important influences on

his intellectual development include the philosopher, poet, and humanist George Santayana (1863–1952), from whom Eliot took a course on modern philosophy, and the literary scholar Irving Babbitt (1865–1933), a relentless foe of Romanticism, with whom Eliot studied nineteenth-century French literary criticism. A strong influence on his early verse was the theory of the dynamic flux and movement of consciousness propounded by the French philosopher Henri Bergson (1859–1941). But for Eliot's poetry and criticism, the crucial experience of his Harvard years was his reading in December 1908 of Arthur Symons's *The Symbolist Movement in Literature* (1899), which introduced French symbolist poetry to English and American readers. Eliot was busy writing verse himself, publishing some of it in *The Harvard Advocate*; between 1909 and 1911, he worked on two of his best poems, "Portrait of a Lady" and "The Love Song of J. Alfred Prufrock," drawing on the style of irony and symbolism he had encountered in the nineteenth-century French poets—especially Charles Baudelaire, Arthur Rimbaud, and Jules Laforgue—whom Symons quoted and discussed.

Eliot was a self-made modernist; as his friend Ezra Pound later said, Eliot had "trained himself *and* modernized himself *on his own*." In his introduction to Pound's *Selected Poems* (1928), Eliot made much the same point: "the form in which I began to write, in 1908 or 1909, was directly drawn from the study of Laforgue together with the later Elizabethan drama; and I do not know anyone who started from exactly that point." He read widely, modifying (and sometimes parodying) the verbal techniques of other poets.

After a year at the Sorbonne in Paris, Eliot returned to Harvard to pursue graduate work and serve as a teaching assistant. For his dissertation topic, he focused on the writings of the British idealist philosopher F. H. Bradley, the author of *Appearance and Reality* (1893). His research led him to the University of Marburg in Germany, in the summer of 1914; but as the threat of world war loomed, he relocated to Merton College, Oxford. He was to settle in England permanently.

In September 1914 Eliot met Pound, who quickly became his adviser, editor, and literary agent. "The Love Song of J. Alfred Prufrock" was published in *Poetry* magazine in June 1915; in the following month, Eliot married Vivien (sometimes Vivienne) Haigh-Wood. The marriage proved unhappy and, as Vivien's mental and physical illnesses deepened in the 1920s and 1930s, it was harrowing for both of them. His despair is reflected in the torment, bitterness, and isolation expressed in much of his poetry. "No artist produces great art," Eliot claimed, "by a deliberate attempt to express his personality. He expresses his personality indirectly through concentrating upon a task which is a task in the same sense as the making of an efficient engine or the turning of a jug or a table-leg" (*Selected Essays, 1917–1932*). Eliot's work is itself impersonal and objective; it is filled—especially the poetry—with masks, role-playing, and multiple voices. Yet it is saturated everywhere, too, with displaced personal pain, regret, sexual desire, and emotional and spiritual yearning.

For two years Eliot taught in grammar schools, gave lectures on literature, and wrote dense, technical articles and reviews on philosophy. In March 1917, tired of makeshift teaching, he took a job at Lloyd's Bank in London. He held this position for the next eight years, while laboring on his poetry—his first volume, *Prufrock and Other Observations*, appeared in 1917—and on literary criticism, publishing essays and book reviews in the *Times Literary Supplement* and other leading periodicals. A number are included in *The Sacred Wood* (1920), a landmark collection of criticism and theory.

Work and worry brought Eliot near a nervous breakdown, and to recuperate he went first to Margate, in southeast England, and then to a sanatorium in Lausanne, Switzerland, where he worked on the draft of a long poem he had started years earlier. In Paris, on his way back to London, he showed the draft to Ezra Pound, who edited it skillfully and turned it (in Eliot's words) from "a jumble of good and bad passages into a poem"—*The Waste Land*. Allusive, experimental, and technically daring, showily learned and archly witty, *The Waste Land* is a primary text of literary

modernism. The poem was published in *The Criterion*—a new literary and cultural quarterly edited by Eliot—in October 1922. For many writers, critics, intellectuals, and general readers, *The Waste Land* evoked the waste and sterility of a Western world ravaged by the horrors of World War I, which had brought carnage on an unprecedented scale: more than 8.5 million soldiers and 13 million civilians had died. *The Waste Land* is not a poem about the war, but the war's trauma informs it from beginning to end.

Eliot was a literary and cultural force throughout the 1920s and 1930s. As editor of the quarterly *The Criterion* until the journal's demise in 1939, he published leading English modernists (including VIRGINIA WOOLF and James Joyce) and was the first to publish in English such significant European writers as Jean Cocteau and Marcel Proust. In 1925 Eliot accepted a position in the London firm of Faber and Gwyer (later, Faber and Faber), which became a leading publisher of poets from Ezra Pound to Sylvia Plath. He began writing plays in the 1930s, with *Murder in the Cathedral* (1935), and he enjoyed considerable popular success with his dramas of the 1950s, including *The Cocktail Party* (1950).

In 1927 Eliot became a British citizen and joined the Church of England; in the following year, he announced in *For Lancelot Andrewes*, a collection of critical essays, that he was "classicist in literature, royalist in politics, and Anglo-Catholic in religion." Eliot was conservative, even reactionary, and sometimes he drifted close to fascism and into racism and anti-Semitism. In his social and cultural writings and in much of his literary criticism of the 1930s and 1940s, Eliot is austere and sometimes censorious in attitude and pontificating in tone. From 1932 to 1933, he held the Charles Eliot Norton Professorship of Poetry at Harvard, where he delivered the lectures that became *The Use of Poetry and the Use of Criticism* (1933). Much of his late cultural criticism, gloomily resentful and hectoring, is today unread, but it does not diminish the force and influence of the best of Eliot's poetry and literary criticism. In 1948 he was awarded the Order of Merit by King George VI and the Nobel Prize in Literature.

Our first selection, "Tradition and the Individual Talent" (1919), begins: "In English writing we seldom speak of tradition." The poise and authority of Eliot's critical voice, backed up by his masterful performances as a poet, soon made "tradition" a key topic for poets, critics, intellectuals, and teachers of literature in the academy. Two of the canonical texts of modern Anglo-American literary criticism, F. R. LEAVIS's *Revaluation: Tradition and Development in English Poetry* (1936) and CLEANTH BROOKS's *Modern Poetry and the Tradition* (1939), were expansions of Eliot's ideas about tradition, and many other books (and countless syllabi) were similarly based on the terms that he had articulated.

For Eliot, each poem exists within the tradition from which it takes shape and which it, in turn, redefines. Thus tradition is both something to which the poet must be "faithful" and something that he or she actively makes: novelty emerges out of being steeped in tradition. Some later critics, such as HAROLD BLOOM, have characterized Eliot as a "weak" poet-critic because of the priority that he assigns to tradition, but in doing so they overlook the extent to which the poet challenges and revises the tradition to which he or she defers: "What happens when a new work of art is created," he says, "is something that happens simultaneously to all the works of art that preceded it." Eliot has also been criticized for picturing tradition as variously a "simultaneous order," a "living whole," an "ideal order," and the "mind of Europe," thereby idealizing its conflicts, contradictions, and omissions.

"The Metaphysical Poets" (1921) is another central work in the history of modern criticism. Almost as soon as it appeared, the difficult seventeenth-century metaphysical poets—John Donne, Andrew Marvell, and their contemporaries, whom Eliot described as "more often named than read, and more often read than profitably studied"—became models of good poetry. Eliot's essay is condensed in its argument, highly suggestive, and extraordinarily ambitious. In it he deploys the evaluative terms that in the eighteenth century Samuel Johnson had used against the metaphysical

poets (“the most heterogeneous ideas are yoked by violence together”) to elevate the poets whom his eminent precursor had assailed, insisting that modern poetry *must* be difficult. He packs “The Metaphysical Poets” with unelaborated argument and assertion, stressing in particular the seventeenth century’s disastrous “dissociation of sensibility” into “thought” and “feeling.” In the process, he illustrates how “tradition” is made, is *forced*, into the form that later generations of writers require. Many of Eliot’s readers took his generalizations as literal truths, and even skeptics, such as the English critic Frank Kermode (see *The Romantic Image*, 1957), judged that refuting Eliot demanded full-scale scholarly and critical demonstration.

Eliot liked being a troublemaker, saying outrageous things from on high and often not quite clarifying whether he meant them seriously. In “Hamlet and His Problems” (1920), for instance, Eliot presents his brilliant theory of the “objective correlative”: “The only way of expressing emotion in the form of art is by finding an ‘objective correlative’; in other words, a set of objects, a situation, a chain of events which shall be the formula for that particular emotion; such that, when the external facts, which must terminate in sensory experience, are given, the emotion is immediately evoked.” Eliot uses *Hamlet* as a test case, surprisingly labeling the play an “artistic failure” precisely because in it the “emotions” that Shakespeare evokes are “in excess” of the facts of the story, the dramatic action. It is a perverse judgment, in which Eliot may not have believed, but which he uttered with such assurance that it is still cited and debated.

Eliot was adept at formulating the nature and function of literary criticism, and the New Critics (such as JOHN CROWE RANSOM and Brooks) invoked his critical practice as a model. He described criticism as “the disinterested exercise of intelligence . . . the elucidation of works of art and the correction of taste . . . the common pursuit of true judgment,” and the New Critics followed his injunction to center arguments in formalist analysis of specific passages and poems. “Comparison and analysis,” Eliot said, “are the chief tools of the critic,” enabling a precise perception of literary effects, relationships, and values. By the 1950s, Eliot was lamenting the rise of copiously detailed interpretation of texts—which he called “lemon-squeezing”—but more than anyone else he had launched the new movement. “Honest criticism and sensitive appreciation are directed not upon the poet but upon the poetry,” Eliot states in section II of “Tradition and the Individual Talent.” In such sentences, we can see the origins of the New Criticism, with its abiding concern for the words on the page—in R. P. Blackmur’s formulation, “the words and the motions of the words . . . all the technical devices of literature.”

For many critics in the 1970s and after, Eliot—Anglican, conservative, New Critical formalist—has been the archenemy. Bloom, for example, has derided Eliot’s poetry and criticism and sought to revitalize the Romantic tradition that Eliot had shunned. Explicitly or implicitly, many others arguing for the inclusion of women and minority writers within the literary canon have attacked his judgments about literary and cultural tradition. Eliot’s and the New Critics’ “tradition,” they maintain, is narrow and elitist, enshrining a limited range of authors and presenting to students a partial, misleading literary history.

While these critics have exposed Eliot’s failings, they have not lessened his importance. Now that the critical sifting has been done, it may be possible to return to Eliot in order to see anew, and appreciate again, the scale of his accomplishments in poetry and prose. Literary modernism is unimaginable without Eliot, and the best of his work has remained extraordinarily influential.

Tradition and the Individual Talent

I

In English writing we seldom speak of tradition, though we occasionally apply its name in deploring its absence. We cannot refer to 'the tradition' or to 'a tradition'; at most, we employ the adjective in saying that the poetry of So-and-so is 'traditional' or even 'too traditional'. Seldom, perhaps, does the word appear except in a phrase of censure. If otherwise, it is vaguely approbative, with the implication, as to the work approved, of some pleasing archaeological reconstruction. You can hardly make the word agreeable to English ears without this comfortable reference to the reassuring science of archaeology.

Certainly the word is not likely to appear in our appreciations of living or dead writers. Every nation, every race, has not only its own creative, but its own critical turn of mind; and is even more oblivious of the shortcomings and limitations of its critical habits than of those of its creative genius. We know, or think we know, from the enormous mass of critical writing that has appeared in the French language the critical method or habit of the French; we only conclude (we are such unconscious people) that the French are 'more critical' than we, and sometimes even plume ourselves a little with the fact, as if the French were the less spontaneous. Perhaps they are; but we might remind ourselves that criticism is as inevitable as breathing, and that we should be none the worse for articulating what passes in our minds when we read a book and feel an emotion about it, for criticizing our own minds in their work of criticism. One of the facts that might come to light in this process is our tendency to insist, when we praise a poet, upon those aspects of his work in which he least resembles anyone else. In these aspects or parts of his work we pretend to find what is individual, what is the peculiar essence of the man. We dwell with satisfaction upon the poet's difference from his predecessors, especially his immediate predecessors; we endeavour to find something that can be isolated in order to be enjoyed. Whereas if we approach a poet without this prejudice we shall often find that not only the best, but the most individual parts of his work may be those in which the dead poets, his ancestors, assert their immortality most vigorously. And I do not mean the impressionable period of adolescence, but the period of full maturity.

Yet if the only form of tradition, of handing down, consisted in following the ways of the immediate generation before us in a blind or timid adherence to its successes, 'tradition' should positively be discouraged. We have seen many such simple currents soon lost in the sand; and novelty is better than repetition. Tradition is a matter of much wider significance. It cannot be inherited, and if you want it you must obtain it by great labour. It involves, in the first place, the historical sense, which we may call nearly indispensable to anyone who would continue to be a poet beyond his twenty-fifth year; and the historical sense involves a perception, not only of the pastness of the past, but of its presence; the historical sense compels a man to write not merely with his own generation in his bones, but with a feeling that the whole of the literature of Europe from Homer and within it the whole of the literature of

his own country has a simultaneous existence and composes a simultaneous order. This historical sense, which is a sense of the timeless as well as of the temporal and of the timeless and of the temporal together, is what makes a writer traditional. And it is at the same time what makes a writer most acutely conscious of his place in time, of his own contemporaneity.

No poet, no artist of any art, has his complete meaning alone. His significance, his appreciation is the appreciation of his relation to the dead poets and artists. You cannot value him alone; you must set him, for contrast and comparison, among the dead. I mean this as a principle of aesthetic, not merely historical, criticism. The necessity that he shall conform, that he shall cohere, is not onesided; what happens when a new work of art is created is something that happens simultaneously to all the works of art which preceded it. The existing monuments form an ideal order among themselves, which is modified by the introduction of the new (the really new) work of art among them. The existing order is complete before the new work arrives; for order to persist after the supervention of novelty, the *whole* existing order must be, if ever so slightly, altered; and so the relations, proportions, values of each work of art toward the whole are readjusted; and this is conformity between the old and the new. Whoever has approved this idea of order, of the form of European, of English literature will not find it preposterous that the past should be altered by the present as much as the present is directed by the past. And the poet who is aware of this will be aware of great difficulties and responsibilities.

In a peculiar sense he will be aware also that he must inevitably be judged by the standards of the past. I say judged, not amputated, by them; not judged to be as good as, or worse or better than, the dead; and certainly not judged by the canons of dead critics. It is a judgment, a comparison, in which two things are measured by each other. To conform merely would be for the new work not really to conform at all; it would not be new, and would therefore not be a work of art. And we do not quite say that the new is more valuable because it fits in; but its fitting in is a test of its value—a test, it is true, which can only be slowly and cautiously applied, for we are none of us infallible judges of conformity. We say: it appears to conform, and is perhaps individual, or it appears individual, and may conform; but we are hardly likely to find that it is one and not the other.

To proceed to a more intelligible exposition of the relation of the poet to the past: he can neither take the past as a lump, an indiscriminate bolus,¹ nor can he form himself wholly on one or two private admirations, nor can he form himself wholly upon one preferred period. The first course is inadmissible, the second is an important experience of youth, and the third is a pleasant and highly desirable supplement. The poet must be very conscious of the main current, which does not at all flow invariably through the most distinguished reputations. He must be quite aware of the obvious fact that art never improves, but that the material of art is never quite the same. He must be aware that the mind of Europe—the mind of his own country—a mind which he learns in time to be much more important than his own private mind—is a mind which changes, and that this change is a development which abandons nothing *en route*, which does not superannuate either Shakespeare,

1. A rounded mass of material.

or Homer, or the rock drawing of the Magdalenian draughtsmen.² That this development, refinement perhaps, complication certainly, is not, from the point of view of the artist, any improvement. Perhaps not even an improvement from the point of view of the psychologist or not to the extent which we imagine; perhaps only in the end based upon a complication in economics and machinery. But the difference between the present and the past is that the conscious present is an awareness of the past in a way and to an extent which the past's awareness of itself cannot show.

Someone said: 'The dead writers are remote from us because we *know* so much more than they did'. Precisely, and they are that which we know.

I am alive to a usual objection to what is clearly part of my programme for the *métier*³ of poetry. The objection is that the doctrine requires a ridiculous amount of erudition (pedantry), a claim which can be rejected by appeal to the lives of poets in any pantheon. It will even be affirmed that much learning deadens or perverts poetic sensibility. While, however, we persist in believing that a poet ought to know as much as will not encroach upon his necessary receptivity and necessary laziness, it is not desirable to confine knowledge to whatever can be put into a useful shape for examinations, drawing-rooms, or the still more pretentious modes of publicity. Some can absorb knowledge, the more tardy must sweat for it. Shakespeare acquired more essential history from Plutarch⁴ than most men could from the whole British Museum. What is to be insisted upon is that the poet must develop or procure the consciousness of the past and that he should continue to develop this consciousness throughout his career.

What happens is a continual surrender of himself as he is at the moment to something which is more valuable. The progress of an artist is a continual self-sacrifice, a continual extinction of personality.

There remains to define this process of depersonalization and its relation to the sense of tradition. It is in this depersonalization that art may be said to approach the condition of science. I therefore invite you to consider, as a suggestive analogy, the action which takes place when a bit of finely filiated platinum is introduced into a chamber containing oxygen and sulphur dioxide.

II

Honest criticism and sensitive appreciation is directed not upon the poet but upon the poetry. If we attend to the confused cries of the newspaper critics and the susurrus⁵ of popular repetition that follows, we shall hear the names of poets in great numbers; if we seek not Blue-book knowledge⁶ but the enjoyment of poetry, and ask for a poem, we shall seldom find it. I have tried to point out the importance of the relation of the poem to other poems by other authors, and suggested the conception of poetry as a living whole of all the poetry that has ever been written. The other aspect of this Impersonal theory of poetry is

2. Artists of the late Paleolithic period who created the cave paintings discovered at La Madeleine, France. The epic poems attributed to Homer were composed ca. 8th century B.C.E.

3. Trade, vocation; a line of action in which one excels (originally French).

4. Greek philosopher and biographer (ca. 50–ca. 120 C.E.); his *Lives* of important Greeks and

Romans provided Shakespeare with source material for his Roman plays.

5. Whispering, murmuring.

6. That is, the ability to name-drop, gleaned from the social register (or "blue book"). Also, a report on knowledge or an examination written in a blue notebook.

the relation of the poem to its author. And I hinted, by an analogy, that the mind of the mature poet differs from that of the immature one not precisely in any valuation of 'personality', not being necessarily more interesting, or having 'more to say', but rather by being a more finely perfected medium in which special, or very varied, feelings are at liberty to enter into new combinations.

The analogy was that of the catalyst. When the two gases previously mentioned are mixed in the presence of a filament of platinum, they form sulphurous acid. This combination takes place only if the platinum is present; nevertheless the newly formed acid contains no trace of platinum, and the platinum itself is apparently unaffected: has remained inert, neutral, and unchanged.⁷ The mind of the poet is the shred of platinum. It may partly or exclusively operate upon the experience of the man himself; but, *the more perfect the artist, the more completely separate in him will be the man who suffers and the mind which creates*; the more perfectly will the mind digest and transmute the passions which are its material.

The experience, you will notice, the elements which enter the presence of the transforming catalyst, are of two kinds: emotions and feelings. The effect of a work of art upon the person who enjoys it is an experience different in kind from any experience not of art. It may be formed out of one emotion, or may be a combination of several; and various feelings, inhering for the writer in particular words or phrases or images, may be added to compose the final result. Or great poetry may be made without the direct use of any emotion whatever: composed out of feelings solely. Canto XV of the *Inferno* (Brunetto Latini)⁸ is a working up of the emotion evident in the situation; but the effect, though single as that of any work of art, is obtained by considerable complexity of detail. The last quatrain gives an image, a feeling attaching to an image, which 'came',⁹ which did not develop simply out of what precedes, but which was probably in suspension in the poet's mind until the proper combination arrived for it to add itself to. The poet's mind is in fact a receptacle for seizing and storing up numberless feelings, phrases, images, which remain there until all the particles which can unite to form a new compound are present together.

If you compare several representative passages of the greatest poetry you see how great is the variety of types of combination, and also how completely any semi-ethical criterion of 'sublimity' misses the mark.¹ For it is not the 'greatness', the intensity, of the emotions, the components, but the intensity of the artistic process, the pressure, so to speak, under which the fusion takes place, that counts. The episode of Paolo and Francesca² employs a definite emotion, but the intensity of the poetry is something quite different from whatever intensity in the supposed experience it may give the impression of. It is no more intense, furthermore, than Canto XXVI, the voyage of

7. In *The Use of Poetry and the Use of Criticism* (1933), Eliot cites with approval an observation in an 1817 letter by the Romantic poet John Keats: "Men of Genius are great as certain ethereal Chemicals operating on the Mass of neutral intellect—but they have not any individuality, any determined Character."

8. During his journey through hell in the *Inferno* (1321), DANTE ALIGHIERI meets his former master Brunetto Latini, whom he still admires, confined in the seventh circle (for committing sodomy).

9. Dante likens Latini to the winner of the annual footrace in Verona.

1. Eliot is seeking to distinguish his notion of the sublime not only from that of LONGINUS and EDMUND BURKE, who stressed "greatness," but also from that of MATTHEW ARNOLD, who had argued that the sublime effects of the highest poetry could and should function as a form of (or even a substitute for) religion.

2. Illicit lovers, who were murdered by Francesca's husband; Dante meets them in the second circle of hell (*Inferno* 6.38–142).

Ulysses,³ which has not the direct dependence upon an emotion. Great variety is possible in the process of transmutation of emotion: the murder of Agamemnon,⁴ or the agony of Othello, gives an artistic effect apparently closer to a possible original than the scenes from Dante. In the *Agamemnon*, the artistic emotion approximates to the emotion of an actual spectator; in *Othello* to the emotion of the protagonist himself. But the difference between art and the event is always absolute; the combination which is the murder of Agamemnon is probably as complex as that which is the voyage of Ulysses. In either case there has been a fusion of elements. The ode of Keats⁵ contains a number of feelings which have nothing particular to do with the nightingale, but which the nightingale, partly perhaps because of its attractive name, and partly because of its reputation, served to bring together.

The point of view which I am struggling to attack is perhaps related to the metaphysical theory of the substantial unity of the soul: for my meaning is, that the poet has, not a 'personality' to express, but a particular medium, which is only a medium and not a personality, in which impressions and experiences combine in peculiar and unexpected ways. Impressions and experiences which are important for the man may take no place in the poetry, and those which become important in the poetry may play quite a negligible part in the man, the personality.

I will quote a passage which is unfamiliar enough to be regarded with fresh attention in the light—or darkness—of these observations:

*And now methinks I could e'en chide myself
For doating on her beauty, though her death
Shall be revenged after no common action.
Does the silkworm expend her yellow labours
For thee? For thee does she undo herself?
Are lordships sold to maintain ladyships
For the poor benefit of a bewildering minute?
Why does yon fellow falsify highways,
And put his life between the judge's lips,
To refine such a thing—keeps horse and men
To beat their valours for her? . . .*⁶

In this passage (as is evident if it is taken in its context) there is a combination of positive and negative emotions: an intensely strong attraction toward beauty and an equally intense fascination by the ugliness which is contrasted with it and which destroys it. This balance of contrasted emotion is in the dramatic situation to which the speech is pertinent, but that situation alone is inadequate to it. This is, so to speak, the structural emotion, provided by the drama. But the whole effect, the dominant tone, is due to the fact that a number of floating feelings, having an affinity to this emotion by no means superficially evident, have combined with it to give us a new art emotion.

3. Ulysses, suffering in hell for his false counsel, describes to Dante the voyage—after his return to Ithaca—that ended in his death.

4. The story of the Greek warrior king Agamemnon, murdered by his wife Clytemnestra, is told by the tragedian Aeschylus in *Agamemnon* (458 B.C.E.). Shakespeare's *Othello* was written in 1603–04.

5. "Ode to a Nightingale" (1819), by John Keats (1795–1821).

6. From *The Revenger's Tragedy*, 3.5.67–78, published anonymously in 1607. When Eliot was writing, the play was attributed to Cyril Tourneur (ca. 1575–1626), but most scholars now believe that the author is Thomas Middleton (1580–1627).

It is not in his personal emotions, the emotions provoked by particular events in his life, that the poet is in any way remarkable or interesting. His particular emotions may be simple, or crude, or flat. The emotion in his poetry will be a very complex thing, but not with the complexity of the emotions of people who have very complex or unusual emotions in life. One error, in fact, of eccentricity in poetry is to seek for new human emotions to express; and in this search for novelty in the wrong place it discovers the perverse. The business of the poet is not to find new emotions, but to use the ordinary ones and, in working them up into poetry, to express feelings which are not in actual emotions at all. And emotions which he has never experienced will serve his turn as well as those familiar to him. Consequently, we must believe that 'emotion recollected in tranquillity'⁷ is an inexact formula. For it is neither emotion, nor recollection, nor, without distortion of meaning, tranquillity. It is a concentration, and a new thing resulting from the concentration, of a very great number of experiences which to the practical and active person would not seem to be experiences at all; it is a concentration which does not happen consciously or of deliberation. These experiences are not 'recollected', and they finally unite in an atmosphere which is 'tranquil' only in that it is a passive attending upon the event. Of course this is not quite the whole story. There is a great deal, in the writing of poetry, which must be conscious and deliberate. In fact, the bad poet is usually unconscious where he ought to be conscious, and conscious where he ought to be unconscious. Both errors tend to make him 'personal'. Poetry is not a turning loose of emotion, but an escape from emotion; it is not the expression of personality, but an escape from personality. But, of course, only those who have personality and emotions know what it means to want to escape from these things.

III

ὁ δὲ νοῦς ἴσως θειότερόν τι καὶ ἀπαθές ἐστιν.⁸

This essay proposes to halt at the frontier of metaphysics or mysticism, and confine itself to such practical conclusions as can be applied by the responsible person interested in poetry. To divert interest from the poet to the poetry is a laudable aim: for it would conduce to a juster estimation of actual poetry, good and bad. There are many people who appreciate the expression of sincere emotion in verse, and there is a smaller number of people who can appreciate technical excellence. But very few know when there is an expression of *significant* emotion, emotion which has its life in the poem and not in the history of the poet. The emotion of art is impersonal. And the poet cannot reach this impersonality without surrendering himself wholly to the work to be done. And he is not likely to know what is to be done unless he lives in what is not merely the present, but the present moment of the past, unless he is conscious, not of what is dead, but of what is already living.

and unaffected (Greek). From ARISTOTLE, *De Anima* (*On the Soul*), 1.4, 408b.

The Metaphysical Poets

By collecting these poems from the work of a generation more often named than read, and more often read than profitably studied, Professor Grierson has rendered a service of some importance.¹ Certainly the reader will meet with many poems already preserved in other anthologies, at the same time that he discovers poems such as those of Aurelian Townshend or Lord Herbert of Cherbury here included. But the function of such an anthology as this is neither that of Professor Saintsbury's admirable edition of Caroline poets² nor that of the *Oxford Book of English Verse*. Mr. Grierson's book is in itself a piece of criticism, and a provocation of criticism; and we think that he was right in including so many poems of Donne, elsewhere (though not in many editions) accessible, as documents in the case of 'metaphysical poetry'.³ The phrase has long done duty as a term of abuse, or as the label of a quaint and pleasant taste. The question is to what extent the so-called metaphysicals formed a school (in our own time we should say a 'movement'), and how far this so-called school or movement is a digression from the main current.

Not only is it extremely difficult to define metaphysical poetry, but difficult to decide what poets practise it and in which of their verses. The poetry of Donne (to whom Marvell and Bishop King⁴ are sometimes nearer than any of the other authors) is late Elizabethan, its feeling often very close to that of Chapman. The 'courtly' poetry is derivative from Jonson, who borrowed liberally from the Latin; it expires in the next century with the sentiment and witticism of Prior.⁵ There is finally the devotional verse of Herbert, Vaughan, and Crashaw (echoed long after by Christina Rossetti and Francis Thompson);⁶ Crashaw, sometimes more profound and less sectarian than the others, has a quality which returns through the Elizabethan period to the early Italians. It is difficult to find any precise use of metaphor, simile, or other conceit, which is common to all the poets and at the same time important enough as an element of style to isolate these poets as a group. Donne, and often Cowley,⁷ employ a device which is sometimes considered characteristically 'metaphysical'; the elaboration (contrasted with the condensation) of a figure of speech to the furthest stage to which ingenuity can carry it. Thus Cowley develops the commonplace comparison of the world to a chess-board through long stanzas (*To Destiny*), and Donne, with more grace, in *A Valediction*,⁸ the comparison of two lovers to a pair of compasses. But elsewhere we find, instead of the mere explication of the

1. Eliot is reviewing the groundbreaking collection *Metaphysical Lyrics and Poems of the Seventeenth Century: Donne to Butler* (1921), ed. Herbert J. C. Grierson (1866–1960).

2. *Minor Poets of the Caroline Period* (1905–21), 3 vols., ed. George Saintsbury (1845–1933). The Caroline poets, such as Richard Lovelace and Thomas Carew, wrote during the reign of Charles I (1625–49), the Caroline Age (the Latin version of Charles is "Carolus").

3. For the term, see SAMUEL JOHNSON, *Life of Cowley* (1783; above). John Donne (1572–1631), English poet, prose writer, and clergyman.

4. Henry King (1592–1669), English poet and Anglican bishop. Andrew Marvell (1621–1678),

English poet and satirist.

5. Matthew Prior (1664–1721), English poet, epigrammatist, and diplomat. George Chapman (ca. 1559–1634), English poet, scholar, and playwright. Ben Jonson (1572–1637), English poet and playwright.

6. English poet (1859–1907), as are all those named here: George Herbert (1593–1633), the Welsh-born Henry Vaughan (1622–1695), Richard Crashaw (1612–1649), and Rossetti (1830–1894).

7. Abraham Cowley (1618–1667), English poet and essayist.

8. Donne, "A Valediction: Forbidding Mourning" (1633). Grierson gives the title of Cowley's poem as "Destinie."

content of a comparison, a development by rapid association of thought which requires considerable agility on the part of the reader.

*On a round ball
A workeman that hath copies by, can lay
An Europe, Afrique, and an Asia,
And quickly make that, which was nothing, All,
So doth each teare,
Which thee doth weare,
A globe, yea world by that impression grow,
Till thy tears mixt with mine doe overflow
This world, by waters sent from thee, my heaven dissolved so.⁹*

Here we find at least two connexions which are not implicit in the first figure, but are forced upon it by the poet: from the geographer's globe to the tear, and the tear to the deluge. On the other hand, some of Donne's most successful and characteristic effects are secured by brief words and sudden contrasts:

A bracelet of bright hair about the bone,¹

where the most powerful effect is produced by the sudden contrast of associations of 'bright hair' and of 'bone'. This telescoping of images and multiplied associations is characteristic of the phrase of some of the dramatists of the period which Donne knew: not to mention Shakespeare, it is frequent in Middleton, Webster, and Tourneur,² and is one of the sources of the vitality of their language.

Johnson, who employed the term 'metaphysical poets', apparently having Donne, Cleveland, and Cowley chiefly in mind, remarks of them that 'the most heterogeneous ideas are yoked by violence together'.³ The force of this impeachment lies in the failure of the conjunction, the fact that often the ideas are yoked but not united; and if we are to judge of styles of poetry by their abuse, enough examples may be found in Cleveland to justify Johnson's condemnation. But a degree of heterogeneity of material compelled into unity by the operation of the poet's mind is omnipresent in poetry. We need not select for illustration such a line as:

Notre âme est un trois-mâts cherchant son Icarie;⁴

we may find it in some of the best lines of Johnson himself (*The Vanity of Human Wishes*):

*His fate was destined to a barren strand,
A petty fortress, and a dubious hand;
He left a name at which the world grew pale,
To point a moral, or adorn a tale.⁵*

9. Donne, "A Valediction: Of Weeping" (1633), lines 10–18.

1. Donne, "The Relic" (1633), line 6.

2. All English dramatists: Thomas Middleton (1580–1627), John Webster (ca. 1580–ca. 1634), and Cyril Tourneur (ca. 1575–1626).

3. Johnson, *Life of Cowley*. John Cleveland (1613–1658), English poet and satirist.

4. Our soul is a three-masted ship searching for her Icarie (French). From "Le Voyage" (1861), by Charles Baudelaire (1821–1867). Icarie: a utopia described in the French socialist Étienne Cabet's novel *Voyage en Icarie* (1840).

5. Johnson, "The Vanity of Human Wishes" (1749), lines 219–22, slightly misquoted ("fate" should be "fall").

where the effect is due to a contrast of ideas, different in degree but the same in principle, as that which Johnson mildly reprehended. And in one of the finest poems of the age (a poem which could not have been written in any other age), the *Exequy* of Bishop King, the extended comparison is used with perfect success: the idea and the simile become one, in the passage in which the Bishop illustrates his impatience to see his dead wife, under the figure of a journey:

*Stay for me there; I will not faile
To meet thee in that hollow Vale.
And think not much of my delay;
I am already on the way,
And follow thee with all the speed
Desire can make, or sorrows breed.
Each minute is a short degree,
And ev'ry houre a step towards thee.
At night when I betake to rest,
Next morn I rise nearer my West
Of life, almost by eight houres sail,
Than when sleep breath'd his drowsy gale. . . .
But heark! My Pulse, like as a soft Drum
Beats my approach, tells Thee I come;
And slow howere my marches be,
I shall at last sit down by Thee.⁶*

(In the last few lines there is that effect of terror which is several times attained by one of Bishop King's admirers, Edgar Poe.⁷) Again, we may justly take these quatrains from Lord Herbert's Ode,⁸ stanzas which would, we think, be immediately pronounced to be of the metaphysical school:

*So when from hence we shall be gone,
And be no more, nor you, nor I,
As one another's mystery,
Each shall be both, yet both but one.*

*This said, in her up-lifted face,
Her eyes, which did that beauty crown,
Were like two starrs, that having faln down,
Look up again to find their place:*

*While such a moveless silent peace
Did seize on their becalmed sense,
One would have thought some influence
Their ravished spirits did possess.*

There is nothing in these lines (with the possible exception of the stars, a simile not at once grasped, but lovely and justified) which fits Johnson's general observations on the metaphysical poets in his essay on Cowley. A good

6. King, "The Exequy" (1657), lines 89–114.

7. EDGAR ALLAN POE (1809–1849), American poet, critic, and short story writer.

8. "An Ode upon a Question Moved, Whether

Love Should Continue Forever?" by Lord Herbert of Cherbury (1583–1648). Eliot quotes lines 129–40.

deal resides in the richness of association which is at the same time borrowed from and given to the word 'becalmed'; but the meaning is clear, the language simple and elegant. It is to be observed that the language of these poets is as a rule simple and pure; in the verse of George Herbert this simplicity is carried as far as it can go—a simplicity emulated without success by numerous modern poets. The *structure* of the sentences, on the other hand, is sometimes far from simple, but this is not a vice; it is a fidelity to thought and feeling. The effect, at its best, is far less artificial than that of an ode by Gray.⁹ And as this fidelity induces variety of thought and feeling, so it induces variety of music. We doubt whether, in the eighteenth century, could be found two poems in nominally the same metre, so dissimilar as Marvell's *Coy Mistress* and Crashaw's *Saint Teresa*;¹ the one producing an effect of great speed by the use of short syllables, and the other an ecclesiastical solemnity by the use of long ones:

*Love, thou art absolute sole lord
Of life and death.*

If so shrewd and sensitive (though so limited) a critic as Johnson failed to define metaphysical poetry by its faults, it is worth while to inquire whether we may not have more success by adopting the opposite method: by assuming that the poets of the seventeenth century (up to the Revolution²) were the direct and normal development of the precedent age; and, without prejudicing their case by the adjective 'metaphysical', consider whether their virtue was not something permanently valuable, which subsequently disappeared, but ought not to have disappeared. Johnson has hit, perhaps by accident, on one of their peculiarities, when he observes that 'their attempts were always analytic'; he would not agree that, after the dissociation, they put the material together again in a new unity.

It is certain that the dramatic verse of the later Elizabethan and early Jacobean poets expresses a degree of development of sensibility which is not found in any of the prose, good as it often is. If we except Marlowe, a man of prodigious intelligence, these dramatists were directly or indirectly (it is at least a tenable theory) affected by Montaigne.³ Even if we except also Jonson and Chapman, these two were notably erudite, and were notably men who incorporated their erudition into their sensibility: their mode of feeling was directly and freshly altered by their reading and thought. In Chapman especially there is a direct sensuous apprehension of thought, or a recreation of thought into feeling, which is exactly what we find in Donne:

*in this one thing, all the discipline
Of manners and of manhood is contained;
A man to join himself with th' Universe*

9. Thomas Gray (1716–1771), "Elegy Written in a Country Churchyard" (1751), a poem of mourning and reflection.

1. Crashaw, "A Hymn to the Name and Honor of the Admirable Saint Teresa" (1652); Eliot quotes its opening lines. Marvell, "To His Coy Mistress" (1681).

2. Either the Glorious Revolution of 1688, when

James II was replaced by William and Mary, or the English Civil War, which climaxed in the execution of Charles I in 1649; scholars disagree on Eliot's reference.

3. Michel de Montaigne (1533–1592), French moralist and essayist. Christopher Marlowe (1564–1593), English dramatist and poet.

*In his main sway, and make in all things fit
 One with that All, and go on, round as it;
 Not plucking from the whole his wretched part,
 And into straits, or into nought revert,
 Wishing the complete Universe might be
 Subject to such a rag of it as he;
 But to consider great Necessity.⁴*

We compare this with some modern passage:

*No, when the fight begins within himself,
 A man's worth something. God stoops o'er his head,
 Satan looks up between his feet—both tug—
 He's left, himself, i' the middle; the soul wakes
 And grows. Prolong that battle through his life!⁵*

It is perhaps somewhat less fair, though very tempting (as both poets are concerned with the perpetuation of love by offspring), to compare with the stanzas already quoted from Lord Herbert's *Ode* the following from Tennyson:

*One walked between his wife and child,
 With measured footfall firm and mild,
 And now and then he gravely smiled.
 The prudent partner of his blood
 Leaned on him, faithful, gentle, good,
 Wearing the rose of womanhood.
 And in their double love secure,
 The little maiden walked demure,
 Pacing with downward eyelids pure.
 These three made unity so sweet,
 My frozen heart began to beat,
 Remembering its ancient heat.⁶*

The difference is not a simple difference of degree between poets. It is something which had happened to the mind of England between the time of Donne or Lord Herbert of Cherbury and the time of Tennyson and Browning; it is the difference between the intellectual poet and the reflective poet. Tennyson and Browning are poets, and they think; but they do not feel their thought as immediately as the odour of a rose. A thought to Donne was an experience; it modified his sensibility. When a poet's mind is perfectly equipped for its work, it is constantly amalgamating disparate experience; the ordinary man's experience is chaotic, irregular, fragmentary. The latter falls in love, or reads Spinoza,⁷ and these two experiences have nothing to do with each other, or with the noise of the typewriter or

4. Chapman, *The Revenge of Bussy d'Ambois* (ca. 1613), 4.1.137–46.

5. "Bishop Blougram's Apology" (1855), lines 693–97, by Robert Browning (1812–1889).

6. "The Two Voices" (1832), lines 412–23, by

Alfred, Lord Tennyson (1809–1892).

7. BARUCH SPINOZA (1632–1677), Dutch philosopher and theologian, whose major work is *Ethics* (1677).

the smell of cooking; in the mind of the poet these experiences are always forming new wholes.⁸

We may express the difference by the following theory: The poets of the seventeenth century, the successors of the dramatists of the sixteenth, possessed a mechanism of sensibility which could devour any kind of experience. They are simple, artificial, difficult, or fantastic, as their predecessors were; no less nor more than Dante, Guido Cavalcanti, Guinicelli, or Cino.⁹ In the seventeenth century a dissociation of sensibility set in, from which we have never recovered; and this dissociation, as is natural, was aggravated by the influence of the two most powerful poets of the century, Milton and Dryden.¹ Each of these men performed certain poetic functions so magnificently well that the magnitude of the effect concealed the absence of others. The language went on and in some respects improved; the best verse of Collins, Gray, Johnson, and even Goldsmith² satisfies some of our fastidious demands better than that of Donne or Marvell or King. But while the language became more refined, the feeling became more crude. The feeling, the sensibility, expressed in the *Country Churchyard* (to say nothing of Tennyson and Browning) is cruder than that in the *Coy Mistress*.

The second effect of the influence of Milton and Dryden followed from the first, and was therefore slow in manifestation. The sentimental age began early in the eighteenth century, and continued. The poets revolted against the ratiocinative,³ the descriptive; they thought and felt by fits, unbalanced; they reflected. In one or two passages of Shelley's *Triumph of Life*, in the second *Hyperion*,⁴ there are traces of a struggle toward unification of sensibility. But Keats and Shelley died, and Tennyson and Browning ruminated.

After this brief exposition of a theory—too brief, perhaps, to carry conviction—we may ask, what would have been the fate of the 'metaphysical' had the current of poetry descended in a direct line from them, as it descended in a direct line to them? They would not, certainly, be classified as metaphysical. The possible interests of a poet are unlimited; the more intelligent he is the better; the more intelligent he is the more likely that he will have interests: our only condition is that he turn them into poetry, and not merely meditate on them poetically. A philosophical theory which has entered into poetry is established, for its truth or falsity in one sense ceases to matter, and its truth in another sense is proved. The poets in question have, like other poets, various faults. But they were, at best, engaged in the task of trying to find the verbal equivalent for states of mind and feeling. And this means both that they

8. Compare SAMUEL TAYLOR COLERIDGE, *Biographia Literaria* (1817; see above), chap. 14: "[The poet] diffuses a tone and spirit of unity, that blends, and (as it were) fuses, each into each, by that synthetic and magical power, to which we have exclusively appropriated the name of imagination."

9. Italian poets (roughly contemporary) known for their *dolce stil nuovo* (sweet new style): DANTE ALIGHIERI (1265–1321), Guido Cavalcanti (1250–1300), Guido Guinicelli (1220–1276), and Cino da Pistoia (1270–1336).

1. JOHN DRYDEN (1631–1700), English poet, dra-

matist, and critic, John Milton (1608–1674), English writer of poetry and prose, and author of *Paradise Lost* (1667).

2. Oliver Goldsmith (1731–1774), Irish-born English poet, playwright, and novelist. William Collins (1721–1759), English poet.

3. Relating to the process of logical reasoning.

4. "Hyperion, a fragment" and "The Fall of Hyperion" (written 1818–19), fragments of epic poems by John Keats (1795–1821). "The Triumph of Life" (written in 1822), an unfinished visionary poem by PERCY BYSSHE SHELLEY (1792–1822).

are more mature, and that they wear better, than later poets of certainly not less literary ability.

It is not a permanent necessity that poets should be interested in philosophy, or in any other subject. We can only say that it appears likely that poets in our civilization, as it exists at present, must be *difficult*. Our civilization comprehends great variety and complexity, and this variety and complexity, playing upon a refined sensibility, must produce various and complex results. The poet must become more and more comprehensive, more allusive, more indirect, in order to force, to dislocate if necessary, language into his meaning. (A brilliant and extreme statement of this view, with which it is not requisite to associate oneself, is that of M. Jean Epstein, *La Poésie d'aujourd'hui*.⁵) Hence we get something which looks very much like the conceit—we get, in fact, a method curiously similar to that of the ‘metaphysical poets’, similar also in its use of obscure words and of simple phrasing.

*O géraniums diaphanes, guerroyeurs sortilèges,
Sacrilèges monomanes!
Emballages, dévergondages, douches! O pressoirs
Des vendanges des grands soirs!
Layettes aux abois,
Thyrses au fond des bois!
Transfusions, représailles,
Relevailles, compresses et l' éternel potion,
Angelus! n' en pouvoir plus
De débâcles nuptiales! de débâcles nuptiales!⁶*

The same poet could write also simply:

*Elle est bien loin, elle pleure,
Le grand vent se lamente aussi . . .⁷*

Jules Laforgue, and Tristan Corbière⁸ in many of his poems, are nearer to the ‘school of Donne’ than any modern English poet. But poets more classical than they have the same essential quality of transmuting ideas into sensations, of transforming an observation into a state of mind.

*Pour l' enfant, amoureux de cartes et d' estampes,
L' univers est égal à son vaste appétit.
Ah, que le monde est grand à la clarté des lampes!
Aux yeux du souvenir que le monde est petit!⁹*

5. *The Poetry of Today* (French), published in 1921. Epstein (1897–1953), French filmmaker, film theorist, literary critic, and novelist.

6. O translucent geraniums, warring wizardry, / Monomaniac impieties! / Enwrappings, licentiousness, showers! O winepresses / Of grape harvestings on great evenings! / Layettes at bay, / Thyrsis deep in the woods! / Transfusion, repayings, / Churchings, compresses and the eternal potion, / *Angelus*! can't bear any more / Those bursting nuptials! Bursting nuptials! (French; trans. June Guicharnaud). From *Derniers vers X*

(1890, *Last Poems*), by the French symbolist poet Jules Laforgue (1860–1887).

7. She is far away, she weeps / The great wind also mourns (French). From Laforgue, *Derniers vers XI*, “Sur une défunte” (“On a Dead Woman”).

8. French symbolist poet (1845–1875).

9. For the child in love with maps and prints, the universe matches his vast appetite. Ah, how big the world is, in the lamplight; but how small, viewed through the eyes of memory (French; trans. Francis Scarfe). From Baudelaire, “Le Voyage.”

In French literature the great master of the seventeenth century—Racine¹—and the great master of the nineteenth—Baudelaire—are in some ways more like each other than they are like anyone else. The greatest two masters of diction are also the greatest two psychologists, the most curious explorers of the soul. It is interesting to speculate whether it is not a misfortune that two of the greatest masters of diction in our language, Milton and Dryden, triumph with a dazzling disregard of the soul. If we continued to produce Miltons and Drydens it might not so much matter, but as things are it is a pity that English poetry has remained so incomplete. Those who object to the ‘artificiality’ of Milton or Dryden sometimes tell us to ‘look into our hearts and write.’² But that is not looking deep enough; Racine or Donne looked into a good deal more than the heart. One must look into the cerebral cortex, the nervous system, and the digestive tracts.

May we not conclude, then, that Donne, Crashaw, Vaughan, Herbert and Lord Herbert, Marvell, King, Cowley at his best, are in the direct current of English poetry, and that their faults should be reprimanded by this standard rather than coddled by antiquarian affection? They have been enough praised in terms which are implicit limitations because they are ‘metaphysical’ or ‘witty’, ‘quaint’ or ‘obscure,’ though at their best they have not these attributes more than other serious poets. On the other hand, we must not reject the criticism of Johnson (a dangerous person to disagree with) without having mastered it, without having assimilated the Johnsonian canons of taste. In reading the celebrated passage in his essay on Cowley we must remember that by wit he clearly means something more serious than we usually mean to-day; in his criticism of their versification we must remember in what a narrow discipline he was trained, but also how well trained; we must remember that Johnson tortures chiefly the chief offenders, Cowley and Cleveland. It would be a fruitful work, and one requiring a substantial book, to break up the classification of Johnson (for there has been none since) and exhibit these poets in all their difference of kind and of degree, from the massive music of Donne to the faint, pleasing tinkle of Aurelian Townshend³—whose *Dialogue between a Pilgrim and Time* is one of the few regrettable omissions from the excellent anthology of Professor Grierson.

1921

1. Jean Racine (1639–1699), French playwright.

2. A slight recasting of the final words of the first sonnet in the sonnet sequence *Astrophil and*

Stella (1591), by SIR PHILIP SIDNEY.

3. Poet and writer of court masques (ca. 1583–1643).

JOHN CROWE RANSOM

1888–1974

The poet, critic, and editor John Crowe Ransom is perhaps the central figure in the institutionalization of the New Criticism, the formalist theory and practice that dominated U.S. teaching and literary criticism in the mid-twentieth century. Through his essays on literary theory, his important work as an editor of the prestigious journal the *Kenyon Review*, and his friendships with many noteworthy authors and critics, Ransom was able to gain a wide and respectful hearing for his and the other New Critics' literary views and values. By the 1950s, the New Critical focus on "the text itself" had become the basic method of literary criticism and of college and university pedagogy.

Ransom was born in Pulaski, Tennessee, the son of a Methodist minister. He was a brilliant student at Bowen School (a private academy) and then at Vanderbilt University in Nashville, where he received rigorous training in the classics. He studied Greek and Roman literature and history at Christ Church, Oxford University, on a Rhodes Scholarship from 1910 to 1913, and in 1914 joined the faculty of Vanderbilt's English Department. He became the leader of Nashville's literary and cultural community, which in the 1920s and 1930s included the poets Allen Tate and Donald Davidson, the poet, novelist, and critic Robert Penn Warren, and the critic CLEANTH BROOKS.

In the early 1920s Ransom was one of the Fugitive poets, a group that came together in Nashville as "fugitives" both from preachy, sentimental nineteenth-century verse and from contemporary verse that struck them as far removed from the Southern regionalist values they embraced. They focused on the language, forms, and techniques of poetry and published in the bimonthly the *Fugitive* (1922–25); many of Ransom's best poems as well as a number of his critical essays appeared in this journal. Later in the decade, Ransom played a prominent role in the Agrarian movement; he contributed both the introduction and a chapter to the Agrarian manifesto *I'll Take My Stand* (1930), a spirited attack on science and industrialization and a defense of Southern tradition and an agricultural economy.

During the Agrarian phase of his career, Ransom wrote many essays on social and cultural criticism, including "The South—Old or New?" (1928), "The Aesthetics of Regionalism" (1934), and "What Does the South Want?" (1936). But the Agrarian cause never won widespread support among Southerners, and by the late 1930s, Ransom was himself shifting away from sociocultural commentary. In 1937 he left Vanderbilt for a position in the English Department at Kenyon College in Ohio, a move that coincided with his sharp turn toward literary criticism and the reforms needed to give it precision and clarity as an autonomous academic discipline. In a 1937 letter to Allen Tate, Ransom noted that the new journal he hoped to launch at Kenyon should "stick to literature entirely. . . . In the severe field of letters there is vocation enough for us: in criticism, in poetry, in fiction."

For two decades, beginning in 1939, Ransom edited the *Kenyon Review*; this journal, which became one of the best U.S. literary quarterlies, was among his greatest achievements. Moreover, his distinguished reputation as an editor as well as a poet and critic enabled him to gain much institutional support for his ideas and programs. During the late 1940s, the Rockefeller Foundation provided funds for a series of *Kenyon Review* Fellows (scholars) and for the Kenyon School of English, which had on its faculty important intellectuals, creative writers, and critics—among the first (in 1948) were Eric Bentley, Cleanth Brooks, and William Empson. The *Kenyon Review* also offered fellowships each year to a poet, a writer of fiction, and a critic; prominent recipients included Flannery O'Connor, Howard Nemerov, and

Irving Howe. The New Criticism was not simply a body of theory and practice but a network of programs, journals, and institutions, and Ransom was involved in nearly all of them.

Our selection from *The World's Body*, "Criticism, Inc." (1938), is, as its title suggests, Ransom's attempt to define the business of criticism—what it is not and what it should be. He lists a number of false or misleading types of current criticism—including the "ethical" approach of the New Humanism and Marxism—but he focuses on the teaching of literature in universities by literary historians and scholars who stress backgrounds, sources, and influences rather than the poems themselves. Historical study, he contends, dominates at the expense of a truly "critical" approach, preventing students from acquiring the skills needed for them to understand the "technical effects" of literary works. As a result, they cannot respond in a direct, rigorous way to contemporary literature or, for that matter, to any poem placed before them.

Ransom urges teachers and students to concentrate on "technical studies of poetry." By this, he means studies of imagery, metaphor, and meter—the stylistic devices through which the poet differentiates the language of his or her text from that of prose. Ransom calls for a revitalized department of English that will make literary history, scholarship, and linguistics secondary to criticism. In his view, criticism must be rescued from book reviewers and amateurs who focus on feelings, not the artistic object itself, and reduce texts to paraphrases with a moral message. Advocating disciplinary coherence and integrity, Ransom is a harbinger of the professionalization of literary analysis that characterized mid- and late twentieth-century U.S. literary culture.

These arguments had great appeal to many teachers and students, and Ransom's approach was so helpful for readers grappling with exacting modern poets that its limits were overlooked at first. By defining the work of literary studies, he supplied a clear procedure: the teacher-critic should concentrate on the text itself and not be distracted by nonliterary contexts and issues. But Ransom and the other New Critics, opponents pointed out, excluded too much; in giving literary studies a disciplinary identity, they failed to clarify how it could engage with social, cultural, and historical issues in a meaningful way. In a sense Ransom allowed the opposition to dictate the terms of his own approach—literary criticism is defined against, not in *relation* to, other fields, subjects, and disciplines. But why should the analysis of specific literary texts require the exclusion of other kinds of analytical work? Ransom defined the enterprise of "Criticism, Inc." with brilliant precision but narrowly, as though the forms of social and cultural critique he had embarked on in his Agrarian writing were wholly incompatible with literary criticism.

To be sure, in stressing that critics should explore how the poem "removes itself from history" Ransom had a specific target: the practice of making history rather than the poem the object of attention in the classroom. Neither he nor the other New Critics asserted that history was irrelevant, or that teachers and students should ignore everything except "the words on the page"; they assumed that teachers would be well-trained and knowledgeable about much more, as they were themselves. Those in the first generation of New Critics were later dismayed at the reductive, mechanical criticism and teaching practiced in their name.

As the New Criticism came under widespread attack in the 1960s and 1970s, it lost the authority it had enjoyed when Ransom, Warren, and Brooks first promoted it. Its emphasis on the text in and for itself seemed far removed from the crises and social movements—civil rights, antiwar, and women's—that were tearing American society apart. The New Critical canon was too limited (male and white) to prove acceptable to feminists, African American critics, and other theorists. In addition, by the 1970s poststructuralists were arguing that the New Critical distinction between what was inside and outside the text could not be maintained: thus the discrete poetic text that was to be the basis of literary studies seemed no longer to

exist. Soon, from another direction, New Historicist scholars began to recuperate and renovate historical analysis; by demonstrating that close reading could be extended to all kinds of texts and documents, they made possible a richer, more diverse approach to history than that found in the earlier literary historians whom Ransom, Brooks, and the others had displaced.

A crucial tenet of the New Critical program survives: the emphasis on "close reading," the central focus of the new business for literary studies that Ransom advocates in "Criticism, Inc." In this respect, the New Criticism has not so much faded as become the foundation that modern approaches build upon.

"Criticism, Inc." Keywords: Defense of Criticism, Ethics, Formalism, Institutional Studies, Interpretation Theory, Poetry

Criticism, Inc.

It is strange, but nobody seems to have told us what exactly is the proper business of criticism. There are many critics who might tell us, but for the most part they are amateurs. So have the critics nearly always been amateurs; including the best ones. They have not been trained to criticism so much as they have simply undertaken a job for which no specific qualifications were required. It is far too likely that what they call criticism when they produce it is not the real thing.

There are three sorts of trained performers who would appear to have some of the competence that the critic needs. The first is the artist himself. He should know good art when he sees it; but his understanding is intuitive rather than dialectical—he cannot very well explain his theory of the thing. It is true that literary artists, with their command of language, are better critics of their own art than are other artists; probably the best critics of poetry we can now have are the poets. But one can well imagine that any artist's commentary on the art-work is valuable in the degree that he sticks to its technical effects, which he knows minutely, and about which he can certainly talk if he will.

The second is the philosopher, who should know all about the function of the fine arts. But the philosopher is apt to see a lot of wood and no trees, for his theory is very general and his acquaintance with the particular works of art is not persistent and intimate, especially his acquaintance with their technical effects. Or at least I suppose so, for philosophers have not proved that they can write close criticism by writing it; and I have the feeling that even their handsome generalizations are open to suspicion as being grounded more on other generalizations, those which form their prior philosophical stock, than on acute study of particulars.

The third is the university teacher of literature, who is styled professor, and who should be the very professional we need to take charge of the critical activity. He is hardly inferior as critic to the philosopher, and perhaps not on the whole to the poet, but he is a greater disappointment because we have the right to expect more of him. Professors of literature are learned but not critical men. The professional morale of this part of the university staff is evidently low. It is as if, with conscious or unconscious cunning, they had appropriated every avenue of escape from their responsibility which was

decent and official; so that it is easy for one of them without public reproach to spend a lifetime in compiling the data of literature and yet rarely or never commit himself to a literary judgment.

Nevertheless it is from the professors of literature, in this country the professors of English for the most part, that I should hope eventually for the erection of intelligent standards of criticism. It is their business.

Criticism must become more scientific, or precise and systematic, and this means that it must be developed by the collective and sustained effort of learned persons—which means that its proper seat is in the universities.

Scientific: but I do not think we need be afraid that criticism, trying to be a sort of science, will inevitably fail and give up in despair, or else fail without realizing it and enjoy some hollow and pretentious career. It will never be a very exact science, or even a nearly exact one. But neither will psychology, if that term continues to refer to psychic rather than physical phenomena; nor will sociology, as Pareto,¹ quite contrary to his intention, appears to have furnished us with evidence for believing; nor even will economics. It does not matter whether we call them sciences or just systematic studies; the total effort of each to be effective must be consolidated and kept going. The studies which I have mentioned have immeasurably improved in understanding since they were taken over by the universities, and the same career looks possible for criticism.

Rather than occasional criticism by amateurs, I should think the whole enterprise might be seriously taken in hand by professionals. Perhaps I use a distasteful figure, but I have the idea that what we need is Criticism, Inc., or Criticism, Ltd.

The principal resistance to such an idea will come from the present incumbents of the professorial chairs. But its adoption must come from them too. The idea of course is not a private one of my own. If it should be adopted before long, the credit would probably belong to Professor Ronald S. Crane,² of the University of Chicago, more than to any other man. He is the first of the great professors to have advocated it as a major policy for departments of English. It is possible that he will have made some important academic history.

2

Professor Crane published recently a paper of great note in academic circles, on the reform of the courses in English. It appeared in *The English Journal*, under the title: "History Versus Criticism in the University Study of Literature." He argues there that historical scholarship has been overplayed heavily in English studies, in disregard of the law of diminishing returns, and that the emphasis must now be shifted to the critical.

To me this means, simply: the students of the future must be permitted to study literature, and not merely about literature. But I think this is what the good students have always wanted to do. The wonder is that they have

1. Vilfredo Pareto (1848–1923), French-born Italian economist and sociologist.

2. The leader (1886–1967) of the Chicago School of neo-Aristotelian criticism, whose views were influenced by, and defined in part in contrast to,

the restructuring of the undergraduate curriculum of the University of Chicago in the 1930s, to a focus on interdisciplinary studies and "Great Books." He published "History Versus Criticism" (discussed below) in 1935.

allowed themselves so long to be denied. But they have not always been amiable about it, and the whole affair presents much comic history.

At the University of Chicago, I believe that Professor Crane, with some others, is putting the revolution into effect in his own teaching, though for the time being perhaps with a limited programme, mainly the application of Aristotle's critical views.³ (My information is not at all exact.) The university is an opulent one, not too old to experience waves of reformational zeal, uninhibited as yet by bad traditions. Its department of English has sponsored plenty of old-line scholarship, but this is not the first time it has gone in for criticism. If the department should now systematically and intelligently build up a general school of literary criticism, I believe it would score a triumph that would be, by academic standards, spectacular. I mean that the alive and brilliant young English scholars all over the country would be saying they wanted to go there to do their work. That would place a new distinction upon the university, and it would eventually and profoundly modify the practices of many other institutions. It would be worth even more than Professor Crane's careful presentation of the theory.

This is not the first time that English professors have tilted against the historians, or "scholars," in the dull sense which that word has acquired. They did not score heavily, at those other times. Probably they were themselves not too well versed in the historical studies, so that it could be said with honest concern that they scarcely had the credentials to judge of such matters. At the same time they may have been too unproductive critically to offer a glowing alternative.

The most important recent diversion from the orthodox course of literary studies was that undertaken by the New Humanists.⁴ I regret to think that it was not the kind of diversion which I am advocating; nor the kind approved by Professor Crane, who comments briefly against it. Unquestionably the Humanists did divert, and the refreshment was grateful to anybody who felt resentful for having his literary predilections ignored under the schedule of historical learning. But in the long run the diversion proved to be nearly as unliterary as the round of studies from which it took off at a tangent. No picnic ideas were behind it.

The New Humanists were, and are, moralists; more accurately, historians and advocates of a certain moral system. Criticism is the attempt to define and enjoy the æsthetic or characteristic values of literature, but I suppose the Humanists would shudder at "æsthetic" as hard as ordinary historical scholars do. Did an official Humanist ever make any official play with the term? I do not remember it. The term "art" is slightly more ambiguous, and they have availed themselves of that; with centuries of loose usage behind it, art connotes, for those who like, high seriousness, and high seriousness connotes moral self-consciousness, and an inner check, and finally either Plato⁵ or Aristotle.

3. For the *Poetics* of ARISTOTLE (384–322 B.C.E), see above.

4. Members of an early 20th-century critical movement in the United States that attacked the decadence of modern life and the immorality of contemporary literature, condemning the influence of Romanticism and appealing for classical

values. The leaders of New Humanism were Paul Elmer More (1864–1937), a critic, editor, and lecturer at Princeton University, and Irving Babbitt (1865–1933), professor of Romance languages at Harvard University.

5. For the views of PLATO (ca. 427–ca. 347 B.C.E), see above.

Mr. Babbitt consistently played on the terms classical and romantic. They mean any of several things each, so that unquestionably Mr. Babbitt could make war on romanticism for purely moral reasons; and his preoccupation was ethical, not æsthetic. It is perfectly legitimate for the moralist to attack romantic literature if he can make out his case; for example, on the ground that it deals with emotions rather than principles, or the ground that its author discloses himself as flabby, intemperate, escapist, unphilosophical, or simply adolescent. The moral objection is probably valid; a romantic period testifies to a large-scale failure of adaptation, and defense of that failure to adapt, to the social and political environment; unless, if the Humanists will consent, it sometimes testifies to the failure of society and state to sympathize with the needs of the individual. But this is certainly not the charge that Mr. T. S. Eliot, a literary critic, brings against romanticism.⁶ His, if I am not mistaken, is æsthetic, though he may not ever care to define it very sharply. In other words, the literary critic also has something to say about romanticism, and it might come to something like this: that romantic literature is imperfect in objectivity, or "æsthetic distance,"⁷ and that out of this imperfection comes its weakness of structure; that the romantic poet does not quite realize the æsthetic attitude, and is not the pure artist. Or it might come to something else. It would be quite premature to say that when a moralist is obliged to disapprove a work the literary critic must disapprove it too.

Following the excitement produced by the Humanist diversion, there is now one due to the Leftists, or Proletarians,⁸ who are also diversionists. Their diversion is likewise moral. It is just as proper for them to ferret out class-consciousness in literature, and to make literature serve the cause of loving-comradeship, as it is for the Humanists to censure romanticism and to use the topic, and the literary exhibit, as the occasion of reviving the Aristotelian moral canon. I mean that these are procedures of the same sort. Debate could never occur between a Humanist and a Leftist on æsthetic grounds, for they are equally intent on ethical values. But the debate on ethical grounds would be very spirited, and it might create such a stir in a department conducting English studies that the conventional scholars there would find themselves slipping, and their pupils deriving from literature new and seductive excitements which would entice them away from their scheduled English exercises.

On the whole, however, the moralists, distinguished as they may be, are like those who have quarrelled with the ordinary historical studies on purer or more æsthetic grounds: they have not occupied in English studies the positions of professional importance. In a department of English, as in any other going business, the proprietary interest becomes vested, and in old and reputable departments the vestees have uniformly been gentlemen who have gone through the historical mill. Their laborious Ph.D.'s and historical publications are their patents.⁹ Naturally, quite spontaneously, they would

7. The detachment from, or nonidentification with, the characters or circumstances of a work of art that permits judgments based on æsthetic

rather than extra-æsthetic criteria.

8. Marxist critics who emphasized the class struggle between workers (proletarians) and owners, and the problems of poverty and racism.

9. Documents conferring privilege.

tend to perpetuate a system in which the power and the glory belonged to them. But English scholars in this country can rarely have better credentials than those which Professor Crane has earned in his extensive field, the eighteenth century. It is this which makes his disaffection significant.

It is really atrocious policy for a department to abdicate its own self-respecting identity. The department of English is charged with the understanding and the communication of literature, an art, yet it has usually forgotten to inquire into the peculiar constitution and structure of its product. English might almost as well announce that it does not regard itself as entirely autonomous, but as a branch of the department of history, with the option of declaring itself occasionally a branch of the department of ethics. It is true that the historical and the ethical studies will cluster round objects which for some reason are called artistic objects. But the thing itself the professors do not have to contemplate; and only last spring the head of English studies in a graduate school fabulously equipped made the following impromptu disclaimer to a victim who felt aggrieved at having his own studies forced in the usual direction: "This is a place for exact scholarship, and you want to do criticism. Well, we don't allow criticism here, because that is something which anybody can do."

But one should never speak impromptu in one's professional capacity. This speech may have betrayed a fluttery private apprehension which should not have been made public: that you can never be critical and be exact at the same time, that history is firmer ground than æsthetics, and that, to tell the truth, criticism is a painful job for the sort of mind that wants to be very sure about things. Not in that temper did Aristotle labor towards a critique in at least one branch of letters; nor in that temper are strong young minds everywhere trying to sharpen their critical apparatus into precision tools, in this decade as never before.

It is not anybody who can do criticism. And for an example, the more eminent (as historical scholar) the professor of English, the less apt he is to be able to write decent criticism, unless it is about another professor's work of historical scholarship, in which case it is not literary criticism. The professor may not be without æsthetic judgments respecting an old work, especially if it is "in his period," since it must often have been judged by authorities whom he respects. Confronted with a new work, I am afraid it is very rare that he finds anything particular to say. Contemporary criticism is not at all in the hands of those who direct the English studies. Contemporary literature, which is almost obliged to receive critical study if it receives any at all, since it is hardly capable of the usual historical commentary, is barely officialized as a proper field for serious study.

Here is contemporary literature, waiting for its criticism; where are the professors of literature? They are watering their own gardens; elucidating the literary histories of their respective periods. So are their favorite pupils. The persons who save the occasion, and rescue contemporary literature from the humiliation of having to go without a criticism, are the men who had to leave the university before their time because they felt themselves being warped into mere historians; or those who finished the courses and took their punishment but were tough, and did not let it engross them and spoil them. They are home-made critics. Naturally they are not too wise, these amateurs who furnish our reviews and critical studies. But when they

distinguish themselves, the universities which they attended can hardly claim more than a trifling share of the honor.

It is not so in economics, chemistry, sociology, theology, and architecture. In these branches it is taken for granted that criticism of the performance is the prerogative of the men who have had formal training in its theory and technique. The historical method is useful, and may be applied readily to any human performance whatever. But the exercise does not become an obsession with the university men working in the other branches; only the literary scholars wish to convert themselves into pure historians. This has gone far to nullify the usefulness of a departmental personnel larger, possibly, than any other, and of the lavish endowment behind it.

3

Presumably the departments of English exist in order to communicate the understanding of the literary art. That will include both criticism and also whatever may be meant by "appreciation." This latter term seems to stand for the kind of understanding that is had intuitively, without benefit of instruction, by merely being constrained to spend time in the presence of the literary product. It is true that some of the best work now being done in departments is by the men who do little more than read well aloud, enforcing a private act of appreciation upon the students. One remembers how good a service that may be, thinking perhaps of Professor Copeland of Harvard, or Dean Cross at Greeley Teachers College.¹ And there are men who try to get at the same thing in another way, which they would claim is surer: by requiring a great deal of memory work, in order to enforce familiarity with fine poetry. These might defend their strategy by saying that at any rate the work they required was not as vain as the historical rigmarole which the scholars made their pupils recite, if the objective was really literary understanding and not external information. But it would be a misuse of terms to employ the word instruction for the offices either of the professors who read aloud or of those who require the memory work. The professors so engaged are properly curators, and the museum of which they have the care is furnished with the cherished literary masterpieces, just as another museum might be filled with paintings. They conduct their squads from one work to another, making appropriate pauses or reverent gestures, but their own obvious regard for the masterpieces is somewhat contagious, and contemplation is induced. Naturally they are grateful to the efficient staff of colleagues in the background who have framed the masterpieces, hung them in the proper schools and in the chronological order, and prepared the booklet of information about the artists and the occasions. The colleagues in their turn probably feel quite happy over this division of labor, thinking that they have done the really productive work, and that it is appropriate now if less able men should undertake a little salesmanship.

Behind appreciation, which is private, and criticism, which is public and negotiable, and represents the last stage of English studies, is historical

1. "Dean Cross" is Neal Cross, who taught in the English department at Greeley Teachers College (now the University of Northern Colorado) from

1941 to 1979. Charles Townsend Copeland (1860–1952), member of the English department at Harvard.

scholarship. It is indispensable. But it is instrumental and cannot be the end itself. In this respect historical studies have the same standing as linguistic studies: language and history are aids.

On behalf of the historical studies. Without them what could we make of Chaucer, for instance? I cite the familiar locus of the "hard" scholarship, the center of any program of advanced studies in English which intends to initiate the student heroically, and once for all, into the historical discipline. Chaucer writes allegories for historians to decipher, he looks out upon institutions and customs unfamiliar to us.² Behind him are many writers in various tongues from whom he borrows both forms and materials. His thought bears constant reference to classical and mediæval philosophies and sciences which have passed from our effective knowledge. An immense labor of historical adaptation is necessary before our minds are ready to make the æsthetic approach to Chaucer.

Or to any author out of our own age. The mind with which we enter into an old work is not the mind with which we make our living, or enter into a contemporary work. It is under sharp restraints, and it is quite differently furnished. Out of our actual contemporary mind we have to cancel a great deal that has come there under modern conditions but was not in the earlier mind at all. This is a technique on the negative side, a technique of suspension; difficult for practical persons, literal scientists, and aggressive moderns who take pride in the "truth" or the "progress" which enlightened man, so well represented in their own instance, has won. Then, on the positive side, we must supply the mind with the precise beliefs and ways of thought it had in that former age, with the specific content in which history instructs us; this is a technique of make-believe. The whole act of historical adaptation, through such techniques, is a marvellous feat of flexibility. Certainly it is a thing hard enough to justify university instruction. But it is not sufficient for an English program.

The achievement of modern historical scholarship in the field of English literature has been, in the aggregate, prodigious; it should be very proud. A good impression of the volume of historical learning now available for the students of English may be quickly had from inspecting a few chapters of the *Cambridge History*,³ with the bibliographies. Or, better, from inspecting one of a large number of works which have come in since the *Cambridge History*: the handbooks, which tell all about the authors, such as Chaucer, Shakespeare, Milton, and carry voluminous bibliographies; or the period books, which tell a good deal about whole periods of literature.

There is one sense in which it may be justly said that we can never have too much scholarship. We cannot have too much of it if the critical intelligence functions, and has the authority to direct it. There is hardly a critical problem which does not require some arduous exercises in fact-finding, but each problem is quite specific about the kind of facts it wants. Mountains of facts may have been found already, but often they have been found for no purpose at all except the purpose of piling up into a big exhibit, to offer intoxicating delights to the academic population.

2. Chaucer's allegories include the dream-poems *The Book of the Duchess* (ca. 1369) and *The House of Fame* (ca. 1374–85).

3. *The Cambridge History of English Literature* (14 vols., 1907–17); and *The Cambridge History of American Literature* (4 vols., 1917–21).

To those who are æsthetically minded among students, the rewards of many a historical labor will have to be disproportionately slight. The official Chaucer course is probably over ninety-five per cent historical and linguistic, and less than five per cent æsthetic or critical. A thing of beauty is a joy forever.⁴ But it is not improved because the student has had to tie his tongue before it. It is an artistic object, with a heroic human labor behind it, and on these terms it calls for public discussion. The dialectical possibilities are limitless, and when we begin to realize them we are engaged in criticism.

4

What is criticism? Easier to ask, What is criticism not? It is an act now notoriously arbitrary and undefined. We feel certain that the critical act is not one of those which the professors of literature habitually perform, and cause their students to perform. And it is our melancholy impression that it is not often cleanly performed in those loose compositions, by writers of perfectly indeterminate qualifications, that appear in print as reviews of books.

Professor Crane excludes from criticism works of historical scholarship and of Neo-Humanism, but more exclusions are possible than that. I should wish to exclude:

1. Personal registrations, which are declarations of the effect of the artwork upon the critic as reader. The first law to be prescribed to criticism, if we may assume such authority, is that it shall be objective, shall cite the nature of the object rather than its effects upon the subject. Therefore it is hardly criticism to assert that the proper literary work is one that we can read twice; or one that causes in us some remarkable physiological effect, such as oblivion of the outer world, the flowing of tears, visceral or laryngeal⁵ sensations, and such like; or one that induces perfect illusion, or brings us into a spiritual ecstasy; or even one that produces a catharsis of our emotions. Aristotle concerned himself with this last in making up his definition of tragedy⁶—though he did not fail to make some acute analyses of the objective features of the work also. I have read that some modern Broadway producers of comedy require a reliable person to seat himself in a trial audience and count the laughs; their method of testing is not so subtle as Aristotle's, but both are concerned with the effects. Such concern seems to reflect the view that art comes into being because the artist, or the employer behind him, has designs upon the public, whether high moral designs or box-office ones. It is an odious view in either case, because it denies the autonomy of the artist as one who interests himself in the artistic object in his own right, and likewise the autonomy of the work itself as existing for its own sake. (We may define a chemical as something which can effect a certain cure, but that is not its meaning to the chemist; and we may define toys, if we are weary parents, as things which keep our children quiet, but that is not what they are to engineers.) Furthermore, we must regard as uncritical the use of an extensive vocabulary which ascribes to the object properties really discovered in the subject, as: *moving, exciting, entertaining, pitiful; great*, if I am not

4. John Keats, *Endymion* (1818), 1.1.

5. Of the internal organs or of the larynx (which

contains the vocal cords).

6. See *Poetics* 6, 1449b.

mistaken, and *admirable*, on a slightly different ground; and, in strictness, *beautiful* itself.

2. Synopsis and paraphrase. The high-school classes and the women's clubs delight in these procedures, which are easiest of all the systematic exercises possible in the discussion of literary objects. I do not mean that the critic never uses them in his analysis of fiction and poetry, but he does not consider plot or story as identical with the real content. Plot is an abstract from content.

3. Historical studies. These have a very wide range, and include studies of the general literary background; author's biography, of course with special reference to autobiographical evidences in the work itself; bibliographical items; the citation of literary originals and analogues, and therefore what, in general, is called comparative literature. Nothing can be more stimulating to critical analysis than comparative literature. But it may be conducted only superficially, if the comparisons are perfunctory and mechanical, or if the scholar is content with merely making the parallel citations.

4. Linguistic studies. Under this head come those studies which define the meaning of unusual words and idioms, including the foreign and archaic ones, and identify the allusions. The total benefit of linguistics for criticism would be the assurance that the latter was based on perfect logical understanding of the content, or "interpretation." Acquaintance with all the languages and literatures in the world would not necessarily produce a critic, though it might save one from damaging errors.

5. Moral studies. The moral standard applied is the one appropriate to the reviewer; it may be the Christian ethic, or the Aristotelian one, or the new proletarian gospel. But the moral content is not the whole content, which should never be relinquished.

6. Any other special studies which deal with some abstract or prose content taken out of the work. Nearly all departments of knowledge may conceivably find their own materials in literature, and take them out. Studies have been made of Chaucer's command of mediæval sciences, of Spenser's view of the Irish question, of Shakespeare's understanding of the law, of Milton's geography, of Hardy's place-names.⁷ The critic may well inform himself of these materials as possessed by the artist, but his business as critic is to discuss the literary assimilation of them.

5

With or without such useful exercises as these, probably assuming that the intelligent reader has made them for himself, comes the critical act itself.

Mr. Austin Warren,⁸ whose writings I admire, is evidently devoted to the academic development of the critical project. Yet he must be a fair representative of what a good deal of academic opinion would be when he sees no reason why criticism should set up its own house, and try to dissociate itself from historical and other scholarly studies; why not let all sorts of studies, including the critical ones, flourish together in the same act of

7. Much of the fiction of Thomas Hardy (1840–1928) is set in "Wessex," a thinly fictionalized version of his native Dorsetshire. "The Irish question": The status of the Irish within the British Empire.

sustained attention, or the same scheduled "course"? But so they are supposed to do at present; and I would only ask him whether he considers that criticism prospers under this arrangement. It has always had the chance to go ahead in the hands of the professors of literature, and it has not gone ahead. A change of policy suggests itself. Strategy requires now, I should think, that criticism receive its own charter of rights and function independently. If he fears for its foundations in scholarship, the scholars will always be on hand to reprove it when it tries to function on an unsound scholarship.

I do not suppose the reviewing of books can be reformed in the sense of being turned into pure criticism. The motives of the reviewers are as much mixed as the performance, and indeed they condition the mixed performance. The reviewer has a job of presentation and interpretation as well as criticism. The most we can ask of him is that he know when the criticism begins, and that he make it as clean and definitive as his business permits. To what authority may he turn?

I know of no authority. For the present each critic must be his own authority. But I know of one large class of studies which is certainly critical, and necessary, and I can suggest another sort of study for the critic's consideration if he is really ambitious.

Studies in the technique of the art belong to criticism certainly. They cannot belong anywhere else, because the technique is not peculiar to any prose materials discoverable in the work of art, nor to anything else but the unique form of that art. A very large volume of studies is indicated by this classification. They would be technical studies of poetry, for instance, the art I am specifically discussing, if they treated its metric; its inversions, solecisms,⁹ lapses from the prose norm of language, and from close prose logic; its tropes;¹ its fictions, or inventions, by which it secures "aesthetic distance" and removes itself from history; or any other devices, on the general understanding that any systematic usage which does not hold good for prose is a poetic device.

A device with a purpose: the superior critic is not content with the compilation of the separate devices; they suggest to him a much more general question. The critic speculates on why poetry, through its devices, is at such pains to dissociate itself from prose at all, and what it is trying to represent that cannot be represented by prose.

I intrude here with an idea of my own, which may serve as a starting point of discussion. Poetry distinguishes itself from prose on the technical side by the devices which are, precisely, its means of escaping from prose. Something is continually being killed by prose which the poet wants to preserve. But this must be put philosophically. (Philosophy sounds hard, but it deals with natural and fundamental forms of experience.)

The critic should regard the poem as nothing short of a desperate ontological or metaphysical manœuvre. The poet himself, in the agony of composition, has something like this sense of his labors. The poet perpetuates in his poem an order of existence which in actual life is constantly crumbling beneath his touch. His poem celebrates the object which is real, individual,

9. Ungrammatical combinations, minor errors.

1. Figures of speech.

and qualitatively infinite. He knows that his practical interests will reduce this living object to a mere utility, and that his sciences will disintegrate it for their convenience into their respective abstracts. The poet wishes to defend his object's existence against its enemies, and the critic wishes to know what he is doing, and how. The critic should find in the poem a total poetic or individual object which tends to be universalized, but is not permitted to suffer this fate. His identification of the poetic object is in terms of the universal or commonplace object to which it tends, and of the tissue, or totality of connotation, which holds it secure. How does he make out the universal object? It is the prose object, which any forthright prosy reader can discover to him by an immediate paraphrase; it is a kind of story, character, thing, scene, or moral principle. And where is the tissue that keeps it from coming out of the poetic object? That is, for the laws of the prose logic, its superfluity; and I think I would even say, its irrelevance.

A poet is said to be distinguishable in terms of his style. It is a comprehensive word, and probably means: the general character of his irrelevances, or tissues. All his technical devices contribute to it, elaborating or individualizing the universal, the core-object; likewise all his material detail. For each poem even, ideally, there is distinguishable a logical object or universal, but at the same time a tissue of irrelevance from which it does not really emerge. The critic has to take the poem apart, or analyze it, for the sake of uncovering these features. With all the finesse possible, it is rude and patchy business by comparison with the living integrity of the poem. But without it there could hardly be much understanding of the value of poetry, or of the natural history behind any adult poem.

The language I have used may sound too formidable, but I seem to find that a profound criticism generally works by some such considerations. However the critic may spell them, the two terms are in his mind: the prose core to which he can violently reduce the total object, and the differentia, residue, or tissue, which keeps the object poetical or entire. The character of the poem resides for the good critic in its way of exhibiting the residuary quality. The character of the poet is defined by the kind of prose object to which his interest evidently attaches, plus his way of involving it firmly in the residuary tissue. And doubtless, incidentally, the wise critic can often read behind the poet's public character his private history as a man with a weakness for lapsing into some special form of prosy or scientific bondage.

Similar considerations hold, I think, for the critique of fiction, or of the non-literary arts. I remark this for the benefit of philosophers who believe, with propriety, that the arts are fundamentally one. But I would prefer to leave the documentation to those who are better qualified.

MARTIN HEIDEGGER

1889–1976

One of the most influential philosophers of the twentieth century, Martin Heidegger spent much of his long career preoccupied by the age-old philosophical question of the meaning of “being.” He made his reputation with the publication of his magnum opus, *Being and Time* (1927, *Sein und Zeit*), a groundbreaking amalgam and extension of the phenomenology of Edmund Husserl (1859–1938) and the hermeneutics of Wilhelm Dilthey (1833–1911) that analyzes “what we really mean by the word ‘being.’” His later philosophical reflections on Being, the writings that are most relevant for literary theorists and critics, are bound up inextricably with the experience and the analysis of poetry and language. For the later Heidegger, language and poetry are not simply devices employed to describe an already existing world. Instead, “language is the house of Being,” and poetry is the means by which human-kind creates worlds.

Heidegger was born to a poor Catholic family in the small town of Messkirch, Germany. His education at the high schools in Konstanz and Freiburg was largely a preparation for the priesthood. While at Freiburg, he first became interested in philosophy following his reading of Franz Brentano’s *On the Various Meanings of Being according to Aristotle* (1862) and Carl Braig’s *On Being: An Outline of Ontology* (1896). He left high school in 1909 to become a Jesuit novice, but he was discharged within a month, most likely because he felt a lack of vocation for the priesthood. He instead entered Freiburg University, where he studied theology and scholastic philosophy. In 1911 a spiritual crisis prompted Heidegger to discontinue his training in theology and concentrate on philosophy. He was particularly influenced by Edmund Husserl’s *Logical Investigations* (1900), a treatise that attempted a systematic inquiry into consciousness (what its author called “phenomenology”). In timely fashion, Heidegger completed his dissertation, *The Theory of the Judgment in Psychologism* (1913), and his habilitation thesis, *Duns Scotus’s Theory of Categories and Meaning* (1915).

In 1919 Heidegger further distanced himself from Catholicism by officially announcing his breach with its theological system. Following World War I, he became a lecturer at Freiburg and an assistant to Husserl. He soon began to acquire a reputation as a brilliant teacher for his lectures on ARISTOTLE, St. Paul, ST. AUGUSTINE, and phenomenology. In 1923 he became an associate professor at Marburg University, where he lectured on Greek, medieval, and German idealist philosophy. The year after the publication of his celebrated *Being and Time*, he succeeded Husserl at Freiburg.

In the early 1930s Heidegger developed sympathy for the Nazi cause, joining the National Socialist German Workers’ Party in 1933, shortly after he was elected rector of Freiburg University. Understandably, this aspect of his career is extremely controversial. It is complicated by Heidegger’s refusal following World War II to discuss his involvement with the Nazis. He did permit an interview on the subject in the 1960s, subsequently titled “Only a God Can Save Us Now,” but on the condition that it not appear during his lifetime; it was published in 1976.

Heidegger’s early work significantly broadened the field of hermeneutics, the theory and art of interpretation. Whereas FRIEDRICH SCHLEIERMACHER (1768–1834) and Dilthey conceived of hermeneutics as the objective exegesis of a specific text or utterance, Heidegger proposed that hermeneutics was central to understanding in general, linking traditional modes of textual interpretation to phenomenology’s focus on the contents of consciousness. In effect, he connected the apprehension of Being and the dynamics of language as co-constituents.

Through the 1930s Heidegger turned his attention more and more to the subject of art: one central outcome was his long lecture "The Origin of the Work of Art" (1935)—a main text for the later Heidegger. This development is commonly referred to as the "turn" (*Kehre*), because Heidegger became less concerned with the everyday human existence discussed in his *Being and Time* and increasingly preoccupied with the examination of language and poetry. Another distinguishing trait of the turn is that Heidegger changed his analytical discourse to a poetic prose style attentive to the multiple meanings of words. His late prose became performative: it followed the paths of thinking, including its false twists and turns, and broke down the traditional distinction between poetry and philosophy. Some of the major poets who figure prominently in his late lectures are the Germans Friedrich Hölderlin (1770–1843), Stefan George (1868–1933), and Rainer Maria Rilke (1875–1926) plus the Austrian Georg Trakl (1887–1914).

Our selection, "Language" (1950), is a work of Heidegger's later years. In it he propounds his celebrated view that "language speaks man." Language brings man and his world into conscious existence; it is inaugural speaking in that it grants an abode or a dwelling for the being of mortals in the larger context of what Heidegger cryptically calls the "fourfold world" (comprising earth, sky, divinities, and mortals). In this account, language is neither mimetic nor expressive: it does not represent an external reality, nor does it express a preexisting feeling or thought. Language shapes consciousness and perception, calling things into being; it does not merely designate or label objects. In poetry, Heidegger argues, the essence of language is manifested with particular clarity, since poetry is less concerned with communication and expression than with imaginative creation.

In our selection, Heidegger presents a now famous explication of Georg Trakl's poem "A Winter Evening." As a poetic or imaginative act, Trakl's poem, he argues, founds and fashions a world. It bids things to appear *as* things; things as things are constituted in language and thus revealed and made near. But for Heidegger, as he notes while discussing the last stanza of the poem, a "difference" between thing and world subsists. This difference is a fundamental threshold where the gathering of things and world in stillness happens. Poetry allows for meditation on the difference, and thus it distinguishes itself from the worn-out instrumental language of everyday speech. This phenomenological account of language as inaugural and performative prefigures later poststructuralist accounts of textuality and discourse developed by PAUL DE MAN, JACQUES DERRIDA, and other admirers of Heidegger.

Heidegger has often been criticized for his views, especially for his mysticism and his quietism, both of which suggest that he never abandoned his youthful religious sensibilities. His late poetic style, moreover, has been criticized as repetitive and obscure, a form of smoke and mirrors. His focus on poetry as pure speech ignores the sociological or "dialogical" dimensions of discourse depicted, most famously, by his contemporary MIKHAIL BAKHTIN. But the major criticism of Heidegger is that he involved himself with the Nazi Party and remained publicly silent about it for the remainder of his life, raising the issue of whether his vast corpus of writings reflects Nazi ideology or sensibility. Some critics separate his philosophy from his politics yet others see the two as fundamentally related. While it is unlikely that this debate will be resolved to everyone's satisfaction, all acknowledge that Heidegger has had a tremendous influence on philosophy, particularly in Europe, as exemplified powerfully in the existentialism of Jean-Paul Sartre, the phenomenological hermeneutics of Hans-Georg Gadamer, and the deconstructive philosophy of Jacques Derrida. In this context, Heidegger is widely believed to be the most important Continental philosopher of the twentieth century.

"Language" Keywords: Hermeneutics, Language, Phenomenology, Poetry

Language¹

Man speaks. We speak when we are awake and we speak in our dreams. We are always speaking, even when we do not utter a single word aloud, but merely listen or read, and even when we are not particularly listening or speaking but are attending to some work or taking a rest. We are continually speaking in one way or another. We speak because speaking is natural to us. It does not first arise out of some special volition. Man is said to have language by nature. It is held that man, in distinction from plant and animal, is the living being capable of speech. This statement does not mean only that, along with other faculties, man also possesses the faculty of speech. It means to say that only speech enables man to be the living being he is as man. It is as one who speaks that man is—man. These are Wilhelm von Humboldt's² words. Yet it remains to consider what it is to be called—man.

In any case, language belongs to the closest neighborhood of man's being. We encounter language everywhere. Hence it cannot surprise us that as soon as man looks thoughtfully about himself at what is, he quickly hits upon language too, so as to define it by a standard reference to its overt aspects. Reflection tries to obtain an idea of what language is universally. The universal that holds for each thing is called its essence or nature. To represent universally what holds universally is, according to prevalent views, the basic feature of thought. To deal with language thoughtfully would thus mean to give an idea of the nature of language and to distinguish this idea properly from other ideas. This lecture,³ too, seems to attempt something of that kind. However, the title of the lecture is not "On the Nature of Language." It is only "Language." "Only," we say, and yet we are clearly placing a far more presumptuous title at the head of our project than if we were to rest content with just making a few remarks about language. Still, to talk about language is presumably even worse than to write about silence. We do not wish to assault language in order to force it into the grip of ideas already fixed beforehand. We do not wish to reduce the nature of language to a concept, so that this concept may provide a generally useful view of language that will lay to rest all further notions about it.

To discuss language, to place it, means to bring to its place of being not so much language as ourselves: our own gathering into the appropriation.⁴

We would reflect on language itself, and on language only. Language itself is—language and nothing else besides. Language itself is language. The understanding that is schooled in logic, thinking of everything in terms of calculation and hence usually overbearing, calls this proposition an empty tautology. Merely to say the identical thing twice—language is language—how is that supposed to get us anywhere? But we do not want to get anywhere. We would like only, for once, to get to just where we are already.

1. Translated by Albert Hofstadter.

2. German philologist and diplomat (1767–1835).

3. "Language" is a revised version of Heidegger's lecture notes.

4. A complicated and elusive term in Heidegger's thought: the "appropriation" (*Ereignis*) refers to the original appearance and nature of being in lan-

guage. The perceptible traits or qualities proper to the various things of the world are manifested, made present, and brought into their own being solely through the inaugural granting of language. Human beings dwell in this appropriation, perceiving only what language founds; thus, they do not speak language but are spoken by it.

This is why we ponder the question, "What about language itself?" This is why we ask, "In what way does language occur as language?" We answer: *Language speaks*. Is this, seriously, an answer? Presumably—that is, when it becomes clear what speaking is.

To reflect on language thus demands that we enter into the speaking of language in order to take up our stay with language, i.e., within *its* speaking, not within our own. Only in that way do we arrive at the region within which it may happen—or also fail to happen—that language will call to us from there and grant us its nature. We leave the speaking to language. We do not wish to ground language in something else that is not language itself, nor do we wish to explain other things by means of language.

On the tenth of August, 1784, Hamann wrote to Herder⁵ (*Hamanns Schriften*, ed. Roth, VII, pp. 151f.):

If I were as eloquent as Demosthenes⁶ I would yet have to do nothing more than repeat a single word three times: reason is language, *logos*.⁷ I gnaw at this marrow-bone and will gnaw myself to death over it. There still remains a darkness, always, over this depth for me; I am still waiting for an apocalyptic angel with a key to this abyss.

For Hamann, this abyss consists in the fact that reason is language. Hamann returns to language in his attempt to say what reason is. His glance, aimed at reason, falls into the depths of an abyss. Does this abyss consist only in the fact that reason resides in language, or is language itself the abyss? We speak of an abyss where the ground falls away and a ground is lacking to us, where we seek the ground and set out to arrive at a ground, to get to the bottom of something. But we do not ask now what reason may be; here we reflect immediately on language and take as our main clue the curious statement, "Language is language." This statement does not lead us to something else in which language is grounded. Nor does it say anything about whether language itself may be a ground for something else. The sentence, "Language is language," leaves us to hover over an abyss as long as we endure what it says.

Language is—language, speech. Language speaks. If we let ourselves fall into the abyss denoted by this sentence, we do not go tumbling into emptiness. We fall upward, to a height. Its loftiness opens up a depth. The two span a realm in which we would like to become at home, so as to find a residence, a dwelling place for the life of man.

To reflect on language means—to reach the speaking of language in such a way that this speaking takes place as that which grants an abode for the being of mortals.

What does it mean to speak? The current view declares that speech is the activation of the organs for sounding and hearing. Speech is the audible expression and communication of human feelings. These feelings are accompanied by thoughts. In such a characterization of language three points are taken for granted:

5. Johann Gottfried von Herder (1744–1803), German philosopher, theologian, and critic. Johann Georg Hamann (1730–1788), German philosopher and theologian. [From Johann Georg Hamann, *Schriften*, edited by F. Roth and G. A. Wiener, 8

parts (Berlin: G. Reimer, 1821)—translator's note.]

6. Athenian orator and statesman (384–322 B.C.E.), generally held to be the greatest Greek orator.

7. Word, speech, discourse, reason (Greek).

First and foremost, speaking is expression. The idea of speech as an utterance is the most common. It already presupposes the idea of something internal that utters or externalizes itself. If we take language to be utterance, we give an external, surface notion of it at the very moment when we explain it by recourse to something internal.

Secondly, speech is regarded as an activity of man. Accordingly we have to say that man speaks, and that he always speaks some language. Hence we cannot say, "Language speaks." For this would be to say: "It is language that first brings man about, brings him into existence." Understood in this way, man would be bespoken by language.

Finally, human expression is always a presentation and representation of the real and the unreal.

It has long been known that the characteristics we have advanced do not suffice to circumscribe the nature of language. But when we understand the nature of language in terms of expression, we give it a more comprehensive definition by incorporating expression, as one among many activities, into the total economy of those achievements by which man makes himself.

As against the identification of speech as a merely human performance, others stress that the word of language is of divine origin. According to the opening of the Prologue of the Gospel of St. John, in the beginning the Word was with God.⁸ The attempt is made not only to free the question of origin from the fetters of a rational-logical explanation, but also to set aside the limits of a merely logical description of language. In opposition to the exclusive characterization of word-meanings as concepts, the figurative and symbolical character of language is pushed into the foreground. Biology and philosophical anthropology, sociology and psychopathology, theology and poetics are all then called upon to describe and explain linguistic phenomena more comprehensively.

In the meantime, all statements are referred in advance to the traditionally standard way in which language appears. The already fixed view of the whole nature of language is thus consolidated. This is how the idea of language in grammar and logic, philosophy of language and linguistics, has remained the same for two and a half millennia, although knowledge about language has progressively increased and changed. This fact could even be adduced as evidence for the unshakable correctness of the leading ideas about language. No one would dare to declare incorrect, let alone reject as useless, the identification of language as audible utterance of inner emotions, as human activity, as a representation by image and by concept. The view of language thus put forth is correct, for it conforms to what an investigation of linguistic phenomena can make out in them at any time. And all *questions* associated with the description and explanation of linguistic phenomena also move within the precincts of this correctness.

We still give too little consideration, however, to the singular role of these correct ideas about language. They hold sway, as if unshakable, over the whole field of the varied scientific perspectives on language. They have their roots in an ancient tradition. Yet they ignore completely the oldest natural cast of language. Thus, despite their antiquity and despite their comprehensibility, they never bring us to language as language.

8. John 1.1: "In the beginning was the Word, and the Word was with God, and the Word was God."

Language speaks. What about its speaking? Where do we encounter such speaking? Most likely, to be sure, in what is spoken. For here speech has come to completion in what is spoken. The speaking does not cease in what is spoken. Speaking is kept safe in what is spoken. In what is spoken, speaking gathers the ways in which it persists as well as that which persists by it—its persistence, its presencing. But most often, and too often, we encounter what is spoken only as the residue of a speaking long past.

If we must, therefore, seek the speaking of language in what is spoken, we shall do well to find something that is spoken purely rather than to pick just any spoken material at random. What is spoken purely is that in which the completion of the speaking that is proper to what is spoken is, in its turn, an original. What is spoken purely is the poem. For the moment, we must let this statement stand as a bare assertion. We may do so, if we succeed in hearing in a poem something that is spoken purely. But what poem shall speak to us? Here we have only one choice, but one that is secured against mere caprice. By what? By what is already told us as the presencing element in language, if we follow in thought the speaking *of language*. Because of this bond between what we think and what we are told by language we choose, as something spoken purely, a poem which more readily than others can help us in our first steps to discover what is binding in that bond. We listen to what is spoken. The poem bears the title:

A Winter Evening

Window with falling snow is arrayed,
Long tolls the vesper bell,
The house is provided well,
The table is for many laid.

Wandering ones, more than a few,
Come to the door on darksome courses.
Golden blooms the tree of graces
Drawing up the earth's cool dew.

Wanderer quietly steps within;
Pain has turned the threshold to stone.
There lie, in limpid brightness shown,
Upon the table bread and wine.

The two last verses of the second stanza and the third stanza read in the first version (Letter to Karl Kraus,⁹ December 13, 1913):

Love's tender power, full of graces,
Binds up his wounds anew.

O! man's naked hurt condign.
Wrestler with angels mutely held,
Craves, by holy pain compelled,
Silently God's bread and wine.

9. Austrian poet, critic, and journalist (1874–1936).

(Cf. the new Swiss edition of the poems of G. Trakl edited by Kurt Horwitz, 1946.)¹

The poem was written by Georg Trakl. Who the author is remains unimportant here, as with every other masterful poem. The mastery consists precisely in this, that the poem can deny the poet's person and name.

The poem is made up of three stanzas. Their meter and rhyme pattern can be defined accurately according to the schemes of metrics and poetics. The poem's content is comprehensible. There is not a single word which, taken by itself, would be unfamiliar or unclear. To be sure, a few of the verses sound strange, like the third and fourth in the second stanza:

Golden blooms the tree of graces
Drawing up the earth's cool dew.

Similarly, the second verse of the third stanza is startling:

Pain has turned the threshold to stone.

But the verses here singled out also manifest a particular beauty of imagery. This beauty heightens the charm of the poem and strengthens its aesthetic perfection as an artistic structure.

The poem describes a winter evening. The first stanza describes what is happening outside: snowfall, and the ringing of the vesper bell. The things outside touch the things inside the human homestead. The snow falls on the window. The ringing of the bell enters into every house. Within, everything is well provided and the table set.

The second stanza raises a contrast. While many are at home within the house and at the table, not a few wander homeless on darksome paths. And yet such—possibly evil—roads sometimes lead to the door of the sheltering house. To be sure, this fact is not presented expressly. Instead, the poem names the tree of graces.

The third stanza bids the wanderer enter from the dark outdoors into the brightness within. The houses of the many and the tables of their daily meals have become house of God and altar.

The content of the poem might be dissected even more distinctly, its form outlined even more precisely, but in such operations we would still remain confined by the notion of language that has prevailed for thousands of years. According to this idea language is the expression, produced by men, of their feelings and the world view that guides them. Can the spell this idea has cast over language be broken? Why should it be broken? In its essence, language is neither expression nor an activity of man. Language speaks. We are now seeking the speaking of language in the poem. Accordingly, what we seek lies in the poetry of the spoken word.

The poem's title is "A Winter Evening." We expect from it the description of a winter evening as it actually is. But the poem does not picture a winter evening occurring somewhere, sometime. It neither merely describes a winter evening that is already there, nor does it attempt to produce the sem-

1. Georg Trakl, *Die Dichtungen. Gesamtausgabe mit einem Anhang: Zeugnisse und Erinnerungen*, ed. Kurt Horwitz (Zurich: Arche Verlag, 1946). This poem, "Ein Winterabend," may also be found in *Die Dichtungen*, 11th ed. (Salzburg: Otto Mül-

ler, 1938), p. 124. The letter to Karl Kraus may be found in *Erinnerung an Georg Trakl: Zeugnisse und Briefe* (Salzburg: Otto Müller, 1959), pp. 172–73 [translator's note]. Trakl (1887–1914), Austrian expressionist poet.

blance, leave the impression, of a winter evening's presence where there is no such winter evening. Naturally not, it will be replied. Everyone knows that a poem is an invention. It is imaginative even where it seems to be descriptive. In his fictive act the poet pictures to himself something that could be present in its presence. The poem, as composed, images what is thus fashioned for our own act of imaging. In the poem's speaking the poetic imagination gives itself utterance. What is spoken in the poem is what the poet enunciates out of himself. What is thus spoken out, speaks by enunciating its content. The language of the poem is a manifold enunciating. Language proves incontestably to be expression. But this conclusion is in conflict with the proposition "Language speaks," assuming that speaking, in its essential nature, is not an expressing.

Even when we understand what is spoken in the poem in terms of poetic composition, it seems to us, as if under some compulsion, always and only to be an expressed utterance. Language is expression. Why do we not reconcile ourselves to this fact? Because the correctness and currency of this view of language are insufficient to serve as a basis for an account of the nature of language. How shall we gauge this inadequacy? Must we not be bound by a different standard before we can gauge anything in that manner? Of course. That standard reveals itself in the proposition, "Language speaks." Up to this point this guiding proposition has had merely the function of warding off the ingrained habit of disposing of speech by throwing it at once among the phenomena of expression instead of thinking it in its own terms. The poem cited has been chosen because, in a way not further explicable, it demonstrates a peculiar fitness to provide some fruitful hints for our attempt to discuss language.

Language *speaks*. This means at the same time and before all else: *language* speaks. Language? And not man? What our guiding proposition demands of us now—is it not even worse than before? Are we, in addition to everything else, also going to deny now that man is the being who speaks? Not at all. We deny this no more than we deny the possibility of classifying linguistic phenomena under the heading of "expression." But we ask, "How does man speak?" We ask, "What is it to speak?"

Window with falling snow is arrayed
Long tolls the vesper bell.

This speaking names the snow that soundlessly strikes the window late in the waning day, while the vesper bell rings. In such a snowfall, everything lasting lasts longer. Therefore the vesper bell, which daily rings for a strictly fixed time, tolls long. The speaking names the winter evening time. What is this naming? Does it merely deck out the imaginable familiar objects and events—snow, bell, window, falling, ringing—with words of a language? No. This naming does not hand out titles, it does not apply terms, but it calls into the word. The naming calls. Calling brings closer what it calls. However this bringing closer does not fetch what is called only in order to set it down in closest proximity to what is present, to find a place for it there. The call does indeed call. Thus it brings the presence of what was previously uncalled into a nearness. But the call, in calling it here, has already called out to what it calls. Where to? Into the distance in which what is called remains, still absent.

The calling here calls into a nearness. But even so the call does not wrest what it calls away from the remoteness, in which it is kept by the calling there. The calling calls into itself and therefore always here and there—here into presence, there into absence. Snowfall and tolling of vesper bell are spoken to us here and now in the poem. They are present in the call. Yet they in no way fall among the things present here and now in this lecture hall. Which presence is higher, that of these present things or the presence of what is called?

The house is provided well,
The table is for many laid.

The two verses speak like plain statements, as though they were noting something present. The emphatic “is” sounds that way. Nevertheless it speaks in the mode of calling. The verses bring the well-provided house and the ready table into that presence that is turned toward something absent.

What does the first stanza call? It calls things, bids them come. Where? Not to be present among things present; it does not bid the table named in the poem to be present here among the rows of seats where you are sitting. The place of arrival which is also called in the calling is a presence sheltered in absence. The naming call bids things to come into such an arrival. Bidding is inviting. It invites things in, so that they may bear upon men as things. The snowfall brings men under the sky that is darkening into night. The tolling of the evening bell brings them, as mortals, before the divine. House and table join mortals to the earth. The things that were named, thus called, gather to themselves sky and earth, mortals and divinities. The four are united primarily in being toward one another, a fourfold. The things let the fourfold of the four stay with them. This gathering, assembling, letting-stay is the thinging of things. The unitary fourfold of sky and earth, mortals and divinities, which is stayed in the thinging of things, we call—the world. In the naming, the things named are called into their thinging. Thinging, they unfold world, in which things abide and so are the abiding ones. By thinging, things carry out world. Our old language calls such carrying *bern*, *bären*—Old High German *beran*—to bear; hence the words *gebaren*, to carry, gestate, give birth, and *Gebärde*, bearing, gesture. Thinging, things are things. Thinging, they gesture—gestate—world.

The first stanza calls things into their thinging, bids them come. The bidding that calls things calls them here, invites them, and at the same time calls out to the things, commending them to the world out of which they appear. Hence the first stanza names not only things. It simultaneously names world. It calls the “many” who belong as mortals to the world’s fourfold. Things be-thing—i.e., condition—mortals. This now means: things, each in its time, literally visit mortals with a world. The first stanza speaks by bidding the things to come.

The second stanza speaks in a different way. To be sure, it too bids to come. But its calling begins as it calls and names mortals:

Wandering ones, more than a few . . .

Not all mortals are called, not the many of the first stanza, but only “more than a few”—those who wander on dark courses. These mortals are capable of dying as the wandering toward death. In death the supreme concealed-

ness of Being crystallizes. Death has already overtaken every dying. Those “wayfarers” must first wander their way to house and table through the darkness of their courses; they must do so not only and not even primarily for themselves, but for the many, because the many think that if they only install themselves in houses and sit at tables, they are already bethinged, conditioned, by things and have arrived at dwelling.

The second stanza begins by calling more than a few of the mortals. Although mortals belong to the world’s fourfold along with the divinities, with earth and sky, the first two verses of the second stanza do not expressly call the world. Rather, very much like the first stanza but in a different sequence, they at the same time name things—the door, the dark paths. It is the two remaining verses that expressly name the world. Suddenly they name something wholly different:

Golden blooms the tree of graces
Drawing up the earth’s cool dew.

The tree roots soundly in the earth. Thus it is sound and flourishes into a blooming that opens itself to heaven’s blessing. The tree’s towering has been called. It spans both the ecstasy of flowering and the soberness of the nourishing sap. The earth’s abated growth and the sky’s open bounty belong together. The poem names the tree of graces. Its sound blossoming harbors the fruit that falls to us unearned—holy, saving, loving toward mortals. In the golden-blossoming tree there prevail earth and sky, divinities and mortals. Their unitary fourfold is the world. The word “world” is now no longer used in the metaphysical sense. It designates neither the universe of nature and history in its secular representation nor the theologically conceived creation (*mundus*), nor does it mean simply the whole of entities present (*kosmos*).²

The third and fourth lines of the second stanza call the tree of graces. They expressly bid the world to come. They call the world-fourfold here, and thus call world to the things.

The two lines start with the word “golden.” So that we may hear more clearly this word and what it calls, let us recollect a poem of Pindar’s:³ *Isthmians* V. At the beginning of this ode the poet calls gold *periosion panton*, that which above all shines through everything, *panta*, shines through each thing present all around. The splendor of gold keeps and holds everything present in the unconcealedness of its appearing.

As the calling that names things calls here and there, so the saying that names the world calls into itself, calling here and there. It entrusts world to the things and simultaneously keeps the things in the splendor of world. The world grants to things their presence. Things bear world. World grants things.

The speaking of the first two stanzas speaks by bidding things to come to world, and world to things. The two modes of bidding are different but not separated. But neither are they merely coupled together. For world and things do not subsist alongside one another. They penetrate each other. Thus the two traverse a middle. In it, they are at one. Thus at one they are intimate.

2. Both *mundus* (Latin) and *kosmos* (Greek) mean “world,” in the different senses that Heidegger gives.

3. Greek lyric poet (ca. 518–438 B.C.E.), known

for his elaborate victory odes. In fact, the word *panton* is not used at the beginning of the poem cited.

The middle of the two is intimacy—in Latin, *inter*. The corresponding German word is *unter*, the English *inter-*. The intimacy of world and thing is not a fusion. Intimacy obtains only where the intimate—world and thing—divides itself cleanly and remains separated. In the midst of the two, in the between of world and thing, in their *inter*, division prevails: a *dif-ference*.

The intimacy of world and thing is present in the separation of the between; it is present in the dif-ference. The word dif-ference is now removed from its usual and customary usage. What it now names is not a generic concept for various kinds of differences. It exists only as this single difference. It is unique. Of itself, it holds apart the middle in and through which world and things are at one with each other. The intimacy of the dif-ference is the unifying element of the *diaphora*, the carrying out that carries through. The dif-ference carries out world in its worlding, carries out things in their thinging. Thus carrying them out, it carries them toward one another. The dif-ference does not mediate after the fact by connecting world and things through a middle added on to them. Being the middle, it first determines world and things in their presence, i.e., in their being toward one another, whose unity it carries out.

The word consequently no longer means a distinction established between objects only by our representations. Nor is it merely a relation obtaining between world and thing, so that a representation coming upon it can establish it. The dif-ference is not abstracted from world and thing as their relationship after the fact. The dif-ference for world and thing *disclosingly appropriates* things into bearing a world; it *disclosingly appropriates* world into the granting of things.

The dif-ference is neither distinction nor relation. The dif-ference is, at most, dimension for world and thing. But in this case “dimension” also no longer means a precinct already present independently in which this or that comes to settle. The dif-ference is *the* dimension, insofar as it measures out, apportions, world and thing, each to its own. Its allotment of them first opens up the separateness and towardness of world and thing. Such an opening up is the way in which the dif-ference here spans the two. The difference, as the middle for world and things, metes out the measure of their presence. In the bidding that calls thing and world, what is really called is: the dif-ference.

The first stanza of the poem bids the things to come which, thinging, bear world. The second stanza bids that world to come which, worlding, grants things. The third stanza bids the middle for world and things to come: the carrying out of the intimacy. On this account the third stanza begins with an emphatic calling:

Wanderer quietly steps within.

Where to? The verse does not say. Instead, it calls the entering wanderer into the stillness. This stillness ministers over the doorway. Suddenly and strangely the call sounds:

Pain has turned the threshold to stone.

This verse speaks all by itself in what is spoken in the whole poem. It names pain. What pain? The verse says merely “pain.” Whence and in what way is pain called?

Pain has turned the threshold to stone.

"Turned . . . to stone"—these are the only words in the poem that speak in the past tense. Even so, they do not name something gone by, something no longer present. They name something that persists and that has already persisted. It is only in turning to stone that the threshold presences at all.

The threshold is the ground-beam that bears the doorway as a whole. It sustains the middle in which the two, the outside and the inside, penetrate each other. The threshold bears the between. What goes out and goes in, in the between, is joined in the between's dependability. The dependability of the middle must never yield either way. The settling of the between needs something that can endure, and is in this sense hard. The threshold, as the settlement of the between, is hard because pain has petrified it. But the pain that became appropriated to stone did not harden into the threshold in order to congeal there. The pain presences unflagging in the threshold, as pain.

But what is pain? Pain rends. It is the rift. But it does not tear apart into dispersive fragments. Pain indeed tears asunder, it separates, yet so that at the same time it draws everything to itself, gathers it to itself. Its rending, as a separating that gathers, is at the same time that drawing which, like the pen-drawing of a plan or sketch, draws and joins together what is held apart in separation. Pain is the joining agent in the rending that divides and gathers. Pain is the joining of the rift. The joining is the threshold. It settles the between, the middle of the two that are separated in it. Pain joins the rift of the difference. Pain is the difference itself.

Pain has turned the threshold to stone.

The verse calls the difference, but it neither thinks it specifically nor does it call its nature by this name. The verse calls the separation of the between, the gathering middle, in whose intimacy the bearing of things and the granting of world pervade one another.

Then would the intimacy of the difference for world and thing be pain? Certainly. But we should not imagine pain anthropologically as a sensation that makes us feel afflicted. We should not think of the intimacy psychologically as the sort in which sentimentality makes a nest for itself.

Pain has turned the threshold to stone.

Pain has already fitted the threshold into its bearing. The difference presences already as the collected presence, from which the carrying out of world and thing appropriately takes place. How so?

There lie, in limpid brightness shown,
Upon the table bread and wine.

Where does the pure brightness shine? On the threshold, in the settling of the pain. The rift of the difference makes the limpid brightness shine. Its luminous joining decides the brightening of the world into its own. The rift of the difference expropriates the world into its worlding, which grants things. By the brightening of the world in their golden gleam, bread and wine at the same time attain to their own gleaming. The nobly named things are lustrous in the simplicity of their thinging. Bread and wine are the fruits of heaven and earth, gifts from the divinities to mortals. Bread and wine gather these

four to themselves from the simple unity of their fourfoldness. The things that are called bread and wine are simple things because their bearing of world is fulfilled, without intermediary, by the favor of the world. Such things have their sufficiency in letting the world's fourfold stay with them. The pure limpid brightness of world and the simple gleaming of things go through their between, the dif-ference.

The third stanza calls world and things into the middle of their intimacy. The seam that binds their being toward one another is pain.

Only the third stanza gathers the bidding of things and the bidding of world. For the third stanza calls primally out of the simplicity of the intimate bidding which calls the dif-ference by leaving it unspoken. The primal calling, which bids the intimacy of world and thing to come, is the authentic bidding. This bidding is the nature of speaking. Speaking occurs in what is spoken in the poem. It is the speaking of language. Language speaks. It speaks by bidding the bidden, thing-world and world-thing, to come to the between of the dif-ference. What is so bidden is commanded to arrive from out of the dif-ference into the dif-ference. Here we are thinking of the old sense of command, which we recognize still in the phrase, "Commit thy way unto the Lord."⁴ The bidding of language commits the bidden thus to the bidding of the dif-ference. The dif-ference lets the thinging of the thing rest in the worlding of the world. The dif-ference expropriates the thing into the repose of the fourfold. Such expropriation does not diminish the thing. Only so is the thing exalted into its own, so that it stays world. To keep in repose is to still. The dif-ference stills the thing, as thing, into the world.

Such stilling, however, takes place only in such a way that at the same time the world's fourfold fulfills the bearing of the thing, in that the stilling grants to the thing the sufficiency of staying world. The dif-ference stills in a twofold manner. It stills by letting things rest in the world's favor. It stills by letting the world suffice itself in the thing. In the double stilling of the dif-ference there takes place: stillness.

What is stillness? It is in no way merely the soundless. In soundlessness there persists merely a lack of the motion of entoning, sounding. But the motionless is neither limited to sounding by being its suspension, nor is it itself already something genuinely tranquil. The motionless always remains, as it were, merely the other side of that which rests. The motionless itself still rests on rest. But rest has its being in the fact that it stills. As the stilling of stillness, rest, conceived strictly, is always more in motion than all motion and always more restlessly active than any agitation.

The dif-ference stills particularly in two ways: it stills the things in thinging and the world in worlding. Thus stilled, thing and world never escape from the dif-ference. Rather, they rescue it in the stilling, where the dif-ference is itself the stillness.

In stilling things and world into their own, the dif-ference calls world and thing into the middle of their intimacy. The dif-ference is the bidder. The dif-ference gathers the two out of itself as it calls them into the rift that is the dif-ference itself. This gathering calling is the pealing. In it there occurs something different from a mere excitation and spreading of sound.

When the dif-ference gathers world and things into the simple onefold of the pain of intimacy, it bids the two to come into their very nature. The difference is the command out of which every bidding itself is first called, so that each may follow the command. The command of the dif-ference has ever already gathered all bidding within itself. The calling, gathered together with itself, which gathers to itself in the calling, is the pealing as the peal.

The calling of the dif-ference is the double stilling. The gathered bidding, the command, in the form of which the dif-ference calls world and things, is the peal of stillness. Language speaks in that the command of the dif-ference calls world and things into the simple onefold of their intimacy.

Language speaks as the peal of stillness. Stillness stills by the carrying out, the bearing and enduring, of world and things in their presence. The carrying out of world and thing in the manner of stilling is the appropriative taking place of the dif-ference. Language, the peal of stillness, is, inasmuch as the dif-ference takes place. Language goes on as the taking place or occurring of the dif-ference for world and things.

The peal of stillness is not anything human. But on the contrary, the human is indeed in its nature given to speech—it is linguistic. The word “linguistic” as it is here used means: having taken place out of the speaking of language. What has thus taken place, human being, has been brought into its own by language, so that it remains given over or appropriated to the nature of language, the peal of stillness. Such an appropriating takes place in that the very *nature*, the *presencing*, of language *needs and uses* the speaking of mortals in order to sound as the peal of stillness for the hearing of mortals. Only as men belong within the peal of stillness are mortals able to speak in *their own* way in sounds.

Mortal speech is a calling that names, a bidding which, out of the simple onefold of the difference, bids thing and world to come. What is purely bidden in mortal speech is what is spoken in the poem. Poetry proper is never merely a higher mode (*melos*)⁵ of everyday language. It is rather the reverse: everyday language is a forgotten and therefore used-up poem, from which there hardly resounds a call any longer.

The opposite of what is purely spoken, the opposite of the poem, is not prose. Pure prose is never “prosaic.” It is as poetic and hence as rare as poetry.

If attention is fastened exclusively on human speech, if human speech is taken simply to be the voicing of the inner man, if speech so conceived is regarded as language itself, then the nature of language can never appear as anything but an expression and an activity of man. But human speech, as the speech of mortals, is not self-subsistent. The speech of mortals rests in its relation to the speaking of language.

At the proper time it becomes unavoidable to think of how mortal speech and its utterance take place in the speaking of language as the peal of the stillness of the dif-ference. Any uttering, whether in speech or writing, breaks the stillness. On what does the peal of stillness break? How does the broken stillness come to sound in words? How does the broken stillness shape the mortal speech that sounds in verses and sentences?

5. A song, tune, or melody considered apart from rhythm (Greek).

Assuming that thinking will succeed one day in answering these questions, it must be careful not to regard utterance, let alone expression, as the decisive element of human speech.

The structure of human speech can only be the manner (*melos*) in which the speaking of language, the peal of the stillness of the difference, appropriates mortals by the command of the difference.

The way in which mortals, called out of the difference into the difference, speak on their own part, is: by responding. Mortal speech must first of all have listened to the command, in the form of which the stillness of the difference calls world and things into the rift of its onefold simplicity. Every word of mortal speech speaks out of such a listening, and as such a listening.

Mortals speak insofar as they listen. They heed the bidding call of the stillness of the difference even when they do not know that call. Their listening draws from the command of the difference what it brings out as sounding word. This speaking that listens and accepts is responding.

Nevertheless by receiving what it says from the command of the difference, mortal speech has already, in its own way, followed the call. Response, as receptive listening, is at the same time a recognition that makes due acknowledgment. Mortals speak by responding to language in a twofold way, receiving and replying. The mortal word speaks by cor-responding in a multiple sense.

Every authentic hearing holds back with its own saying. For hearing keeps to itself in the listening by which it remains appropriated to the peal of stillness. All responding is attuned to this restraint that reserves itself. For this reason such reserve must be concerned to be ready, in the mode of listening, for the command of the difference. But the reserve must take care not just to hear the peal of stillness afterward, but to hear it even beforehand, and thus as it were to anticipate its command.

This anticipating while holding back determines the manner in which mortals respond to the difference. In this way mortals live in the speaking of language.

Language speaks. Its speaking bids the difference to come which expropriates world and things into the simple onefold of their intimacy.

Language speaks.

Man speaks in that he responds to language. This responding is a hearing. It hears because it listens to the command of stillness.

It is not a matter here of stating a new view of language. What is important is learning to live in the speaking of language. To do so, we need to examine constantly whether and to what extent we are capable of what genuinely belongs to responding: anticipation in reserve. For:

Man speaks only as he responds to language.

Language speaks.

Its speaking speaks for us in what has been spoken:

A Winter Evening

Window with falling snow is arrayed.
Long tolls the vesper bell,
The house is provided well,
The table is for many laid.

Wandering ones, more than a few,
 Come to the door on darksome courses.
 Golden blooms the tree of graces
 Drawing up the earth's cool dew.

Wanderer quietly steps within;
 Pain has turned the threshold to stone.
 There lie, in limpid brightness shown,
 Upon the table bread and wine.

1950

ANTONIO GRAMSCI

1891–1937

A Marxist martyr, determined to balance “pessimism of the intellect” with “optimism of the will,” Antonio Gramsci is central to cultural studies and to all attempts to locate the roles that literature and culture play in the establishment, maintenance, and contestation of political power. Caught between the Russian Revolution, which he hoped to see reenacted in Italy, and the rise to power instead of the Fascist Party led by Benito Mussolini, Gramsci’s failed political efforts motivated his revisionist Marxism, which emphasized the way cultural activities interact with both the economy and the state to forge the “manufactured consent” he calls “hegemony.”

Gramsci was born on the impoverished and marginalized island of Sardinia into the family of a minor government official. His schooling was interrupted at age twelve, when he was forced to begin working sixty-hour weeks to help support his family after his father’s imprisonment for fraud (the conviction may have been politically motivated). An early childhood bout with tuberculosis left Gramsci deformed (he described himself as a hunchback) and stunted (four feet, ten inches tall). Having won a modest scholarship, he left Sardinia in 1911 to attend the University of Turin. The site of Fiat’s factories, Turin was a major industrial city of Italy and home to a strong socialist movement among the factory workers. By 1914 Gramsci was a committed socialist, and in December 1916 he became an editor of the official Socialist Party newspaper. For the next six years, he worked as a political journalist and editor for various leftist publications.

An enthusiastic champion of the Russian Revolution, Gramsci had reason to believe that Italy’s socialist revolution would not be far behind. In response to a company lock-out, Fiat workers occupied the factories and produced cars on their own in September 1920, while the Socialist Party’s various trade unions had over two million members that same year. But membership quickly declined as Mussolini’s Fascist movement grew. Fascism’s nationalist trumpeting of the glories of empire and of Italy’s Roman past swept away concerns about its use of a militaristic state to keep workers and other potential dissidents under strict control. As popular support for Fascism mounted, leftist groups fought among themselves over how to respond. In 1921 Gramsci was one of the leading figures in the formation of the Communist Party of Italy.

Like other European Communist parties, the Italian one looked to Moscow for financial and intellectual sustenance. While Gramsci spent the bulk of 1922 and 1923 in Russia, the newly installed Fascist government in Italy issued a warrant for

his arrest. Elected to Parliament on the Communist ticket in 1924, Gramsci returned to take his seat, protected from prosecution by parliamentary immunity. Mussolini announced a one-party state the following year, and Gramsci was placed under police surveillance. The leaders of the Communist Party, including Gramsci, were arrested in November 1926 and were tried together in June 1928. Gramsci was sentenced to twenty years in prison. Released from prison because of ill health in April 1937, he died less than two weeks after gaining his freedom.

For four years (1929–33) in prison, before his health collapsed, Gramsci was allowed to write. The result was the four volumes of the *Quaderni del carcere* (*The Prison Notebooks*), on which most of Gramsci's reputation as a social and cultural theorist is based and from which "The Formation of the Intellectuals" is taken.

Gramsci is one of the major figures of Western Marxism, a term that covers the work of twentieth-century German, French, British, and Italian leftist intellectuals. One abiding concern of these theorists is why the working-class revolution predicted by KARL MARX did not occur in Western Europe. An orthodox Soviet reading of Marx, promulgated and enforced by the Russian Bolsheviks, claimed that both political action and intellectual beliefs derive from economic interest. Since capitalism is against the economic interest of the workers, and since the workers are much more numerous than their employers, a proletarian revolution should be both inevitable and successful. But Western Marxists recognized that many workers were indifferent or even hostile to workers' movements and socialism, and that many workers supported fascist parties, even when they seemed obvious enemies of workers' interests. Significantly, Western Marxists proposed that economic interests are only part of the story when one considers the beliefs, values, commitments, and aspirations that motivate action; cultural factors are also crucial. It is this attention to how culture influences attitudes and actions that has made Western Marxism important for literary and cultural studies.

Gramsci's immediate concern was the Left's failure to win the hearts and minds of the Italian people, who supported the Fascists instead. Vladimir Lenin had already theorized that the workers' revolution could not happen spontaneously; revolution could succeed only if a dedicated cadre of revolutionaries stirred the workers to action and organized those actions once they occurred. This vanguard is the "party" for Lenin; its necessity justified the leadership role taken by the Bolsheviks in a supposedly egalitarian revolution. Subsequent writers have seen Lenin's justification of "the dictatorship of the party" as the first step toward the betrayal of Marxism that led to the tyranny in Soviet Russia between 1919 and 1989.

Gramsci's meditations on intellectuals subtly contest Lenin's writings on the role of the party. He wants to consider how the intellectual can be effective, especially in moving people to action. (Similar worries still bedevil literary intellectuals who espouse political causes.) Gramsci identifies two types of intellectuals. Traditional intellectuals are the administrators and apologists for existing social and cultural institutions, such as schools, various religious denominations, corporations, the military, the press, political bureaucracies, and the judicial system. Writers, artists, and philosophers are traditional intellectuals insofar as they work within formal institutions. In contrast, organic intellectuals rise out of membership in social groups (or classes) that have an antagonistic relationship to established institutions and official power. They "articulate" those groups' needs and aspirations, which have frequently gone unexpressed. The organic intellectual does not simply parrot preexisting group beliefs or demands but brings to the level of public speech what has not been officially recognized. While a given group does have certain tendencies, the process of articulation itself will shape it, giving it new identities and commitments—new ways of understanding itself and its desires.

For Gramsci, the traditional Marxist notion of "class" is too inert if it leads us to believe that workers, by virtue of their social position, always belong to the same class and possess the same attitudes and interests. The phrase "historic bloc"—Gramsci's

own coinage—expresses his sense that social groups are dynamically created in specific historical moments, or so-called conjunctures. Any bloc's ability to intervene effectively in social arrangements depends on the relative strength of other blocs in a social field marked by conflict and continual jockeying for advantage. Intellectuals play a key role in the ongoing formation and re-formation of historic blocs.

The emphasis on intellectuals, articulation, and the formation of a historic bloc culminates in the concept of "hegemony," which substantially revises standard Marxist theories of "ideology." There are two notions of ideology found in Marx's *German Ideology* (written 1845–46; see above): the first holds that a person's beliefs and values are a reflection of that person's economic interests (though often not recognized as such); the second maintains that the leading ideas of the ruling class will be the ruling ideas of the age. In both cases, ideology mirrors economic interest, though in complex ways. Hegemony, like the historic bloc, aims to make this static Marxist concept dynamic. Gramsci argues elsewhere that a stable state never rules by force alone but relies on a combination of coercion and consent. Dominance is secure only if a majority voluntarily complies with the law. Any group that aspires to rule must work to gain the people's consent, and this work must be done before any directly revolutionary effort to seize and hold on to "material force." The effort to win consent—an effort that is ongoing and never entirely successful (force will be needed against some recalcitrant citizens)—is the attempt to gain hegemony, the dominant position in a given society. Hegemony is "manufactured consent," created through the articulation of intellectuals in a public sphere in which contending articulations are also voiced.

Gramsci's dynamic model has been especially crucial for later British Marxists and for the version of cultural studies that comes from Britain. Leading figures in cultural studies such as STUART HALL and DICK HEBDIGE use the concept of hegemony to move away from the class-based politics of the Labour Party; they embrace instead a cultural politics that emphasizes the need of intellectuals to contest power in multiple ways and to engage issues of race, gender, and identity. The most frequent criticisms of Gramsci also resurface in evaluations of British cultural studies. Orthodox Marxists worry that concentrating on cultural influences on behavior will cause material and economic factors to slide from view. For those outside the Marxist tradition, the focus on intellectuals seems potentially antidemocratic, while the stress on gaining power within a conflicted social field often moves issues of ethics and justice to the margins. Despite such criticisms, Gramsci's focus on the cultural work that intellectuals do, joined with his revision of key Marxist concepts, ensures his continuing influence within cultural studies.

"The Formation of the Intellectuals" Keywords: Cultural Studies, Hegemony, Ideology, Marxism

The Formation of the Intellectuals¹

Are intellectuals an autonomous and independent social group, or does every social group have its own particular specialised category of intellectuals? The problem is a complex one, because of the variety of forms assumed to date by the real historical process of formation of the different categories of intellectuals.

1. Translated by Quintin Hoare and Geoffrey Nowell Smith, who occasionally retain the original Italian in brackets.

The most important of these forms are two:

1. Every social group, coming into existence on the original terrain of an essential function in the world of economic production, creates together with itself, organically, one or more strata of intellectuals which give it homogeneity and an awareness of its own function not only in the economic but also in the social and political fields. The capitalist entrepreneur creates alongside himself the industrial technician, the specialist in political economy, the organisers of a new culture, of a new legal system, etc. It should be noted that the entrepreneur himself represents a higher level of social elaboration, already characterised by a certain directive [*dirigente*] and technical (i.e. intellectual) capacity: he must have a certain technical capacity, not only in the limited sphere of his activity and initiative but in other spheres as well, at least in those which are closest to economic production. He must be an organiser of masses of men; he must be an organiser of the "confidence" of investors in his business, of the customers for his product, etc.

If not all entrepreneurs, at least an *élite* amongst them must have the capacity to be an organiser of society in general, including all its complex organism of services, right up to the state organism, because of the need to create the conditions most favourable to the expansion of their own class; or at the least they must possess the capacity to choose the deputies (specialised employees) to whom to entrust this activity of organising the general system of relationships external to the business itself. It can be observed that the "organic" intellectuals which every new class creates alongside itself and elaborates in the course of its development, are for the most part "specialisations" of partial aspects of the primitive activity of the new social type which the new class has brought into prominence.²

Even feudal lords were possessors of a particular technical capacity, military capacity, and it is precisely from the moment at which the aristocracy loses its monopoly of technico-military capacity that the crisis of feudalism begins. But the formation of intellectuals in the feudal world and in the preceding classical world is a question to be examined separately: this formation and elaboration follows ways and means which must be studied concretely. Thus it is to be noted that the mass of the peasantry, although it performs an essential function in the world of production, does not elaborate its own "organic" intellectuals, nor does it "assimilate" any stratum of "traditional" intellectuals, although it is from the peasantry that other social groups draw many of their intellectuals and a high proportion of traditional intellectuals are of peasant origin.

2. However, every "essential" social group which emerges into history out of the preceding economic structure, and as an expression of a development of this structure, has found (at least in all of history up to the present) categories of intellectuals already in existence and which seemed indeed to represent an historical continuity uninterrupted even by the most complicated and radical changes in political and social forms.

2. [Gaetano] Mosca's *Elementi di Scienza Politica* [*Elements of Political Science*] (new expanded edition, 1923) is worth looking at in this connection. Mosca's so-called "political class" is nothing other than the intellectual category of the dominant social group. Mosca's concept of "political class"

can be connected with Pareto's concept of the *élite*, which is another attempt to interpret the historical phenomena of the intellectuals and their function in the life of the state and of society [Gramsci's note]. Vilfredo Pareto (1848–1923), Italian economist and sociologist.

The most typical of these categories of intellectuals is that of the ecclesiastics, who for a long time (for a whole phase of history, which is partly characterised by this very monopoly) held a monopoly of a number of important services: religious ideology, that is the philosophy and science of the age, together with schools, education, morality, justice, charity, good works, etc. The category of ecclesiastics can be considered the category of intellectuals organically bound to the landed aristocracy. It had equal status juridically with the aristocracy, with which it shared the exercise of feudal ownership of land, and the use of state privileges connected with property.³ But the monopoly held by the ecclesiastics in the superstructural field⁴ was not exercised without a struggle or without limitations, and hence there took place the birth, in various forms (to be gone into and studied concretely), of other categories, favoured and enabled to expand by the growing strength of the central power of the monarch, right up to absolutism. Thus we find the formation of the *noblesse de robe*,⁵ with its own privileges, a stratum of administrators, etc., scholars and scientists, theorists, non-ecclesiastical philosophers, etc.

Since these various categories of traditional intellectuals experience through an "*esprit de corps*" their uninterrupted historical continuity and their special qualification, they thus put themselves forward as autonomous and independent of the dominant social group. This self-assessment is not without consequences in the ideological and political field, consequences of wide-ranging import. The whole of idealist philosophy⁶ can easily be connected with this position assumed by the social complex of intellectuals and can be defined as the expression of that social utopia by which the intellectuals think of themselves as "independent", autonomous, endowed with a character of their own, etc.

One should note however that if the Pope and the leading hierarchy of the Church consider themselves more linked to Christ and to the apostles than they are to senators Agnelli and Benni, the same does not hold for Gentile and Croce,⁷ for example: Croce in particular feels himself closely linked to Aristotle and Plato,⁸ but he does not conceal, on the other hand, his links with senators Agnelli and Benni, and it is precisely here that one can discern the most significant character of Croce's philosophy.

3. For one category of these intellectuals, possibly the most important after the ecclesiastical for its prestige and the social function it performed in primitive societies, the category of *medical men* in the wide sense, that is all those who "struggle" or seem to struggle against death and disease, compare the *Storia della medicina* [1927, *A History of Medicine*] of Arturo Castiglioni. Note that there has been a connection between religion and medicine, and in certain areas there still is: hospitals in the hands of religious orders for certain organisational functions, apart from the fact that wherever the doctor appears, so does the priest (exorcism, various forms of assistance, etc.). Many great religious figures were and are conceived of as great "healers": the idea of miracles, up to the resurrection of the dead. Even in the case of kings the belief long survived that they could heal with the laying on of hands, etc. [Gramsci's note].

4. From this has come the general sense of "intellectual" or "specialist" of the word *chierico* (clerk, cleric) in many languages of romance origin or heavily influenced, through church Latin, by the romance languages, together with its correlative

laico (lay, layman) in the sense of profane, non-specialist [Gramsci's note].

5. Nobility of the robe or gown (French); Gramsci refers to judges and lawyers.

6. A philosophy that posits the existence of ideas, motives, and actions separate from their material, economic origins and their consequences.

7. Benedetto Croce (1866–1952), the major liberal, idealist philosopher of Italy; a staunch opponent of fascism, his international fame protected him. Giovanni Agnelli (1866–1945), founder of Fiat and an Italian senator. Antonio Benni (1880–1945), industrialist turned politician, later a Fascist minister. Giovanni Gentile (1874–1944), Sicilian philosopher, early ally of Croce, and later Fascist minister of education. Gramsci's point is that Croce, despite his idealism and antifascism, understands the realities of political and economic power, taking care to maintain good relations with his friends in high places.

8. For the Greek philosophers ARISTOTLE (384–322 B.C.E.) and PLATO (ca. 427–ca. 347 B.C.E.), see above.

What are the “maximum” limits of acceptance of the term “intellectual”? Can one find a unitary criterion to characterise equally all the diverse and disparate activities of intellectuals and to distinguish these at the same time and in an essential way from the activities of other social groupings? The most widespread error of method seems to me that of having looked for this criterion of distinction in the intrinsic nature of intellectual activities, rather than in the ensemble of the system of relations in which these activities (and therefore the intellectual groups who personify them) have their place within the general complex of social relations. Indeed the worker or proletarian, for example, is not specifically characterised by his manual or instrumental work, but by performing this work in specific conditions and in specific social relations (apart from the consideration that purely physical labour does not exist and that even Taylor’s⁹ phrase of “trained gorilla” is a metaphor to indicate a limit in a certain direction: in any physical work, even the most degraded and mechanical, there exists a minimum of technical qualification, that is, a minimum of creative intellectual activity). And we have already observed that the entrepreneur, by virtue of his very function, must have to some degree a certain number of qualifications of an intellectual nature although his part in society is determined not by these, but by the general social relations which specifically characterise the position of the entrepreneur within industry.

All men are intellectuals, one could therefore say: but not all men have in society the function of intellectuals.¹

When one distinguishes between intellectuals and non-intellectuals, one is referring in reality only to the immediate social function of the professional category of the intellectuals, that is, one has in mind the direction in which their specific professional activity is weighted, whether towards intellectual elaboration or towards muscular-nervous effort. This means that, although one can speak of intellectuals, one cannot speak of non-intellectuals, because non-intellectuals do not exist. But even the relationship between efforts of intellectual-cerebral elaboration and muscular-nervous effort is not always the same, so that there are varying degrees of specific intellectual activity. There is no human activity from which every form of intellectual participation can be excluded: *homo faber* cannot be separated from *homo sapiens*.² Each man, finally, outside his professional activity, carries on some form of intellectual activity, that is, he is a “philosopher”, an artist, a man of taste, he participates in a particular conception of the world, has a conscious line of moral conduct, and therefore contributes to sustain a conception of the world or to modify it, that is, to bring into being new modes of thought.

The problem of creating a new stratum of intellectuals consists therefore in the critical elaboration of the intellectual activity that exists in everyone at a certain degree of development, modifying its relationship with the muscular-nervous effort towards a new equilibrium, and ensuring that the

9. Frederick Taylor (1856–1915), American efficiency expert who greatly influenced the organization of factory work. In *The Principles of Scientific Management* (1911), he declared that he believed an intelligent gorilla could be trained to handle pig iron more efficiently than any man.

1. Thus, because it can happen that everyone at some time fries a couple of eggs or sews up a tear in a jacket, we do not necessarily say that everyone is a cook or a tailor [Gramsci’s note].

2. Literally, “man the thinker” (Latin). *Homo faber*: man the maker (Latin).

muscular-nervous effort itself, in so far as it is an element of a general practical activity, which is perpetually innovating the physical and social world, becomes the foundation of a new and integral conception of the world. The traditional and vulgarised type of the intellectual is given by the man of letters, the philosopher, the artist. Therefore journalists, who claim to be men of letters, philosophers, artists, also regard themselves as the "true" intellectuals. In the modern world, technical education, closely bound to industrial labour even at the most primitive and unqualified level, must form the basis of the new type of intellectual.

On this basis the weekly *Ordine Nuovo*³ worked to develop certain forms of new intellectualism and to determine its new concepts, and this was not the least of the reasons for its success, since such a conception corresponded to latent aspirations and conformed to the development of the real forms of life. The mode of being of the new intellectual can no longer consist in eloquence, which is an exterior and momentary mover of feelings and passions, but in active participation in practical life, as constructor, organiser, "permanent persuader" and not just a simple orator (but superior at the same time to the abstract mathematical spirit); from technique-as-work one proceeds to technique-as-science and to the humanistic conception of history, without which one remains "specialised" and does not become "directive" (specialised and political).

Thus there are historically formed specialised categories for the exercise of the intellectual function. They are formed in connection with all social groups, but especially in connection with the more important, and they undergo more extensive and complex elaboration in connection with the dominant social group. One of the most important characteristics of any group that is developing towards dominance is its struggle to assimilate and to conquer "ideologically" the traditional intellectuals, but this assimilation and conquest is made quicker and more efficacious the more the group in question succeeds in simultaneously elaborating its own organic intellectuals.

The enormous development of activity and organisation of education in the broad sense in the societies that emerged from the medieval world is an index of the importance assumed in the modern world by intellectual functions and categories. Parallel with the attempt to deepen and to broaden the "intellectuality" of each individual, there has also been an attempt to multiply and narrow the various specialisations. This can be seen from educational institutions at all levels, up to and including the organisms that exist to promote so-called "high culture" in all fields of science and technology.

School is the instrument through which intellectuals of various levels are elaborated. The complexity of the intellectual function in different states can be measured objectively by the number and gradation of specialised schools: the more extensive the "area" covered by education and the more numerous the "vertical" "levels" of schooling, the more complex is the cultural world, the civilisation, of a particular state. A point of comparison can be found in the sphere of industrial technology: the industrialisation of a country can be measured by how well equipped it is in the production of

3. *New Order*, a socialist magazine edited by Gramsci in 1919–20.

machines with which to produce machines, and in the manufacture of ever more accurate instruments for making both machines and further instruments for making machines, etc. The country which is best equipped in the construction of instruments for experimental scientific laboratories and in the construction of instruments with which to test the first instruments, can be regarded as the most complex in the technical-industrial field, with the highest level of civilisation, etc. The same applies to the preparation of intellectuals and to the schools dedicated to this preparation; schools and institutes of high culture can be assimilated to each other. In this field also, quantity cannot be separated from quality. To the most refined technical-cultural specialisation there cannot but correspond the maximum possible diffusion of primary education and the maximum care taken to expand the middle grades numerically as much as possible. Naturally this need to provide the widest base possible for the selection and elaboration of the top intellectual qualifications—i.e. to give a democratic structure to high culture and top-level technology—is not without its disadvantages: it creates the possibility of vast crises of unemployment for the middle intellectual strata, and in all modern societies this actually takes place.

It is worth noting that the elaboration of intellectual strata in concrete reality does not take place on the terrain of abstract democracy but in accordance with very concrete traditional historical processes. Strata have grown up which traditionally “produce” intellectuals and these strata coincide with those which have specialised in “saving”, i.e. the petty and middle landed bourgeoisie and certain strata of the petty and middle urban bourgeoisie. The varying distribution of different types of school (classical and professional) over the “economic” territory and the varying aspirations of different categories within these strata determine, or give form to, the production of various branches of intellectual specialisation. Thus in Italy the rural bourgeoisie produces in particular state functionaries and professional people, whereas the urban bourgeoisie produces technicians for industry. Consequently it is largely northern Italy which produces technicians and the South which produces functionaries and professional men.

The relationship between the intellectuals and the world of production is not as direct as it is with the fundamental social groups but is, in varying degrees, “mediated” by the whole fabric of society and by the complex of superstructures, of which the intellectuals are, precisely, the “functionaries”. It should be possible both to measure the “organic quality” [*organicità*] of the various intellectual strata and their degree of connection with a fundamental social group, and to establish a gradation of their functions and of the superstructures from the bottom to the top (from the structural base upwards). What we can do, for the moment, is to fix two major superstructural “levels”: the one that can be called “civil society”, that is the ensemble of organisms commonly called “private”, and that of “political society” or “the State”. These two levels correspond on the one hand to the function of “hegemony” which the dominant group exercises throughout society and on the other hand to that of “direct domination” or command exercised through the State and “juridical” government. The functions in question are precisely organisational and connective. The intellectuals are the dominant group’s “deputies” exercising the subaltern functions of social hegemony and political government. These comprise:

1. The “spontaneous” consent given by the great masses of the population to the general direction imposed on social life by the dominant fundamental group; this consent is “historically” caused by the prestige (and consequent confidence) which the dominant group enjoys because of its position and function in the world of production.

2. The apparatus of state coercive power which “legally” enforces discipline on those groups who do not “consent” either actively or passively. This apparatus is, however, constituted for the whole of society in anticipation of moments of crisis of command and direction when spontaneous consent has failed.

This way of posing the problem has as a result a considerable extension of the concept of intellectual, but it is the only way which enables one to reach a concrete approximation of reality. It also clashes with preconceptions of caste. The function of organising social hegemony and state domination certainly gives rise to a particular division of labour and therefore to a whole hierarchy of qualifications in some of which there is no apparent attribution of directive or organisational functions. For example, in the apparatus of social and state direction there exist a whole series of jobs of a manual and instrumental character (non-executive work, agents rather than officials or functionaries). It is obvious that such a distinction has to be made just as it is obvious that other distinctions have to be made as well. Indeed, intellectual activity must also be distinguished in terms of its intrinsic characteristics, according to levels which in moments of extreme opposition represent a real qualitative difference—at the highest level would be the creators of the various sciences, philosophy, art, etc., at the lowest the most humble “administrators” and divulgators of pre-existing, traditional, accumulated intellectual wealth.⁴

In the modern world the category of intellectuals, understood in this sense, has undergone an unprecedented expansion. The democratic-bureaucratic system has given rise to a great mass of functions which are not all justified by the social necessities of production, though they are justified by the political necessities of the dominant fundamental group. Hence Loria’s⁵ conception of the unproductive “worker” (but unproductive in relation to whom and to what mode of production?), a conception which could in part be justified if one takes account of the fact that these masses exploit their position to take for themselves a large cut out of the national income. Mass formation has standardised individuals both psychologically and in terms of individual qualification and has produced the same phenomena as with other standardised masses: competition which makes necessary organisations for the defence of professions, unemployment, over-production in the schools, emigration, etc.

1929–33

1948–51

4. Here again military organisation offers a model of complex gradations between subaltern officers, senior officers and general staff, not to mention the NCOs, whose importance is greater than is generally admitted. It is worth observing that all these parts feel a solidarity and indeed it

is the lower strata that display the most blatant *esprit de corps*, from which they derive a certain “conceit” which is apt to lay them open to jokes and witticisms [Gramsci’s note].

5. Achille Loria (1857–1943), Italian economic theorist.

ZORA NEALE HURSTON

1891–1960

Zora Neale Hurston's *Their Eyes Were Watching God* (1937) is said to be the most frequently taught text in U.S. colleges and universities, but few readers have paid attention to the rich body of her work—including other novels, stories, and cultural criticism. Hurston identified herself as a “literary anthropologist,” a phrase that reflects her training in anthropology at Columbia University, her deep and abiding interest in folklore, and her commitment to the creative power of the literary imagination.

Born near Tuskegee, Alabama, Hurston grew up in Eatonville, Florida, the first incorporated, self-governing black township in the United States, where her father, a Baptist minister, served three terms as mayor. Her childhood experiences played a central role in the development of the characters and themes of her literary work. As Hurston's novels and her autobiography *Dust Tracks on a Road* (1942) attest, she felt an intimate bond to the customs, beliefs, and forms of speech of the African American community. Hurston studied between 1918 and 1924 at Howard University in Washington, D.C. Encouraged by Alain Locke, one of her teachers and a distinguished African American intellectual, she first submitted a story to the journal *Opportunity*, where it was published in December 1924. Hurston also contributed the story “Spunk” to Locke's groundbreaking collection *The New Negro* (1925).

In 1925 Hurston traveled to New York City, where she soon became one of the leading lights of the Harlem Renaissance, known both for her plays and stories and for her oral performances of black folklore and folktales. Helped by white patrons, she was able to attend Barnard College, studying with the eminent anthropologist Franz Boas, a professor at Columbia; she graduated in 1928. Her research in the South and in the Caribbean formed the basis of her landmark collection of African American folklore, *Mules and Men* (1935), which was followed by a second compilation, *Tell My Horse* (1938).

While undertaking ethnographic study in Haiti, Hurston completed *Their Eyes Were Watching God*. She had published one novel already—*Jonah's Gourd Vine* (1934), which focuses on a Baptist minister—and other novels would follow, including *Moses, Man of the Mountain* (1939), her retelling of the Exodus story. But *Their Eyes Were Watching God* is her masterpiece, an evocative, often painful, but ultimately celebratory account of its black heroine's quest for emotional and sexual fulfillment and personal freedom.

Hurston's defense of the language she uses in *Their Eyes Were Watching God*, “Characteristics of Negro Expression” (1934), had appeared three years earlier. In that essay, our first selection, she describes the rich, flexible resources of African American dialect and folk expression. Her subject is language in the broadest sense—including gestures and forms of music and dance—but she dwells particularly on African American speech, which had so often been mocked and ridiculed, misinterpreted and devalued. “Negro dialect” was suppressed by schools and attacked by contemporary critics of language and culture such as H. L. Mencken. Hurston praises and celebrates the linguistic prowess and cultural greatness of her people, even as she also points to (and calls attention to the flaws in) efforts by white artists to adapt distinctively African American styles and expressions in language and, especially, in music and dance.

Hurston's career peaked in the 1930s. Her later novels were less successful, and other writings were left unfinished. She had come under attack by some black writers, such as Richard Wright and Ralph Ellison, who blasted *Their Eyes Were Watch-*

ing *God* as a “minstrel novel” and her writing as “calculated burlesque”; moreover, the benefits she saw in a black-run community like Eatonville made her suspicious of demands for integration, a view that set her outside the African American intellectual mainstream in the 1950s. During the final decade of her life, she worked as a cleaning woman and at other menial jobs. She died in poverty, forgotten, with none of her books in print. In the early 1970s, the African American novelist Alice Walker wrote movingly of locating the approximate site of Hurston’s unmarked grave; Walker’s essays, particularly her comments on *Their Eyes Were Watching God*, were instrumental in reviving Hurston’s reputation.

In her last novel, *Seraph on the Suwanee* (1948), Hurston focused on a white woman, a shift implying a view of artistic freedom that our second selection, “What White Publishers Won’t Print” (1950), makes explicit. Though her emphasis is on the need for publishers, theater producers, editors, and audiences to accept a more honest and nuanced treatment of black and other minority characters, she argues here against any restrictions on subject matter. For Hurston, it is crucial that writers and readers strive to break through racial and ethnic stereotypes, even when readers find the new kinds of characters and themes unfamiliar and disorienting. She stresses, on the one hand, that the consciousness of black people is different (and not captured by the reductive, distorted versions in popular thought and in past and present literature). But on the other hand, she contends that all individuals have much in common: “Minorities,” she explains, are “just like everybody else.”

Though set in a specific political context, when cold war tensions seemed to make imperative a national unity that appeared to be unattainable without better understanding of racial and ethnic minorities, “What White Publishers Won’t Print” is in large part a lively adaptation of an oft-repeated (and historically very important) argument. In the nineteenth century, Frederick Douglass and other African American abolitionists argued that black men and women, slave and free alike, must be portrayed and understood as authentic individuals; many twentieth-century black writers and critics, including Wright, Ellison, W. E. B. DU BOIS, LANGSTON HUGHES, and James Baldwin, similarly attacked stereotyping and argued for artistic freedom. Hurston’s call for literary works about average and well-to-do African Americans is both a plea for realism and a criticism of the typical depiction of “Negro” characters as quaint or exceptional.

But Hurston’s essay also bears witness to her ongoing literary, critical, and cultural disputes with her peers. In her judgment, because of their emphasis on politics they misleadingly represent black experience as primarily defined by white racism, from which there is no escape. Hurston stresses that the search for freedom is profoundly personal and cannot be captured by the category of race alone. As “What White Publishers Won’t Print” reveals, Hurston insists that the independence to explore the inner lives of her characters, white as well as black, is essential both sociopolitically and artistically.

Characteristics of Negro Expression

Drama

The Negro's universal mimicry is not so much a thing in itself as an evidence of something that permeates his entire self. And that thing is drama.

His very words are action words. His interpretation of the English language is in terms of pictures. One act described in terms of another. Hence the rich metaphor and simile.

The metaphor is of course very primitive. It is easier to illustrate than it is to explain because action came before speech. Let us make a parallel. Language is like money. In primitive communities actual goods, however bulky, are bartered for what one wants. This finally evolves into coin, the coin being not real wealth but a symbol of wealth. Still later even coin is abandoned for legal tender, and still later for checks in certain usages.

Every phase of Negro life is highly dramatized. No matter how joyful or how sad the case there is sufficient poise for drama. Everything is acted out. Unconsciously for the most part of course. There is an impromptu ceremony always ready for every hour of life. No little moment passes unadorned.

Now the people with highly developed languages have words for detached ideas. That is legal tender. "That-which-we-squat-on" has become "chair." "Groan-causer" has evolved into "spear," and so on. Some individuals even conceive of the equivalent of check words, like "ideation" and "pleonastic." Perhaps we might say that *Paradise Lost* and *Sartor Resartus*¹ are written in check words.

The primitive man exchanges descriptive words. His terms are all close-fitting. Frequently the Negro, even with detached words in his vocabulary—not evolved in him but transplanted on his tongue by contact—must add action to it to make it do. So we have "chop-axe," "sitting-chair," "cook-pot" and the like because the speaker has in his mind the picture of the object in use. Action. Everything illustrated. So we can say the white man thinks in a written language and the Negro thinks in hieroglyphics.

A bit of Negro drama familiar to all is the frequent meeting of two opponents who threaten to do atrocious murder one upon the other.

Who has not observed a robust young Negro chap posing upon a street corner, possessed of nothing but his clothing, his strength and his youth? Does he bear himself like a pauper? No, Louis XIV² could be no more insolent in his assurance. His eyes say plainly "Female, halt!" His posture exults "Ah, female, I am the eternal male, the giver of life. Behold in my hot flesh all the delights of this world. Salute me, I am strength." All this with a languid posture, there is no mistaking his meaning.

A Negro girl strolls past the corner lounge. Her whole body panging and posing. A slight shoulder movement that calls attention to her bust, that is all of a dare. A hippy undulation below the waist that is a sheaf of promises tied with conscious power. She is acting out "I'm a darned sweet woman and you know it."

1. A dense philosophical satire (1833) by the Scottish-born historian and essayist Thomas Carlyle. *Paradise Lost* (1667), epic poem by John Milton.

2. King of France (1638–1715); his reign (1673–1715) was a flowering of French art, literature, and extravagant style.

These little plays by strolling players are acted out daily in a dozen streets in a thousand cities, and no one ever mistakes the meaning.

Will to Adorn

The will to adorn is the second most notable characteristic in Negro expression. Perhaps his idea of ornament does not attempt to meet conventional standards, but it satisfies the soul of its creator.

In this respect the American Negro has done wonders to the English language. It has often been stated by etymologists that the Negro has introduced no African words to the language. This is true, but it is equally true that he has made over a great part of the tongue to his liking and has had his revision accepted by the ruling class. No one listening to a Southern white man talk could deny this. Not only has he softened and toned down strongly consonanted words like "aren't" to "aint" and the like, he has made new force words out of old feeble elements. Examples of this are "ham-shanked," "battle-hammed," "double-teen," "bodaciously," "muffle-jawed."

But the Negro's greatest contribution to the language is: (1) the use of metaphor and simile; (2) the use of the double descriptive; (3) the use of verbal nouns.

1. Metaphor and Simile

One at a time, like lawyers going to heaven.

You sho is propaganda.

Sobbing hearted.

I'll beat you till: (a) rope like okra, (b) slack like lime, (c) smell like onions.

Fatal for naked.

Kyting³ along.

That's a lynch.

That's a rope.

Cloakers—deceivers.

Regular as pig-tracks.

Mule blood—black molasses.

Syndicating—gossiping.

Flambeaux—cheap café (lighted by flambeaux).

To put yo'self on de ladder.

2. The Double Descriptive

High-tall.

Little-tee-ninchy (tiny).

Low-down.

Top-superior.

Sham-polish.

Lady-people.

Kill-dead.

Hot-boiling.

Chop-axe.

3. Hurrying.

Sitting-chairs.
 De watch wall.
 Speedy-hurry.
 More great and more better.

3. Verbal Nouns

She features somebody I know.
 Funeralize.
 Sense me into it.
 Puts the shamery on him.
 'Taint everybody you kin confidence.
 I wouldn't friend with her.
 Jooking—playing piano or guitar as it is done in Jook-houses (houses
 of ill-fame).
 Uglying away.
 I wouldn't scorn my name all up on you.
 Bookooing (beaucoup) around—showing off.

Nouns from Verbs

Won't stand a broke.
 She won't take a listen.
 He won't stand straightening.
 That is such a compliment.
 That's a lynch.

The stark, trimmed phrases of the Occident seem too bare for the voluptuous child of the sun, hence the adornment. It arises out of the same impulse as the wearing of jewelry and the making of sculpture—the urge to adorn.

On the walls of the homes of the average Negro one always finds a glut of gaudy calendars, wall pockets and advertising lithographs. The sophisticated white man or Negro would tolerate none of these, even if they bore a likeness to the Mona Lisa.⁴ No commercial art for decoration. Nor the calendar nor the advertisement spoils the picture for this lowly man. He sees the beauty in spite of the declaration of the Portland Cement Works or the butcher's announcement. I saw in Mobile a room in which there was an overstuffed mohair living-room suite, an imitation mahogany bed and chifforobe, a console victrola.⁵ The walls were gaily papered with Sunday supplements of the *Mobile Register*. There were seven calendars and three wall pockets. One of them was decorated with a lace doily. The mantel-shelf was covered with a scarf of deep homemade lace, looped up with a huge bow of pink crepe paper. Over the door was a huge lithograph showing the Treaty of Versailles⁶ being signed with a Waterman fountain pen.

It was grotesque, yes. But it indicated the desire for beauty. And decorating a decoration, as in the case of the doily on the gaudy wall pocket, did not seem out of place to the hostess. The feeling back of such an act is that there can never be enough of beauty, let alone too much. Perhaps she is right. We each have our standards of art, and thus are we all interested parties and so unfit to pass judgment upon the art concepts of others.

4. Painting (ca. 1504) by Leonardo da Vinci.

5. Brand of phonograph.

6. Peace treaty of 1919 that formally ended World War I.

Whatever the Negro does of his own volition he embellishes. His religious service is for the greater part excellent prose poetry. Both prayers and sermons are tooled and polished until they are true works of art. The supplication is forgotten in the frenzy of creation. The prayer of the white man is considered humorous in its bleakness. The beauty of the Old Testament does not exceed that of a Negro prayer.

Angularity

After adornment the next most striking manifestation of the Negro is Angularity. Everything that he touches becomes angular. In all African sculpture and doctrine of any sort we find the same thing.

Anyone watching Negro dancers will be struck by the same phenomenon. Every posture is another angle. Pleasing, yes. But an effect achieved by the very means which an European strives to avoid.

The pictures on the walls are hung at deep angles. Furniture is always set at an angle. I have instances of a piece of furniture in the *middle* of a wall being set with one end nearer the wall than the other to avoid the simple straight line.

Asymmetry

Asymmetry is a definite feature of Negro art. I have no samples of true Negro painting unless we count the African shields, but the sculpture and carvings are full of this beauty and lack of symmetry.

It is present in the literature, both prose and verse. I offer an example of this quality in verse from Langston Hughes:⁷

I ain't gonna mistreat ma good gal any more,
I'm just gonna kill her next time she makes me sore.

I treats her kind but she don't do me right,
She fights and quarrels most ever' night.

I can't have no woman's got such low-down ways
Cause de blue gum woman aint de style now'days.

I brought her from the South and she's goin on back,
Else I'll use her head for a carpet track.

It is the lack of symmetry which makes Negro dancing so difficult for white dancers to learn. The abrupt and unexpected changes. The frequent change of key and time are evidences of this quality in music. (Note the St. Louis Blues.)⁸

The dancing of the justly famous Bo-Jangles and Snake Hips⁹ are excellent examples.

7. African American poet (1902–1967; see below); the poem is "Evil Woman" (1927).

8. Song written in 1914 by W. C. Handy, performed most notably by the blues singer Bessie Smith, and often called the most popular blues

song ever written.

9. Nicknames of, respectively, the African American dancers Bill Robinson (1878–1949) and Earl Tucker (1905–1937).

The presence of rhythm and lack of symmetry are paradoxical, but there they are. Both are present to a marked degree. There is always rhythm, but it is the rhythm of segments. Each unit has a rhythm of its own, but when the whole is assembled it is lacking in symmetry. But easily workable to a Negro who is accustomed to the break in going from one part to another, so that he adjusts himself to the new tempo.

Dancing

Negro dancing is dynamic suggestion. No matter how violent it may appear to the beholder, every posture gives the impression that the dancer will do much more. For example, the performer flexes one knee sharply, assumes a ferocious face mask, thrusts the upper part of the body forward with clenched fists, elbows taut as in hard running or grasping a thrusting blade. That is all. But the spectator himself adds the picture of ferocious assault, hears the drums and finds himself keeping time with the music and tensing himself for the struggle. It is compelling insinuation. That is the very reason the spectator is held so rapt. He is participating in the performance himself—carrying out the suggestions of the performer.

The difference in the two arts is: the white dancer attempts to express fully; the Negro is restrained, but succeeds in gripping the beholder by forcing him to finish the action the performer suggests. Since no art ever can express all the variations conceivable, the Negro must be considered the greater artist, his dancing is realistic suggestion, and that is about all a great artist can do.

Negro Folklore

Negro folklore is not a thing of the past. It is still in the making. Its great variety shows the adaptability of the black man: nothing is too old or too new, domestic or foreign, high or low, for his use. God and the Devil are paired, and are treated no more reverently than Rockefeller and Ford.¹ Both of these men are prominent in folklore, Ford being particularly strong, and they talk and act like good-natured stevedores or mill-hands. Ole Massa is sometimes a smart man and often a fool. The automobile is ranged alongside of the oxcart. The angels and the apostles walk and talk like section hands.² And through it all walks Jack, the greatest culture hero of the South; Jack beats them all—even the Devil, who is often smarter than God.

Culture Heroes

The Devil is next after Jack as a culture hero. He can outsmart everyone but Jack. God is absolutely no match for him. He is good-natured and full of humor. The sort of person one may count on to help out in any difficulty.

Peter the Apostle is the third in importance. One need not look far for the explanation. The Negro is not a Christian really. The primitive gods are not deities of too subtle inner reflection; they are hardworking bodies who serve

1. Henry Ford (1863–1947), American automobile manufacturer and pioneer of the assembly line. John D. Rockefeller (1839–1937), U.S. oil

magnate and philanthropist of enormous wealth.

2. Laborers in work gangs assigned to a section of a railroad.

their devotees just as laboriously as the suppliant serves them. Gods of physical violence, stopping at nothing to serve their followers. Now of all the apostles Peter is the most active. When the other ten fell back trembling in the garden, Peter wielded the blade on the posse.³ Peter first and foremost in all action. The gods of no peoples have been philosophic until the people themselves have approached that state.

The rabbit, the bear, the lion, the buzzard, the fox are culture heroes from the animal world. The rabbit is far in the lead of all the others and is blood brother to Jack. In short, the trickster-hero of West Africa has been transplanted to America.

John Henry⁴ is a culture hero in song, but no more so than Stacker Lee, Smokey Joe or Bad Lazarus. There are many, many Negroes who have never heard of any of the song heroes, but none who do not know John (Jack) and the rabbit.

EXAMPLES OF FOLKLORE AND THE MODERN CULTURE HERO

Why de Porpoise's Tail Is On Crosswise

Now, I want to tell you 'bout de porpoise. God had done made de world and everything. He set de moon and de stars in de sky. He got de fishes of de sea, and de fowls of de air completed.

He made de sun and hung it up. Then He made a nice gold track for it to run on. Then He said, "Now, Sun, I got everything made but Time. That's up to you. I want you to start out and go round de world on dis track just as fast as you kin make it. And de time it takes you to go and come, I'm going to call day and night." De Sun went zoonin' on cross de elements. Now, de porpoise was hanging round there and heard God what he tole de Sun, so he decided he'd take dat trip round de world hisself. He looked up and saw de Sun kytin' along, so he lit out too, him and dat Sun!

So de porpoise beat de Sun round de world by one hour and three minutes. So God said, "Aw naw, this aint gointer do! I didn't mean for nothin' to be faster than de Sun!" So God run dat porpoise for three days before he run him down and caught him, and took his tail off and put it on crossways to slow him up. Still he's de fastest thing in de water. And dat's why de porpoise got his tail on crossways.

Rockefeller and Ford

Once John D. Rockefeller and Henry Ford was woofing at each other. Rockefeller told Henry Ford he could build a solid gold road round the world. Henry Ford told him if he would he would look at it and see if he liked it, and if he did he would buy it and put one of his tin lizzies⁵ on it.

3. See John 18.10–11: Peter draws a sword and cuts off the ear of a servant who is among those coming to seize Jesus.

4. Legendary and prodigiously strong black hero of American tall tales and ballads, and by far the

best known of the "song heroes" named here (though in the 1930s the black bandleader Cab Calloway recorded songs featuring Stacker Lee and Smokey Joe).

5. Model T Fords (the first mass-produced car).

Originality

It has been said so often that the Negro is lacking in originality that it has almost become a gospel. Outward signs seem to bear this out. But if one looks closely its falsity is immediately evident.

It is obvious that to get back to original sources is much too difficult for any group to claim very much as a certainty. What we really mean by originality is the modification of ideas. The most ardent admirer of the great Shakespeare cannot claim first source even for him. It is his treatment of the borrowed material.

So if we look at it squarely, the Negro is a very original being. While he lives and moves in the midst of a white civilization, everything that he touches is reinterpreted for his own use. He has modified the language, mode of food preparation, practice of medicine, and most certainly the religion of his new country, just as he adapted to suit himself the Sheik haircut made famous by Rudolph Valentino.⁶

Everyone is familiar with the Negro's modification of the whites' musical instruments, so that his interpretation has been adopted by the white man himself and then reinterpreted. In so many words, Paul Whiteman⁷ is giving an imitation of a Negro orchestra making use of white-invented musical instruments in a Negro way. Thus has arisen a new art in the civilized world, and thus has our so-called civilization come. The exchange and re-exchange of ideas between groups.

Imitation

The Negro, the world over, is famous as a mimic. But this in no way damages his standing as an original. Mimicry is an art in itself. If it is not, then all art must fall by the same blow that strikes it down. When sculpture, painting, acting, dancing, literature neither reflect nor suggest anything in nature or human experience we turn away with a dull wonder in our hearts at why the thing was done. Moreover, the contention that the Negro imitates from a feeling of inferiority is incorrect. He mimics for the love of it. The group of Negroes who slavishly imitate is small. The average Negro glories in his ways. The highly educated Negro the same. The self-despisement lies in a middle class who scorns to do or be anything Negro. "That's just like a Nigger" is the most terrible rebuke one can lay upon this kind. He wears drab clothing, sits through a boresome church service, pretends to have no interest in the community, holds beauty contests, and otherwise apes all the mediocrities of the white brother. The truly cultured Negro scorns him, and the Negro "farthest down" is too busy "spreading his junk" in his own way to see or care. He likes his own things best. Even the group who are not Negroes but belong to the "sixth race,"⁸ buy such records as "Shake dat thing" and "Tight lak dat." They really enjoy hearing a good bible-beater preach, but wild horses could drag no such admission from them. Their ready-made expression is: "We done got away from all that now." Some refuse to countenance Negro music on the

6. Italian-born American actor (1895–1926), a star of silent films, including *The Sheik* (1921).

7. American conductor (1890–1967).

8. A new and higher race that will evolve in the Americas from a great amalgamation of all

the current races of the earth, according to the teachings of theosophy, a system of mystic and occult speculation popular in the late 19th and early 20th century.

grounds that it is niggerism, and for that reason should be done away with. Roland Hayes⁹ was thoroughly denounced for singing spirituals until he was accepted by white audiences. Langston Hughes is not considered a poet by this group because he writes of the man in the ditch, who is more numerous and real among us than any other.

But, this group aside, let us say that the art of mimicry is better developed in the Negro than in other racial groups. He does it as the mockingbird does it, for the love of it, and not because he wishes to be like the one imitated. I saw a group of small Negro boys imitating a cat defecating and the subsequent toilet of the cat. It was very realistic, and they enjoyed it as much as if they had been imitating a coronation ceremony. The dances are full of imitations of various animals. The buzzard lope, walking the dog, the pig's hind legs, holding the mule, elephant squat, pigeon's wing, falling off the log, seaboard (imitation of an engine starting), and the like.

It is said that Negroes keep nothing secret, that they have no reserve. This ought not to seem strange when one considers that we are an outdoor people accustomed to communal life. Add this to all-permeating drama and you have the explanation.

There is no privacy in an African village. Loves, fights, possessions are, to misquote Woodrow Wilson, "Open disagreements openly arrived at."¹ The community is given the benefit of a good fight as well as a good wedding. An audience is a necessary part of any drama. We merely go with nature rather than against it.

Discord is more natural than accord. If we accept the doctrine of the survival of the fittest there are more fighting honors than there are honors for other achievements. Humanity places premiums on all things necessary to its well-being, and a valiant and good fighter is valuable in any community. So why hide the light under a bushel? Moreover, intimidation is a recognized part of warfare the world over, and threats certainly must be listed under that head. So that a great threatener must certainly be considered an aid to the fighting machine. So then if a man or woman is a facile hurler of threats why should he or she not show their wares to the community? Hence the holding of all quarrels and fights in the open. One relieves one's pent-up anger and at the same time earns laurels in intimidation. Besides, one does the community a service. There is nothing so exhilarating as watching well-matched opponents go into action. The entire world likes action, for that matter. Hence prize-fighters become millionaires.

Likewise lovemaking is a biological necessity the world over and an art among Negroes. So that a man or woman who is proficient sees no reason why the fact should not be moot.² He swaggers. She struts hipply about. Songs are built on the power to charm beneath the bedclothes. Here again we have individuals striving to excel in what the community considers an art. Then if all of his world is seeking a great lover, why should he not speak right out loud?

It is all in a viewpoint. Lovemaking and fighting in all their branches are high arts, other things are arts among other groups where they brag about

9. American tenor (1887-1977).

1. In an address to Congress on January 8, 1918, President Wilson (1856-1924; 28th U.S. presi-

dent, 1913-21) spoke of "Open covenants of peace, openly arrived at."

2. Brought up.

their proficiency just as brazenly as we do about these things that others consider matters for conversation behind closed doors. At any rate, the white man is despised by Negroes as a very poor fighter individually, and a very poor lover. One Negro, speaking of white men, said, "White folks is alright when dey gits in de bank and on de law bench, but dey sho' kin lie about wimmen folks."

I pressed him to explain. "Well you see, white mens makes out they marries wimmen to look at they eyes, and they know they gits em for just what us gits em for. 'Nother thing, white mens say they goes clear round de world and wins all de wimmen folks way from they men folks. Dat's a lie too. They don't win nothin, they buys em. Now de way I figgers it, if a woman don't want me enough to be wid me, 'thout³ I got to pay her, she kin rock right on, but these here white men don't know what to do wid a woman when they gits her—dat's how come they gives they wimmen so much. They got to. Us wimmen works jus as hard as us does an come home an sleep wid us every night. They own wouldn't do it and its de mens fault. Dese white men done fooled theyself bout dese wimmen.

"Now me, I keeps me some wimmens all de time. Dat's whut dey wuz put here for—us mens to use. Dat's right now, Miss. Y'all wuz put here so us mens could have some pleasure. Course I don't run round like heap uh men folks. But if my ole lady go way from me and stay more'n two weeks, I got to git me somebody, aint I?"

The Jook

Jook is the word for a Negro pleasure house. It may mean a bawdy house. It may mean the house set apart on public works where the men and women dance, drink and gamble. Often it is a combination of all these.

In past generations the music was furnished by "boxes," another word for guitars. One guitar was enough for a dance; to have two was considered excellent. Where two were playing one man played the lead and the other seconded him. The first player was "picking" and the second was "framing," that is, playing chords while the lead carried the melody by dexterous finger work. Sometimes a third player was added, and he played a tom-tom effect on the low strings. Believe it or not, this is excellent dance music.

Pianos soon came to take the place of the boxes, and now player-pianos and victrolas are in all of the Jooks.

Musically speaking, the Jook is the most important place in America. For in its smelly, shoddy confines has been born the secular music known as blues, and on blues has been founded jazz. The singing and playing in the true Negro style is called "jooking."

The songs grow by incremental repetition as they travel from mouth to mouth and from Jook to Jook for years before they reach outside ears. Hence the great variety of subject-matter in each song.

The Negro dances circulated over the world were also conceived inside the Jooks. They too make the round of Jooks and public works before going into the outside world.

3. Without, unless.

In this respect it is interesting to mention the Black Bottom. I have read several false accounts of its origin and name. One writer claimed that it got its name from the black sticky mud on the bottom of the Mississippi river. Other equally absurd statements gummed the press. Now the dance really originated in the Jook section of Nashville, Tennessee, around Fourth Avenue. This is a tough neighborhood known as Black Bottom—hence the name.

The Charleston is perhaps forty years old, and was danced up and down the Atlantic seaboard from North Carolina to Key West, Florida.

The Negro social dance is slow and sensuous. The idea in the Jook is to gain sensation, and not so much exercise. So that just enough foot movement is added to keep the dancers on the floor. A tremendous sex stimulation is gained from this. But who is trying to avoid it? The man, the woman, the time and the place have met. Rather, little intimate names are indulged in to heap fire on fire.

These too have spread to all the world.

The Negro theatre, as built up by the Negro, is based on Jook situations, with women, gambling, fighting, drinking. Shows like "Dixie to Broadway"⁴ are only Negro in cast, and could just as well have come from pre-Soviet Russia.

Another interesting thing—Negro shows before being tampered with did not specialize in octoroon chorus girls. The girl who could hoist a Jook song from her belly and lam it against the front door of the theatre was the lead, even if she were as black as the hinges of hell. The question was "Can she jook?" She must also have a good belly wobble, and her hips must, to quote a popular work song, "Shake like jelly all over and be so broad, Lawd, Lawd, and be so broad." So that the bleached chorus is the result of a white demand and not the Negro's.

The woman in the Jook may be nappy headed and black, but if she is a good lover she gets there just the same. A favorite Jook song of the past has this to say:

Singer: It aint good looks dat takes you through dis world.

Audience: What is it, good mama?

Singer: Elgin movements⁵ in your hips
Twenty years guarantee.

And it always brought down the house too.

Oh de white gal rides in a Cadillac,
De yaller⁶ gal rides de same,
Black gal rides in a rusty Ford
But she gits dere just de same.

The sort of woman her men idealize is the type that is put forth in the theatre. The art-creating Negro prefers a not too thin woman who can shake like jelly all over as she dances and sings, and that is the type he put forth on the stage. She has been banished by the white producer and the Negro who takes his cue from the white.

4. A revue that opened on Broadway in 1924 featuring black performers, with music written by the black composer Will Vodery.

5. That is, the smooth movements of an Elgin watch.

6. Yellow (that is, mulatto).

Of course a black woman is never the wife of the upper class Negro in the North. This state of affairs does not obtain in the South, however. I have noted numerous cases where the wife was considerably darker than the husband. People of some substance, too.

This scornful attitude towards black women receives mouth sanction by the mud-sills.⁷

Even on the works and in the Jooks the black man sings disparagingly of black women. They say that she is evil. That she sleeps with her fists doubled up and ready for action. All over they are making a little drama of waking up a yaller wife and a black one.

A man is lying beside his yaller wife and wakes her up. She says to him, "Darling, do you know what I was dreaming when you woke me up?" He says, "No honey, what was you dreaming?" She says, "I dreamt I had done cooked you a big, fine dinner and we was setting down to eat out de same plate and I was setting on yo' lap jus huggin you and kissin you and you was so sweet."

Wake up a black woman, and before you kin git any sense into her she be done up and lammed you over the head four or five times. When you git her quiet she'll say, "Nigger, know whut I was dreamin when you woke me up?"

You say, "No honey, what was you dreamin?" She says, "I dreamt you shook yo' rusty fist under my nose and I split yo' head open wid a axe."

But in spite of disparaging fictitious drama, in real life the black girl is drawing on his account at the commissary. Down in the Cypress Swamp⁸ as he swings his axe he chants:

Dat ole black gal, she keep on grumblin,
New pair shoes, new pair shoes,
I'm goint to buy her shoes and stockings
Slippers too, slippers too.

Then adds aside: "Blacker de berry, sweeter de juice."

To be sure the black gal is still in power, men are still cutting and shooting their way to her pillow. To the queen of the Jook!

Speaking of the influence of the Jook, I noted that Mae West⁹ in "Sex" had much more flavor of the turpentine quarters¹ than she did of the white bawd. I know that the piece she played on the piano is a very old Jook composition. "Honey let yo' drawers hang low" had been played and sung in every Jook in the South for at least thirty-five years. It has always puzzled me why she thought it likely to be played in a Canadian bawdy house.

Speaking of the use of Negro material by white performers, it is astonishing that so many are trying it, and I have never seen one yet entirely realistic. They often have all the elements of the song, dance, or expression, but they are misplaced or distorted by the accent falling on the wrong element. Every one seems to think that the Negro is easily imitated when nothing is further from the truth. Without exception I wonder why the blackface comedians *are* blackface; it is a puzzle—good comedians, but darn poor niggers. Gershwin²

7. Those at the bottom of the social scale.

8. In southern Florida.

9. American actress (1892–1980), who began in burlesque and continued to specialize in double entendre in films; she wrote as well as starred in the 1926 play *Sex*.

1. The housing (usually shanties) for black work-

ers who collected tree sap to be processed into turpentine.

2. George Gershwin (1898–1937), American composer who wrote both Broadway musicals and concert works that incorporated jazz elements, including *Rhapsody in Blue* (1924).

and the other "Negro" rhapsodists come under this same axe. Just about as Negro as caviar or Ann Pennington's³ athletic Black Bottom. When the Negroes who knew the Black Bottom in its cradle saw the Broadway version they asked each other, "Is you learnt dat new Black Bottom yet?" Proof that it was not *their* dance.

And God only knows what the world has suffered from the white damsels who try to sing Blues.

The Negroes themselves have sinned also in this respect. In spite of the goings up and down on the earth, from the original Fisk Jubilee Singers⁴ down to the present, there has been no genuine presentation of Negro songs to white audiences. The spirituals that have been sung around the world are Negroid to be sure, but so full of musicians' tricks that Negro congregations are highly entertained when they hear their old songs so changed. They never use the new style songs, and these are never heard unless perchance some daughter or son has been off to college and returns with one of the old songs with its face lifted, so to speak.

I am of the opinion that this trick style of delivery was originated by the Fisk Singers; Tuskegee and Hampton⁵ followed suit and have helped spread this misconception of Negro spirituals. This Glee Club style has gone on so long and become so fixed among concert singers that it is considered quite authentic. But I say again, that not one concert singer in the world is singing the songs as the Negro song-makers sing them.

If anyone wishes to prove the truth of this let him step into some unfashionable Negro church and hear for himself.

To those who want to institute the Negro theatre, let me say it is already established. It is lacking in wealth, so it is not seen in the high places. A creature with a white head and Negro feet struts the Metropolitan boards. The real Negro theatre is in the Jooks and the cabarets. Self-conscious individuals may turn away the eye and say, "Let us search elsewhere for our dramatic art." Let 'em search. They certainly won't find it. Butter Beans and Susie,⁶ Bo-Jangles and Snake Hips are the only performers of the real Negro school it has ever been my pleasure to behold in New York.

Dialect

If we are to believe the majority of writers of Negro dialect and the burnt-cork artists,⁷ Negro speech is a weird thing, full of "ams" and "Ises." Fortunately we don't have to believe them. We may go directly to the Negro and let him speak for himself.

I know that I run the risk of being damned as an infidel for declaring that nowhere can be found the Negro who asks "am it?" nor yet his brother who announces "Ise uh gwinter." He exists only for a certain type of writers and performers.

3. American dancer and actress (1893–1971).

4. An ensemble formed in 1871 at Fisk University, a historically black institution that opened in 1866 in Nashville, Tennessee; it toured the United States and Europe to raise money for the school (the ensemble still exists).

5. Two schools begun as industrial training institutes, in Tuskegee, Alabama (founded 1881), and in Hampton, Virginia (founded 1868), respec-

tively; both are now universities.

6. Married African American vaudeville entertainers, Jodie "Butterbeans" Edwards (1895–1967) and Susie Hawthorne (ca. 1896–1963), who toured together for almost 50 years.

7. That is, white performers who act in black-face, a form popularized in the 19th century that lasted into the 1950s.

Very few Negroes, educated or not, use a clear clipped “I.” It verges more or less upon “Ah.” I think the lip form is responsible for this to a great extent. By experiment the reader will find that a sharp “I” is very much easier with a thin taut lip than with a full soft lip. Like tightening violin strings.

If one listens closely one will note too that a word is slurred in one position in the sentence but clearly pronounced in another. This is particularly true of the pronouns. A pronoun as a subject is likely to be clearly enunciated, but slurred as an object. For example: “You better not let me ketch yuh.”

There is a tendency in some localities to add the “h” to “it” and pronounce it “hit.” Probably a vestige of old English. In some localities “if” is “ef.”

In storytelling “so” is universally the connective. It is used even as an introductory word, at the very beginning of a story. In religious expression “and” is used. The trend in stories is to state conclusions; in religion, to enumerate.

I am mentioning only the most general rules in dialect because there are so many quirks that belong only to certain localities that nothing less than a volume would be adequate.

Now He told me, He said: “You got the three witnesses. One is water, one is spirit, and one is blood. And these three correspond with the three in heben—Father, Son, and Holy Ghost.”

Now I ast Him about this lyin in sin and He give me a handful of seeds and He tole me to sow ’em in a bed and He tole me: “I want you to watch them seeds.” The seeds come up about in places and He said: “Those seeds that come up, they died in the heart of the earth and quickened and come up and brought forth fruit. But those seeds that didn’t come up, they died in the heart of the earth and rotted.

“And a soul that dies and quickens through my spirit they will live forever, but those that dont never pray, they are lost forever.”

(Rev. JESSIE JEFFERSON.)⁸

1934

What White Publishers Won't Print

I have been amazed by the Anglo-Saxon's lack of curiosity about the internal lives and emotions of the Negroes, and for that matter, any non-Anglo-Saxon peoples within our borders, above the class of unskilled labor.

This lack of interest is much more important than it seems at first glance. It is even more important at this time than it was in the past. The internal affairs of the nation have bearings on the international stress and strain,¹ and this gap in the national literature now has tremendous weight in world affairs. National coherence and solidarity is implicit in a thorough understanding of the various groups within a nation, and this lack of knowledge about the internal emotions and behavior of the minorities cannot fail to bar

8. A local minister whom Hurston had observed.

1. The cold war—the post-World War II rivalry between the United States and the Soviet Union.

our understanding. Man, like all the other animals, fears and is repelled by that which he does not understand, and mere difference is apt to connote something malign.

The fact that there is no demand for incisive and full-dress stories around Negroes above the servant class is indicative of something of vast importance to this nation. This blank is NOT filled by the fiction built around upperclass Negroes exploiting the race problem. Rather, it tends to point it up. A college-bred Negro still is not a person like other folks, but an interesting problem, more or less. It calls to mind a story of slavery time. In this story, a master with more intellectual curiosity than usual, set out to see how much he could teach a particularly bright slave of his. When he had gotten him up to higher mathematics and to be a fluent reader of Latin, he called in a neighbor to show off his brilliant slave, and to argue that Negroes had brains just like the slave-owners had, and given the same opportunities, would turn out the same.

The visiting master of slaves looked and listened, tried to trap the literate slave in Algebra and Latin, and failing to do so in both, turned to his neighbor and said:

"Yes, he certainly knows his higher mathematics, and he can read Latin better than many white men I know, but I cannot bring myself to believe that he understands a thing that he is doing. It is all an aping of our culture. All on the outside. You are crazy if you think that it has changed him inside in the least. Turn him loose, and he will revert at once to the jungle. He is still a savage, and no amount of translating Virgil and Ovid² is going to change him. In fact, all you have done is to turn a useful savage into a dangerous beast."

That was in slavery time, yes, and we have come a long, long way since then, but the troubling thing is that there are still too many who refuse to believe in the ingestion and digestion of western culture as yet. Hence the lack of literature about the higher emotions and love life of upperclass Negroes and the minorities in general.

Publishers and producers are cool to the idea. Now, do not leap to the conclusion that editors and producers constitute a special class of unbelievers. That is far from true. Publishing houses and theatrical promoters are in business to make money. They will sponsor anything that they believe will sell. They shy away from romantic stories about Negroes and Jews because they feel that they know the public indifference to such works, unless the story or play involves racial tension. It can then be offered as a study in Sociology, with the romantic side subdued. They know the skepticism in general about the complicated emotions in the minorities. The average American just cannot conceive of it, and would be apt to reject the notion, and publishers and producers take the stand that they are not in business to educate, but to make money. Sympathetic as they might be, they cannot afford to be crusaders.

In proof of this, you can note various publishers and producers edging forward a little, and ready to go even further when the trial balloons show that the public is ready for it. This public lack of interest is the nut of the matter.

The question naturally arises as to the why of this indifference, not to say skepticism, to the internal life of educated minorities.

2. Roman poets: the *Aeneid* of Virgil (70–19 B.C.E.) and stories from the *Metamorphoses* of Ovid (43 B.C.E.–17 C.E.) were staples of the schoolroom for centuries.

The answer lies in what we may call THE AMERICAN MUSEUM OF UNNATURAL HISTORY.³ This is an intangible built on folk belief. It is assumed that all non-Anglo-Saxons are uncomplicated stereotypes. Everybody knows all about them. They are lay figures mounted in the museum where all may take them in at a glance. They are made of bent wires without insides at all. So how could anybody write a book about the nonexistent?

The American Indian is a contraption of copper wires in an eternal war-bonnet, with no equipment for laughter, expressionless face and that says "How" when spoken to. His only activity is treachery leading to massacres. Who is so dumb as not to know all about Indians, even if they have never seen one, nor talked with anyone who ever knew one?

The American Negro exhibit is a group of two. Both of these mechanical toys are built so that their feet eternally shuffle, and their eyes pop and roll. Shuffling feet and those popping, rolling eyes denote the Negro, and no characterization is genuine without this monotony. One is seated on a stump picking away on his banjo and singing and laughing. The other is a most amoral character before a sharecropper's shack mumbling about injustice. Doing this makes him out to be a Negro "intellectual." It is as simple as all that.

The whole museum is dedicated to the convenient "typical." In there is the "typical" Oriental, Jew, Yankee, Westerner, Southerner, Latin, and even out-of-favor Nordics like the German. The Englishman "I say old chappie," and the gesticulating Frenchman. The least observant American can know them all at a glance. However, the public willingly accepts the untypical in Nordics, but feels cheated if the untypical is portrayed in others. The author of *Scarlet Sister Mary*⁴ complained to me that her neighbors objected to her book on the grounds that she had the characters thinking, "and everybody know that Nigras don't think."

But for the national welfare, it is urgent to realize that the minorities do think, and think about something other than the race problem. That they are very human and internally, according to natural endowment, are just like everybody else. So long as this is not conceived, there must remain that feeling of unsurmountable difference, and difference to the average man means something bad. If people were made right, they would be just like him.

The trouble with the purely problem arguments is that they leave too much unknown. Argue all you will or may about injustice, but as long as the majority cannot conceive of a Negro or a Jew feeling and reacting inside just as they do, the majority will keep right on believing that people who do not look like them cannot possibly feel as they do, and conform to the established pattern. It is well known that there must be a body of waived matter, let us say, things accepted and taken for granted by all in a community before there can be that commonality of feeling. The usual phrase is having things in common. Until this is thoroughly established in respect to Negroes in America, as well as of other minorities, it will remain impossible for the majority to conceive of a Negro experiencing a deep and abiding love and not just the passion of sex. That a great mass of Negroes can be stirred by the pageants of Spring and

3. New York City's American Museum of Natural History opened in 1877; among its exhibits were dioramas of "primitive" life similar to those mockingly suggested by Hurston.

4. The Southern writer Julia Peterkin (1880–1961), whose fiction focused on the Gullahs of coastal South Carolina; this novel was published in 1928.

Fall; the extravaganza of summer, and the majesty of winter. That they can and do experience discovery of the numerous subtle faces as a foundation for a great and selfless love, and the diverse nuances that go to destroy that love as with others. As it is now, this capacity, this evidence of high and complicated emotions, is ruled out. Hence the lack of interest in a romance uncomplicated by the race struggle has so little appeal.

This insistence on defeat in a story where upperclass Negroes are portrayed perhaps says something from the subconscious of the majority. Involved in western culture, the hero or the heroine, or both, must appear frustrated and go down to defeat, somehow. Our literature reeks with it. Is it the same as saying, "You can translate Virgil, and fumble with the differential calculus, but can you really comprehend it? Can you cope with our subtleties?"

That brings us to the folklore of "reversion to type." This curious doctrine has such wide acceptance that it is tragic. One has only to examine the huge literature on it to be convinced. No matter how high we may *seem* to climb, put us under strain and we revert to type, that is, to the bush. Under a superficial layer of western culture, the jungle drums throb in our veins.

This ridiculous notion makes it possible for that majority who accept it to conceive of even a man like the suave and scholarly Dr. Charles S. Johnson⁵ to hide a black cat's bone on his person, and indulge in a midnight voodoo ceremony, complete with leopard skin and drums, if threatened with the loss of the presidency of Fisk University, or the love of his wife. "Under the skin . . . better to deal with them in business, etc., but otherwise keep them at a safe distance and under control. I tell you, Carl Van Vechten,⁶ think as you like, but they are just not like us."

The extent and extravagance of this notion reaches the ultimate in nonsense in the widespread belief that the Chinese have bizarre genitals, because of that eye-fold that makes their eyes seem to slant. In spite of the fact that no biology has ever mentioned any such difference in reproductive organs makes no matter. Millions of people believe it. "Did you know that a Chinese has . . ." Consequently, their quiet contemplative manner is interpreted as a sign of slyness and a treacherous inclination.

But the opening wedge for better understanding has been thrust into the crack. Though many Negroes denounced Carl Van Vechten's *Nigger Heaven* because of the title, and without ever reading it, the book, written in the deepest sincerity, revealed Negroes of wealth and culture to the white public. It created curiosity even when it aroused skepticism. It made folks want to know. Worth Tuttle Hedden's *The Other Room*⁷ has definitely widened the opening. Neither of these well-written works take a romance of upper-class Negro life as the central theme, but the atmosphere and the background is there. These works should be followed up by some incisive and intimate stories from the inside.

The realistic story around a Negro insurance official, dentist, general practitioner, undertaker and the like would be most revealing. Thinly disguised

5. African American sociologist and educator (1893–1956), president of Fisk University from 1946 to 1956.

6. White American critic and novelist (1880–1964), whose works include *Nigger Heaven* (1926),

a novel about Harlem life.

7. Prize-winning novel published in 1947; Hedden (1896–1985), a white woman, was a champion of rights for blacks and women.

fiction around the well known Negro names is not the answer, either. The “exceptional” as well as the Ol’ Man Rivers⁸ has been exploited all out of context already. Everybody is already resigned to the “exceptional” Negro, and willing to be entertained by the “quaint.” To grasp the penetration of western civilization in a minority, it is necessary to know how the average behaves and lives. Books that deal with people like in Sinclair Lewis’ *Main Street*⁹ is the necessary metier. For various reasons, the average, struggling, nonmorbid Negro is the best-kept secret in America. His revelation to the public is the thing needed to do away with that feeling of difference which inspires fear, and which ever expresses itself in dislike.

It is inevitable that this knowledge will destroy many illusions and romantic traditions which America probably likes to have around. But then, we have no record of anybody sinking into a lingering death on finding out that there was no Santa Claus. The old world will take it in its stride. The realization that Negroes are no better nor no worse, and at times just as boring as everybody else, will hardly kill off the population of the nation.

Outside of racial attitudes, there is still another reason why this literature should exist. Literature and other arts are supposed to hold up the mirror to nature.¹ With only the fractional “exceptional” and the “quaint” portrayed, a true picture of Negro life in America cannot be. A great principle of national art has been violated.

These are the things that publishers and producers, as the accredited representatives of the American people, have not as yet taken into consideration sufficiently. Let there be light!²

1950

ERICH AUERBACH

1892–1957

A founder of modern academic comparative literature, Erich Auerbach is one of a number of brilliant European philologists who, displaced by the rise of fascism and World War II, settled in the United States during the 1930s and 1940s and who, during the 1950s, helped make Romance philology—a European discipline that studies cultures through historical analyses of their languages—a vital alternative to the New Criticism that was then dominating the study of literature in the United States. Auerbach’s monumental study, *Mimesis: The Representation of Reality in Western Literature* (1946), was perhaps his attempt to salvage European humanism from fascism. “The challenge,” he wrote to a student in 1938, “is not to grasp and digest all the evil that’s happening—that’s not too difficult—but much more to find a point of departure [*Ausgangspunkt*] for those historical forces that can be set against it.” The work for which he is best remembered was written in Istanbul, where he had fled Nazi

persecution, without access to libraries, books, journals, or even reliable critical editions of the literary texts discussed. In his epilogue, he speculates that his distance from the specialized libraries of Europe may have enabled him to write the book.

Auerbach was born in Berlin to a middle-class Jewish family. He attended the prestigious Französisches Gymnasium and universities in Berlin, Freiburg, and Munich before receiving a degree in law from the University of Heidelberg in 1913. After serving in the German army during World War I, he abandoned law to pursue studies in Romance languages; he received his doctorate from the University of Greifswald in 1921. From 1923 to 1929 he was on the staff of the Prussian State Library in Berlin, a position that enabled him to research and publish two books—a German translation of GIAMBATTISTA VICO's *New Science* (1926) and a book on DANTE, *Dante: Poet of the Secular World* (1929). In 1929 he succeeded Leo Spitzer as chair of Romance philology at the University of Marburg, remaining there until 1935, when the Nazis stripped him of his post. In 1936 Auerbach emigrated to Turkey, where he took on the task of creating a modernized European literature curriculum at the State University of Istanbul, staying until 1947. In 1947 he emigrated again, this time to the United States, where he taught at Pennsylvania State University and later became affiliated with the Institute for Advanced Studies at Princeton University. In 1950 he moved to Yale University, where in 1956 he was appointed Sterling Professor of Romance Philology. He died the following year. Auerbach's *Mimesis* stands among the highest achievements of literary philology, a discipline that counts Vico, FRIEDRICH SCHLEIERMACHER, and FRIEDRICH NIETZSCHE as its most illustrious forerunners, and EDWARD W. SAID and FREDRIC JAMESON as its most esteemed contemporary heirs.

In the epilogue to *Mimesis*, Auerbach notes that the starting point for his study of literary representations of reality was PLATO's discussion of mimesis—representation—in book 10 of the *Republic*. However, he approaches the perennial problem of literature's vexed relationships with truth and reality not, as Plato does, from a philosophical perspective but from the perspective of historical linguistics and literary stylistics. For Auerbach, mimesis does not primarily concern the faithfulness of correspondence between a particular text and something we might call "reality"; it is instead a matter of style—and the history of style—that, he argues, offers insight into characteristically Western means of perceiving and forming reality. His book provides a crucial link between classical notions of mimesis, which persisted through the end of the Enlightenment, and modern theorists' renewed interest in representation and its dynamics.

Our selection, "Odysseus' Scar," the first chapter of *Mimesis*, provides a memorable example of Auerbach's method of "partial investigation," which relies on minute contextualized observations of particular texts. Unlike New Critical close reading, which focuses on individual literary style divorced from cultural contexts, Auerbach's philological close reading scrutinizes and compares the dynamics of *cultural* styles. The essay begins with a reading of the scene near the end of Homer's *Odyssey* in which the hero, Odysseus, having returned to Ithaca after twenty years' absence, is recognized by the old housekeeper Euryclea from a scar on his thigh. Comparing Homer's narrative style in this scene with the Old Testament narrative of the sacrifice of Isaac, Auerbach describes two distinct styles of *realism*—two means of representing or inscribing "reality"—which we might call the Hellenistic and the Hebraic. Even though Odysseus's scar represents a focal point in the story—a point at which both past and present come together—no such temporal perspective emerges in Homer's narrative, Auerbach argues. Everything in Homer's style is presented as foreground: that is, as a local and temporal present that is absolute. All phenomena, including psychological processes, are fully externalized, fully visible, fixed in their temporal and spatial relationship. Homer's realism presents a uniformly illuminated and uniformly objective present. As a result,

his narrative can be analyzed but not interpreted. The biblical style in the story of Abraham's sacrifice of Isaac presents a very different sort of realism—one fraught with background, in which temporal and spatial markers are mostly missing or symbolic, in which psychological motivation is complex but absent. Such a narrative style demands investigation and interpretation. Along the way Auerbach provocatively contrasts Greek and Hebrew syntax, social class, patriarchy, and preferred genres. While Auerbach depicts European literature as alternating between these two styles of realism, it is the latter, with its openness to ambiguity, contradiction, and plurality of meaning and reference, that most interests him.

Even as Auerbach's fascination with ambiguity in and interpretation of biblical narrative provides a bridge between nineteenth-century historicism and more recent New Historicism, it also displays his difference from contemporary historians, whose treatments of history are more open and relativistic. For Auerbach, the potential for indeterminacy in biblical realism is held in check by the process of figural interpretation—a process he describes in his famous essay "Figura" (1938) as establishing "a connection between two events or persons in such a way that the first signifies not only itself but also the second, while the second involves or fulfils the first." In a figural view of history, two events separated by historical time (for example, the sacrifice of Isaac and the crucifixion of Jesus) are connected by one figure; and the consciousness of their connection is, as Auerbach puts it, "a spiritual act." Auerbach's historicism, which he employs while analyzing modernist as well as ancient literature, is closer to that of medieval allegorical thinkers like Dante than to that articulated by contemporary historicist theory. The indeterminacy of historical interpretation often highlighted by contemporary theorists of history is for him delimited by the unifying process of figuration.

Auerbach's critics have maintained that the theoretical underpinnings of his historicism are indebted to an outdated medieval worldview, that he minimizes politics and economics, that he advocates a mystical humanism at odds with his radically relativist framework, and that his reluctance to propose universal laws of history clashes with his desire to describe the figural truth of history. But the sheer force of his original readings of an impressive range of European texts has inspired critics as different as NORTHROP FRYE, Fredric Jameson, and Edward W. Said, all of whom have found much of interest in his methods and wide-ranging claims.

*From Mimesis: The Representation of Reality in Western Literature*¹

Chapter 1. Odysseus' Scar

Readers of the *Odyssey*² will remember the well-prepared and touching scene in book 19, when Odysseus has at last come home, the scene in which the old housekeeper Euryclea, who had been his nurse, recognizes him by a scar on his thigh. The stranger has won Penelope's³ good will; at his request she tells the housekeeper to wash his feet, which, in all old stories, is the

1. Translated by Willard R. Trask.

2. Greek epic attributed to Homer (ca. 8th c. B.C.E.); its hero is Odysseus.

3. Odysseus's faithful wife; during his long absence, many suitors urge her to marry again.

first duty of hospitality toward a tired traveler. Euryclea busies herself fetching water and mixing cold with hot, meanwhile speaking sadly of her absent master, who is probably of the same age as the guest, and who perhaps, like the guest, is even now wandering somewhere, a stranger; and she remarks how astonishingly like him the guest looks. Meanwhile Odysseus, remembering his scar, moves back out of the light; he knows that, despite his efforts to hide his identity, Euryclea will now recognize him, but he wants at least to keep Penelope in ignorance. No sooner has the old woman touched the scar than, in her joyous surprise, she lets Odysseus' foot drop into the basin; the water spills over, she is about to cry out her joy; Odysseus restrains her with whispered threats and endearments; she recovers herself and conceals her emotion. Penelope, whose attention Athena's⁴ foresight had diverted from the incident, has observed nothing.

All this is scrupulously externalized and narrated in leisurely fashion. The two women express their feelings in copious direct discourse. Feelings though they are, with only a slight admixture of the most general considerations upon human destiny, the syntactical connection between part and part is perfectly clear, no contour is blurred. There is also room and time for orderly, perfectly well-articulated, uniformly illuminated descriptions of implements, ministrations, and gestures; even in the dramatic moment of recognition, Homer does not omit to tell the reader that it is with his right hand that Odysseus takes the old woman by the throat to keep her from speaking, at the same time that he draws her closer to him with his left. Clearly outlined, brightly and uniformly illuminated, men and things stand out in a realm where everything is visible; and not less clear—wholly expressed, orderly even in their ardor—are the feelings and thoughts of the persons involved.

In my account of the incident I have so far passed over a whole series of verses which interrupt it in the middle. There are more than seventy of these verses—while to the incident itself some forty are devoted before the interruption and some forty after it. The interruption, which comes just at the point when the housekeeper recognizes the scar—that is, at the moment of crisis—describes the origin of the scar, a hunting accident which occurred in Odysseus' boyhood, at a boar hunt, during the time of his visit to his grandfather Autolycus. This first affords an opportunity to inform the reader about Autolycus, his house, the precise degree of the kinship, his character, and, no less exhaustively than touchingly, his behavior after the birth of his grandson; then follows the visit of Odysseus, now grown to be a youth; the exchange of greetings, the banquet with which he is welcomed, sleep and waking, the early start for the hunt, the tracking of the beast, the struggle, Odysseus' being wounded by the boar's tusk, his recovery, his return to Ithaca, his parents' anxious questions—all is narrated, again with such a complete externalization of all the elements of the story and of their interconnections as to leave nothing in obscurity. Not until then does the narrator return to Penelope's chamber, not until then, the digression having run its course, does Euryclea, who had recognized the scar before the digression began, let Odysseus' foot fall back into the basin.

The first thought of a modern reader—that this is a device to increase suspense—is, if not wholly wrong, at least not the essential explanation of this

4. Greek goddess of wisdom, who favors the wily Odysseus.

Homeric procedure. For the element of suspense is very slight in the Homeric poems; nothing in their entire style is calculated to keep the reader or hearer breathless. The digressions are not meant to keep the reader in suspense, but rather to relax the tension. And this frequently occurs, as in the passage before us. The broadly narrated, charming, and subtly fashioned story of the hunt, with all its elegance and self-sufficiency, its wealth of idyllic pictures, seeks to win the reader over wholly to itself as long as he is hearing it, to make him forget what had just taken place during the foot-washing. But an episode that will increase suspense by retarding the action must be so constructed that it will not fill the present entirely, will not put the crisis, whose resolution is being awaited, entirely out of the reader's mind, and thereby destroy the mood of suspense; the crisis and the suspense must continue, must remain vibrant in the background. But Homer—and to this we shall have to return later—knows no background. What he narrates is for the time being the only present, and fills both the stage and the reader's mind completely. So it is with the passage before us. When the young Euryclea (vv. 401ff.) sets the infant Odysseus on his grandfather Autolycus' lap after the banquet, the aged Euryclea, who a few lines earlier had touched the wanderer's foot, has entirely vanished from the stage and from the reader's mind.

Goethe and Schiller,⁵ who, though not referring to this particular episode, exchanged letters in April 1797 on the subject of "the retarding element" in the Homeric poems in general, put it in direct opposition to the element of suspense—the latter word is not used, but is clearly implied when the "retarding" procedure is opposed, as something proper to epic, to tragic procedure (letters of April 19, 21, and 22). The "retarding element," the "going back and forth" by means of episodes, seems to me, too, in the Homeric poems, to be opposed to any tensional and suspensive striving toward a goal, and doubtless Schiller is right in regard to Homer when he says that what he gives us is "simply the quiet existence and operation of things in accordance with their natures"; Homer's goal is "already present in every point of his progress." But both Schiller and Goethe raise Homer's procedure to the level of a law for epic poetry in general, and Schiller's words quoted above are meant to be universally binding upon the epic poet, in contradistinction from the tragic. Yet in both modern and ancient times, there are important epic works which are composed throughout with no "retarding element" in this sense but, on the contrary, with suspense throughout, and which perpetually "rob us of our emotional freedom"—which power Schiller will grant only to the tragic poet. And besides it seems to me undemonstrable and improbable that this procedure of Homeric poetry was directed by aesthetic considerations or even by an aesthetic feeling of the sort postulated by Goethe and Schiller. The effect, to be sure, is precisely that which they describe, and is, furthermore, the actual source of the conception of epic which they themselves hold, and with them all writers decisively influenced by classical antiquity. But the true cause of the impression of "retardation" appears to me to lie elsewhere—namely, in the need of the Homeric style to leave nothing which it mentions half in darkness and unexternalized.

5. FRIEDRICH VON SCHILLER (1759–1803), German poet, philosopher, dramatist, and historian. Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and novelist.

The excursus upon the origin of Odysseus' scar is not basically different from the many passages in which a newly introduced character, or even a newly appearing object or implement, though it be in the thick of a battle, is described as to its nature and origin; or in which, upon the appearance of a god, we are told where he last was, what he was doing there, and by what road he reached the scene; indeed, even the Homeric epithets⁶ seem to me in the final analysis to be traceable to the same need for an externalization of phenomena in terms perceptible to the senses. Here is the scar, which comes up in the course of the narrative; and Homer's feeling simply will not permit him to see it appear out of the darkness of an unilluminated past; it must be set in full light, and with it a portion of the hero's boyhood—just as, in the *Iliad*, when the first ship is already burning and the Myrmidons⁷ finally arm that they may hasten to help, there is still time not only for the wonderful simile of the wolf, not only for the order of the Myrmidon host, but also for a detailed account of the ancestry of several subordinate leaders (16, vv. 155ff.). To be sure, the aesthetic effect thus produced was soon noticed and thereafter consciously sought; but the more original cause must have lain in the basic impulse of the Homeric style: to represent phenomena in a fully externalized form, visible and palpable in all their parts, and completely fixed in their spatial and temporal relations. Nor do psychological processes receive any other treatment: here too nothing must remain hidden and unexpressed. With the utmost fullness, with an orderliness which even passion does not disturb, Homer's personages vent their inmost hearts in speech; what they do not say to others, they speak in their own minds, so that the reader is informed of it. Much that is terrible takes place in the Homeric poems, but it seldom takes place wordlessly: Polyphemus talks to Odysseus; Odysseus talks to the suitors when he begins to kill them; Hector⁸ and Achilles talk at length, before battle and after; and no speech is so filled with anger or scorn that the particles⁹ which express logical and grammatical connections are lacking or out of place. This last observation is true, of course, not only of speeches but of the presentation in general. The separate elements of a phenomenon are most clearly placed in relation to one another; a large number of conjunctions, adverbs, particles, and other syntactical tools, all clearly circumscribed and delicately differentiated in meaning, delimit persons, things, and portions of incidents in respect to one another, and at the same time bring them together in a continuous and ever flexible connection; like the separate phenomena themselves, their relationships—their temporal, local, causal, final, consecutive, comparative, concessive, antithetical, and conditional limitations—are brought to light in perfect fullness; so that a continuous rhythmic procession of phenomena passes by, and never is there a form left fragmentary or half-illuminated, never a lacuna, never a gap, never a glimpse of unplumbed depths.

6. Word (often compound adjectives) repeatedly used to describe people or things in Homer's epics (e.g., "wine-dark sea").

7. The host of warriors under the command of Achilles, the greatest fighter among the Greeks, during the Trojan War. The events of the *Iliad*, an epic also ascribed to Homer, precede those of the *Odyssey*, and the poem appears to have been com-

posed first.

8. Trojan hero, killed by the Greek Achilles in the *Iliad*. Polyphemus: the Cyclops Odysseus encounters and blinds during his return home from Troy in the *Odyssey*.

9. Words expressing modes of thought or moods (used frequently in classical Greek).

And this procession of phenomena takes place in the foreground—that is, in a local and temporal present which is absolute. One might think that the many interpolations, the frequent moving back and forth, would create a sort of perspective in time and place; but the Homeric style never gives any such impression. The way in which any impression of perspective is avoided can be clearly observed in the procedure for introducing episodes, a syntactical construction with which every reader of Homer is familiar; it is used in the passage we are considering, but can also be found in cases when the episodes are much shorter. To the word *scar* (v. 393) there is first attached a relative clause (“which once long ago a boar . . .”), which enlarges into a voluminous syntactical parenthesis; into this an independent sentence unexpectedly intrudes (v. 396: “A god himself gave him . . .”), which quietly disentangles itself from syntactical subordination, until, with verse 399, an equally free syntactical treatment of the new content begins a new present which continues unchallenged until, with verse 467 (“The old woman now touched it . . .”), the scene which had been broken off is resumed. To be sure, in the case of such long episodes as the one we are considering, a purely syntactical connection with the principal theme would hardly have been possible; but a connection with it through perspective would have been all the easier had the content been arranged with that end in view; if, that is, the entire story of the scar had been presented as a recollection which awakens in Odysseus’ mind at this particular moment. It would have been perfectly easy to do; the story of the scar had only to be inserted two verses earlier, at the first mention of the word *scar*, where the motifs “Odysseus” and “recollection” were already at hand. But any such subjectivistic-perspectivistic procedure, creating a foreground and background, resulting in the present lying open to the depths of the past, is entirely foreign to the Homeric style; the Homeric style knows only a foreground, only a uniformly illuminated, uniformly objective present. And so the excursus does not begin until two lines later, when Euryclea has discovered the scar—the possibility for a perspectivistic connection no longer exists, and the story of the wound becomes an independent and exclusive present.

The genius of the Homeric style becomes even more apparent when it is compared with an equally ancient and equally epic style from a different world of forms. I shall attempt this comparison with the account of the sacrifice of Isaac, a homogeneous narrative produced by the so-called Elohists.¹ The King James version² translates the opening as follows (Genesis 22:1): “And it came to pass after these things, that God did tempt Abraham, and said to him, Abraham! and he said, Behold, here I am.” Even this opening startles us when we come to it from Homer. Where are the two speakers? We are not told. The reader, however, knows that they are not normally to be found together in one place on earth, that one of them, God, in order to speak to Abraham, must come from somewhere, must enter the earthly realm from some unknown heights or depths. Whence does he come, whence does he call to Abraham? We are not told. He does not come, like Zeus or Poseidon,

1. Author of one of the common collections of oral traditions (ca. 9th c. B.C.E.) that served as a source for the Hebrew scriptures, distinguished by referring to God as *Elohim* instead of *Yahweh* in stories set before the time of Moses. Isaac: the son of Abraham, the founder of the Jewish people.

2. An English translation of the Bible (1611) commissioned during the reign of James I (1603–25) to be the official version used by the Church of England; its use became widespread in all Protestant churches and it had enormous influence on literature written in English.

from the Aethiopians,³ where he has been enjoying a sacrificial feast. Nor are we told anything of his reasons for tempting Abraham so terribly. He has not, like Zeus, discussed them in set speeches with other gods gathered in council; nor have the deliberations in his own heart been presented to us; unexpected and mysterious, he enters the scene from some unknown height or depth and calls: Abraham! It will at once be said that this is to be explained by the particular concept of God which the Jews held and which was wholly different from that of the Greeks. True enough—but this constitutes no objection. For how is the Jewish concept of God to be explained? Even their earlier God of the desert was not fixed in form and content, and was alone; his lack of form, his lack of local habitation, his singleness, was in the end not only maintained but developed even further in competition with the comparatively far more manifest gods of the surrounding Near Eastern world. The concept of God held by the Jews is less a cause than a symptom of their manner of comprehending and representing things.

This becomes still clearer if we now turn to the other person in the dialogue, to Abraham. Where is he? We do not know. He says, indeed: Here I am—but the Hebrew word means only something like “behold me,” and in any case is not meant to indicate the actual place where Abraham is, but a moral position in respect to God, who has called to him—Here am I awaiting thy command. Where he is actually, whether in Beersheba⁴ or elsewhere, whether indoors or in the open air, is not stated; it does not interest the narrator, the reader is not informed; and what Abraham was doing when God called to him is left in the same obscurity. To realize the difference, consider Hermes’ visit to Calypso,⁵ for example, where command, journey, arrival and reception of the visitor, situation and occupation of the person visited, are set forth in many verses; and even on occasions when gods appear suddenly and briefly, whether to help one of their favorites or to deceive or destroy some mortal whom they hate, their bodily forms, and usually the manner of their coming and going, are given in detail. Here, however, God appears without bodily form (yet he “appears”), coming from some unspecified place—we only hear his voice, and that utters nothing but a name, a name without an adjective, without a descriptive epithet for the person spoken to, such as is the rule in every Homeric address; and of Abraham too nothing is made perceptible except the words in which he answers God: *Hinne-ni*, Behold me here—with which, to be sure, a most touching gesture expressive of obedience and readiness is suggested, but it is left to the reader to visualize it. Moreover the two speakers are not on the same level: if we conceive of Abraham in the foreground, where it might be possible to picture him as prostrate or kneeling or bowing with outspread arms or gazing upward, God is not there too: Abraham’s words and gestures are directed toward the depths of the picture or upward, but in any case the undetermined, dark place from which the voice comes to him is not in the foreground.

After this opening, God gives his command,⁶ and the story itself begins: everyone knows it; it unrolls with no episodes in a few independent sentences

3. That is, Ethiopia. Zeus: chief god of the Greeks. Poseidon: Greek god of the sea (at the beginning of *Odyssey* 1, he is described as feasting among the Ethiopians).

4. The southernmost city of Old Testament Israel.

5. In the *Odyssey*, the nymph who detained Odys-

seus for 7 years until Zeus—his orders carried by Hermes, the messenger god—commanded her to release the hero.

6. That is, to offer Isaac as a burnt offering (Genesis 22.2).

whose syntactical connection is of the most rudimentary sort. In this atmosphere it is unthinkable that an implement, a landscape through which the travelers passed, the serving-men, or the ass, should be described, that their origin or descent or material or appearance or usefulness should be set forth in terms of praise; they do not even admit an adjective: they are serving-men, ass, wood, and knife, and nothing else, without an epithet; they are there to serve the end which God has commanded; what in other respects they were, are, or will be, remains in darkness. A journey is made, because God has designated the place where the sacrifice is to be performed; but we are told nothing about the journey except that it took three days, and even that we are told in a mysterious way: Abraham and his followers rose "early in the morning" and "went unto" the place of which God had told him; on the third day he lifted up his eyes and saw the place from afar. That gesture is the only gesture, is indeed the only occurrence during the whole journey, of which we are told; and though its motivation lies in the fact that the place is elevated, its uniqueness still heightens the impression that the journey took place through a vacuum; it is as if, while he traveled on, Abraham had looked neither to the right nor to the left, had suppressed any sign of life in his followers and himself save only their footfalls.

Thus the journey is like a silent progress through the indeterminate and the contingent, a holding of the breath, a process which has no present, which is inserted, like a blank duration, between what has passed and what lies ahead, and which yet is measured: three days! Three such days positively demand the symbolic interpretation which they later received. They began "early in the morning." But at what time on the third day did Abraham lift up his eyes and see his goal? The text says nothing on the subject. Obviously not "late in the evening," for it seems that there was still time enough to climb the mountain and make the sacrifice. So "early in the morning" is given, not as an indication of time, but for the sake of its ethical significance; it is intended to express the resolution, the promptness, the punctual obedience of the sorely tried Abraham. Bitter to him is the early morning in which he saddles his ass, calls his serving-men and his son Isaac, and sets out; but he obeys, he walks on until the third day, then lifts up his eyes and sees the place. Whence he comes, we do not know, but the goal is clearly stated: Jeruel⁷ in the land of Moriah. What place this is meant to indicate is not clear—"Moriah" especially may be a later correction of some other word. But in any case the goal was given, and in any case it is a matter of some sacred spot which was to receive a particular consecration by being connected with Abraham's sacrifice. Just as little as "early in the morning" serves as a temporal indication does "Jeruel in the land of Moriah" serve as a geographical indication; and in both cases alike, the complementary indication is not given, for we know as little of the hour at which Abraham lifted up his eyes as we do of the place from which he set forth—Jeruel is significant not so much as the goal of an earthly journey, in its geographical relation to other places, as through its special election, through its relation to God, who designated it as the scene of the act, and therefore it must be named.

7. The place-name appears only in 2 Chronicles 20.16 as the site of a battle. It is not mentioned in Genesis. It is possible Auerbach has in mind the name that Abraham subsequently gives to

the mountain on which the sacrifice takes place, Jehovahjireh (in Hebrew, "the Lord will see"; Genesis 22.14).

In the narrative itself, a third chief character appears: Isaac. While God and Abraham, the serving-men, the ass, and the implements are simply named, without mention of any qualities or any other sort of definition, Isaac once receives an appositive; God says, "Take Isaac, thine only son, whom thou lovest." But this is not a characterization of Isaac as a person, apart from his relation to his father and apart from the story; he may be handsome or ugly, intelligent or stupid, tall or short, pleasant or unpleasant—we are not told. Only what we need to know about him as a personage in the action, here and now, is illuminated, so that it may become apparent how terrible Abraham's temptation is, and that God is fully aware of it. By this example of the contrary, we see the significance of the descriptive adjectives and digressions of the Homeric poems; with their indications of the earlier and as it were absolute existence of the persons described, they prevent the reader from concentrating exclusively on a present crisis; even when the most terrible things are occurring, they prevent the establishment of an overwhelming suspense. But here, in the story of Abraham's sacrifice, the overwhelming suspense is present; what Schiller makes the goal of the tragic poet—to rob us of our emotional freedom, to turn our intellectual and spiritual powers (Schiller says "our activity") in one direction, to concentrate them there⁸—is effected in this Biblical narrative, which certainly deserves the epithet epic.

We find the same contrast if we compare the two uses of direct discourse. The personages speak in the Bible story too; but their speech does not serve, as does speech in Homer, to manifest, to externalize thoughts—on the contrary, it serves to indicate thoughts which remain unexpressed. God gives his command in direct discourse, but he leaves his motives and his purpose unexpressed; Abraham, receiving the command, says nothing and does what he has been told to do. The conversation between Abraham and Isaac on the way to the place of sacrifice is only an interruption of the heavy silence and makes it all the more burdensome. The two of them, Isaac carrying the wood and Abraham with fire and a knife, "went together." Hesitantly, Isaac ventures to ask about the ram, and Abraham gives the well-known answer.⁹ Then the text repeats: "So they went both of them together." Everything remains unexpressed.

It would be difficult, then, to imagine styles more contrasted than those of these two equally ancient and equally epic texts. On the one hand, externalized, uniformly illuminated phenomena, at a definite time and in a definite place, connected together without lacunae in a perpetual foreground; thoughts and feeling completely expressed; events taking place in leisurely fashion and with very little of suspense. On the other hand, the externalization of only so much of the phenomena as is necessary for the purpose of the narrative, all else left in obscurity; the decisive points of the narrative alone are emphasized, what lies between is nonexistent; time and place are undefined and call for interpretation; thoughts and feeling remain unexpressed, are only suggested by the silence and the fragmentary speeches; the whole, permeated with the most unrelieved suspense and directed toward a single goal (and to that extent far more of a unity), remains mysterious and "fraught with background."

8. See Schiller's "On Tragic Art" (1792) and "On the Pleasure We Derive from Tragic Representation" (1792) for statements on tragedy.

9. "My son, God will provide himself a lamb for a burnt offering" (Genesis 22.8).

I will discuss this term in some detail, lest it be misunderstood. I said above that the Homeric style was “of the foreground” because, despite much going back and forth, it yet causes what is momentarily being narrated to give the impression that it is the only present, pure and without perspective. A consideration of the Elohistic text teaches us that our term is capable of a broader and deeper application. It shows that even the separate personages can be represented as possessing “background”; God is always so represented in the Bible, for he is not comprehensible in his presence, as is Zeus; it is always only “something” of him that appears, he always extends into depths. But even the human beings in the Biblical stories have greater depths of time, fate, and consciousness than do the human beings in Homer; although they are nearly always caught up in an event engaging all their faculties, they are not so entirely immersed in its present that they do not remain continually conscious of what has happened to them earlier and elsewhere; their thoughts and feelings have more layers, are more entangled. Abraham’s actions are explained not only by what is happening to him at the moment, nor yet only by his character (as Achilles’ actions by his courage and his pride, and Odysseus’ by his versatility and foresightedness), but by his previous history; he remembers, he is constantly conscious of, what God has promised him and what God has already accomplished for him—his soul is torn between desperate rebellion and hopeful expectation; his silent obedience is multilayered, has background. Such a problematic psychological situation as this is impossible for any of the Homeric heroes, whose destiny is clearly defined and who wake every morning as if it were the first day of their lives: their emotions, though strong, are simple and find expression instantly.

How fraught with background, in comparison, are characters like Saul and David!¹ How entangled and stratified are such human relations as those between David and Absalom, between David and Joab!² Any such “background” quality of the psychological situation as that which the story of Absalom’s death and its sequel (II Samuel 18 and 19, by the so-called Jahvist³) rather suggests than expresses, is unthinkable in Homer. Here we are confronted not merely with the psychological processes of characters whose depth of background is veritably abysmal, but with a purely geographical background too. For David is absent from the battlefield; but the influence of his will and his feelings continues to operate, they affect even Joab in his rebellion and disregard for the consequences of his actions; in the magnificent scene with the two messengers,⁴ both the physical and psychological background is fully manifest, though the latter is never expressed. With this, compare, for example, how Achilles, who sends Patroclus⁵ first to scout and then into battle, loses almost all “presentness” so long as he is not physically present. But the most important thing is the “multilayeredness” of the individual character; this is hardly to be met with in Homer, or at

1. King of ancient Israel (d. ca. 970 B.C.E.); he succeeded Saul, the first king, who at one point out of jealousy sought to kill him (see I Samuel).

2. King David’s nephew; disobeying the king’s orders, Joab killed David’s son Absalom, who was leading a revolt against him. As he was dying, David cursed Joab (2 Samuel 15–18; 1 Kings 2.5–6).

3. The conjectured author of the earliest oral tra-

dition that was a source for the Hebrew scriptures; throughout it, God is called *Yahweh*.

4. From the first messenger, David learns that his forces have won; from the second, that Absalom is dead (2 Samuel 18.28–33).

5. In the *Iliad*, Achilles’ closest friend; anger and grief at his death (at the hands of Hector) draw Achilles back into battle.

most in the form of a conscious hesitation between two possible courses of action; otherwise, in Homer, the complexity of the psychological life is shown only in the succession and alternation of emotions; whereas the Jewish writers are able to express the simultaneous existence of various layers of consciousness and the conflict between them.

The Homeric poems, then, though their intellectual, linguistic, and above all syntactical culture appears to be so much more highly developed, are yet comparatively simple in their picture of human beings; and no less so in their relation to the real life which they describe in general. Delight in physical existence is everything to them, and their highest aim is to make that delight perceptible to us. Between battles and passions, adventures and perils, they show us hunts, banquets, palaces and shepherds' cots,⁶ athletic contests and washing days—in order that we may see the heroes in their ordinary life, and seeing them so, may take pleasure in their manner of enjoying their savory present, a present which sends strong roots down into social usages, landscape, and daily life. And thus they bewitch us and ingratiate themselves to us until we live with them in the reality of their lives; so long as we are reading or hearing the poems, it does not matter whether we know that all this is only legend, "make-believe." The oft-repeated reproach that Homer is a liar takes nothing from his effectiveness, he does not need to base his story on historical reality, his reality is powerful enough in itself; it ensnares us, weaving its web around us, and that suffices him. And this "real" world into which we are lured, exists for itself, contains nothing but itself; the Homeric poems conceal nothing, they contain no teaching and no secret second meaning. Homer can be analyzed, as we have essayed to do here, but he cannot be interpreted. Later allegorizing trends have tried their arts of interpretation upon him, but to no avail. He resists any such treatment; the interpretations are forced and foreign, they do not crystallize into a unified doctrine. The general considerations which occasionally occur (in our episode, for example, v. 360: that in misfortune men age quickly) reveal a calm acceptance of the basic facts of human existence, but with no compulsion to brood over them, still less any passionate impulse either to rebel against them or to embrace them in an ecstasy of submission.

It is all very different in the Biblical stories. Their aim is not to bewitch the senses, and if nevertheless they produce lively sensory effects, it is only because the moral, religious, and psychological phenomena which are their sole concern are made concrete in the sensible matter of life. But their religious intent involves an absolute claim to historical truth. The story of Abraham and Isaac is not better established than the story of Odysseus, Penelope, and Euryclia; both are legendary. But the Biblical narrator, the Elohist, had to believe in the objective truth of the story of Abraham's sacrifice—the existence of the sacred ordinances of life rested upon the truth of this and similar stories. He had to believe in it passionately; or else (as many rationalistic interpreters believed and perhaps still believe) he had to be a conscious liar—no harmless liar like Homer, who lied to give pleasure, but a political liar with a definite end in view, lying in the interest of a claim to absolute authority.

6. Cottages.

To me, the rationalistic interpretation seems psychologically absurd; but even if we take it into consideration, the relation of the Elohist to the truth of his story still remains a far more passionate and definite one than is Homer's relation. The Biblical narrator was obliged to write exactly what his belief in the truth of the tradition (or, from the rationalistic standpoint, his interest in the truth of it) demanded of him—in either case, his freedom in creative or representative imagination was severely limited; his activity was perforce reduced to composing an effective version of the pious tradition. What he produced, then, was not primarily oriented toward "realism" (if he succeeded in being realistic, it was merely a means, not an end); it was oriented toward truth. Woe to the man who did not believe it! One can perfectly well entertain historical doubts on the subject of the Trojan War or of Odysseus' wanderings, and still, when reading Homer, feel precisely the effects he sought to produce; but without believing in Abraham's sacrifice, it is impossible to put the narrative of it to the use for which it was written. Indeed, we must go even further. The Bible's claim to truth is not only far more urgent than Homer's, it is tyrannical—it excludes all other claims. The world of the Scripture stories is not satisfied with claiming to be a historically true reality—it insists that it is the only real world, is destined for autocracy. All other scenes, issues, and ordinances have no right to appear independently of it, and it is promised that all of them, the history of all mankind, will be given their due place within its frame, will be subordinated to it. The Scripture stories do not, like Homer's, court our favor, they do not flatter us that they may please us and enchant us—they seek to subject us, and if we refuse to be subjected we are rebels.

Let no one object that this goes too far, that not the stories, but the religious doctrine, raises the claim to absolute authority; because the stories are not, like Homer's, simply narrated "reality." Doctrine and promise are incarnate in them and inseparable from them; for that very reason they are fraught with "background" and mysterious, containing a second, concealed meaning. In the story of Isaac, it is not only God's intervention at the beginning and the end, but even the factual and psychological elements which come between, that are mysterious, merely touched upon, fraught with background; and therefore they require subtle investigation and interpretation, they demand them. Since so much in the story is dark and incomplete, and since the reader knows that God is a hidden God, his effort to interpret it constantly finds something new to feed upon. Doctrine and the search for enlightenment are inextricably connected with the physical side of the narrative—the latter being more than simple "reality"; indeed they are in constant danger of losing their own reality, as very soon happened when interpretation reached such proportions that the real vanished.

If the text of the Biblical narrative, then, is so greatly in need of interpretation on the basis of its own content, its claim to absolute authority forces it still further in the same direction. Far from seeking, like Homer, merely to make us forget our own reality for a few hours, it seeks to overcome our reality: we are to fit our own life into its world, feel ourselves to be elements in its structure of universal history. This becomes increasingly difficult the further our historical environment is removed from that of the Biblical books; and if these nevertheless maintain their claim to absolute authority, it is inevitable that they themselves be adapted through interpretative

transformation. This was for a long time comparatively easy; as late as the European Middle Ages it was possible to represent Biblical events as ordinary phenomena of contemporary life, the methods of interpretation themselves forming the basis for such a treatment. But when, through too great a change in environment and through the awakening of a critical consciousness, this becomes impossible, the Biblical claim to absolute authority is jeopardized; the method of interpretation is scorned and rejected, the Biblical stories become ancient legends, and the doctrine they had contained, now dissevered from them, becomes a disembodied image.

As a result of this claim to absolute authority, the method of interpretation spread to traditions other than the Jewish. The Homeric poems present a definite complex of events whose boundaries in space and time are clearly delimited; before it, beside it, and after it, other complexes of events, which do not depend upon it, can be conceived without conflict and without difficulty. The Old Testament, on the other hand, presents universal history: it begins with the beginning of time, with the creation of the world, and will end with the Last Days, the fulfilling of the Covenant, with which the world will come to an end. Everything else that happens in the world can only be conceived as an element in this sequence; into it everything that is known about the world, or at least everything that touches upon the history of the Jews, must be fitted as an ingredient of the divine plan; and as this too became possible only by interpreting the new material as it poured in, the need for interpretation reaches out beyond the original Jewish-Israelitish realm of reality—for example to Assyrian, Babylonian, Persian, and Roman history; interpretation in a determined direction becomes a general method of comprehending reality; the new and strange world which now comes into view and which, in the form in which it presents itself, proves to be wholly unutilizable within the Jewish religious frame, must be so interpreted that it can find a place there. But this process nearly always also reacts upon the frame, which requires enlarging and modifying. The most striking piece of interpretation of this sort occurred in the first century of the Christian era, in consequence of Paul's mission to the Gentiles: Paul and the Church Fathers⁷ reinterpreted the entire Jewish tradition as a succession of figures prognosticating the appearance of Christ, and assigned the Roman Empire its proper place in the divine plan of salvation. Thus while, on the one hand, the reality of the Old Testament presents itself as complete truth with a claim to sole authority, on the other hand that very claim forces it to a constant interpretative change in its own content; for millennia it undergoes an incessant and active development with the life of man in Europe.

The claim of the Old Testament stories to represent universal history, their insistent relation—a relation constantly redefined by conflicts—to a single and hidden God, who yet shows himself and who guides universal history by promise and exaction, gives these stories an entirely different perspective from any the Homeric poems can possess. As a composition, the Old Testament is incomparably less unified than the Homeric poems, it is more obviously pieced together—but the various components all belong to one concept

7. Early writers and teachers of the Christian Church (1st–6th c.), including ST. AUGUSTINE (354–430). St. Paul (d. ca. 67 C.E.), Roman Jew

whose conversion to Christianity is recorded in Acts of the New Testament; he went on three missionary journeys in Asia Minor and Greece.

of universal history and its interpretation. If certain elements survived which did not immediately fit in, interpretation took care of them; and so the reader is at every moment aware of the universal religio-historical perspective which gives the individual stories their general meaning and purpose. The greater the separateness and horizontal disconnection of the stories and groups of stories in relation to one another, compared with the *Iliad* and the *Odyssey*, the stronger is their general vertical connection, which holds them all together and which is entirely lacking in Homer. Each of the great figures of the Old Testament, from Adam to the prophets, embodies a moment of this vertical connection. God chose and formed these men to the end of embodying his essence and will—yet choice and formation do not coincide, for the latter proceeds gradually, historically, during the earthly life of him upon whom the choice has fallen. How the process is accomplished, what terrible trials such a formation inflicts, can be seen from our story of Abraham's sacrifice. Herein lies the reason why the great figures of the Old Testament are so much more fully developed, so much more fraught with their own biographical past, so much more distinct as individuals, than are the Homeric heroes. Achilles and Odysseus are splendidly described in many well-ordered words, epithets cling to them, their emotions are constantly displayed in their words and deeds—but they have no development, and their life-histories are clearly set forth once and for all. So little are the Homeric heroes presented as developing or having developed, that most of them—Nestor, Agamemnon,⁸ Achilles—appear to be of an age fixed from the very first. Even Odysseus, in whose case the long lapse of time and the many events which occurred offer so much opportunity for biographical development, shows almost nothing of it. Odysseus on his return is exactly the same as he was when he left Ithaca two decades earlier. But what a road, what a fate, lie between the Jacob⁹ who cheated his father out of his blessing and the old man whose favorite son has been torn to pieces by a wild beast!—between David the harp player, persecuted by his lord's jealousy, and the old king, surrounded by violent intrigues, whom Abishag the Shunnamite warmed in his bed, and he knew her not!¹ The old man, of whom we know how he has become what he is, is more of an individual than the young man; for it is only during the course of an eventful life that men are differentiated into full individuality; and it is this history of a personality which the Old Testament presents to us as the formation undergone by those whom God has chosen to be examples. Fraught with their development, sometimes even aged to the verge of dissolution, they show a distinct stamp of individuality entirely foreign to the Homeric heroes. Time can touch the latter only outwardly, and even that change is brought to our observation as little as possible; whereas the stern hand of God is ever upon the Old Testament figures; he has not only made them once and for all and chosen them, but he continues to work upon them, bends them and kneads them, and, without destroying them in essence, produces from them forms which their youth gave no grounds for anticipating. The objection

8. King of Mycenae, and leader of the Greeks in the Trojan War. Nestor: king of Pylos, and the eldest of the Greek warriors in the *Iliad*.

9. Younger son of Isaac, who deceived his blind father to cheat his elder brother Esau out of the firstborn's birthright (Genesis 27). Jacob's own

sons would trick him into believing that his favorite, their brother Joseph, had been killed by "an evil beast" (37.33).

1. That is, he did not have sexual relations with the young virgin from Shunem brought to warm him (1 Kings 1.1–3).

that the biographical element of the Old Testament often springs from the combination of several legendary personages does not apply; for this combination is a part of the development of the text. And how much wider is the pendulum swing of their lives than that of the Homeric heroes! For they are bearers of the divine will, and yet they are fallible, subject to misfortune and humiliation—and in the midst of misfortune and in their humiliation their acts and words reveal the transcendent majesty of God. There is hardly one of them who does not, like Adam, undergo the deepest humiliation—and hardly one who is not deemed worthy of God's personal intervention and personal inspiration. Humiliation and elevation go far deeper and far higher than in Homer, and they belong basically together. The poor beggar Odysseus is only masquerading, but Adam is really cast down, Jacob really a refugee, Joseph² really in the pit and then a slave to be bought and sold. But their greatness, rising out of humiliation, is almost superhuman and an image of God's greatness. The reader clearly feels how the extent of the pendulum's swing is connected with the intensity of the personal history—precisely the most extreme circumstances, in which we are immeasurably forsaken and in despair, or immeasurably joyous and exalted, give us, if we survive them, a personal stamp which is recognized as the product of a rich existence, a rich development. And very often, indeed generally, this element of development gives the Old Testament stories a historical character, even when the subject is purely legendary and traditional.

Homer remains within the legendary with all his material, whereas the material of the Old Testament comes closer and closer to history as the narrative proceeds; in the stories of David the historical report predominates. Here too, much that is legendary still remains, as for example the story of David and Goliath;³ but much—and the most essential—consists in things which the narrators knew from their own experience or from firsthand testimony. Now the difference between legend and history is in most cases easily perceived by a reasonably experienced reader. It is a difficult matter, requiring careful historical and philological training, to distinguish the true from the synthetic or the biased in a historical presentation; but it is easy to separate the historical from the legendary in general. Their structure is different. Even where the legendary does not immediately betray itself by elements of the miraculous, by the repetition of well-known standard motives, typical patterns and themes, through neglect of clear details of time and place, and the like, it is generally quickly recognizable by its composition. It runs far too smoothly. All cross-currents, all friction, all that is casual, secondary to the main events and themes, everything unresolved, truncated, and uncertain, which confuses the clear progress of the action and the simple orientation of the actors, has disappeared. The historical event which we witness, or learn from the testimony of those who witnessed it, runs much more variously, contradictorily, and confusedly; not until it has produced results in a definite domain are we able, with their help, to classify it to a certain extent; and how often the order to which we think we have attained becomes doubtful again,

2. Youngest son of Jacob and Rachel, sold by his elder brothers into slavery in Egypt (Genesis 37). Adam is "cast down" by his expulsion from Eden and by his need to labor (Genesis 3.17–24), and

Jacob, after fleeing from the anger of his brother Esau, stays away for years.

3. Philistine giant killed by David (1 Samuel 17).

how often we ask ourselves if the data before us have not led us to a far too simple classification of the original events! Legend arranges its material in a simple and straightforward way; it detaches it from its contemporary historical context, so that the latter will not confuse it; it knows only clearly outlined men who act from few and simple motives and the continuity of whose feelings and actions remains uninterrupted. In the legends of martyrs, for example, a stiff-necked and fanatical persecutor stands over against an equally stiff-necked and fanatical victim; and a situation so complicated—that is to say, so real and historical—as that in which the “persecutor” Pliny finds himself in his celebrated letter to Trajan on the subject of the Christians,⁴ is unfit for legend. And that is still a comparatively simple case. Let the reader think of the history which we are ourselves witnessing; anyone who, for example, evaluates the behavior of individual men and groups of men at the time of the rise of National Socialism⁵ in Germany, or the behavior of individual peoples and states before and during the last war,⁶ will feel how difficult it is to represent historical themes in general, and how unfit they are for legend; the historical comprises a great number of contradictory motives in each individual, a hesitation and ambiguous groping on the part of groups; only seldom (as in the last war) does a more or less plain situation, comparatively simple to describe, arise, and even such a situation is subject to division below the surface, is indeed almost constantly in danger of losing its simplicity; and the motives of all the interested parties are so complex that the slogans of propaganda can be composed only through the crudest simplification—with the result that friend and foe alike can often employ the same ones. To write history is so difficult that most historians are forced to make concessions to the technique of legend.

It is clear that a large part of the life of David as given in the Bible contains history and not legend. In Absalom’s rebellion, for example, or in the scenes from David’s last days, the contradictions and crossing of motives both in individuals and in the general action have become so concrete that it is impossible to doubt the historicity of the information conveyed. Now the men who composed the historical parts are often the same who edited the older legends too; their peculiar religious concept of man in history, which we have attempted to describe above, in no way led them to a legendary simplification of events; and so it is only natural that, in the legendary passages of the Old Testament, historical structure is frequently discernible—of course, not in the sense that the traditions are examined as to their credibility according to the methods of scientific criticism; but simply to the extent that the tendency to a smoothing down and harmonizing of events, to a simplification of motives, to a static definition of characters which avoids conflict, vacillation, and development, such as are natural to legendary structure, does not predominate in the Old Testament world of legend. Abraham, Jacob, or even Moses⁷ produces a more concrete, direct, and historical impression than the figures of the Homeric world—not because they are better described in terms of sense

4. As Roman governor of Bithynia (111–ca. 112 C.E.), Pliny the Younger (ca. 61–ca. 112) sent a letter to the emperor Trajan (53–117; emperor 98–117) to inquire about his policy of prosecuting Christians.
5. That is, Nazism, the doctrines of the National

Socialist German Workers’ Party (founded 1919), led from 1920 to 1945 by Adolph Hitler.

6. That is, World War I.

7. Biblical lawgiver and prophet who led the exodus from Egypt.

(the contrary is the case) but because the confused, contradictory multiplicity of events, the psychological and factual cross-purposes, which true history reveals, have not disappeared in the representation but still remain clearly perceptible. In the stories of David, the legendary, which only later scientific criticism makes recognizable as such, imperceptibly passes into the historical; and even in the legendary, the problem of the classification and interpretation of human history is already passionately apprehended—a problem which later shatters the framework of historical composition and completely overruns it with prophecy; thus the Old Testament, in so far as it is concerned with human events, ranges through all three domains: legend, historical reporting, and interpretative historical theology.

Connected with the matters just discussed is the fact that the Greek text seems more limited and more static in respect to the circle of personages involved in the action and to their political activity. In the recognition scene with which we began, there appears, aside from Odysseus and Penelope, the housekeeper Euryclea, a slave whom Odysseus' father Laertes had bought long before. She, like the swineherd Eumaeus, has spent her life in the service of Laertes' family; like Eumaeus, she is closely connected with their fate, she loves them and shares their interests and feelings. But she has no life of her own, no feelings of her own; she has only the life and feelings of her master. Eumaeus too, though he still remembers that he was born a freeman and indeed of a noble house (he was stolen as a boy), has, not only in fact but also in his own feeling, no longer a life of his own, he is entirely involved in the life of his masters. Yet these two characters are the only ones whom Homer brings to life who do not belong to the ruling class. Thus we become conscious of the fact that in the Homeric poems life is enacted only among the ruling class—others appear only in the role of servants to that class. The ruling class is still so strongly patriarchal, and still itself so involved in the daily activities of domestic life, that one is sometimes likely to forget their rank. But they are unmistakably a sort of feudal aristocracy, whose men divide their lives between war, hunting, marketplace councils, and feasting, while the women supervise the maids in the house. As a social picture, this world is completely stable; wars take place only between different groups of the ruling class; nothing ever pushes up from below. In the early stories of the Old Testament the patriarchal condition is dominant too, but since the people involved are individual nomadic or half-nomadic tribal leaders, the social picture gives a much less stable impression; class distinctions are not felt. As soon as the people completely emerges—that is, after the exodus from Egypt—its activity is always discernible, it is often in ferment, it frequently intervenes in events not only as a whole but also in separate groups and through the medium of separate individuals who come forward; the origins of prophecy seem to lie in the irrepressible politico-religious spontaneity of the people. We receive the impression that the movements emerging from the depths of the people of Israel-Judah must have been of a wholly different nature from those even of the later ancient democracies—of a different nature and far more elemental.

With the more profound historicity and the more profound social activity of the Old Testament text, there is connected yet another important distinction from Homer: namely, that a different conception of the elevated style and of the sublime is to be found here. Homer, of course, is not afraid to let

the realism of daily life enter into the sublime and tragic; our episode of the scar is an example, we see how the quietly depicted, domestic scene of the foot-washing is incorporated into the pathetic and sublime action of Odysseus' homecoming. From the rule of the separation of styles which was later almost universally accepted and which specified that the realistic depiction of daily life was incompatible with the sublime and had a place only in comedy or, carefully stylized, in idyl⁸—from any such rule Homer is still far removed. And yet he is closer to it than is the Old Testament. For the great and sublime events in the Homeric poems take place far more exclusively and unmistakably among the members of a ruling class; and these are far more untouched in their heroic elevation than are the Old Testament figures, who can fall much lower in dignity (consider, for example, Adam, Noah, David, Job⁹); and finally, domestic realism, the representation of daily life, remains in Homer in the peaceful realm of the idyllic, whereas, from the very first, in the Old Testament stories, the sublime, tragic, and problematic take shape precisely in the domestic and commonplace: scenes such as those between Cain and Abel, between Noah and his sons,¹ between Abraham, Sarah, and Hagar, between Rebekah,² Jacob, and Esau, and so on, are inconceivable in the Homeric style. The entirely different ways of developing conflicts are enough to account for this. In the Old Testament stories the peace of daily life in the house, in the fields, and among the flocks, is undermined by jealousy over election and the promise of a blessing, and complications arise which would be utterly incomprehensible to the Homeric heroes. The latter must have palpable and clearly expressible reasons for their conflicts and enmities, and these work themselves out in free battles; whereas, with the former, the perpetually smouldering jealousy and the connection between the domestic and the spiritual, between the paternal blessing and the divine blessing, lead to daily life being permeated with the stuff of conflict, often with poison. The sublime influence of God here reaches so deeply into the everyday that the two realms of the sublime and the everyday are not only actually unseparated but basically inseparable.

We have compared these two texts, and, with them, the two kinds of style they embody, in order to reach a starting point for an investigation into the literary representation of reality in European culture. The two styles, in their opposition, represent basic types: on the one hand fully externalized description, uniform illumination, uninterrupted connection, free expression, all events in the foreground, displaying unmistakable meanings, few elements of historical development and of psychological perspective; on the other hand, certain parts brought into high relief, others left obscure, abruptness, suggestive influence of the unexpressed, "background" quality,

8. A poem (usually short) that presents simple scenes of pastoral or rustic life.

9. A just and upright man who is brought low to test his faith in God, as described in the book of Job. Noah: the biblical builder of the ark who later became drunk on his own wine (see the following note).

1. While Noah was drunk, his son Canaan saw his nakedness and told his brothers, who, without looking, covered their father; for this, Noah cursed

Canaan (Genesis 9.20–27). Cain and Abel: sons of Adam and Eve; because Cain was jealous that Abel's offerings to God were preferred, he killed his younger brother (Genesis 4.1–8).

2. Wife of Isaac; she helped Jacob scheme against Esau. Sarah: Abraham's wife; at her urging, her Egyptian servant Hagar bore Abraham a son, Ishmael, but after Sarah bore Isaac, Hagar and her son were sent into the wilderness (Genesis 16, 21.1–21).

multiplicity of meanings and the need for interpretation, universal-historical claims, development of the concept of the historically becoming, and preoccupation with the problematic.

Homer's realism is, of course, not to be equated with classical-antique realism in general; for the separation of styles, which did not develop until later, permitted no such leisurely and externalized description of everyday happenings; in tragedy³ especially there was no room for it; furthermore, Greek culture very soon encountered the phenomena of historical becoming and of the "multilayeredness" of the human problem, and dealt with them in its fashion; in Roman realism, finally, new and native concepts are added. We shall go into these later changes in the antique representation of reality when the occasion arises; on the whole, despite them, the basic tendencies of the Homeric style, which we have attempted to work out, remained effective and determinant down into late antiquity.

Since we are using the two styles, the Homeric and the Old Testament, as starting points, we have taken them as finished products, as they appear in the texts; we have disregarded everything that pertains to their origins, and thus have left untouched the question whether their peculiarities were theirs from the beginning or are to be referred wholly or in part to foreign influences. Within the limits of our purpose, a consideration of this question is not necessary; for it is in their full development, which they reached in early times, that the two styles exercised their determining influence upon the representation of reality in European literature.

1946

3. A form that developed after the *Iliad* and *Odyssey* were composed.

WALTER BENJAMIN

1892–1940

"It has always been one of the primary tasks of art to create a demand whose hour of full satisfaction has not yet come," remarks Walter Benjamin in his celebrated essay "The Work of Art in the Age of Its Technological Reproducibility" (1936–39). The same could be said of Benjamin's criticism itself. During his lifetime, he was considered, by a small coterie of admirers such as the philosopher THEODOR ADORNO, one of the most original and promising writers on literature, language, and aesthetics of his generation; but at the time of his premature death fleeing the Nazis in 1940, his name had passed into obscurity both within and outside Germany. The publication in 1955 of a collection of his works in a German edition sponsored by Adorno spurred renewed attention, and since the 1970s Benjamin has become one of the most highly esteemed critics of the twentieth century; he is seen as an innovator in diverse fields, including Marxist literary criticism, deconstruction, historiography, and media studies. A broad speculative account of the interaction of industrial production and modern aesthetics, "The Work of Art in the Age of Its Technological Reproducibility" has had particular influence in contemporary film and visual studies and is considered a fundamental work of cultural studies.

Born in Berlin into a wealthy Jewish family, Benjamin was first educated by private tutors, later attending boarding school and the University of Freiburg. He continued his studies in Berlin and Munich, but settled in Berne, Switzerland, in 1917 to avoid being drafted into the German army in World War I. In 1919 he received his doctorate from the university there; his thesis, *The Concept of Criticism in German Romanticism*, was published the following year. Returning to Berlin in 1920, he wrote essays and newspaper articles as he worked on a translation of the important nineteenth-century French poet Charles Baudelaire, building a significant reputation as a cultural critic. Under financial pressure from his father, who wanted him to take a position in a bank, Benjamin considered starting a used book business but finally decided to pursue an academic career. To complete an additional requirement for a teaching post in the German university system, he wrote a second dissertation in 1925, *The Origins of German Tragic Drama* (1928; trans. 1977); however, it was rejected because of its density and difficulty. One examiner commented that it was an “incomprehensible morass” (another examiner who criticized the submission was MAX HORKHEIMER, later an associate of Benjamin’s).

Thus thwarted, Benjamin became an independent scholar, writing articles for leading German periodicals, translating, and conducting research for an ambitious but never-completed historical work on nineteenth-century Paris later known as the *Arcades Project* (trans. 1999). During the twenties and thirties, he traveled across Europe; in a visit to Moscow (1926–27), he observed firsthand the achievements and limitations of the Bolshevik Revolution. Though his friend Gershom Scholem, the Jewish mystical thinker, urged him to emigrate to Palestine, Benjamin remained in Germany, participating in the German Communist Party (as his brother had done). Initially attracted to Marxism in the 1920s on reading GYÖRGY LUKÁCS’s *History and Class Consciousness* (1923) and influenced by his friendship during the 1930s with the German Marxist writer Bertolt Brecht, Benjamin adopted increasingly left-wing political positions and showed the influence of Marxism in his writings on culture.

Exiled in Paris after the Nazi takeover in Germany in 1933, Benjamin lived a lonely and, as the threat of war approached, increasingly desperate existence. He struggled to support himself by writing while pursuing research for his *Arcades Project*, one small section of which, “On Some Motifs in Baudelaire” (1939), appeared in the journal of the Institute for Social Research at the University of Frankfurt. But Benjamin’s methods and political orientation were increasingly at loggerheads with those of the institute—members of the Frankfurt School were turning away from the traditional paths of Marxism—and he became distant from his friend Adorno, as correspondence from the 1930s reveals. After the German invasion of France in 1940, Benjamin attempted to escape to Spain, intending to emigrate from there to the United States. Stopped at the border in the Pyrenees and fearful that he would be sent back to France to face internment in a concentration camp, Benjamin committed suicide.

Though many of his larger projects remained unfinished at the time of his death, and his essays were often composed under financial and emotional duress, Benjamin’s work encompasses a rich and heterogeneous range: autobiographical writings and familiar essays on topics including his travels to Moscow, his experiments with hashish, and his love of book collecting; dense theoretical considerations of allegory and language, such as *Origins of German Tragic Drama* and “The Task of the Translator” (1923), which speculates on how translation offers fragments of a “pure language”; translations into German of Baudelaire and the modern French novelist Marcel Proust; literary criticism introducing contemporary authors such as Franz Kafka to general audiences; aphoristic considerations of the philosophy of history; and avowedly Marxist examinations of the role of art in modern society, such as “The Author as Producer” (1934) and “The Work of Art in the Age of Its Technological Reproducibility.” Academically trained but denied an academic career, Benjamin represents a

crossover figure in literary theory, resembling the mid-twentieth-century American literary and social critic Edmund Wilson in the range of his writing and cultural concerns, as well as the more academic Adorno in his philosophical sophistication.

Among the texts that Benjamin published under the auspices of the Frankfurt Institute, none has become more famous than "The Work of Art in the Age of Its Technological Reproducibility." It introduces his seminal concept of "aura"—the unique quality traditionally attributed to an artwork, giving it a special status equivalent to that of a sacred object in religious ritual. Investigating the perennial theoretical problem of the relation of aesthetics to social history, Benjamin argues that the status of the artwork is not timeless: it changed with the advent of capitalist mass production, which dispelled its unique aura and revered standing by devaluing the concept of the "original." Taking photography and film as his prime examples, he speculates that social transformations induced by technological changes in production alter aesthetic perception itself. He contrasts painting—a topic of comparison made familiar in aesthetics by GOTTHOLD EPHRAIM LESSING (1729–1781)—with film, noting that the stream of images in film promotes a "deepening of apperception" and that the close-up, among other techniques, "further insight into the necessities governing our lives." These are benefits of the reproducibility of art.

Though many view Benjamin as a mystical thinker, he does not express nostalgia for a time when the artwork possessed an "aura"; indeed, he denounces theories that assert an auratic or ritualistic power of film, branding them politically and aesthetically regressive. In contrast to painting or orchestral music, film has revolutionary potential because it abolishes authenticity and aura and enjoins the participation of the audience. Echoing Brecht on the "alienation effects" achieved by actors and staging in experimental theater, Benjamin maintains that the very process through which a movie is constructed—shot by shot, as the editor sutures together sequences filmed at different times—prevents audience members from unconsciously empathizing or identifying with any actor, thereby provoking them to thought and perhaps to action.

Nonetheless, Benjamin recognizes that any art form can be turned to reactionary purposes, and that the apparatus or technology of film does not guarantee a singular political outcome. He thus dispels the utopian belief that technology necessarily generates beneficial changes (a belief sometimes expressed today in rhapsodic pronouncements on the Internet). Mindful of the uses that fascists had made of film—notably Leni Riefenstahl's *Triumph of the Will* (1934), an infamous celebration of Nazi ideology—Benjamin sternly rebukes the aestheticization of politics, by which sheer technical brilliance and beauty mask the representation of a pernicious political program. Instead of offering a fascination with aesthetic qualities, communism positively "politicizes art" by foregrounding political action in the work and compelling the audience to reflect on the problems it raises. As is often the case with Benjamin, "The Work of Art in the Age of Its Technological Reproducibility" is less an authoritative statement of general aesthetic principles than a sequence of striking observations and an injunction for future work.

Some critics have stressed Benjamin's trajectory from the philosophical idealism of his early writings on language, aesthetics, and philosophy to his more explicitly Marxist later writings, but the very range of his work—on language, allegory, translation theory, historiography, aesthetics, film, and the philosophy of technology—has sometimes led commentators to shape Benjamin's work according to their own tastes. Beginning with his lifelong friend, Gershom Scholem, one prominent strand of readings foregrounds Benjamin's more philosophical works, seeing them as an expression of Jewish mysticism. Such readings downplay his mature works of the 1930s, viewing them as a misguided infatuation with the Marxist Brecht. Deconstructive critics, notably PAUL DE MAN and Geoffrey Hartman, draw on Benjamin's writings on allegory and language, claiming him as a precursor of deconstruction in his focus on the problematics of language. Marxists like TERRY EAGLETON have stressed his exemplary role as a revolutionary critic, though one with messianic leanings. Despite the legendary

obscurity of his prose style and his use of idioms derived from mysticism and German idealist philosophy (especially in his earlier writings), Benjamin persistently calls attention in his later work to the influence of the means of production on culture; he commands the revolutionary intellectual to assume an attitude that would transform him "from a supplier of the productive apparatus into an engineer who sees it as his task to adapt this apparatus to the purposes of proletarian revolution" ("The Author as Producer").

The Work of Art in the Age of Its Technological Reproducibility¹

Our fine arts were developed, their types and uses were established, in times very different from the present, by men whose power of action upon things was insignificant in comparison with ours. But the amazing growth of our techniques, the adaptability and precision they have attained, the ideas and habits they are creating, make it a certainty that profound changes are impending in the ancient craft of the Beautiful. In all the arts, there is a physical component which can no longer be considered or treated as it used to be, which cannot remain unaffected by our modern knowledge and power. For the last twenty years, neither matter nor space nor time has been what it was from time immemorial. We must expect great innovations to transform the entire technique of the arts, thereby affecting artistic invention itself and perhaps even bringing about an amazing change in our very notion of art.

—Paul Valéry,² *Pièces sur l'art*
("La Conquête De L'ubiquité")

Introduction

When Marx undertook his analysis of the capitalist mode of production, this mode was in its infancy.³ Marx adopted an approach which gave his investigations prognostic value. Going back to the basic conditions of capitalist production, he presented them in a way which showed what could be expected of capitalism in the future. What could be expected, it emerged, was not only an increasingly harsh exploitation of the proletariat but, ultimately, the creation of conditions which would make it possible for capitalism to abolish itself.

Since the transformation of the superstructure proceeds far more slowly than that of the base, it has taken more than half a century for the change

1. Translated by Harry Zohn and Edmund Jephcott.

2. A leading French poet and essayist (1871–1945); the quote is taken from "The Conquest of Ubiquity," an essay published in *Pieces on Art* (3d ed., 1936).

3. The German philosopher KARL MARX (1818–1883) divided human history into seven modes of

production, the most recent being feudalism and capitalism; he undertook his analyses only a short time after the capitalist industrial revolution had taken hold in England. Marx argued that capitalism's economic base (the mode of production, or "substructure") determines all noneconomic aspects of life ("superstructure").

in the conditions of production to be manifested in all areas of culture. How this process has affected culture can only now be assessed, and these assessments must meet certain prognostic requirements. They do not, however, call for theses on the art of the proletariat after its seizure of power, and still less for any on the art of the classless society. They call for theses defining the tendencies of the development of art under the present conditions of production. The dialectic of these conditions of production is evident in the superstructure, no less than in the economy. Theses defining the developmental tendencies of art can therefore contribute to the political struggle in ways that it would be a mistake to underestimate. They neutralize a number of traditional concepts—such as creativity and genius, eternal value and mystery—which, used in an uncontrolled way (and controlling them is difficult today), allow factual material to be manipulated in the interests of fascism. *In what follows, the concepts which are introduced into the theory of art differ from those now current in that they are completely useless for the purposes of fascism. On the other hand, they are useful for the formulation of revolutionary demands in the politics of art.*

I

In principle, the work of art has always been reproducible. Objects made by humans could always be copied by humans. Replicas were made by pupils in practicing for their craft, by masters in disseminating their works, and, finally, by third parties in pursuit of profit. But the technological reproduction of artworks is something new. Having appeared intermittently in history, at widely spaced intervals, it is now being adopted with ever-increasing intensity. The Greeks had only two ways of technologically reproducing works of art: casting and stamping. Bronzes, terracottas, and coins were the only artworks they could produce in large numbers. All others were unique and could not be technologically reproduced. Graphic art was first made technologically reproducible by the woodcut, long before written language became reproducible by movable type. The enormous changes brought about in literature by movable type, the technological reproducibility of writing, are well known. But they are only a special case, though an important one, of the phenomenon considered here from the perspective of world history. In the course of the Middle Ages the woodcut was supplemented by engraving and etching, and at the beginning of the nineteenth century by lithography.

Lithography marked a fundamentally new stage in the technology of reproduction. This much more direct process—distinguished by the fact that the drawing is traced on a stone, rather than incised on a block of wood or etched on a copper plate—first made it possible for graphic art to market its products not only in large numbers, as previously, but in daily changing variations. Lithography enabled graphic art to provide an illustrated accompaniment to everyday life. It began to keep pace with movable-type printing. But only a few decades after the invention of lithography, graphic art was surpassed by photography. For the first time, photography freed the hand from the most important artistic tasks in the process of pictorial reproduction—tasks that now devolved solely upon the eye looking into a lens. And since the eye perceives more swiftly than the hand can draw, the process of pictorial reproduction was enormously accelerated, so that it could now keep pace

with speech. A cinematographer shooting a scene in the studio captures the images at the speed of an actor's speech. Just as the illustrated newspaper virtually lay hidden within lithography, so the sound film was latent in photography. The technological reproduction of sound was tackled at the end of the last century. These convergent endeavors made it possible to conceive of the situation that Paul Valéry describes in this sentence: "Just as water, gas, and electricity are brought into our houses from far off to satisfy our needs with minimal effort, so we shall be supplied with visual or auditory images, which will appear and disappear at a simple movement of the hand, hardly more than a sign."⁴ *Around 1900, technological reproduction not only had reached a standard that permitted it to reproduce all known works of art, profoundly modifying their effect, but it also had captured a place of its own among the artistic processes.* In gauging this standard, we would do well to study the impact which its two different manifestations—the reproduction of artworks and the art of film—are having on art in its traditional form.

II

In even the most perfect reproduction, *one* thing is lacking: the here and now of the work of art—its unique existence in a particular place. It is this unique existence—and nothing else—that bears the mark of the history to which the work has been subject. This history includes changes to the physical structure of the work over time, together with any changes in ownership.⁵ Traces of the former can be detected only by chemical or physical analyses (which cannot be performed on a reproduction), while changes of ownership are part of a tradition which can be traced only from the standpoint of the original in its present location.

The here and now of the original underlies the concept of its authenticity. Chemical analyses of the patina of a bronze can help to establish its authenticity, just as the proof that a given manuscript of the Middle Ages came from an archive of the fifteenth century helps to establish its authenticity. *The whole sphere of authenticity eludes technological—and, of course, not only technological—reproducibility.*⁶ But whereas the authentic work retains its full authority in the face of a reproduction made by hand, which it generally brands a forgery, this is not the case with technological reproduction. The reason is twofold. First, technological reproduction is more independent of the original than is manual reproduction. For example, in photography it can bring out aspects of the original that are accessible only to the lens (which is adjustable and can easily change viewpoint) but not to

4. Valéry, *Pièces sur l'art* (Paris), p. 105 [Benjamin's note]. Some of the author's notes have been edited, and some omitted.

5. Of course, the history of a work of art encompasses more than this. The history of the "Mona Lisa," for instance, encompasses the kind and number of its copies made in the 17th, 18th, and 19th centuries [Benjamin's note]. *Mona Lisa* (ca. 1504), painting by Leonardo da Vinci.

6. Precisely because authenticity is not reproducible, the intensive penetration of certain (technological) processes of reproduction was instrumental in differentiating and gradating authenticity. To develop such differentiations was an important

function of the trade in works of art. Such trade had a manifest interest in distinguishing among various prints of a woodblock engraving (those before and those after inscription), of a copperplate engraving, and so on. The invention of the woodcut may be said to have struck at the root of the quality of authenticity even before its late flowering. To be sure, a medieval picture of the Madonna at the time it was created could not yet be said to be "authentic." It became "authentic" only during the succeeding centuries, and perhaps most strikingly so during the 19th [Benjamin's note].

the human eye; or it can use certain processes, such as enlargement or slow motion, to record images which escape natural optics altogether. This is the first reason. Second, technological reproduction can place the copy of the original in situations which the original itself cannot attain. Above all, it enables the original to meet the recipient halfway, whether in the form of a photograph or in that of a gramophone record. The cathedral leaves its site to be received in the studio of an art lover; the choral work performed in an auditorium or in the open air is enjoyed in a private room.

The situations into which the product of technological reproduction can be brought may leave the artwork's other properties untouched, but they certainly devalue the here and now of the artwork. And although this can apply not only to art but (say) to a landscape moving past the spectator in a film, in the work of art this process touches on a highly sensitive core, more vulnerable than that of any natural object. That core is its authenticity. The authenticity of a thing is the quintessence of all that is transmissible in it from its origin on, ranging from its physical duration to the historical testimony relating to it. Since the historical testimony is founded on the physical duration, the former, too, is jeopardized by reproduction, in which the physical duration plays no part. And what is really jeopardized when the historical testimony is affected is the authority of the object.⁷

One might encompass the eliminated element within the concept of the aura, and go on to say: what withers in the age of the technological reproducibility of the work of art is the latter's aura. The process is symptomatic; its significance extends far beyond the realm of art. *It might be stated as a general formula that the technology of reproduction detaches the reproduced object from the sphere of tradition. By replicating the work many times over, it substitutes a mass existence for a unique existence. And in permitting the reproduction to reach the recipient in his or her own situation, it actualizes that which is reproduced.* These two processes lead to a massive upheaval in the domain of objects handed down from the past—a shattering of tradition which is the reverse side of the present crisis and renewal of humanity. Both processes are intimately related to the mass movements of our day. Their most powerful agent is film. The social significance of film, even—and especially—in its most positive form, is inconceivable without its destructive, cathartic⁸ side: the liquidation of the value of tradition in the cultural heritage. This phenomenon is most apparent in the great historical films. It is assimilating ever more advanced positions in its spread. When Abel Gance fervently proclaimed in 1927, “Shakespeare, Rembrandt, Beethoven will make films. . . . All legends, all mythologies, and all myths, all the founders of religions, indeed, all religions, . . . await their celluloid resurrection, and the heroes are pressing at the gates,” he was inviting the reader, no doubt unawares, to witness a comprehensive liquidation.⁹

7. The poorest provincial staging of Goethe's *Faust* is superior to a film of *Faust* in that, ideally, it competes with the first performance at Weimar [Benjamin's note]. *Faust* (1808, 1832), a drama by the German Romantic writer Johann Wolfgang von Goethe (1749–1832), who lived for most of his life in Weimar.

8. Purgative. Benjamin here invokes a sense very different from the traditional literary meaning of catharsis, a term applied by ARISTOTLE (384–322

B.C.E.) in the *Poetics* (see above) to the emotional release experienced by an audience watching a tragedy.

9. Abel Gance, “Le Temps de l'image est venu!” [“It Is Time for the Image!” (French)], in *L'Art cinématographique*, vol. 2 (Paris, 1927), pp. 94–95 [Benjamin's note]. Gance (1889–1981), French silent film director. Rembrandt van Rijn (1606–1669), Dutch painter and etcher. Ludwig van Beethoven (1770–1827), German composer.

III

Just as the entire mode of existence of human collectives changes over long historical periods, so too does their mode of perception. The way in which human perception is organized—the medium in which it occurs—is conditioned not only by nature but by history. The era of the migration of peoples, an era which saw the rise of the late-Roman art industry and the Vienna Genesis, developed not only an art different from that of antiquity but also a different perception. The scholars of the Viennese school Riegl and Wickhoff,¹ resisting the weight of the classical tradition beneath which this art had been buried, were the first to think of using such art to draw conclusions about the organization of perception at the time the art was produced. However far-reaching their insight, it was limited by the fact that these scholars were content to highlight the formal signature which characterized perception in late-Roman times. They did not attempt to show the social upheavals manifested in these changes of perception—and perhaps could not have hoped to do so at that time. Today, the conditions for an analogous insight are more favorable. And if changes in the medium of present-day perception can be understood as a decay of the aura, it is possible to demonstrate the social determinants of that decay.

The concept of the aura which was proposed above with reference to historical objects can be usefully illustrated with reference to an aura of natural objects. We define the aura of the latter as the unique apparition of a distance, however near it may be. To follow with the eye—while resting on a summer afternoon—a mountain range on the horizon or a branch that casts its shadow on the beholder is to breathe the aura of those mountains, of that branch. In the light of this description, we can readily grasp the social basis of the aura's present decay. It rests on two circumstances, both linked to the increasing significance of the masses in contemporary life. Namely: *the desire of the present-day masses to "get closer" to things spatially and humanly, and their equally passionate concern for overcoming each thing's uniqueness by assimilating it as a reproduction.*² Every day the urge grows stronger to get hold of an object at close range in an image, or better, in a facsimile, a reproduction. And the reproduction as offered by illustrated magazines and newsreels, differs unmistakably from the image. Uniqueness and permanence are as closely entwined in the latter as are transitoriness and repeatability in the former. The stripping of the veil from the object, the destruction of the aura, is the signature of a perception whose "sense for sameness in the world"³ has so increased that, by means of reproduction, it extracts sameness even from what is unique. Thus is manifested in the field of perception what in the theoretical sphere is noticeable in the increasing significance of statis-

1. Alois Riegl (1858–1905) and Franz Wickhoff (1853–1909), Austrian art historians who studied the inception (hence "genesis") of European art in Vienna in the Middle Ages, an inception influenced by earlier Roman art.

2. Getting closer (in terms of human interest) to the masses may involve having one's social function removed from the field of vision. Nothing guarantees that a portraitist of today, when painting a famous surgeon at the breakfast table

with his family, depicts his social function more precisely than a painter of the seventeenth century who showed the viewer doctors representing their profession, as Rembrandt did in his "Anatomy Lesson" [Benjamin's note]. *Anatomy Lesson of Dr. Tulp*, a group portrait, was painted in 1632.

3. Quoted from *Exotische Novellen* (1919, *Exotic Novella*), by the Danish writer Johannes V. Jensen.

tics. The alignment of reality with the masses and of the masses with reality is a process of immeasurable importance for both thinking and perception.

IV

The uniqueness of the work of art is identical to its embeddedness in the context of tradition. Of course, this tradition itself is thoroughly alive and extremely changeable. An ancient statute of Venus,⁴ for instance, existed in a traditional context for the Greeks (who made it an object of worship) that was different from the context in which it existed for medieval clerics (who viewed it as a sinister idol). But what was equally evident to both was its uniqueness—that is, its aura. Originally, the embeddedness of an artwork in the context of tradition found expression in a cult. As we know, the earliest artworks originated in the service of rituals—first magical, then religious. And it is highly significant that the artwork's auratic mode of existence is never entirely severed from its ritual function.⁵ In other words: *the unique value of the "authentic" work of art has its basis in ritual, the source of its original use value.* This ritualistic basis, however mediated it may be, is still recognizable as secularized ritual in even the most profane forms of the cult of beauty.⁶ The secular worship of beauty, which developed during the Renaissance and prevailed for three centuries, clearly displayed that ritualistic basis in its subsequent decline and in the first severe crisis which befell it. For when, with the advent of the first truly revolutionary means of reproduction (namely, photography, which emerged at the same time as socialism), art felt the approach of that crisis which a century later has become unmistakable, it reacted with the doctrine of *l'art pour l'art*⁷—that is, with a theology of art. This in turn gave rise to a negative theology, in the form of an idea of "pure" art, which rejects not only any social function but any definition in terms of a representational content. (In poetry, Mallarmé⁸ was the first to adopt this standpoint.)

No investigation of the work of art in the age of its technological reproducibility can overlook these connections. They lead to crucial insight: for the first time in world history, technological reproducibility emancipates the work of art from its parasitic subservience to ritual. To an ever-increasing degree, the work reproduced becomes the reproduction of a work designed for reproducibility.⁹ From a photographic plate, for example, one can make

4. Roman goddess of love, identified with the Greek Aphrodite.

5. The definition of the aura as the "unique apparition of a distance, however near it may be," represents nothing more than a formulation of the cult value of the work of art in categories of spatiotemporal perception. Distance is the opposite of nearness. The *essentially* distant is the unapproachable. Unapproachability is, indeed, a primary quality of the cult image; true to its nature, the cult image remains "distant, however near it may be." The nearness which one may gain from its substance does not impair the distance it retains in its apparition [Benjamin's note].

6. To the extent that the cult value of a painting is secularized, the impressions of its fundamental uniqueness become less distinct. In the viewer's imagination, the uniqueness of the phenomena holding sway in the cult image is more and more

displaced by the empirical uniqueness of the artist or of his creative achievement. To be sure, never completely so—the concept of authenticity always transcends that of proper attribution. (This is particularly apparent in the collector, who always displays some traits of the fetishist and who, through his possession of the artwork, shares in its cultic power.) Nevertheless, the concept of authenticity still functions as a determining factor in the evaluation of art; as art becomes secularized, authenticity displaces the cult value of the work [Benjamin's note].

7. Art for art's sake (French), a 19th-century aesthetic doctrine; see WALTER PATER, above.

8. Stéphane Mallarmé (1842–1898), French poet.

9. In film, the technological reproducibility of the product is not an externally imposed condition of its mass dissemination, as it is, say, in literature or painting. *The technological reproducibility of films*

any number of prints; to ask for the “authentic” print makes no sense. *But as soon as the criterion of authenticity ceases to be applied to artistic production, the whole social function of art is revolutionized. Instead of being founded on ritual, it is based on a different practice: politics.*

V

The reception of works of art varies in character, but in general two polar types stand out: one accentuates the artwork’s cult value; the other, its exhibition value. Artistic production begins with figures in the service of a cult. One may assume that it was more important for these figures to be present than to be seen. The elk depicted by Stone Age man on the walls of his cave is an instrument of magic. He exhibits it to his fellow men, to be sure, but in the main it is meant for the spirits. Cult value as such tends today, it would seem, to keep the artwork out of sight: certain statues of gods are accessible only to the priest in the cella¹; certain images of the Madonna remain covered nearly all year round; certain sculptures on medieval cathedrals are not visible to the viewer at ground level. *With the emancipation of specific artistic practices from the service of ritual, the opportunities for exhibiting their products increase.* It is easier to exhibit a portrait bust that can be sent here and there than to exhibit the statue of a divinity that has a fixed place in the interior of a temple. A panel painting can be exhibited more easily than the mosaic or fresco which preceded it. And although a Mass may have been no less suited to public presentation than a symphony, the symphony came into being at a time when the possibility of such presentation promised to be greater.

The scope for exhibiting the work of art has increased so enormously with the various methods of technologically reproducing it that, as happened in prehistoric times, a quantitative shift between the two poles of the artwork has led to a qualitative transformation in its nature. Just as the work of art in prehistoric times, through the absolute emphasis placed on its cult value, became first and foremost an instrument of magic which only later came to be recognized as a work of art, so today, through the absolute emphasis placed on its exhibition value, the work of art becomes a construct with quite new functions. Among these, the one we are conscious of—the artistic function—may subsequently be seen as incidental.² This much is

is based directly on the technology of their production. This not only makes possible the mass dissemination of films in the most direct way, but actually enforces it. It does so because the process of producing a film is so costly that an individual who could afford to buy a painting, for example, could not afford to buy a [master print of a] film. It was calculated in 1927 that, in order to make a profit, a major film needed to reach an audience of 9 million. Of course, the advent of sound film initially caused a movement in the opposite direction: its audience was restricted by language boundaries. And that coincided with the emphasis placed on national interests by fascism. But it is less important to note this setback (which in any case was mitigated by dubbing) than to observe its connection with fascism. The simultaneity of the two phenomena results from the eco-

nomie crisis. The same disorders which led, in the world at large, to an attempt to maintain existing property relations by brute force induced film capital, under the threat of crisis, to speed up the development of sound film. Its introduction brought temporary relief, not only because sound film attracted the masses back into the cinema but because it consolidated new capital from the electrical industry with that of film. Thus, considered from the outside, sound film promoted national interests; but seen from the inside, it helped internationalize film production even more than before [Benjamin’s note].

1. Small room (Latin); specifically, a priest’s cell.

2. Bertolt Brecht, on a different level, engaged in analogous reflections: “If the concept of ‘work of art’ can no longer be applied to the thing that emerges once the work is transformed into a com-

certain: today, photography and film are the most serviceable vehicles of this new understanding.

VI

In photography, exhibition value begins to drive back cult value on all fronts. But cult value does not give way without resistance. It falls back to a last entrenchment: the human countenance. It is no accident that the portrait is central to early photography. In the cult of remembrance of dead or absent loved ones, the cult value of the image finds its last refuge. In the fleeting expression of a human face, the aura beckons from early photographs for the last time. This is what gives them their melancholy and incomparable beauty. But as the human being withdraws from the photographic image, exhibition value for the first time shows its superiority to cult value. To have given this development its local habitation constitutes the unique significance of Atget,³ who, around 1900, took photographs of deserted Paris streets. It has justly been said that he photographed them like scenes of crimes. A crime scene, too, is deserted; it is photographed for the purpose of establishing evidence. With Atget, photographic records begin to be evidence in the historical trial. This constitutes their hidden political significance. They demand a specific kind of reception. Free-floating contemplation is no longer appropriate to them. They unsettle the viewer; he feels challenged to find a particular way to approach them. At the same time, illustrated magazines begin to put up signposts for him—whether these are right or wrong is irrelevant. For the first time, captions become obligatory. And it is clear that they have a character altogether different from the titles of paintings. The directives given by captions to those looking at images in illustrated magazines soon become even more precise and commanding in films, where the way each single image is understood appears prescribed by the sequence of all the preceding images.

VII

The nineteenth-century dispute over the relative artistic merits of painting and photography seems misguided and confused today. But this does not diminish its importance, and may even underscore it. The dispute was in fact an expression of a world-historical upheaval whose true nature was concealed from both parties. Insofar as the age of technological reproducibility separated art from its basis in cult, all semblance of art's autonomy disappeared forever. But the resulting change in the function of art lay beyond the horizon of the nineteenth century. And even the twentieth, which saw the development of film, was slow to perceive it.

modity, we have to eliminate this concept with due caution but without fear, lest we liquidate the function of the very thing as well. For it has to go through this phase unswervingly; there is no viable detour from the straight path. Rather, what happens here with the work of art will change it fundamentally, will erase its past to such an extent that—should the old concept be taken up again

(and it will be; why not?)—it will no longer evoke any memory of the thing it once designated." Brecht, *Versuche* [Experiments], 8–10 (Berlin, 1931), pp. 301–2 [Benjamin's note]. Brecht (1898–1956), German playwright and influential Marxist friend of Benjamin.

3. Eugène Atget (1857–1927), French photographer.

Though commentators had earlier expended much fruitless ingenuity on the question of whether photography was an art—without asking the more fundamental question of whether the invention of photography had not transformed the entire character of art—film theorists quickly adopted the same ill-considered standpoint. But the difficulties which photography caused for traditional aesthetics were child's play compared to those presented by film. Hence the obtuse and hyperbolic character of early film theory. Abel Gance, for instance, compares film to hieroglyphs: "By a remarkable regression, we are transported back to the expressive level of the Egyptians. . . . Pictorial language has not matured, because our eyes are not yet adapted to it. There is not yet enough respect, not enough *cult*, for what it expresses."⁴ Or, in the words of Séverin-Mars: "What other art has been granted a dream . . . at once more poetic and more real? Seen in this light, film might represent an incomparable means of expression, and only the noblest minds should move within its atmosphere, in the most perfect and mysterious moments of their lives."⁵ Alexander Arnoux, for his part, concludes a fantasy about the silent film with the question: "Do not all the bold descriptions we have given amount to a definition of prayer?"⁶ It is instructive to see how the desire to annex film to "art" impels these theoreticians to attribute elements of cult to film—with a striking lack of discretion. Yet when these speculations were published, works like *A Woman of Paris* and *The Gold Rush*⁷ had already appeared. This did not deter Abel Gance from making the comparison with hieroglyphs, while Séverin-Mars speaks of film as one might speak of paintings by Fra Angelico.⁸ It is revealing that even today especially reactionary authors look in the same direction for the significance of film—finding, if not actually a sacred significance, then at least a supernatural one. In connection with Max Reinhardt's film version of *A Midsummer Night's Dream*, Werfel⁹ comments that it was undoubtedly the sterile copying of the external world—with its streets, interiors, railroad stations, restaurants, automobiles, and beaches—that had prevented film up to now from ascending to the realm of art. "Film has not yet realized its true purpose, its real possibilities. . . . These consist in its unique ability to use natural means to give incomparably convincing expression to the fairylike, the marvelous, the supernatural."¹

VIII

The artistic performance of a stage actor is directly presented to the public by the actor in person; that of a screen actor, however, is presented through a camera, with two consequences. The recording apparatus that brings the film actor's performance to the public need not respect the performance as

4. Gance, p. 101 [Benjamin's note].

5. Quoted in Gance, p. 100 [Benjamin's note]. Séverin-Mars (Armand Jean de Malasayade, 1873–1921), French writer and actor who appeared in three of Gance's films.

6. Alexandre Arnoux, *Cinéma* (Paris, 1929), p. 28 [Benjamin's note]. Arnoux (1884–1973), French playwright.

7. Two American silent films (1923, 1925) written and directed by the English actor and director Charlie Chaplin (1889–1977).

8. Florentine painter (Giovanni da Fiesole, ca.

1400–1455), a monk whose works often have religious subjects.

9. Franz Werfel (1890–1945), Austrian poet, playwright, and novelist. Reinhardt (1873–1943), Austrian-born actor and producer of theater and film; his version of Shakespeare's *A Midsummer Night's Dream* (ca. 1595) was released in 1935.

1. Franz Werfel, "Ein Sommernachtstraum: Ein Film von Shakespeare und Reinhardt" ["A Midsummer Night's Dream: A Film by Shakespeare and Reinhardt"], *Neues Wiener Journal*, cited in *Lu*, Nov. 15, 1935 [Benjamin's note].

an integral whole. Guided by the cameraman, the camera continually changes its position with respect to the performance. The sequence of positional views which the editor composes from the material supplied him constitutes the completed film. It comprises a certain number of movements, of various kinds and duration, which must be apprehended as such through the camera, not to mention special camera angles, close-ups, and so on. Hence, the performance of the actor is subjected to a series of optical tests. This is the first consequence of the fact that the actor's performance is presented by means of a camera. The second consequence is that the film actor lacks the opportunity of the stage actor to adjust to the audience during his performance, since he does not present his performance to the audience in person. This permits the audience to take the position of a critic, without experiencing any personal contact with the actor. *The audience's empathy with the actor is really an empathy with the camera. Consequently, the audience takes the position of the camera; its approach is that of testing.*² This is not an approach compatible with cult value.

IX

In the case of film, the fact that the actor represents someone else before the audience matters much less than the fact that he represents himself before the apparatus. One of the first to sense this transformation of the actor by the test performance was Pirandello.³ That his remarks on the subject in his novel *Si gira* are confined to the negative aspects of this change, and to silent film only, does little to diminish their relevance. For in this respect, the sound film changed nothing essential. What matters is that the actor is performing for a piece of equipment—or, in the case of sound film, for two pieces of equipment. "The film actor," Pirandello writes, "feels as if exiled. Exiled not only from the stage but from his own person. With a vague unease, he senses an inexplicable void, stemming from the fact that his body has lost its substance, that he has been volatilized, stripped of his reality, his life, his voice, the noises he makes when moving about, and has been turned into a mute image that flickers for a moment on the screen, then vanishes into silence. . . . The little apparatus will play with his shadow before the audience, and he himself must be content to play before the apparatus." The situation can also be characterized as follows: for the first time—and this is the effect of film—the human being is placed in a position where he must operate with his whole living person, while forgoing its aura. For the aura is bound to his presence in the here and now. There is no facsimile of the aura. The aura surrounding Macbeth⁴ on the stage cannot be divorced from the aura which, for the living spectators, surrounds the actor who plays him. What distinguishes the shot in the film studio, however,

2. The expansion of the field of the testable which the film apparatus brings about for the actor corresponds to the extraordinary expansion of the field of the testable brought about for the individual through economic conditions. Thus, vocational aptitude tests become constantly more important. What matters in these tests are segmental performances of the individual. The final cut of a film and the vocational

aptitude test are both taken before a panel of experts. The director in the studio occupies a position identical to that of the examiner during aptitude tests [Benjamin's note].

3. Luigi Pirandello (1867–1936), Italian dramatist and novelist; his novel *Si Gira* (1915) was translated as *Shoot!* in 1926.

4. Title character of Shakespeare's play (1606).

is that the camera is substituted for the audience. As a result, the aura surrounding the actor is dispelled—and, with it, the aura of the figure he portrays.

It is not surprising that it should be a dramatist such as Pirandello who, in reflecting on the special character of film acting, inadvertently touches on the crisis now affecting the theater. Indeed, nothing contrasts more starkly with a work of art completely subject to (or, like film, founded in) technological reproduction than a stage play. Any thorough consideration will confirm this. Expert observers have long recognized that, in film, “the best effects are almost always achieved by ‘acting’ as little as possible. . . . The development,” according to Rudolf Arnheim, writing in 1932, has been toward “using the actor as one of the ‘props,’ chosen for his typicalness and . . . introduced in the proper context.”⁵ Closely bound up with this development is something else. *The stage actor identifies himself with a role. The film actor very often is denied this opportunity.* His performance is by no means a unified whole, but is assembled from many individual performances. Apart from incidental concerns about studio rental, availability of other actors, scenery, and so on, there are elementary necessities of the machinery that split the actor’s performance into a series of episodes capable of being assembled. In particular, lighting and its installation require the representation of an action—which on the screen appears as a swift, unified sequence—to be filmed in a series of separate takes, which may be spread over hours in the studio. Not to mention the more obvious effects of montage. A leap from a window, for example, can be shot in the studio as a leap from a scaffold, while the ensuing fall may be filmed weeks later at an outdoor location. And far more paradoxical cases can easily be imagined. Let us assume that an actor is supposed to be startled by a knock at the door. If his reaction is not satisfactory, the director can resort to an expedient: he could have a shot fired without warning behind the actor’s back on some other occasion when he happens to be in the studio. The actor’s frightened reaction at that moment could be recorded and then edited into the film. Nothing shows more graphically that art has escaped the realm of “beautiful semblance,” which for so long was regarded as the only sphere in which it could thrive.

X

The film actor’s feeling of estrangement in the face of the apparatus, as Pirandello describes this experience, is basically of the same kind as the estrangement felt before one’s appearance in a mirror. But now the mirror image has become detachable from the person mirrored, and is transportable. And where is it transported? To a site in front of the public.⁶ The

5. Rudolf Arnheim, *Film als Kunst* [*Film as Art*] (Berlin, 1932), pp. 176–77. If the actor thus becomes a prop, the prop, in its turn, not infrequently functions as an actor. At any rate, it is not unusual for films to allocate a role to a prop. [For example,] a clock that is running will always be a disturbance on the stage, where it cannot be permitted its role of measuring time. Even in a naturalistic play, real-life time would conflict with theatrical time. In view of this, it is very revealing

that film—where appropriate—can readily make use of time as measured by a clock. This feature, more than many others, makes it clear that—circumstances permitting—each and every prop in a film may assume decisive functions [Benjamin’s note]. Arnheim (1904–2007), German-born writer on art and visual thinking.

6. The change noted here in the mode of exhibition—a change brought about by reproduction technology—is also noticeable in politics.

screen actor never for a moment ceases to be aware of this. *While he stands before the apparatus, the screen actor knows that in the end he is confronting the public, the consumers who constitute the market.* This market, where he offers not only his labor but his entire self, his heart and soul, is beyond his reach. During the shooting, he has as little contact with it as would any article being made in a factory. This may contribute to that oppression, that new anxiety which, according to Pirandello, grips the actor before the camera. Film responds to the shriveling of the aura by artificially building up the “personality” outside the studio. The cult of the movie star, fostered by the money of the film industry, preserves that magic of the personality which has long been no more than the putrid magic of its own commodity character. So long as moviemakers’ capital sets the fashion, as a rule the only revolutionary merit that can be ascribed to today’s cinema is the promotion of a revolutionary criticism of traditional concepts of art. We do not deny that in some cases today’s films can also foster revolutionary criticism of social conditions, even of property relations. But the present study is no more specifically concerned with this than is western European film production.

It is inherent in the technology of film, as of sports, that everyone who witnesses these performances does so as a quasi-expert. This is obvious to anyone who has listened to a group of newspaper boys leaning on their bicycles and discussing the outcome of a bicycle race. It is no accident that newspaper publishers arrange races for their delivery boys. These arouse great interest among the participants, for the winner has a chance to rise from delivery boy to professional racer. Similarly, the newsreel offers everyone the chance to rise from passer-by to movie extra. In this way, a person might even see himself becoming part of a work of art: think of Vertov’s *Three Songs of Lenin* or Ivens’ *Borinage*.⁷ *Any person today can lay claim to being filmed.* This claim can best be clarified by considering the historical situation of literature today.

For centuries it was in the nature of literature that a small number of writers confronted many thousands of readers. This began a change toward the end of the past century. With the growth and extension of the press, which constantly made new political, religious, scientific, professional, and local journals available to readers, an increasing number of readers—in isolated cases, at first—turned into writers. It began with the space set aside for “letters to the editor” in the daily press, and has now reached a point where there is hardly a European engaged in the work process who could not, in

The present crisis of the bourgeois democracies involves a crisis in the conditions governing the public presentation of leaders. Democracies exhibit the leader directly, in person, before elected representatives. The parliament is his public. But innovations in recording equipment now enable the speaker to be heard by an unlimited number of people while he is speaking, and to be seen by an unlimited number shortly afterward. This means that priority is given to presenting the politician before the recording equipment. Parliaments are becoming depopulated at the same time as theaters. Radio and film are changing not only the function of the professional actor

but, equally, the function of those who, like the leaders, present themselves before these media. The direction of this change is the same for the film actor and for the leader, regardless of their different tasks. It tends toward the exhibition of controllable, transferable skills under certain social conditions. This results in a new form of selection—selection before an apparatus—from which the star and the dictator emerge as victors [Benjamin’s note].

7. A 1933 film directed by the Dutch director Joris Ivens (1898–1989). Dziga Vertov (1896–1954), early Russian film director; *Three Songs about Lenin* appeared in 1934.

principle, find an opportunity to publish somewhere or other an account of a work experience, a complaint, a report, or something of the kind. Thus, the distinction between author and public is about to lose its axiomatic character. The difference becomes functional; it may vary from case to case. At any moment, the reader is ready to become a writer. As an expert—which he has had to become in any case in a highly specialized work process, even if only in some minor capacity—the reader gains access to authorship. In the Soviet Union, work itself is given a voice. And the ability to describe a job in words now forms part of the expertise needed to carry it out. Literary competence is no longer founded on specialized higher education but on polytechnic training, and thus is common property.⁸

All this can readily be applied to film, where shifts that in literature took place over centuries have occurred in a decade. In cinematic practice—above all, in Russia—this shift has already been partly realized. Some of the actors taking part in Russian films are not actors in our sense but people who portray *themselves*—and primarily in their own work process. In western Europe today, the capitalist exploitation of film obstructs the human being's legitimate claim to being reproduced. Under these circumstances, the film industry has an overriding interest in stimulating the involvement of the masses through illusionary displays and ambiguous speculations.

XI

The shooting of a film, especially a sound film, offers a hitherto unimaginable spectacle. It presents a process in which it is impossible to assign to the spectator a single viewpoint which would exclude from his or her field of vision the equipment not directly involved in the action being filmed—the camera, the lighting units, the technical crew, and so forth (unless the alignment of the spectator's pupil coincided with that of the camera). This circumstance, more than any other, makes any resemblance between a scene

8. The privileged character of the respective techniques is lost. Aldous Huxley writes: "Advances in technology have led . . . to vulgarity. . . . Process reproduction and the rotary press have made possible the indefinite multiplication of writing and pictures. Universal education and relatively high wages have created an enormous public who know how to read and can afford to buy reading and pictorial matter. A great industry has been called into existence in order to supply these commodities. Now, artistic talent is a very rare phenomenon; whence it follows . . . that, at every epoch and in all countries, most art has been bad. But the proportion of trash in the total artistic output is greater now than at any other period. That it must be so is a matter of simple arithmetic. The population of Western Europe has a little more than doubled during the last century. But the amount of reading—and seeing—matter has increased, I should imagine, at least twenty and possibly fifty or even a hundred times. If there were n men of talent in a population of x millions, there will presumably be $2n$ men of talent among $2x$ millions. The situation may be summed up thus. For every page of print and pictures published a century ago, twenty or perhaps even a hundred pages are published today. But for every man of talent then liv-

ing, there are now only two men of talent. It may be of course that, thanks to universal education, many potential talents which in the past would have been stillborn are now enabled to realize themselves. Let us assume, then, that there are now three or even four men of talent to every one of earlier times. It still remains true to say that the consumption of reading—and seeing—matter has far outstripped the natural production of gifted writers and draftsmen. It is the same with hearing-matter. Prosperity, the gramophone and the radio have created an audience of hearers who consume an amount of hearing-matter that has increased out of all proportion to the increase of population and the consequent natural increase of talented musicians. It follows from all this that in all the arts the output of trash is both absolutely and relatively greater than it was in the past; and that it must remain greater for just so long as the world continues to consume the present inordinate quantities of reading-matter, seeing-matter, and hearing-matter" (Aldous Huxley, *Beyond the Mexican Bay: A Traveller's Journal*, 1934 [reprint, London, 1949, pp. 274ff.]). This mode of observation is obviously not progressive [Benjamin's note]. Huxley (1894–1963), English novelist and essayist.

in a film studio and one onstage superficial and irrelevant. In principle, the theater includes a position from which the action on the stage cannot easily be detected as an illusion. There is no such position where a film is being shot. The illusory nature of film is of the second degree; it is the result of editing. That is to say: *In the film studio the apparatus has penetrated so deeply into reality that a pure view of that reality, free of the foreign body of equipment, is the result of a special procedure, namely, the shooting by the specially adjusted photographic device and the assembly of that shot with others of the same kind.* The equipment-free aspect of reality has here become the height of artifice, and the vision of immediate reality the Blue Flower in the land of technology.⁹

This state of affairs, which contrasts so sharply with that which obtains in the theater, can be compared even more instructively to the situation in painting. Here we have to pose the question: How does the camera operator compare with the painter? In answer to this, it will be helpful to consider the concept of the operator as it is familiar to us from surgery. The surgeon represents the polar opposite of the magician. The attitude of the magician, who heals a sick person by a laying-on of hands, differs from that of the surgeon, who makes an intervention in the patient. The magician maintains the natural distance between himself and the person treated; more precisely, he reduces it slightly by laying on his hands, but increases it greatly by his authority. The surgeon does exactly the reverse; he greatly diminishes the distance from the patient by penetrating the patient's body, and increases it only slightly by the caution with which his hand moves among the organs. In short: unlike the magician (traces of whom are still found in the medical practitioner), the surgeon abstains at the decisive moment from confronting his patient person to person; instead, he penetrates the patient by operating.—Magician is to surgeon as painter is to cinematographer. The painter maintains in his work a natural distance from reality, whereas the cinematographer penetrates deeply into its tissue. The images obtained by each differ enormously. The painter's is a total image, whereas that of the cinematographer is piecemeal, its manifold parts being assembled according to a new law. *Hence, the presentation of reality in film is incomparably the more significant for people of today, since it provides the equipment-free aspect of reality they are entitled to demand from a work of art, and does so precisely on the basis of the most intensive interpenetration of reality with equipment.*

XII

The technological reproducibility of the artwork changes the relation of the masses to art. The extremely backward attitude toward a Picasso¹ painting changes into a highly progressive reaction to a Chaplin film. The progressive reaction is characterized by an immediate, intimate fusion of pleasure—pleasure in seeing and experiencing—with an attitude of expert appraisal. Such a fusion is an important social index. As is clearly seen in the case of

9. An allusion to *Heinrich von Ofterdingen* (1802), an unfinished novel by the German Romantic writer Novalis (Friedrich Freiherr von Hardenberg, 1772–1801), in which a medieval poet

searches for a blue flower that bears the face of his beloved.

1. Pablo Picasso (1881–1973), Spanish-born painter who was a pioneer of modern art.

painting, the more reduced the social impact of an art form, the more widely criticism and enjoyment of it diverge in the public. The conventional is uncritically enjoyed, while the truly new is criticized with aversion. With regard to the cinema, the critical and uncritical attitudes of the public coincide. The decisive reason for this is that nowhere more than in the cinema are the reactions of individuals, which together make up the massive reaction of the audience, determined by the imminent concentration of reactions into a mass. No sooner are these reactions manifest than they regulate one another. Again, the comparison with painting is fruitful. A painting has always exerted a claim to be viewed primarily by a single person or by a few. The simultaneous viewing of paintings by a large audience, as happened in the nineteenth century, is an early symptom of the crisis in painting, a crisis triggered not only by photography but, in a relatively independent way, by the artwork's claim to the attention of the masses.

Painting, by its nature, cannot provide an object of simultaneous collective reception, as architecture has always been able to do, as the epic poem could do at one time, and as film is able to do today. And although direct conclusions about the social role of painting cannot be drawn from this fact alone, it does have a strongly adverse effect whenever painting is led by special circumstances, as if against its nature, to confront the masses directly. In the churches and monasteries of the Middle Ages, and at the princely courts up to about the end of the eighteenth century, the collective reception of paintings took place not simultaneously but in a manifoldly graduated and hierarchically mediated way. If that has changed, the change testifies to the special conflict in which painting has become enmeshed by the technological reproducibility of the image. And while efforts have been made to present paintings to the masses in galleries and salons, this mode of reception gives the masses no means of organizing and regulating their response. Thus, the same public which reacts progressively to a slapstick comedy inevitably displays a backward attitude toward Surrealism.²

XIII

Film can be characterized not only in terms of man's presentation of himself to the camera but also in terms of his representation of his environment by means of this apparatus. A glance at occupational psychology illustrates the testing capacity of the equipment. Psychoanalysis illustrates it in a different perspective. In fact, film has enriched our field of perception with methods that can be illustrated by those of Freudian theory. Fifty years ago, a slip of the tongue passed more or less unnoticed. Only exceptionally may such a slip have opened a perspective on depths in a conversation which had seemed to be proceeding on a superficial plane. Since the publication of *On the Psychopathology of Everyday Life*,³ things have changed. This book isolated and made analyzable things which had previously floated unnoticed on the broad stream of perception. A similar deepening of appreciation through-

2. An experimental literary and political movement founded in France in 1924; its members sought to express subconscious thought and feeling.

3. An early work (1904) of SIGMUND FREUD (1856–

1939), the Austrian founder of psychoanalysis, that discusses how what has come to be called a "Freudian slip" reveals unconscious feelings.

out the entire spectrum of optical—and now also auditory—impressions has been accomplished by film. One is merely stating the obverse of this fact when one says that actions shown in a movie can be analyzed much more precisely and from more points of view than those presented in a painting or on the stage. In contrast to what obtains in painting, filmed action lends itself more readily to analysis because it delineates situations far more precisely. In contrast to what obtains on the stage, filmed action lends itself more readily to analysis because it can be isolated more easily. This circumstance derives its prime importance from the fact that it tends to foster the interpenetration of art and science. Actually, if we think of a filmed action as neatly delineated within a particular situation—like a flexed muscle in a body—it is difficult to say which is more fascinating, its artistic value or its value for science. *Demonstrating that the artistic uses of photography are identical to its scientific uses—these two dimensions having usually been separated until now—will be one of the revolutionary functions of film.*⁴

On the one hand, film furthers insight into the necessities governing our lives by its use of close-ups, by its accentuation of hidden details in familiar objects, and by its exploration of commonplace milieux through the ingenious guidance of the camera; on the other hand, it manages to assure us of a vast and unsuspected field of action. Our bars and city streets, our offices and furnished rooms, our railroad stations and our factories seemed to close relentlessly around us. Then came film and exploded this prison-world with the dynamite of the split second,⁵ so that now we can set off calmly on journeys of adventure among its far-flung debris. With the close-up, space expands; with slow motion, movement is extended. And just as enlargement not merely clarifies what we see indistinctly “in any case,” but brings to light entirely new structures of matter, slow motion not only reveals familiar aspects of movements, but discloses quite unknown aspects within them—aspects “which do not appear as the retarding of natural movements but have a curious gliding, floating character of their own.”⁶ Clearly, it is another nature which speaks to the camera as compared to the eye. “Other” above all in the sense that a space informed by human consciousness gives way to a space informed by the unconscious. Whereas it is a commonplace that, for example, we have some idea what is involved in the act of walking (if only in general terms), we have no idea at all what happens during the split second when a person actually takes a step. We are familiar with the movement of picking up a cigarette lighter or a spoon, but know almost nothing of what really goes on between hand and metal, and still less how this varies with different moods. This is where the camera comes into play, with all its resources for swooping and rising, disrupting and isolating, stretching or compressing a sequence, enlarging or reducing an object. It is through the camera that we first discover the optical unconscious, just as we discover the instinctual unconscious through psychoanalysis.

4. Renaissance painting offers a revealing analogy to this situation. The incomparable development of this art and its significance depended not least on the integration of various new sciences, or at least various new scientific data. Renaissance painting made use of anatomy and perspective,

of mathematics, meteorology, and chromatology [Benjamin's note].

5. The viewing time of the individual frames of a film.

6. Arnheim, p. 138 [Benjamin's note].

XIV

It has always been one of the primary tasks of art to create a demand whose hour of full satisfaction has not yet come.⁷ The history of every art form has critical periods in which the particular form strains after effects which can be easily achieved only with a changed technical standard—that is to say, in a new art form. The excesses and crudities of art which thus result, particularly in periods of so-called decadence, actually emerge from the core of its richest historical energies. In recent years, Dadaism has abounded in such barbarisms. Only now is its impulse recognizable: *Dadaism attempted to produce with the means of painting (or literature) the effects which the public today seeks in film.*

Every fundamentally new, pioneering creation of demand will overshoot its target. Dadaism did so to the extent that it sacrificed the market values so characteristic of film in favor of more significant aspirations—of which, to be sure, it was unaware in the form described here. The Dadaists attached much less importance to the commercial usefulness of their artworks than to the uselessness of those works as objects of contemplative immersion. They sought to achieve this uselessness not least by thorough degradation of their material. Their poems are “word-salad”⁸ containing obscene expressions and every imaginable kind of linguistic refuse. It is not otherwise with their paintings, on which they mounted buttons or train tickets. What they achieved by such means was a ruthless annihilation of the aura in every object they produced, which they branded as a reproduction through the very means of production. Before a painting by Arp or a poem by August Stramm, it is impossible to take time for concentration and evaluation, as one can before a painting by Derain or a poem by Rilke.⁹ Contemplative immersion—

7. “The artwork,” writes André Breton, “has value only insofar as it is alive to reverberations of the future.” And indeed every highly developed art form stands at the intersection of three lines of development. First, technology is working toward a particular form of art. Before film appeared, there were little books of photos that could be made to flit past the viewer under the pressure of the thumb, presenting a boxing match or a tennis match; then there were coin-operated peepboxes in bazaars, with image sequences kept in motion by the turning of a handle. Second, traditional art forms, at certain stages in their development, strain laboriously for effects which later are effortlessly achieved by new art forms. Before film became established, Dadaists’ performances sought to stir in their audience reactions which Chaplin then elicited more naturally. Third, apparently insignificant social changes often foster a change in reception which benefits only the new art form. Before film had started to create its public, images (which were no longer motionless) were received by an assembled audience in the *Kaiserpanorama*. Here the audience faced a screen into which stereoscopes were fitted, one for each spectator. In front of these stereoscopes single images automatically appeared, remained briefly in view, and then gave way to others. Edison still had to work with similar means when he presented the first film strip—before the movie

screen and projection were known; a small audience gazed into an apparatus in which a sequence of images was shown. Incidentally, the institution of the *Kaiserpanorama* very clearly manifests a dialectic of development. Shortly before film turned the viewing of images into a collective activity, image viewing by the individual, through the stereoscopes of these soon outmoded establishments, was briefly intensified, as it had been once before in the isolated contemplation of the divine image by the priest in the cella [Benjamin’s note]. Dadaists: members of a literary and artistic movement, founded in 1916, that stressed irrationality and anarchy and mocked normal aesthetic conventions. Breton (1896–1966), French artist and writer who broke with Dadaism in 1921 and founded surrealism in 1924. Thomas Alva Edison (1847–1931), American inventor, holder of patents for the microphone (1877), the phonograph (1878), the incandescent lamp (1879), and the Kinetoscope (1889), the single-view machine described by Benjamin; he also experimented with synchronizing motion pictures and sound.

8. Incoherent speech or writing made up of real and invented words.

9. Rainer Maria Rilke (1875–1926), Austrian poet. Jean Arp (1887–1966), French sculptor, one of the founders of Dadaism. Stramm (1874–1915), German poet. André Derain (1880–1954), French painter.

which, as the bourgeoisie degenerated, became a breeding ground for asocial behavior—is here opposed by distraction as a variant of social behavior. Dadaist manifestations actually guaranteed a quite vehement distraction by making artworks the center of scandal. One requirement was paramount: to outrage the public.

From an alluring visual composition or an enchanting fabric of sound, the Dadaists turned the artwork into a missile. It jolted the viewer, taking on a tactile quality. It thereby fostered the demand for film, since the distracting element in film is also primarily tactile, being based on successive changes of scene and focus which have a percussive effect on the spectator. Let us compare the screen on which a film unfolds with the canvas of a painting. The painting invites the viewer to contemplation; before it, he can give himself up to his train of associations. Before a film image, he cannot do so. No sooner has he seen it than it has already changed. It cannot be fixed on. Duhamel, who detests the cinema and knows nothing of its significance, though he does know something about its structure, describes the situation as follows: "I can no longer think what I want to think. My thoughts have been replaced by moving images."¹ Indeed, the train of associations in the person contemplating these images is immediately interrupted by new images. This constitutes the shock effect of film, which, like all shock effects, seeks to induce heightened attention.² *By means of its technological structure, film has freed the physical shock effect—which Dadaism had kept wrapped, as it were, inside the moral shock effect—from this wrapping.*³

XV

The masses are a matrix from which all customary behavior toward works of art is today emerging newborn. Quantity has been transformed into quality: *the greatly increased mass of participants has produced a different kind of participation.* The fact that the new mode of participation first appeared in a disreputable form should not mislead the observer. Yet some people have launched spirited attacks against precisely this superficial aspect of the matter. Among these critics, Duhamel has expressed himself most radically. What he objects to most is the kind of participation which the movie elicits from the masses. Duhamel calls the movie "a pastime for helots, a diversion for uneducated, wretched, worn-out creatures who are consumed by their

1. Georges Duhamel, *Scènes de la vie future* [*Scenes from Future Life*], 2d ed. (Paris, 1930), p. 52 [Benjamin's note]. Duhamel (1884–1966), French novelist and poet.

2. Film is the art form corresponding to the increased threat to life that faces people today. Humanity's need to expose itself to shock effects represents an adaptation to the dangers threatening it. Film corresponds to profound changes in the apparatus of apperception—changes that are experienced on the scale of private existence by each passerby in big-city traffic, and on a historical scale by every present-day citizen [Benjamin's note].

3. Film proves useful in illuminating Cubism and Futurism, as well as Dadaism. Both appear as deficient attempts on the part of art to take

into account the pervasive interpenetration of reality by the apparatus. Unlike film, these schools did not try to use the apparatus as such for the artistic representation of reality, but aimed at a sort of alloy of represented reality and represented apparatus. In Cubism, a premonition of the structure of this apparatus, which is based on optics, plays a dominant part; in Futurism, it is the premonition of the effects of the apparatus—effects which are brought out by the rapid coursing of the band of film [Benjamin's note]. A movement beginning in the early 1900s, cubism reacted against sentimental and realistic painting, using primarily abstract form; a radical movement in art and literature, futurism glorified speed, war, and machinery, as well as advocated rebellion.

worries . . . , a spectacle which requires no concentration and presupposes no intelligence . . . , which kindles no light in the heart and awakens no hope other than the ridiculous one of someday becoming a 'star' in Los Angeles."⁴ Clearly, this is in essence the ancient lament that the masses seek distraction, whereas art demands concentration from the spectator. That is a commonplace. The question remains whether it provides a basis for the analysis of film. This calls for closer examination. Distraction and concentration form an antithesis, which may be formulated as follows. A person who concentrates before a work of art is absorbed by it; he enters into the work, just as, according to legend, a Chinese painter entered his completed painting while beholding it. By contrast, the distracted masses absorb the work of art into themselves. This is most obvious with regard to buildings. Architecture has always offered the prototype of an artwork that is received in a state of distraction and through the collective. The laws of architecture's reception are highly instructive.

Buildings have accompanied human existence since primeval times. Many art forms have come into being and passed away. Tragedy begins with the Greeks, is extinguished along with them, and is revived centuries later, though only according to its "rules."⁵ The epic, which originates in the early days of peoples, dies out in Europe at the end of the Renaissance. Panel painting is a creation of the Middle Ages, and nothing guarantees its uninterrupted existence. But the human need for shelter is permanent. Architecture has never had fallow periods. Its history is longer than that of any other art, and its effect ought to be recognized in any attempt to account for the relationship of the masses to the work of art. Buildings are received in a twofold manner: by use and by perception. Or, better: tactilely and optically. Such reception cannot be understood in terms of the concentrated attention of a traveler before a famous building. On the tactile side, there is no counterpart to what contemplation is on the optical side. Tactile reception comes about not so much by way of attention as by way of habit. The latter largely determines even the optical reception of architecture, which spontaneously takes the form of casual noticing, rather than attentive observation. Under certain circumstances, this form of reception shaped by architecture acquires canonical value. *For the tasks which face the human apparatus of perception at historical turning points cannot be performed solely by optical means—that is, by way of contemplation. They are mastered gradually—taking their cue from tactile reception—through habit.*

Even the distracted person can form habits. What is more, the ability to master certain tasks in a state of distraction proves that their performance has become habitual. The sort of distraction that is provided by art represents a covert measure of the extent to which it has become possible to perform new tasks of apperception. Since, moreover, individuals are tempted to evade such tasks, art will tackle the most difficult and most important tasks wherever it is able to mobilize the masses. It does so currently in film. *Reception in distraction—the sort of reception which is increasingly noticeable in*

4. Duhamel, p. 58 [Benjamin's note].

5. Tragedy developed from Greek religious festivals of Dionysus; Aristotle described the genre in

his *Poetics*, but its "rules" were laid down by neo-classical critics and playwrights of the 17th and 18th centuries (e.g., see PIERRE CORNEILLE, above).

all areas of art and is a symptom of profound changes in apperception—finds in film its true training ground. Film, by virtue of its shock effects, is predisposed to this form of reception. It makes cult value recede into the background, not only because it encourages an evaluating attitude in the audience but also because, at the movies, the evaluating attitude requires no attention. The audience is an examiner, but a distracted one.

Epilogue

The increasing proletarianization of modern man and the increasing formation of masses are two sides of the same process. Fascism attempts to organize the newly proletarianized masses while leaving intact the property relations which they strive to abolish. It sees its salvation in granting expression to the masses—but on no account granting them rights.⁶ The masses have a right to changed property relations; fascism seeks to give them *expression* in keeping these relations unchanged. *The logical outcome of fascism is an aestheticizing of political life.* The violation of the masses, whom fascism, with its *Führer*⁷ cult, forces to their knees, has its counterpart in the violation of an apparatus which is pressed into serving the production of ritual values.

All efforts to aestheticize politics culminate in one point. That one point is war. War, and only war, makes it possible to set a goal for mass movements on the grandest scale while preserving traditional property relations. That is how the situation presents itself in political terms. In technological terms it can be formulated as follows: only war makes it possible to mobilize all of today's technological resources while maintaining property relations. It goes without saying that the fascist glorification of war does not make use of *these* arguments. Nevertheless, a glance at such glorification is instructive. In Marinetti's manifesto for the colonial war in Ethiopia, we read:

For twenty-seven years we Futurists have rebelled against the idea that war is anti-aesthetic. . . . We therefore state: . . . War is beautiful because—thanks to its gas masks, its terrifying megaphones, its flame throwers, and light tanks—it establishes man's dominion over the subjugated machine. War is beautiful because it inaugurates the dreamed-of metallization of the human body. War is beautiful because it enriches a flowering meadow with the fiery orchids of machine-guns. War is beautiful because it combines gunfire, barrages, cease-fires, scents, and the fragrance of putrefaction into a symphony. War is beautiful

6. A technological factor is important here, especially with regard to the newsreel, whose significance for propaganda purposes can hardly be overstated. *Mass reproduction is especially favored by the reproduction of the masses.* In great ceremonial processions, giant rallies, and mass sporting events, and in war, all of which are now fed into the camera, the masses come face to face with themselves. This process, whose significance need not be emphasized, is closely bound up with the development of reproduction and recording technologies. In general, mass movements are

more clearly apprehended by the camera than by the eye. A bird's-eye view best captures assemblies of hundreds of thousands. And even when this perspective is no less accessible to the human eye than to the camera, the image formed by the eye cannot be enlarged in the same way as a photograph. This is to say that mass movements, including war, are a form of human behavior especially suited to the camera [Benjamin's note].

7. Leader (German), the title assumed by Adolf Hitler.

because it creates new architectures, like those of armored tanks, geometric squadrons of aircraft, spirals of smoke from burning villages, and much more. . . . Poets and artists of Futurism, . . . remember these principles of an aesthetic of war, that they may illuminate . . . your struggles for a new poetry and a new sculpture!⁸

This manifesto has the merit of clarity. The question it poses deserves to be taken up by the dialectician. To him, the aesthetic of modern warfare appears as follows: if the natural use of productive forces is impeded by the property system, then the increase in technological means, in speed, in sources of energy will press toward an unnatural use. This is found in war, and the destruction caused by war furnishes proof that society was not mature enough to make technology its organ, that technology was not sufficiently developed to master the elemental forces of society. The most horrifying features of imperialist war are determined by the discrepancy between the enormous means of production and their inadequate use in the process of production (in other words, by unemployment and the lack of markets). *Imperialist war is an uprising on the part of technology, which demands repayment in "human material" for the natural material society has denied it.* Instead of draining rivers, society directs a human stream into a bed of trenches; instead of dropping seeds from airplanes, it drops incendiary bombs over cities; and in gas warfare it has found a new means of abolishing the aura.

"Fiat ars—pereat mundus,"⁹ says fascism, expecting from war, as Marinetti admits, the artistic gratification of a sense perception altered by technology. This is evidently the consummation of *l'art pour l'art*. Humankind, which once, in Homer,¹ was an object of contemplation for the Olympian gods, has now become one for itself. Its self-alienation has reached the point where it can experience its own annihilation as a supreme aesthetic pleasure. *Such is the aestheticizing of politics, as practiced by fascism. Communism replies by politicizing art.*

1936–39

1936, 1955

8. Likely cited from a French newspaper, one of several manifestos issued by Filippo Tommaso Marinetti (1876–1944), Italian poet and novelist who in 1909 founded futurism; for a time, the movement was endorsed by Italian Fascists. "The Colonial War in Ethiopia": an ambiguously worded 1889 treaty led Italy to claim Ethiopia as its pro-

tectorate; the war of 1895–96 forced Italy to recognize Ethiopia's independence, but in 1935 Italy invaded the country.

9. Let art be made, let the world perish (Latin).

1. Greek poet credited with authoring the *Iliad* and the *Odyssey* (ca. 8th c. B.C.E.).

MIKHAIL M. BAKHTIN

1895–1975

Proclaimed by TZVETAN TODOROV as perhaps the greatest twentieth-century theorist of literature, M. M. Bakhtin, since his discovery in the 1970s, has been acclaimed by literary critics across a wide theoretical and political spectrum. He has been called a formalist, a Marxist, a Christian humanist, a conservative, and a radical; because his work intersects in eccentric ways with so many of the critical orthodoxies of contemporary literary criticism, it resists easy classification.

Almost everything about Bakhtin's life and writing is colored by the fact that his greatest period of productivity coincided with the Russian Revolution, the ensuing civil war (1918–21), and the repressive Soviet regime under Joseph Stalin. Lacking Communist Party credentials, he labored most of his adult life in obscurity, a circumstance that probably saved his life at a time when his close—and better connected—friends were disappearing into death camps. The circumstances of Bakhtin's life make it sometimes difficult to verify the authorship and chronology of his writings. Certain works written during his youth in the 1920s were not published until late in his life or after his death, and controversies continue over three disputed books from the 1920s that appeared under the names of his colleagues Valentin Vološinov and Pavel Medvedev, held by some to be the works of Bakhtin himself. Yet these difficulties in separating Bakhtin's voice from those of others are of a piece with his own philosophical beliefs about the dialogic nature of language. As he wrote in a note that was later published in his *Speech Genres and Other Late Essays*, "Quests for my own words are quests for a word that is not my own."

Born in the Russian town of Orel, Bakhtin grew up in Vilnius and later Odessa. He earned a degree in classics and philology from the University of Petrograd in 1918. Working as a schoolteacher in Nevel in western Russia during the civil war between the Red Army and the anti-Bolshevik White armies, he first met the group of intellectuals who would become part of his circle and within whose wide-ranging discussions Bakhtin would formulate the critical concepts that were to dominate his thinking for the rest of his life. In 1920 Bakhtin settled in Vitebsk, where his circle, which by now included Vološinov and Medvedev, continued to meet. In 1924 Bakhtin moved back to Petrograd (or St. Petersburg), now renamed Leningrad; there in January 1929 he was arrested and imprisoned for alleged antigovernment activity and the Socratic crime of "corrupting the young." In prison he suffered from health problems caused by chronic osteomyelitis, a painful inflammation of the bone marrow. He was sentenced to ten years in a labor camp, but on the intervention of friends, the sentence was commuted to six years' internal exile in Kazakhstan. In 1936, his exile over, he taught at Mordovia Pedagogical Institute in Saransk until new purges forced him to resign. He moved to a small town outside of Moscow where his worsening osteomyelitis led to the amputation of his right leg. After that surgery, Bakhtin had difficulty finding permanent employment, though he occasionally delivered lectures at the Gorky Institute of World Literature.

In the 1930s and 1940s Bakhtin began to write a dissertation on the French writer François Rabelais (1490–1553), as well as a book on novels that chronicle the main character's maturation and education (the *bildungsroman*). World War II interrupted his work on the dissertation and the planned book on the *bildungsroman*; only fragments of this book survive. Following the war, Bakhtin was allowed to return to his university position in Saransk, and to his unfinished dissertation on Rabelais. Although he was finally granted the doctoral degree, he could not publish his dissertation; it remained unread until it was discovered in the Gorky Institute's archives by graduate students in the early 1960s. After Stalin's death in 1953, Bakhtin's scholarly fortunes began to rise even as his health began to decline. In

addition to osteomyelitis, he also suffered from emphysema caused by his heavy smoking. By the time of his death from complications of emphysema, he had become something of a cult figure in Russia. In the 1970s his reputation spread to Paris through the work of Eastern European émigrés such as JULIA KRISTEVA and Tzvetan Todorov; from there in the 1980s it reached North America and England, where his work had significant impact.

Bakhtin's earliest writings, in such essays as "Towards a Philosophy of the Act" (1919, published 1986) and "Author and Hero in Aesthetic Activity" (1919, published 1975), are densely philosophical and heavily indebted to IMMANUEL KANT (1724–1804). Although these lengthy essays exhibit a keen interest in phenomenology and the intersubjective nature of language, the publications of the Bakhtin Circle from the late 1920s defined the problems of language that would occupy Bakhtin for the rest of his life. In 1926 Vološinov published *Freudianism: A Marxist Critique*, and Medvedev followed in 1928 with *The Formal Method in Literary Scholarship*. In 1929 Vološinov's *Marxism and the Philosophy of Language* appeared and also Bakhtin's *Problems of Dostoevsky's Poetics*, the only book to be published under his own name before Stalin's death. Critics wary of Marxism have attempted to distance Bakhtin from the work of his circle, arguing that he did not share the Communist sympathies of Vološinov and Medvedev (both members of the Communist Party; both disappeared during the political purges of the 1930s). But regardless of whether Bakhtin actually wrote the books ascribed to his two colleagues, as some have claimed, the influences among the members of the circle were undoubtedly strong and indelible. Bakhtin's words became inextricably and dialogically intertwined with those of his collaborators, whose thought influenced the key concepts he later developed in his celebrated writings on the novel, just as his thought undoubtedly influenced theirs.

Bakhtin's theory of the novel relies on three key concepts. The *carnavalesque*—an idea first introduced in *Rabelais and His World* (written in the 1930s and 1940s, published 1965)—is Bakhtin's term for those forms of unofficial culture (the early novel among them) that resist official culture, political oppression, and totalitarian order through laughter, parody, and "grotesque realism." In "Forms of Time and Chronotope in the Novel" (1937–38), he develops the influential term *chronotope* to describe the intrinsic connectedness of time and space and their central role in constituting literary genres. Finally and most significantly, the *dialogism* of language, the "intense interanimation and struggle between one's own and another's word," would come to dominate Bakhtin's thinking about language after 1926. This concept of the multivoiced nature of discourse received its fullest treatment in "Discourse in the Novel" (1934–35), a key text for narrative, linguistic, and literary theory, from which we have taken our selection.

Bakhtin here addresses the limitations for literary studies of the abstract and formal analyses of literary technique widespread among critics during the interwar period. Traditional linguistics, stylistics, and literary theory—including the theory of the Russian formalists, represented by critics like Boris Eichenbaum—as well as contemporary Marxist philosophy of language (see Leon Trotsky, for instance) and the new structural linguistics indebted to FERDINAND DE SAUSSURE, all fail to articulate an adequate account of the novel because they have not pursued a properly "sociological stylistics." The philosophy of language on which these inadequate critical methods are based posits, on the one hand, a unitary system of language—a system of more or less absolute norms that govern speech—and, on the other hand, an individual who is seen as the controlling "author" of discourse. Bakhtin calls such a view of language "monologic," and he argues that it is alien to the dynamics of the novel because it describes not real, living language but an abstraction created through self-conscious deliberation about language and cut off from the daily ideological activities of social life. Living language exhibits *heteroglossia*, the term Bakhtin famously uses to describe the "internal stratification" of language: the interplay among its social dialects, class dialects, professional jargons, languages of generations and age groups and of passing fads, "languages that serve the specific

sociopolitical purposes of the day, even of the hour." Heteroglossia, which Bakhtin hails as the characteristic stylistic feature of the novel, celebrates not, as structuralism does, the systematic nature of language but the multiplicity of all those "centrifugal" forces at work in language, the variety of social speech types, and the diversity of voices interacting with one another.

Central to Bakhtin's theory of the novel is his belief that language is fundamentally dialogic. "Discourse in the Novel" offers his most elaborate analysis of "dialogism" and its relationship to style in the novel. Between any word and its object, between any word and its speaking subject, between any word and its active respondent(s), Bakhtin argues, there exists "an elastic environment of other, alien words about the same object"; and this "dialogically agitated and tension-filled environment of alien words, value judgments and accents" that weaves in and out of discourse in complex patterns finds its most artistic expression in the novel. Bakhtin celebrates the dialogics of the novel while criticizing the monologism of poetry, which characteristically aims for a unified and pure discourse. Although conflict, contradiction, and doubt may be present in the subject matter of poetry, they do not, according to Bakhtin, enter into the language of the poem itself, as they consistently do in the novel.

Bakhtin's theories can sometimes appear confusing and vague because his critical terminology often seems at once evaluative and descriptive; he regularly establishes his critical vocabulary by defining certain terms positively against related terms given negative valences. Thus the novel is opposed to poetry, the carnivalesque to official discourse, the dialogic to the monologic. These judgments have posed problems for critics who value those genres that Bakhtin most frequently derogates as monologic, especially poetry, the epic, and drama. Other critics object that it is not clear to what degree Bakhtin espouses a mimetic theory of literature, insofar as language for him seems less to represent or reflect reality than to refract and rework it.

Nevertheless, Bakhtin's work has been much admired and extended by scholars in many fields. Those in cultural studies have found two major contributions particularly useful. First, Bakhtin focuses on "language" as the utterances of speaking subjects: that is, as spoken "discourse" and not the impersonal, prevocal signifiers or rhetorical tropes posited by the influential structuralist and poststructuralist traditions. Second, he insists that discourse unfolds in a heteroglot, dialogic force field of conflicting interests and ideologies—with literary language being only one of many discursive strata and itself divided by generic, stylistic, professional, and other special features. These Bakhtinian views, widely advocated by cultural studies scholars, promote a complex sociopoetics suited to a contemporary globalized world of diverse peoples, languages, and cultural forms.

"Discourse in the Novel" Keywords: Ideology, Language, Literary History, The Novel, Vernacular Language

*From Discourse in the Novel*¹

The principal idea of this essay is that the study of verbal art can and must overcome the divorce between an abstract "formal" approach and an equally abstract "ideological" approach. Form and content in discourse are one, once we understand that verbal discourse is a social phenomenon—social throughout its entire range and in each and every of its factors, from the sound image to the furthest reaches of abstract meaning.

1. Translated by Caryl Emerson and Michael Holquist, who occasionally retain the original Russian words or add information in brackets.

It is this idea that has motivated our emphasis on “the stylistics of genre.” The separation of style and language from the question of genre has been largely responsible for a situation in which only individual and period-bound overtones of a style are the privileged subjects of study, while its basic social tone is ignored. The great historical destinies of genres are overshadowed by the petty vicissitudes of stylistic modifications, which in their turn are linked with individual artists and artistic movements. For this reason, stylistics has been deprived of an authentic philosophical and sociological approach to its problems; it has become bogged down in stylistic trivia; it is not able to sense behind the individual and period-bound shifts the great and anonymous destinies of artistic discourse itself. More often than not, stylistics defines itself as a stylistics of “private craftsmanship” and ignores the social life of discourse outside the artist’s study, discourse in the open spaces of public squares, streets, cities and villages, of social groups, generations and epochs. Stylistics is concerned not with living discourse but with a histological specimen made from it, with abstract linguistic discourse in the service of an artist’s individual creative powers. But these individual and tendentious overtones of style, cut off from the fundamentally social modes in which discourse lives, inevitably come across as flat and abstract in such a formulation and cannot therefore be studied in organic unity with a work’s semantic components.

Modern Stylistics & the Novel

Before the twentieth century, problems associated with a stylistics of the novel had not been precisely formulated—such a formulation could only have resulted from a recognition of the stylistic uniqueness of novelistic (artistic-prose) discourse.

For a long time treatment of the novel was limited to little more than abstract ideological examination and publicistic commentary. Concrete questions of stylistics were either not treated at all or treated in passing and in an arbitrary way: the discourse of artistic prose was either understood as being poetic in the narrow sense, and had the categories of traditional stylistics (based on the study of tropes) uncritically applied to it, or else such questions were limited to empty, evaluative terms for the characterization of language, such as “expressiveness,” “imagery,” “force,” “clarity” and so on—without providing these concepts with any stylistic significance, however vague and tentative.

Toward the end of the last century, as a counterweight to this abstract ideological way of viewing things, interest began to grow in the concrete problems of artistic craftsmanship in prose, in the problems of novel and short-story technique. However, in questions of stylistics the situation did not change in the slightest; attention was concentrated almost exclusively on problems of composition (in the broad sense of the word). But, as before, the peculiarities of the stylistic life of discourse in the novel (and in the short story as well) lacked an approach that was both principled and at the same time concrete (one is impossible without the other); the same arbitrary judgmental observations about language—in the spirit of traditional stylistics—continued to reign supreme, and they totally overlooked the authentic nature of artistic prose.

There is a highly characteristic and widespread point of view that sees novelistic discourse as an extra-artistic medium, a discourse that is not worked into any special or unique style. After failure to find in novelistic discourse a purely poetic formulation ("poetic" in the narrow sense) as was expected, prose discourse is denied any artistic value at all; it is the same as practical speech for everyday life, or speech for scientific purposes, an artistically neutral means of communication.²

Such a point of view frees one from the necessity of undertaking stylistic analyses of the novel; it in fact gets rid of the very problem of a stylistics of the novel, permitting one to limit oneself to purely thematic analyses of it.

It was, however, precisely in the 1920s that this situation changed: the novelistic prose word began to win a place for itself in stylistics. On the one hand there appeared a series of concrete stylistic analyses of novelistic prose; on the other hand, systematic attempts were made to recognize and define the stylistic uniqueness of artistic prose as distinct from poetry.

But it was precisely these concrete analyses and these attempts at a principled approach that made patently obvious the fact that all the categories of traditional stylistics—in fact the very concept of a *poetic* artistic discourse, which lies at the heart of such categories—were not applicable to novelistic discourse. Novelistic discourse proved to be the acid test for this whole way of conceiving style, exposing the narrowness of this type of thinking and its inadequacy in all areas of discourse's artistic life.

All attempts at concrete stylistic analysis of novelistic prose either strayed into linguistic descriptions of the language of a given novelist or else limited themselves to those separate, isolated stylistic elements of the novel that were includable (or gave the appearance of being includable) in the traditional categories of stylistics. In both instances the stylistic whole of the novel and of novelistic discourse eluded the investigator.

The novel as a whole is a phenomenon multiform in style and variform in speech and voice. In it the investigator is confronted with several heterogeneous stylistic unities, often located on different linguistic levels and subject to different stylistic controls.

We list below the basic types of compositional-stylistic unities into which the novelistic whole usually breaks down:

- (1) Direct authorial literary-artistic narration (in all its diverse variants);
- (2) Stylization of the various forms of oral everyday narration (*skaz*);³

2. As recently as the 1920s, V. M. Žirmunskij [important fellow traveler of the Formalists (translators' note)] was writing: "When lyrical poetry appears to be authentically a work of *verbal art*, due to its choice and combination of words (on semantic as well as sound levels) all of which are completely subordinated to the aesthetic project, Tolstoy's novel, by contrast, which is free in its verbal composition, does not use words as an artistically significant element of interaction but as a neutral medium or as a system of significations subordinated (as happens in practical speech) to the communicative function, directing our attention to thematic aspects quite abstracted from purely verbal considerations. We cannot call such a *literary work* a work of *verbal art* or,

in any case, not in the sense that the term is used for lyrical poetry" ["On the Problem of the Formal Method," in an anthology of his articles, *Problems of a Theory of Literature* (Leningrad, 1928, p. 173); Russian edition: "K voprosu o 'formal' nom metode," in *Voprosy teorii literatury* (L., 1928) (trans.)] [Bakhtin's note]. Leo Tolstoy (1828–1910), Russian novelist and moral philosopher.

3. This term has no precise equivalent in English; *skaz* is a technique or mode of narration that imitates the oral speech or "yarn" of an individualized narrator, as in Mark Twain's "Celebrated Jumping Frog of Calaveras County" (1865). *Skaz* was the subject of much Russian formalist criticism.

- (3) Stylization of the various forms of semiliterary (written) everyday narration (the letter, the diary, etc.);
- (4) Various forms of literary but extra-artistic authorial speech (moral, philosophical or scientific statements, oratory, ethnographic descriptions, memoranda and so forth);
- (5) The stylistically individualized speech of characters.

These heterogeneous stylistic unities, upon entering the novel, combine to form a structured artistic system, and are subordinated to the higher stylistic unity of the work as a whole, a unity that cannot be identified with any single one of the unities subordinated to it.

The stylistic uniqueness of the novel as a genre consists precisely in the combination of these subordinated, yet still relatively autonomous, unities (even at times comprised of different languages) into the higher unity of the work as a whole: the style of a novel is to be found in the combination of its styles; the language of a novel is the system of its "languages." Each separate element of a novel's language is determined first of all by one such subordinated stylistic unity into which it enters directly—be it the stylistically individualized speech of a character, the down-to-earth voice of a narrator in *skaz*, a letter or whatever. The linguistic and stylistic profile of a given element (lexical, semantic, syntactic) is shaped by that subordinated unity to which it is most immediately proximate. At the same time this element, together with its most immediate unity, figures into the style of the whole, itself supports the accent of the whole and participates in the process whereby the unified meaning of the whole is structured and revealed.

The novel can be defined as a diversity of social speech types (sometimes even diversity of languages) and a diversity of individual voices, artistically organized. The internal stratification of any single national language into social dialects, characteristic group behavior, professional jargons, generic languages, languages of generations and age groups, tendentious languages, languages of the authorities, of various circles and of passing fashions, languages that serve the specific sociopolitical purposes of the day, even of the hour (each day has its own slogan, its own vocabulary, its own emphases)—this internal stratification present in every language at any given moment of its historical existence is the indispensable prerequisite for the novel as a genre. The novel orchestrates all its themes, the totality of the world of objects and ideas depicted and expressed in it, by means of the social diversity of speech types [*raznorečie*] and by the differing individual voices that flourish under such conditions. Authorial speech, the speeches of narrators, inserted genres, the speech of characters are merely those fundamental compositional unities with whose help heteroglossia [*raznorečie*] can enter the novel; each of them permits a multiplicity of social voices and a wide variety of their links and interrelationships (always more or less dialogized). These distinctive links and interrelationships between utterances and languages, this movement of the theme through different languages and speech types, its dispersion into the rivulets and droplets of social heteroglossia, its dialogization—this is the basic distinguishing feature of the stylistics of the novel.

Such a combining of languages and styles into a higher unity is unknown to traditional stylistics; it has no method for approaching the distinctive

social dialogue among languages that is present in the novel. Thus stylistic analysis is not oriented toward the novel as a whole, but only toward one or another of its subordinated stylistic unities. The traditional scholar bypasses the basic distinctive feature of the novel as a genre; he substitutes for it another object of study, and instead of novelistic style he actually analyzes something completely different. He transposes a symphonic (orchestrated) theme on to the piano keyboard.

We notice two such types of substitutions: in the first type, an analysis of novelistic style is replaced by a description of the language of a given novelist (or at best of the “languages” of a given novel); in the second type, one of the subordinated styles is isolated and analyzed as if it were the style of the whole.

In the first type, style is cut off from considerations of genre, and from the work as such, and regarded as a phenomenon of language itself: the unity of style in a given work is transformed either into the unity of an individual language (“individual dialect”), or into the unity of an individual speech (*parole*). It is precisely the individuality of the speaking subject that is recognized to be that style-generating factor transforming a phenomenon of language and linguistics into a stylistic unity.

We have no need to follow where such an analysis of novelistic style leads, whether to a disclosing of the novelist’s individual dialect (that is, his vocabulary, his syntax) or to a disclosing of the distinctive features of the work taken as a “complete speech act,” an “utterance.” Equally in both cases, style is understood in the spirit of Saussure:⁴ as an individualization of the general language (in the sense of a system of general language norms). Stylistics is transformed either into a curious kind of linguistics treating individual languages, or into a linguistics of the utterance.

In accordance with the point of view selected, the unity of a style thus presupposes on the one hand a unity of language (in the sense of a system of general normative forms) and on the other hand the unity of an individual person realizing himself in this language.

Both these conditions are in fact obligatory in the majority of verse-based poetic genres, but even in these genres they far from exhaust or define the style of the work. The most precise and complete description of the individual language and speech of a poet—even if this description does choose to treat the expressiveness of language and speech elements—does not add up to a stylistic analysis of the work, inasmuch as these elements relate to a system of language or to a system of speech, that is, to various linguistic unities and not to the system of the artistic work, which is governed by a completely different system of rules than those that govern the linguistic systems of language and of speech.

But—we repeat—in the majority of poetic genres, the unity of the language system and the unity (and uniqueness) of the poet’s individuality as reflected in his language and speech, which is directly realized in this unity, are indispensable prerequisites of poetic style. The novel, however, not only does not require these conditions but (as we have said) even makes of the internal stratification of language, of its social heteroglossia and the variety of individual voices in it, the prerequisite for authentic novelistic prose.

4. Specifically, the emphasis by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913) on *langue* (a language system) and *parole* (individual speech).

Thus the substitution of the individualized language of the novelist (to the extent that one can recover this language from the “speech” and “language” systems of the novel) for the style of the novel itself is doubly imprecise: it distorts the very essence of a stylistics of the novel. Such substitution inevitably leads to the selection from the novel of only those elements that can be fitted within the frame of a single language system and that express, directly and without mediation, an authorial individuality in language. The whole of the novel and the specific tasks involved in constructing this whole out of heteroglot, multi-voiced, multi-styled and often multi-linguaged elements remain outside the boundaries of such a study.

Such is the first type of substitution for the proper object of study in the stylistic analysis of the novel. We will not delve further into the diverse variations of this type, which are determined by the different ways in which such concepts as “the speech whole,” “the system of language,” “the individuality of the author’s language and speech” are understood, and by a difference in the very way in which the relationship between style and language is conceived (and also the relationship between stylistics and linguistics). In all possible variants on this type of analysis, which acknowledge only one single language and a single authorial individuality expressing itself directly in that language, the stylistic nature of the novel slips hopelessly away from the investigator.

The second type of substitution is characterized not by an orientation toward the language of the author, but rather toward the style of the novel itself—although style thus understood is narrowed down to mean the style of merely one out of the several subordinated unities (which are relatively autonomous) within the novel.

In the majority of cases the style of the novel is subsumed under the concept of “epic style,” and the appropriate categories of traditional stylistics are applied to it. In such circumstances only those elements of epic representation (those occurring predominantly in direct authorial speech) are isolated from the novel for consideration. The profound difference between novelistic and purely epic modes of expression is ignored. Differences between the novel and the epic are usually perceived on the level of composition and thematics alone.

In other instances, different aspects of novelistic style are selected out as most characteristic of one or another concrete literary work. Thus the narrational aspect can be considered from the point of view not of its objective descriptive mode, but of its subjective expression mode (expressiveness). One might select elements of vernacular extraliterary narration (*skaz*) or those aspects that provide the information necessary to further the plot (as one might do, for example, in analyzing an adventure novel).⁵ And it is possible, finally, to select those purely dramatic elements of the novel that lower the narrational aspect to the level of a commentary on the dialogues of the novel’s characters. But the system of languages in drama is organized on completely different principles, and therefore its languages sound utterly different than do the languages of the novel. In drama there is no all-

5. Artistic prose style has been studied in Russia by the Formalists largely on these two last levels, that is, either *skaz* (Eichenbaum) or plot-informational aspects (Shklovsky) were studied

as most characteristic of literary prose [Bakhtin’s note]. Boris Eichenbaum (1886–1959), Russian formalist critic. Viktor Shklovsky (1893–1984), Russian formalist writer and critic.

encompassing language that addresses itself dialogically to separate languages, there is no second all-encompassing plotless (nondramatic) dialogue outside that of the (nondramatic) plot.

All these types of analysis are inadequate to the style not only of the novelistic whole but even of that element isolated as fundamental for a given novel—inasmuch as that element, removed from its interaction with others, changes its stylistic meaning and ceases to be that which it in fact had been in the novel.

The current state of questions posed by a stylistics of the novel reveals, fully and clearly, that all the categories and methods of traditional stylistics remain incapable of dealing effectively with the artistic uniqueness of discourse in the novel, or with the specific life that discourse leads in the novel. "Poetic language," "individuality of language," "image," "symbol," "epic style" and other general categories worked out and applied by stylistics, as well as the entire set of concrete stylistic devices subsumed by these categories (no matter how differently understood by individual critics), are all equally oriented toward the single-language and single-styled genres, toward the poetic genres in the narrow sense of the word. Their connection with this exclusive orientation explains a number of the particular features and limitations of traditional stylistic categories. All these categories, and the very philosophical conception of poetic discourse in which they are grounded, are too narrow and cramped, and cannot accommodate the artistic prose of novelistic discourse.

Thus stylistics and the philosophy of discourse indeed confront a dilemma: either to acknowledge the novel (and consequently all artistic prose tending in that direction) an unartistic or quasi-artistic genre, or to radically reconsider that conception of poetic discourse in which traditional stylistics is grounded and which determines all its categories.

This dilemma, however, is by no means universally recognized. Most scholars are not inclined to undertake a radical revision of the fundamental philosophical conception of poetic discourse. Many do not even see or recognize the philosophical roots of the stylistics (and linguistics) in which they work, and shy away from any fundamental philosophical issues. They utterly fail to see behind their isolated and fragmented stylistic observations and linguistic descriptions any theoretical problems posed by novelistic discourse. Others—more principled—make a case for consistent individualism in their understanding of language and style. First and foremost they seek in the stylistic phenomenon a direct and unmediated expression of authorial individuality, and such an understanding of the problem is least likely of all to encourage a reconsideration of basic stylistic categories in the proper direction.

However, there is another solution of our dilemma that does take basic concepts into account: one need only consider oft-neglected rhetoric, which for centuries has included artistic prose in its purview. Once we have restored rhetoric to all its ancient rights, we may adhere to the old concept of poetic discourse, relegating to "rhetorical forms" everything in novelistic prose that does not fit the Procrustean bed of traditional stylistic categories.⁶

6. Such a solution to the problem was especially tempting to adherents of the formal method in poetics: in fact, the re-establishment of rhetoric, with all its rights, greatly strengthens the Formalist position. Formalist rhetoric is a necessary addi-

tion to Formalist poetics. Our Formalists were being completely consistent when they spoke of the necessity of reviving rhetoric alongside poetics (on this, see B. M. Eichenbaum, *Literature [Literatura]*; Leningrad, 1927], pp. 147–48) [Bakhtin's note].

Gustav Shpet,⁷ in his time, proposed such a solution to the dilemma, with all due rigorousness and consistency. He utterly excluded artistic prose and its ultimate realization—the novel—from the realm of poetry, and assigned it to the category of purely rhetorical forms.⁸

Here is what Shpet says about the novel: “The recognition that contemporary forms of moral propaganda—i.e., the *novel*—do not spring from *poetic creativity* but are purely rhetorical compositions, is an admission, and a conception, that apparently cannot arise without immediately confronting a formidable obstacle in the form of the universal recognition, despite everything, that the novel *does* have a certain aesthetic value.”⁹

Shpet utterly denies the novel any aesthetic significance. The novel is an extra-artistic rhetorical genre, “the contemporary form of moral propaganda”; artistic discourse is exclusively poetic discourse (in the sense we have indicated above).

Viktor Vinogradov¹ adopted an analogous point of view in his book *On Artistic Prose*, assigning the problem of artistic prose to rhetoric. While agreeing with Shpet’s basic philosophical definitions of the “poetic” and the “rhetorical,” Vinogradov was, however, not so paradoxically consistent: he considered the novel a syncretic, mixed form (“a hybrid formation”) and admitted that it contained, along with rhetorical elements, some purely poetic ones.²

The point of view that completely excludes novelistic prose, as a rhetorical formation, from the realm of poetry—a point of view that is basically false—does nevertheless have a certain indisputable merit. There resides in it an acknowledgment in principle and in substance of the inadequacy of all contemporary stylistics, along with its philosophical and linguistic base, when it comes to defining the specific distinctive features of novelistic prose. And what is more, the very reliance on rhetorical forms has a great heuristic significance. Once rhetorical discourse is brought into the study with all its living diversity, it cannot fail to have a deeply revolutionizing influence on linguistics and on the philosophy of language. It is precisely those aspects of any discourse (the internally dialogic quality of discourse, and the phenomena related to it), not yet sufficiently taken into account and fathomed in all the enormous weight they carry in the life of language, that are revealed with great external precision in rhetorical forms, provided a correct and unprejudiced approach to those forms is used. Such is the general methodological and heuristic significance of rhetorical forms for linguistics and for the philosophy of language.

The special significance of rhetorical forms for understanding the novel is equally great. The novel, and artistic prose in general, has the closest gene-

7. tic, family relationship to rhetorical forms. And throughout the entire development of the novel, its intimate interaction (both peaceful and hostile) with living rhetorical genres (journalistic, moral, philosophical and others) has never ceased; this interaction was perhaps no less intense than was the novel's interaction with the artistic genres (epic, dramatic, lyric). But in this uninterrupted interrelationship, novelistic discourse preserved its own qualitative uniqueness and was never reducible to rhetorical discourse.

The novel is an artistic genre. Novelistic discourse is poetic discourse, but one that does not fit within the frame provided by the concept of poetic discourse as it now exists. This concept has certain underlying presuppositions that limit it. The very concept—in the course of its historical formulation from Aristotle³ to the present day—has been oriented toward the specific “official” genres and connected with specific historical tendencies in verbal ideological life. Thus a whole series of phenomena remained beyond its conceptual horizon.

Philosophy of language, linguistics and stylistics [i.e., such as they have come down to us] have all postulated a simple and unmediated relation of speaker to his unitary and singular “own” language, and have postulated as well a simple realization of this language in the monologic utterance of the individual. Such disciplines actually know only two poles in the life of language, between which are located all the linguistic and stylistic phenomena they know: on the one hand, the system of a *unitary language*, and on the other the *individual* speaking in this language.

Various schools of thought in the philosophy of language, in linguistics and in stylistics have, in different periods (and always in close connection with the diverse concrete poetic and ideological styles of a given epoch), introduced into such concepts as “system of language,” “monologic utterance,” “the speaking *individuum*,” various differing nuances of meaning, but their basic content remains unchanged. This basic content is conditioned by the specific sociohistorical destinies of European languages and by the destinies of ideological discourse, and by those particular historical tasks that ideological discourse has fulfilled in specific social spheres and at specific stages in its own historical development.

These tasks and destinies of discourse conditioned specific verbal-ideological movements, as well as various specific genres of ideological discourse, and ultimately the specific philosophical concept of discourse itself—in particular, the concept of poetic discourse, which had been at the heart of all concepts of style.

The strength and at the same time the limitations of such basic stylistic categories become apparent when such categories are seen as conditioned by specific historical destinies and by the task that an ideological discourse assumes. These categories arose from and were shaped by the historically *aktuell*⁴ forces at work in the verbal-ideological evolution of specific social groups; they comprised the theoretical expression of actualizing forces that were in the process of creating a life for language.

These forces are *the forces that serve to unify and centralize the verbal-ideological world*.

3. The Greek philosopher (384–322 B.C.E.) discusses poetic discourse in his *Poetics* (see above).

4. Topical, of pressing current importance (German).

Unitary language constitutes the theoretical expression of the historical processes of linguistic unification and centralization, an expression of the centripetal forces of language. A unitary language is not something given [*dan*] but is always in essence posited [*zadan*]⁵—and at every moment of its linguistic life it is opposed to the realities of heteroglossia. But at the same time it makes its real presence felt as a force for overcoming this heteroglossia, imposing specific limits to it, guaranteeing a certain maximum of mutual understanding and crystalizing into a real, although still relative, unity—the unity of the reigning conversational (everyday) and literary language, “correct language.”

A common unitary language is a system of linguistic norms. But these norms do not constitute an abstract imperative; they are rather the generative forces of linguistic life, forces that struggle to overcome the heteroglossia of language, forces that unite and centralize verbal-ideological thought, creating within a heteroglot national language the firm, stable linguistic nucleus of an officially recognized literary language, or else defending an already formed language from the pressure of growing heteroglossia.

What we have in mind here is not an abstract linguistic minimum of a common language, in the sense of a system of elementary forms (linguistic symbols) guaranteeing a *minimum* level of comprehension in practical communication. We are taking language not as a system of abstract grammatical categories, but rather language conceived as ideologically saturated, language as a world view, even as a concrete opinion, insuring a *maximum* of mutual understanding in all spheres of ideological life. Thus a unitary language gives expression to forces working toward concrete verbal and ideological unification and centralization, which develop in vital connection with the processes of sociopolitical and cultural centralization.

Aristotelian poetics, the poetics of Augustine, the poetics of the medieval church, of “the one language of truth,” the Cartesian poetics of neoclassicism, the abstract grammatical universalism of Leibniz (the idea of a “universal grammar”), Humboldt’s⁵ insistence on the concrete—all these, whatever their differences in nuance, give expression to the same centripetal forces in sociolinguistic and ideological life; they serve one and the same project of centralizing and unifying the European languages. The victory of one reigning language (dialect) over the others, the supplanting of languages, their enslavement, the process of illuminating them with the True Word, the incorporation of barbarians and lower social strata into a unitary language of culture and truth, the canonization of ideological systems, philology with its methods of studying and teaching dead languages, languages that were by that very fact “unities,” Indo-European linguistics with its focus of attention, directed away from language plurality to a single proto-language—all this determined the content and power of the category of “unitary language” in linguistic and stylistic thought, and determined its creative, style-shaping role in the majority of the poetic genres that coalesced in the channel formed by those same centripetal forces of verbal-ideological life.

5. Wilhelm Freiherr von Humboldt (1767–1835), German humanist writer and philologist. AUGUSTINE (354–430), early Christian philosopher and theologian; on his poetics, see above. “The poetics of the medieval church”: see Hugh of St. Victor (ca. 1097–1141). “The Cartesian poetics of

neoclassicism”: on these dualistic (from the French philosopher René Descartes, 1596–1650) poetics, see PIERRE CORNEILLE (1606–1684). Gottfried Wilhelm von Leibniz (1646–1716), German philosopher and mathematician.

But the centripetal forces of the life of language, embodied in a "unitary language," operate in the midst of heteroglossia. At any given moment of its evolution, language is stratified not only into linguistic dialects in the strict sense of the word (according to formal linguistic markers, especially phonetic), but also—and for us this is the essential point—into languages that are socio-ideological: languages of social groups, "professional" and "genetic" languages, languages of generations and so forth. From this point of view, literary language itself is only one of these heteroglot languages—and in its turn is also stratified into languages (generic, period-bound and others). And this stratification and heteroglossia, once realized, is not only a static invariant of linguistic life, but also what insures its dynamics: stratification and heteroglossia widen and deepen as long as language is alive and developing. Alongside the centripetal forces, the centrifugal forces of language carry on their uninterrupted work; alongside verbal-ideological centralization and unification, the uninterrupted processes of decentralization and disunification go forward.

Every concrete utterance of a speaking subject serves as a point where centrifugal as well as centripetal forces are brought to bear. The processes of centralization and decentralization, of unification and disunification, intersect in the utterance; the utterance not only answers the requirements of its own language as an individualized embodiment of a speech act, but it answers the requirements of heteroglossia as well; it is in fact an active participant in such speech diversity. And this active participation of every utterance in living heteroglossia determines the linguistic profile and style of the utterance to no less a degree than its inclusion in any normative-centralizing system of a unitary language.

Every utterance participates in the "unitary language" (in its centripetal forces and tendencies) and at the same time partakes of social and historical heteroglossia (the centrifugal, stratifying forces).

Such is the fleeting language of a day, of an epoch, a social group, a genre, a school and so forth. It is possible to give a concrete and detailed analysis of any utterance, once having exposed it as a contradiction-ridden, tension-filled unity of two embattled tendencies in the life of language.

The authentic environment of an utterance, the environment in which it lives and takes shape, is dialogized heteroglossia, anonymous and social as language, but simultaneously concrete, filled with specific content and accented as an individual utterance.

At the time when major divisions of the poetic genres were developing under the influence of the unifying, centralizing, centripetal forces of verbal-ideological life, the novel—and those artistic-prose genres that gravitate toward it—was being historically shaped by the current of decentralizing, centrifugal forces. At the time when poetry was accomplishing the task of cultural, national and political centralization of the verbal-ideological world in the higher official socio-ideological levels, on the lower levels, on the stages of local fairs and at buffoon spectacles, the heteroglossia of the clown sounded forth, ridiculing all "languages" and dialects; there developed the literature of the *fabliaux* and *Schwänke*⁶ of street songs,

6. Medieval comic folktales (German). *Fabliaux*: medieval short tales in verse (French).

folksayings, anecdotes, where there was no language-center at all, where there was to be found a lively play with the “languages” of poets, scholars, monks, knights and others, where all “languages” were masks and where no language could claim to be an authentic, incontestable face.

Heteroglossia, as organized in these low genres, was not merely heteroglossia vis-à-vis the accepted literary language (in all its various generic expressions), that is, vis-à-vis the linguistic center of the verbal-ideological life of the nation and the epoch, but was a heteroglossia consciously opposed to this literary language. It was parodic, and aimed sharply and polemically against the official languages of its given time. It was heteroglossia that had been dialogized.

Linguistics, stylistics and the philosophy of language that were born and shaped by the current of centralizing tendencies in the life of language have ignored this dialogized heteroglossia, in which is embodied the centrifugal forces in the life of language. For this very reason they could make no provision for the dialogic nature of language, which was a struggle among socio-linguistic points of view, not an intra-language struggle between individual wills or logical contradictions. Moreover, even intra-language dialogue (dramatic, rhetorical, cognitive or merely casual) has hardly been studied linguistically or stylistically up to the present day. One might even say outright that the dialogic aspect of discourse and all the phenomena connected with it have remained to the present moment beyond the ken of linguistics.

Stylistics has been likewise completely deaf to dialogue. A literary work has been conceived by stylistics as if it were a hermetic and self-sufficient whole, one whose elements constitute a closed system presuming nothing beyond themselves, no other utterances. The system comprising an artistic work was thought to be analogous with the system of a language, a system that could not stand in a dialogic interrelationship with other languages. From the point of view of stylistics, the artistic work as a whole—whatever that whole might be—is a self-sufficient and closed authorial monologue, one that presumes only passive listeners beyond its own boundaries. Should we imagine the work as a rejoinder in a given dialogue, whose style is determined by its interrelationship with other rejoinders in the same dialogue (in the totality of the conversation)—then traditional stylistics does not offer an adequate means for approaching such a dialogized style. The sharpest and externally most marked manifestations of this stylistic category—the polemical style, the parodic, the ironic—are usually classified as rhetorical and not as poetic phenomena. Stylistics locks every stylistic phenomenon into the monologic context of a given self-sufficient and hermetic utterance, imprisoning it, as it were, in the dungeon of a single context; it is not able to exchange messages with other utterances; it is not able to realize its own stylistic implications in a relationship with them; it is obliged to exhaust itself in its own single hermetic context.

Linguistics, stylistics and the philosophy of language—as forces in the service of the great centralizing tendencies of European verbal-ideological life—have sought first and foremost for *unity* in diversity. This exclusive “orientation toward unity” in the present and past life of languages has concentrated the attention of philosophical and linguistic thought on the firmest, most stable, least changeable and most mono-semantic aspects of discourse—on the *phonetic* aspects first of all—that are furthest removed

from the changing socio-semantic spheres of discourse. Real ideologically saturated "language consciousness," one that participates in actual heteroglossia and multi-linguagedness, has remained outside its field of vision. It is precisely this orientation toward unity that has compelled scholars to ignore all the verbal genres (quotidian, rhetorical, artistic-prose) that were the carriers of the decentralizing tendencies in the life of language, or that were in any case too fundamentally implicated in heteroglossia. The expression of this hetero- as well as polyglot consciousness in the specific forms and phenomena of verbal life remained utterly without determinative influence on linguistics and stylistic thought.

Therefore proper theoretical recognition and illumination could not be found for the specific feel for language and discourse that one gets in stylizations, in *skaz*, in parodies and in various forms of verbal masquerade, "not talking straight," and in the more complex artistic forms for the organization of contradiction, forms that orchestrate their themes by means of languages—in all characteristic and profound models of novelistic prose, in Grimmelshausen, Cervantes, Rabelais, Fielding, Smollett, Sterne⁷ and others.

The problem of stylistics for the novel inevitably leads to the necessity of engaging a series of fundamental questions concerning the philosophy of discourse, questions connected with those aspects in the life of discourse that have had no light cast on them by linguistic and stylistic thought—that is, we must deal with the life and behavior of discourse in a contradictory and multi-linguaged world.

Discourse in Poetry and Discourse in the Novel

For the philosophy of language, for linguistics and for stylistics structured on their base, a whole series of phenomena have therefore remained almost entirely beyond the realm of consideration: these include the specific phenomena that are present in discourse and that are determined by its dialogic orientation, first, amid others' utterances inside a *single* language (the primordial dialogism of discourse), amid other "social languages" within a single *national* language and finally amid different national languages within the same *culture*, that is, the same socio-ideological conceptual horizon.⁸

In recent decades, it is true, these phenomena have begun to attract the attention of scholars in language and stylistics, but their fundamental and wide-ranging significance in all spheres of the life of discourse is still far from acknowledged.

The dialogic orientation of a word among other words (of all kinds and degrees of otherness) creates new and significant artistic potential in discourse, creates the potential for a distinctive art of prose, which has found its fullest and deepest expression in the novel.

7. All important early novelists—German: Hans Jakob Christoffel von Grimmelshausen (ca. 1621–1676); Spanish: Miguel de Cervantes (1547–1616); French: François Rabelais (ca. 1490–ca. 1533); and English: Henry Fielding (1707–1754), (Scottish-born) Tobias Smollett (1721–1771), and Laurence Sterne (1713–1768).

8. Linguistics acknowledges only a mechanical reciprocal influencing and intermixing of languages (that is, one that is unconscious and determined by social conditions) which is reflected in abstract linguistic elements (phonetic and morphological) [Bakhtin's note].

We will focus our attention here on various forms and degrees of dialogic orientation in discourse, and on the special potential for a distinctive prose-art.

As treated by traditional stylistic thought, the word acknowledges only itself (that is, only its own context), its own object, its own direct expression and its own unitary and singular language. It acknowledges another word, one lying outside its own context, only as the neutral word of language, as the word of no one in particular, as simply the potential for speech. The direct word, as traditional stylistics understands it, encounters in its orientation toward the object only the resistance of the object itself (the impossibility of its being exhausted by a word, the impossibility of saying it all), but it does not encounter in its path toward the object the fundamental and richly varied opposition of another's word. No one hinders this word, no one argues with it.

But no living word relates to its object in a *singular* way: between the word and its object, between the word and the speaking subject, there exists an elastic environment of other, alien words about the same object, the same theme, and this is an environment that it is often difficult to penetrate. It is precisely in the process of living interaction with this specific environment that the word may be individualized and given stylistic shape.

Indeed, any concrete discourse (utterance) finds the object at which it was directed already as it were overlain with qualifications, open to dispute, charged with value, already enveloped in an obscuring mist—or, on the contrary, by the “light” of alien words that have already been spoken about it. It is entangled, shot through with shared thoughts, points of view, alien value judgments and accents. The word, directed toward its object, enters a dialogically agitated and tension-filled environment of alien words, value judgments and accents, weaves in and out of complex interrelationships, merges with some, recoils from others, intersects with yet a third group: and all this may crucially shape discourse, may leave a trace in all its semantic layers, may complicate its expression and influence its entire stylistic profile.

The living utterance, having taken meaning and shape at a particular historical moment in a socially specific environment, cannot fail to brush up against thousands of living dialogic threads, woven by socio-ideological consciousness around the given object of an utterance; it cannot fail to become an active participant in social dialogue. After all, the utterance arises out of this dialogue as a continuation of it and as a rejoinder to it—it does not approach the object from the sidelines.

The way in which the word conceptualizes its object is a complex act—all objects, open to dispute and overlain as they are with qualifications, are from one side highlighted while from the other side dimmed by heteroglot social opinion, by an alien word about them.⁹ And into this complex play of light

9. Highly significant in this respect is the struggle that must be undertaken in such movements as Rousseauism, Naturalism, Impressionism, Acmeism, Dadaism, Surrealism and analogous schools with the “qualified” nature of the object (a struggle occasioned by the idea of a return to primordial consciousness, to original conscious-

ness, to the object itself in itself, to pure perception and so forth) [Bakhtin's note]. Acmeism: a movement of early 20th-century Russian poets who reacted against what they saw as the vagueness of symbolism, stressing form, poetic craft, and concrete representation.

and shadow the word enters—it becomes saturated with this play, and must determine within it the boundaries of its own semantic and stylistic contours. The way in which the word conceives its object is complicated by a dialogic interaction within the object between various aspects of its socio-verbal intelligibility. And an artistic representation, an “image” of the object, may be penetrated by this dialogic play of verbal intentions that meet and are interwoven in it; such an image need not stifle these forces, but on the contrary may activate and organize them. If we imagine the *intention* of such a word, that is, its *directionality toward the object*, in the form of a ray of light, then the living and unrepealable play of colors and light on the facets of the image that it constructs can be explained as the spectral dispersion of the ray-word, not within the object itself (as would be the case in the play of an image-as-trope, in poetic speech taken in the narrow sense, in an “autotelic word”), but rather as its spectral dispersion in an atmosphere filled with the alien words, value judgments and accents through which the ray passes on its way toward the object; the social atmosphere of the word, the atmosphere that surrounds the object, makes the facets of the image sparkle.

The word, breaking through to its own meaning and its own expression across an environment full of alien words and variously evaluating accents, harmonizing with some of the elements in this environment and striking a dissonance with others, is able, in this dialogized process, to shape its own stylistic profile and tone.

Such is the *image in artistic prose* and the image of *novelistic prose* in particular. In the atmosphere of the novel, the direct and unmediated intention of a word presents itself as something impermissably naive, something in fact impossible, for naiveté itself, under authentic novelistic conditions, takes on the nature of an internal polemic and is consequently dialogized (in, for example, the work of the Sentimentalists, in Chateaubriand¹ and in Tostoy). Such a dialogized image can occur in all the poetic genres as well, even in the lyric (to be sure, without setting the tone).² But such an image can fully unfold, achieve full complexity and depth and at the same time artistic closure, only under the conditions present in the genre of the novel.

In the poetic image narrowly conceived (in the image-as-trope), all activity—the dynamics of the image-as-word—is completely exhausted by the play between the word (with all its aspects) and the object (in all its aspects). The word plunges into the inexhaustible wealth and contradictory multiplicity of the object itself, with its “virginal,” still “unuttered” nature; therefore it presumes nothing beyond the borders of its own context (except, of course, what can be found in the treasure-house of language itself). The word forgets that its object has its own history of contradictory acts of verbal recognition, as well as that heteroglossia that is always present in such acts of recognition.

For the writer of artistic prose, on the contrary, the object reveals first of all precisely the socially heteroglot multiplicity of its names, definitions and value judgments. Instead of the virginal fullness and inexhaustibility of

1. François-Auguste-René, vicomte de Chateaubriand (1768–1848), French novelist.

2. The Horatian lyric, Villon, Heine, Laforgue, Annenskij and others—despite the fact that these are extremely varied instances [Bakhtin's note].

All lyric poets: HORACE (65–8 B.C.E.), Roman; François Villon (1431–ca.1463), French; Heinrich Heine (1797–1856), German; Jules Laforgue (1860–1887), French; and Innokenty Annenskij (1855–1909), Russian.

the object itself, the prose writer confronts a multitude of routes, roads and paths that have been laid down in the object by social consciousness. Along with the internal contradictions inside the object itself, the prose writer witnesses as well the unfolding of social heteroglossia *surrounding* the object, the Tower-of-Babel mixing of languages³ that goes on around any object; the dialectics of the object are interwoven with the social dialogue surrounding it. For the prose writer, the object is a focal point for heteroglot voices among which his own voice must also sound; these voices create the background necessary for his own voice, outside of which his artistic prose nuances cannot be perceived, and without which they “do not sound.”

The prose artist elevates the social heteroglossia surrounding objects into an image that has finished contours, an image completely shot through with dialogized overtones; he creates artistically calculated nuances on all the fundamental voices and tones of this heteroglossia. But as we have already said, every extra-artistic prose discourse—in any of its forms, quotidian, rhetorical, scholarly—cannot fail to be oriented toward the “already uttered,” the “already known,” the “common opinion” and so forth. The dialogic orientation of discourse is a phenomenon that is, of course, a property of *any* discourse. It is the natural orientation of any living discourse. On all its various routes toward the object, in all its directions, the word encounters an alien word and cannot help encountering it in a living, tension-filled interaction. Only the mythical Adam, who approached a virginal and as yet verbally unqualified world with the first word, could really have escaped from start to finish this dialogic inter-orientation with the alien word that occurs in the object. Concrete historical human discourse does not have this privilege: it can deviate from such inter-orientation only on a conditional basis and only to a certain degree.

It is all the more remarkable that linguistics and the philosophy of discourse have been primarily oriented precisely toward this artificial, preconditioned status of the word, a word excised from dialogue and taken for the norm (although the primacy of dialogue over monologue is frequently proclaimed). Dialogue is studied merely as a compositional form in the structuring of speech, but the internal dialogism of the word (which occurs in a monologic utterance as well as in a rejoinder), the dialogism that penetrates its entire structure, all its semantic and expressive layers, is almost entirely ignored. But it is precisely this internal dialogism of the word, which does not assume any external compositional forms of dialogue, that cannot be isolated as an independent act, separate from the word’s ability to form a concept [*koncipirovanie*] of its object—it is precisely this internal dialogism that has such enormous power to shape style. The internal dialogism of the word finds expression in a series of peculiar features in semantics, syntax and stylistics that have remained up to the present time completely unstudied by linguistics and stylistics (nor, what is more, have the peculiar semantic features of ordinary dialogue been studied).

The word is born in a dialogue as a living rejoinder within it; the word is shaped in dialogic interaction with an alien word that is already in the object. A word forms a concept of its own object in a dialogic way.

3. See Genesis 11.1–9.

But this does not exhaust the internal dialogism of the word. It encounters an alien word not only in the object itself: every word is directed toward an *answer* and cannot escape the profound influence of the answering word that it anticipates.

The word in living conversation is directly, blatantly, oriented toward a future answer-word: it provokes an answer, anticipates it and structures itself in the answer's direction. Forming itself in an atmosphere of the already spoken, the word is at the same time determined by that which has not yet been said but which is needed and in fact anticipated by the answering word. Such is the situation in any living dialogue.

All rhetorical forms, monologic in their compositional structure, are oriented toward the listener and his answer. This orientation toward the listener is usually considered the basic constitutive feature of rhetorical discourse.⁴ It is highly significant for rhetoric that this relationship toward the concrete listener, taking him into account, is a relationship that enters into the very internal construction of rhetorical discourse. This orientation toward an answer is open, blatant and concrete.

This open orientation toward the listener and his answer in everyday dialogue and in rhetorical forms has attracted the attention of linguists. But even where this has been the case, linguists have by and large gotten no further than the compositional forms by which the listener is taken into account; they have not sought influence springing from more profound meaning and style. They have taken into consideration only those aspects of style determined by demands for comprehensibility and clarity—that is, precisely those aspects that are deprived of any internal dialogism, that take the listener for a person who passively understands but not for one who actively answers and reacts.

The listener and his response are regularly taken into account when it comes to everyday dialogue and rhetoric, but every other sort of discourse as well is oriented toward an understanding that is “responsive”—although this orientation is not particularized in an independent act and is not compositionally marked. Responsive understanding is a fundamental force, one that participates in the formulation of discourse, and it is moreover an *active* understanding, one that discourse senses as resistance or support enriching the discourse.

Linguistics and the philosophy of language acknowledge only a passive understanding of discourse, and moreover this takes place by and large on the level of common language, that is, it is an understanding of an utterance's *neutral signification* and not its *actual meaning*.

The linguistic significance of a given utterance is understood against the background of language, while its actual meaning is understood against the background of other concrete utterances on the same theme, a background made up of contradictory opinions, points of view and value judgments—that is, precisely that background that, as we see, complicates the path of any word toward its object. Only now this contradictory environment of alien words is present to the speaker not in the object, but rather in the consciousness of the listener, as his apperceptive background, pregnant with responses

4. Cf. V. Vinogradov's book *On Artistic Prose*, the chapter “Rhetoric and Poetics,” pp. 75ff., where definitions taken from the older rhetorics are introduced [Bakhtin's note].

and objections. And every utterance is oriented toward this apperceptive background of understanding, which is not a linguistic background but rather one composed of specific objects and emotional expressions. There occurs a new encounter between the utterance and an alien word, which makes itself felt as a new and unique influence on its style.

A passive understanding of linguistic meaning is no understanding at all, it is only the abstract aspect of meaning. But even a more concrete *passive* understanding of the meaning of the utterance, an understanding of the speaker's intention insofar as that understanding remains purely passive, purely receptive, contributes nothing new to the word under consideration, only mirroring it, seeking, at its most ambitious, merely the full reproduction of that which is already given in the word—even such an understanding never goes beyond the boundaries of the word's context and in no way enriches the word. Therefore, insofar as the speaker operates with such a passive understanding, nothing new can be introduced into his discourse; there can be no new aspects in his discourse relating to concrete objects and emotional expressions. Indeed the purely negative demands, such as could only emerge from a passive understanding (for instance, a need for greater clarity, more persuasiveness, more vividness and so forth), leave the speaker in his own personal context, within his own boundaries; such negative demands are completely immanent in the speaker's own discourse and do not go beyond his semantic or expressive self-sufficiency.

In the actual life of speech, every concrete act of understanding is active: it assimilates the word to be understood into its own conceptual system filled with specific objects and emotional expressions, and is indissolubly merged with the response, with a motivated agreement or disagreement. To some extent, primacy belongs to the response, as the activating principle: it creates the ground for understanding, it prepares the ground for an active and engaged understanding. Understanding comes to fruition only in the response. Understanding and response are dialectically merged and mutually condition each other; one is impossible without the other.

Thus an active understanding, one that assimilates the word under consideration into a new conceptual system, that of the one striving to understand, establishes a series of complex interrelationships, consonances and dissonances with the word and enriches it with new elements. It is precisely such an understanding that the speaker counts on. Therefore his orientation toward the listener is an orientation toward a specific conceptual horizon, toward the specific world of the listener; it introduces totally new elements into his discourse; it is in this way, after all, that various different points of view, conceptual horizons, systems for providing expressive accents, various social "languages" come to interact with one another. The speaker strives to get a reading on his own word, and on his own conceptual system that determines this word, within the alien conceptual system of the understanding receiver; he enters into dialogical relationships with certain aspects of this system. The speaker breaks through the alien conceptual horizon of the listener, constructs his own utterance on alien territory, against his, the listener's, apperceptive background.

This new form of internal dialogism of the word is different from that form determined by an encounter with an alien word within the object itself: here it is not the object that serves as the arena for the encounter, but rather the subjective belief system of the listener. Thus this dialogism bears a more sub-

jective, psychological and (frequently) random character, sometimes crassly accommodating, sometimes provocatively polemical. Very often, especially in the rhetorical forms, this orientation toward the listener and the related internal dialogism of the word may simply overshadow the object: the strong point of any concrete listener becomes a self-sufficient focus of attention, and one that interferes with the word's creative work on its referent.

Although they differ in their essentials and give rise to varying stylistic effects in discourse, the dialogic relationship toward an alien word within the object and the relationship toward an alien word in the anticipated answer of the listener can, nevertheless, be very tightly interwoven with each other, becoming almost indistinguishable during stylistic analysis.

Thus, discourse in Tolstoy is characterized by a sharp internal dialogism, and this discourse is moreover dialogized in the belief system of the reader—whose peculiar semantic and expressive characteristics Tolstoy acutely senses—as well as in the object. These two lines of dialogization (having in most cases polemical overtones) are tightly interwoven in his style: even in the most “lyrical” expressions and the most “epic” descriptions, Tolstoy's discourse harmonizes and disharmonizes (more often disharmonizes) with various aspects of the heteroglot socio-verbal consciousness ensnaring the object, while at the same time polemically invading the reader's belief and evaluative system, striving to stun and destroy the apperceptive background of the reader's active understanding. In this respect Tolstoy is an heir of the eighteenth century, especially of Rousseau.⁵ This propagandizing impulse sometimes leads to a narrowing-down of heteroglot social consciousness (against which Tolstoy polemicalizes) to the consciousness of his immediate contemporary, a contemporary of the day and not of the epoch; what follows from this is a radical concretization of dialogization (almost always undertaken in the service of a polemic). For this reason Tolstoy's dialogization, no matter how acutely we sense it in the expressive profile of his style, sometimes requires special historical or literary commentary: we are not sure with *what* precisely a given tone is in harmony or disharmony, for this dissonance or consonance has entered into the positive project of creating a style.⁶ It is true that such extreme concreteness (which approaches at times the *feuilleton*⁷) is present only in those secondary aspects, the overtones of internal dialogization in Tolstoy's discourse.

In those examples of the internal dialogization of discourse that we have chosen (the internal, as contrasted with the external, compositionally marked, dialogue) the relationship to the alien word, to an alien utterance enters into the positing of the style. Style organically contains within itself indices that reach outside itself, a correspondence of its own elements and the elements of an alien context. The internal politics of style (how the elements are put together) is determined by its external politics (its relationship to alien discourse). Discourse lives, as it were, on the boundary between its own context and another, alien, context.

5. Jean-Jacques Rousseau (1712–1778), Swiss-born French philosopher and author.

6. Cf. B. M. Eichenbaum's book *Lev Tolstoj*, book I (Leningrad, 1928), which contains much relevant material; for example, an explication of the topical context of “Family Happiness” [Bakhtin's

note]. Tolstoy famously observed in *Anna Karenina* (1875–77) that “Happy families are all alike; every unhappy family is unhappy in its own way.”

7. Light, popular piece of newspaper writing.

In any actual dialogue the rejoinder also leads such a double life: it is structured and conceptualized in the context of the dialogue as a whole, which consists of its own utterances ("own" from the point of view of the speaker) and of alien utterances (those of the partner). One cannot excise the rejoinder from this combined context made up of one's own words and the words of another without losing its sense and tone. It is an organic part of a heteroglot unity.

The phenomenon of internal dialogization, as we have said, is present to a greater or lesser extent in all realms of the life of the word. But if in extra-artistic prose (everyday, rhetorical, scholarly) dialogization usually stands apart, crystallizes into a special kind of act of its own and runs its course in ordinary dialogue or in other, compositionally clearly marked forms for mixing and polemicizing with the discourse of another—then in *artistic* prose, and especially in the novel, this dialogization penetrates from within the very way in which the word conceives its object and its means for expressing itself, reformulating the semantics and syntactical structure of discourse. Here dialogic inter-orientation becomes, as it were, an event of discourse itself, animating from within and dramatizing discourse in all aspects.

In the majority of poetic genres (poetic in the narrow sense), as we have said, the internal dialogization of discourse is not put to artistic use, it does not enter into the work's "aesthetic object," and is artificially extinguished in poetic discourse. In the novel, however, this internal dialogization becomes one of the most fundamental aspects of prose style and undergoes a specific artistic elaboration.

But internal dialogization can become such a crucial force for creating form only where individual differences and contradictions are enriched by social heteroglossia, where dialogic reverberations do not sound in the semantic heights of discourse (as happens in the rhetorical genres) but penetrate the deep strata of discourse, dialogize language itself and the world view a particular language has (the internal form of discourse)—where the dialogue of voices arises directly out of a social dialogue of "languages," where an alien utterance begins to sound like a socially alien language, where the orientation of the word among alien utterances changes into an orientation of a word among socially alien languages within the boundaries of one and the same national language.

In genres that are poetic in the narrow sense, the natural dialogization of the word is not put to artistic use, the word is sufficient unto itself and does not presume alien utterances beyond its own boundaries. Poetic style is by convention suspended from any mutual interaction with alien discourse, any allusion to alien discourse.

Any way whatever of alluding to alien languages, to the possibility of another vocabulary, another semantics, other syntactic forms and so forth, to the possibility of other linguistic points of view, is equally foreign to poetic style. It follows that any sense of the boundedness, the historicity, the social determination and specificity of one's own language is alien to poetic style, and therefore a critical qualified relationship to one's own language (as merely one of many languages in a heteroglot world) is foreign to poetic style—as is a related phenomenon, the incomplete commitment of oneself, of one's full meaning, to a given language.

Of course this relationship and the relationship to his own language (in greater or lesser degree) could never be foreign to a historically existent poet, as a human being surrounded by living hetero- and polyglossia; but this relationship could not find a place in the *poetic style* of his work without destroying that style, without transposing it into a prosaic key and in the process turning the poet into a writer of prose.

In poetic genres, artistic consciousness—understood as a unity of all the author's semantic and expressive intentions—fully realizes itself within its own language; in them alone is such consciousness fully immanent, expressing itself in it directly and without mediation, without conditions and without distance. The language of the poet is *his* language, he is utterly immersed in it, inseparable from it, he makes use of each form, each word, each expression according to its unmediated power to assign meaning (as it were, “without quotation marks”), that is, as a pure and direct expression of his own intention. No matter what “agonies of the word” the poet endured in the process of creation, in the finished work language is an obedient organ, fully adequate to the author's intention.

The language in a poetic work realizes itself as something about which there can be no doubt, something that cannot be disputed, something all-encompassing. Everything that the poet sees, understands and thinks, he does through the eyes of a given language, in its inner forms, and there is nothing that might require, for its expression, the help of any other or alien language. The language of the poetic genre is a unitary and singular Ptolemaic world⁸ outside of which nothing else exists and nothing else is needed. The concept of many worlds of language, all equal in their ability to conceptualize and to be expressive, is organically denied to poetic style.

The world of poetry, no matter how many contradictions and insoluble conflicts the poet develops within it, is always illumined by one unitary and indisputable discourse. Contradictions, conflicts and doubts remain in the object, in thoughts, in living experiences—in short, in the subject matter—but they do not enter into the language itself. In poetry, even discourse about doubts must be cast in a discourse that cannot be doubted.

To take responsibility for the language of the work as a whole at all of its points as *its* language, to assume a full solidarity with each of the work's aspects, tones, nuances—such is the fundamental prerequisite for poetic style; style so conceived is fully adequate to a single language and a single linguistic consciousness. The poet is not able to oppose his own poetic consciousness, his own intentions to the language that he uses, for he is completely within it and therefore cannot turn it into an object to be perceived, reflected upon or related to. Language is present to him only from inside, in the work it does to effect its intention, and not from outside, in its objective specificity and boundedness. Within the limits of poetic style, direct unconditional intentionality, language at its full weight and the objective display of language (as a socially and historically limited linguistic reality) are all simultaneous, but incompatible. The unity and singularity of language are the indispensable prerequisites for a realization of the direct (but not objectively

8. That is, the stationary center of the universe. In the system of the universe postulated by Ptolemy (active 127–148 C.E.), the Alexandrian

astronomer, mathematician, and geographer, the sun, planets, and stars revolve around the earth.

typifying) intentional individuality of poetic style and of its monologic steadfastness.

This does not mean, of course, that heteroglossia or even a foreign language is completely shut out of a poetic work. To be sure, such possibilities are limited: a certain latitude for heteroglossia exists only in the "low" poetic genres—in the satiric and comic genres and others. Nevertheless, heteroglossia (other socio-ideological languages) can be introduced into purely poetic genres, primarily in the speeches of characters. But in such a context it is objective. It appears, in essence, as a *thing*, it does not lie on the *same* plane with the real language of the work: it is the depicted gesture of one of the characters and does not appear as an aspect of the word doing the depicting. Elements of heteroglossia enter here not in the capacity of another language carrying its own particular points of view, about which one can say things not expressible in one's own language, but rather in the capacity of a depicted thing. Even when speaking of alien things, the poet speaks in his own language. To shed light on an alien world, he never resorts to an alien language, even though it might in fact be more adequate to that world. Whereas the writer of prose, by contrast—as we shall see—attempts to talk about even his *own* world in an alien language (for example, in the nonliterary language of the teller of tales, or the representative of a specific socio-ideological group); he often measures his own world by alien linguistic standards.

As a consequence of the prerequisites mentioned above, the language of poetic genres, when they approach their stylistic limit,⁹ often becomes authoritarian, dogmatic and conservative, sealing itself off from the influence of extraliterary social dialects. Therefore such ideas as a special "poetic language," a "language of the gods," a "priestly language of poetry" and so forth could flourish on poetic soil. It is noteworthy that the poet, should he not accept the given literary language, will sooner resort to the artificial creation of a new language specifically for poetry than he will to the exploitation of actual available social dialects. Social languages are filled with specific objects, typical, socially localized and limited, while the artificially created language of poetry must be a directly intentional language, unitary and singular. Thus, when Russian prose writers at the beginning of the twentieth century began to show a profound interest in dialects and *skaz*, the Symbolists (Bal'mont, V. Ivanov) and later the Futurists dreamed of creating a special "language of poetry," and even made experiments directed toward creating such a language (those of V. Khlebnikov).¹

The idea of a special unitary and singular language of poetry is a typical utopian philosopheme² of poetic discourse: it is grounded in the actual conditions and demands of poetic style, which is always a style adequately serviced

9. It goes without saying that we continually advance as typical the extreme to which poetic genres aspire; in concrete examples of poetic works it is possible to find features fundamental to prose, and numerous hybrids of various generic types exist. These are especially widespread in periods of shift in literary poetic languages [Bakhtin's note].

1. Velimir Khlebnikov (1885–1922), Russian experimental poet and playwright. Konstantin Bal'mont (1867–1943), Russian symbolist poet.

Vyacheslav Ivanov (1866–1949), Russian poet and philologist. Symbolism, a poetic movement that began in France in the last third of the 19th century, emphasized the evocation of subjective emotion, via symbol and metaphor, rather than objective description. Futurism, a revolutionary movement in art and literature begun in Italy in 1909, stressed speed, modernity, and rebellion; it quickly found adherents in Russia.

2. Basic unit or element of philosophy.

by one directly intentional language from whose point of view other languages (conversational, business and prose languages, among others) are perceived as objects that are in no way its equal.³ The idea of a "poetic language" is yet another expression of that same Ptolemaic conception of the linguistic and stylistic world.

Language—like the living concrete environment in which the consciousness of the verbal artist lives—is never unitary. It is unitary only as an abstract grammatical system of normative forms, taken in isolation from the concrete, ideological conceptualizations that fill it, and in isolation from the uninterrupted process of historical becoming that is a characteristic of all living language. Actual social life and historical becoming create within an abstractly unitary national language a multitude of concrete worlds, a multitude of bounded verbal-ideological and social belief systems; within these various systems (identical in the abstract) are elements of language filled with various semantic and axiological content and each with its own different sound.

Literary language—both spoken and written—although it is unitary not only in its shared, abstract, linguistic markers but also in its forms for conceptualizing these abstract markers, is itself stratified and heteroglot in its aspect as an expressive system, that is, in the forms that carry its meanings.

This stratification is accomplished first of all by the specific organisms called *genres*. Certain features of language (lexicological, semantic, syntactic) will knit together with the intentional aim, and with the overall accentual system inherent in one or another genre: oratorical, publicistic, newspaper and journalistic genres, the genres of low literature (penny dreadfuls, for instance) or, finally, the various genres of high literature. Certain features of language take on the specific flavor of a given genre: they knit together with specific points of view, specific approaches, forms of thinking, nuances and accents characteristic of the given genre.

In addition, there is interwoven with this generic stratification of language a *professional* stratification of language, in the broad sense of the term "professional": the language of the lawyer, the doctor, the businessman, the politician, the public education teacher and so forth, and these sometimes coincide with, and sometimes depart from, the stratification into genres. It goes without saying that these languages differ from each other not only in their vocabularies; they involve specific forms for manifesting intentions, forms for making conceptualization and evaluation concrete. And even the very language of the writer (the poet or novelist) can be taken as a professional jargon on a par with professional jargons.

What is important to us here is the intentional dimensions, that is, the denotative and expressive dimension of the "shared" language's stratification. It is in fact not the neutral linguistic components of language being stratified and differentiated, but rather a situation in which the intentional possibilities of language are being expropriated: these possibilities are realized in specific directions, filled with specific content, they are made concrete, particular, and are permeated with concrete value judgments; they knit together with specific objects and with the belief systems of certain

3. Such was the point of view taken by Latin toward national languages in the Middle Ages [Bakhtin's note].

genres of expression and points of view peculiar to particular professions. Within these points of view, that is, for the speakers of the language themselves, these generic languages and professional jargons are directly intentional—they denote and express directly and fully, and are capable of expressing themselves without mediation; but outside, that is, for those not participating in the given purview, these languages may be treated as objects, as typifactions, as local color. For such outsiders, the intentions permeating these languages become *things*, limited in their meaning and expression; they attract to, or excise from, such language a particular word—making it difficult for the word to be utilized in a directly intentional way, without any qualifications.

But the situation is far from exhausted by the generic and professional stratification of the common literary language. Although at its very core literary language is frequently socially homogeneous, as the oral and written language of a dominant social group, there is nevertheless always present, even here, a certain degree of social differentiation, a social stratification, that in other eras can become extremely acute. Social stratification may here and there coincide with generic and professional stratification, but in essence it is, of course, a thing completely autonomous and peculiar to itself.

Social stratification is also and primarily determined by differences between the forms used to convey meaning and between the expressive planes of various belief systems—that is, stratification expresses itself in typical differences in ways used to conceptualize and accentuate elements of language, and stratification may not violate the abstractly linguistic dialectological unity of the shared literary language.

What is more, all socially significant world views have the capacity to exploit the intentional possibilities of language through the medium of their specific concrete instancing. Various tendencies (artistic and otherwise), circles, journals, particular newspapers, even particular significant artistic works and individual persons are all capable of stratifying language, in proportion to their social significance; they are capable of attracting its words and forms into their orbit by means of their own characteristic intentions and accents, and in so doing to a certain extent alienating these words and forms from other tendencies, parties, artistic works and persons.

Every socially significant verbal performance has the ability—sometimes for a long period of time, and for a wide circle of persons—to infect with its own intention certain aspects of language that had been affected by its semantic and expressive impulse, imposing on them specific semantic nuances and specific axiological overtones; thus, it can create slogan-words, curse-words, praise-words and so forth.

In any given historical moment of verbal-ideological life, each generation at each social level has its own language; moreover, every age group has as a matter of fact its own language, its own vocabulary, its own particular accentual system that, in their turn, vary depending on social level, academic institution (the language of the cadet, the high school student, the trade school student are all different languages) and other stratifying factors. All this is brought about by socially typifying languages, no matter how narrow the social circle in which they are spoken. It is even possible to have a family jargon define the societal limits of a language, as, for instance,

the jargon of the Irtenevs⁴ in Tolstoy, with its special vocabulary and unique accentual system.

And finally, at any given moment, languages of various epochs and periods of socio-ideological life cohabit with one another. Even languages of the day exist: one could say that today's and yesterday's socio-ideological and political "day" do not, in a certain sense, share the same language; every day represents another socio-ideological semantic "state of affairs," another vocabulary, another accentual system, with its own slogans, its own ways of assigning blame and praise. Poetry depersonalizes "days" in language, while prose, as we shall see, often deliberately intensifies difference between them, gives them embodied representation and dialogically opposes them to one another in unresolvable dialogues.

Thus at any given moment of its historical existence, language is heteroglot from top to bottom: it represents the co-existence of socio-ideological contradictions between the present and the past, between differing epochs of the past, between different socio-ideological groups in the present, between tendencies, schools, circles and so forth, all given a bodily form. These "languages" of heteroglossia intersect each other in a variety of ways, forming new socially typifying "languages."

Each of these "languages" of heteroglossia requires a methodology very different from the others; each is grounded in a completely different principle for marking differences and for establishing units (for some this principle is functional, in others it is the principle of theme and content, in yet others it is, properly speaking, a socio-dialectological principle). Therefore languages do not *exclude* each other, but rather intersect with each other in many different ways (the Ukrainian language, the language of the epic poem, of early Symbolism, of the student, of a particular generation of children, of the run-of-the-mill intellectual, of the Nietzschean⁵ and so on). It might even seem that the very word "language" loses all meaning in this process—for apparently there is no single plane on which all these "languages" might be juxtaposed to one another.

In actual fact, however, there does exist a common plane that methodologically justifies our juxtaposing them: all languages of heteroglossia, whatever the principle underlying them and making each unique, are specific points of view on the world, forms for conceptualizing the world in words, specific world views, each characterized by its own objects, meanings and values. As such they all may be juxtaposed to one another, mutually supplement one another, contradict one another and be interrelated dialogically. As such they encounter one another and co-exist in the consciousness of real people—first and foremost, in the creative consciousness of people who write novels. As such, these languages live a real life, they struggle and evolve in an environment of social heteroglossia. Therefore they are all able to enter into the unitary plane of the novel, which can unite in itself parodic stylizations of generic languages, various forms of stylizations and illustrations of professional and period-bound languages, the languages of particular generations, of social dialects and others (as occurs, for example, in the English comic novel). They may all be drawn in by the novelist for the

5. Follower of FRIEDRICH NIETZSCHE (1844–1900), German philologist and philosopher.

orchestration of his themes and for the refracted (indirect) expression of his intentions and values.

This is why we constantly put forward the referential and expressive—that is, intentional—factors as the force that stratifies and differentiates the common literary language, and not the linguistic markers (lexical coloration, semantic overtones, etc.) of generic languages, professional jargons and so forth—markers that are, so to speak, the sclerotic deposits of an intentional process, signs left behind on the path of the real living project of an intention, of the particular way it imparts meaning to general linguistic norms. These external markers, linguistically observable and fixable, cannot in themselves be understood or studied without understanding the specific conceptualization they have been given by an intention.

Discourse lives, as it were, beyond itself, in a living impulse [*napravlenost'*] toward the object; if we detach ourselves completely from this impulse all we have left is the naked corpse of the word, from which we can learn nothing at all about the social situation or the fate of a given word in life. *To study the word as such, ignoring the impulse that reaches out beyond it, is just as senseless as to study psychological experience outside the context of that real life toward which it was directed and by which it is determined.*

By stressing the intentional dimension of stratification in literary language, we are able, as has been said, to locate in a single series such methodologically heterogeneous phenomena as professional and social dialects, world views and individual artistic works, for in their intentional dimension one finds that common plane on which they can all be juxtaposed, and juxtaposed dialogically. The whole matter consists in the fact that there may be, between “languages,” highly specific dialogic relations; no matter how these languages are conceived, they may all be taken as particular points of view on the world. However varied the social forces doing the work of stratification—a profession, a genre, a particular tendency, an individual personality—the work itself everywhere comes down to the (relatively) protracted and socially meaningful (collective) saturation of language with specific (and consequently limiting) intentions and accents. The longer this stratifying saturation goes on, the broader the social circle encompassed by it and consequently the more substantial the social force bringing about such a stratification of language, then the more sharply focused and stable will be those traces, the linguistic changes in the language markers (linguistic symbols), that are left behind in language as a result of this social force’s activity—from stable (and consequently social) semantic nuances to authentic dialectological markers (phonetic, morphological and others), which permit us to speak of particular social dialects.

As a result of the work done by all these stratifying forces in language, there are no “neutral” words and forms—words and forms that can belong to “no one”; language has been completely taken over, shot through with intentions and accents. For any individual consciousness living in it, language is not an abstract system of normative forms but rather a concrete heteroglot conception of the world. All words have the “taste” of a profession, a genre, a tendency, a party, a particular work, a particular person, a generation, an age group, the day and hour. Each word tastes of the context and contexts in which it has lived its socially charged life; all words and forms are populated

by intentions. Contextual overtones (generic, tendentious, individualistic) are inevitable in the word.

As a living, socio-ideological concrete thing, as heteroglot opinion, language, for the individual consciousness, lies on the borderline between oneself and the other. The word in language is half someone else's. It becomes "one's own" only when the speaker populates it with his own intention, his own accent, when he appropriates the word, adapting it to his own semantic and expressive intention. Prior to this moment of appropriation, the word does not exist in a neutral and impersonal language (it is not, after all, out of a dictionary that the speaker gets his words!), but rather it exists in other people's mouths, in other people's contexts, serving other people's intentions: it is from there that one must take the word, and make it one's own. And not all words for just anyone submit equally easily to this appropriation, to this seizure and transformation into private property: many words stubbornly resist, others remain alien, sound foreign in the mouth of the one who appropriated them and who now speaks them; they cannot be assimilated into his context and fall out of it; it is as if they put themselves in quotation marks against the will of the speaker. Language is not a neutral medium that passes freely and easily into the private property of the speaker's intentions; it is populated—overpopulated—with the intentions of others. Expropriating it, forcing it to submit to one's own intentions and accents, is a difficult and complicated process.

We have so far proceeded on the assumption of the abstract-linguistic (dialectological) unity of literary language. But even a literary language is anything but a closed dialect. Within the scope of literary language itself there is already a more or less sharply defined boundary between everyday-conversational language and written language. Distinctions between genres frequently coincide with dialectological distinctions (for example, the high—Church Slavonic⁶—and the low—conversational—genres of the eighteenth century); finally, certain dialects may be legitimized in literature and thus to a certain extent be appropriated by literary language.

As they enter literature and are appropriated to literary language, dialects in this new context lose, of course, the quality of closed socio-linguistic systems; they are deformed and in fact cease to be that which they had been simply as dialects. On the other hand, these dialects, on entering the literary language and preserving within it their own dialectological elasticity, their other-languedness, have the effect of deforming the literary language; it, too, ceases to be that which it had been, a closed socio-linguistic system. Literary language is a highly distinctive phenomenon, as is the linguistic consciousness of the educated person who is its agent; within it, intentional diversity of speech [*raznorečivost'*] (which is present in every living dialect as a closed system) is transformed into diversity of language [*raznojazyčie*]; what results is not a single language but a dialogue of languages.

The national literary language of a people with a highly developed art of prose, especially if it is novelistic prose with a rich and tension-filled verbal-ideological history, is in fact an organized microcosm that reflects

6. The South Slavic language used in the standard 9th-century translation of the Bible done by the brothers Sts. Cyril (827–869) and Methodius

(826–885) and still used as a liturgical language by all Slavic Orthodox Christian Churches.

the macrocosm not only of national heteroglossia, but of European heteroglossia as well. The unity of a literary language is not a unity of a single, closed language system, but is rather a highly specific unity of several "languages" that have established contact and mutual recognition with each other (merely one of which is poetic language in the narrow sense). Precisely this constitutes the peculiar nature of the methodological problem in literary language.

Concrete socio-ideological language consciousness, as it becomes creative—that is, as it becomes active as literature—discovers itself already surrounded by heteroglossia and not at all a single, unitary language, inviolable and indisputable. The actively literary linguistic consciousness at all times and everywhere (that is, in all epochs of literature historically available to us) comes upon "languages," and not language. Consciousness finds itself inevitably facing the necessity of *having to choose a language*. With each literary-verbal performance, consciousness must actively orient itself amidst heteroglossia, it must move in and occupy a position for itself within it, it chooses, in other words, a "language." Only by remaining in a closed environment, one without writing or thought, completely off the maps of socio-ideological becoming, could a man fail to sense this activity of selecting a language and rest assured in the inviolability of his own language, the conviction that his language is predetermined.

Even such a man, however, deals not in fact with a single language, but with languages—except that the place occupied by each of these languages is fixed and indisputable, the movement from one to the other is predetermined and not a thought process; it is as if these languages were in different chambers. They do not collide with each other in his consciousness, there is no attempt to coordinate them, to look at one of these languages through the eyes of another language.

Thus an illiterate peasant, miles away from any urban center, naively immersed in an unmoving and for him unshakable everyday world, nevertheless lived in several language systems: he prayed to God in one language (Church Slavonic), sang songs in another, spoke to his family in a third and, when he began to dictate petitions to the local authorities through a scribe, he tried speaking yet a fourth language (the official-literate language, "paper" language). All these are *different languages*, even from the point of view of abstract socio-dialectological markers. But these languages were not dialogically coordinated in the linguistic consciousness of the peasant; he passed from one to the other without thinking, automatically: each was indisputably in its own place, and the place of each was indisputable. He was not yet able to regard one language (and the verbal world corresponding to it) through the eyes of another language (that is, the language of everyday life and the everyday world with the language of prayer or song, or vice versa).⁷

As soon as a critical interanimation of languages began to occur in the consciousness of our peasant, as soon as it became clear that these were not only various different languages but even internally variegated languages, that the ideological systems and approaches to the world that were indissolubly connected with these languages contradicted each other and

7. We are of course deliberately simplifying: the real-life peasant could and did do this to a certain extent [Bakhtin's note].

in no way could live in peace and quiet with one another—then the inviolability and predetermined quality of these languages came to an end, and the necessity of actively choosing one's orientation among them began.

The language and world of prayer, the language and world of song, the language and world of labor and everyday life, the specific language and world of local authorities, the new language and world of the workers freshly immigrated to the city—all these languages and worlds sooner or later emerged from a state of peaceful and moribund equilibrium and revealed the speech diversity in each.

Of course the actively literary linguistic consciousness comes upon an even more varied and profound heteroglossia within literary language itself, as well as outside it. Any fundamental study of the stylistic life of the word must begin with this basic fact. The nature of the heteroglossia encountered and the means by which one orients oneself in it determine the concrete stylistic life that the word will lead.

The poet is a poet insofar as he accepts the idea of a unitary and singular language and a unitary, monologically sealed-off utterance. These ideas are immanent in the poetic genres with which he works. In a condition of actual contradiction, these are what determine the means of orientation open to the poet. The poet must assume a complete single-personed hegemony over his own language, he must assume equal responsibility for each one of its aspects and subordinate them to his own, and only his own, intentions. Each word must express the poet's *meaning* directly and without mediation; there must be no distance between the poet and his word. The meaning must emerge from language as a single intentional whole: none of its stratification, its speech diversity, to say nothing of its language diversity, may be reflected in any fundamental way in his poetic work.

To achieve this, the poet strips the word of others' intentions, he uses only such words and forms (and only in such a way) that they lose their link with concrete intentional levels of language and their connection with specific contexts. Behind the words of a poetic work one should not sense any typical or reified images of genres (except for the given poetic genre), nor professions, tendencies, directions (except the direction chosen by the poet himself), nor world views (except for the unitary and singular world view of the poet himself), nor typical and individual images of speaking persons, their speech mannerisms or typical intonations. *Everything that enters the work must immerse itself in Lethe,⁸ and forget its previous life in any other contexts: language may remember only its life in poetic contexts (in such contexts, however, even concrete reminiscences are possible).*

Of course there always exists a limited sphere of more or less concrete contexts, and a connection with them must be deliberately evidenced in poetic discourse. But these contexts are purely semantic and, so to speak, accented in the abstract; in their linguistic dimension they are impersonal or at least no particularly concrete linguistic specificity is sensed behind them, no particular manner of speech and so forth, no socially typical linguistic face (the possible personality of the narrator) need peek out from behind them. Everywhere there is only one face—the linguistic face of the author,

8. A mythological river through the Greek underworld, Hades (literally, "Forgetfulness"; Greek). All who drink from it lose their memory.

answering for every word as if it were his own. No matter how multiple and varied these semantic and accentual threads, associations, pointers, hints, correlations that emerge from every poetic word, one language, one conceptual horizon, is sufficient to them all; there is no need of heteroglot social contexts. What is more, the very movement of the poetic symbol (for example, the unfolding of a metaphor) presumes precisely this unity of language, an unmediated correspondence with its object. Social diversity of speech, were it to arise in the work and stratify its language, would make impossible both the normal development and the activity of symbols within it.

The very rhythm of poetic genres does not promote any appreciable degree of stratification. *Rhythm, by creating an unmediated involvement between every aspect of the accentual system of the whole* (via the most immediate rhythmic unities), destroys in embryo those social worlds of speech and of persons that are potentially embedded in the word: in any case, rhythm puts definite limits on them, does not let them unfold or materialize. Rhythm serves to strengthen and concentrate even further the unity and hermetic quality of the surface of poetic style, and of the unitary language that this style posits.

As a result of this work—stripping all aspects of language of the intentions and accents of other people, destroying all traces of social heteroglossia and diversity of language—a tension-filled unity of language is achieved in the poetic work. This unity may be naive, and present only in those extremely rare epochs of poetry, when poetry had not yet exceeded the limits of a closed, unitary, undifferentiated social circle whose language and ideology were not yet stratified. More often than not, we experience a profound and conscious tension through which the unitary poetic language of a work rises from the heteroglot and language-diverse chaos of the literary language contemporary to it.

This is how the poet proceeds. The novelist working in prose (and almost any prose writer) takes a completely different path. He welcomes the heteroglossia and language diversity of the literary and extraliterary language into his own work not only not weakening them but even intensifying them (for he interacts with their particular self-consciousness). It is in fact out of this stratification of language, its speech diversity and even language diversity, that he constructs his style, while at the same time he maintains the unity of his own creative personality and the unity (although it is, to be sure, unity of another order) of his own style.

The prose writer does not purge words of intentions and tones that are alien to him, he does not destroy the seeds of social heteroglossia embedded in words, he does not eliminate those language characterizations and speech mannerisms (potential narrator-personalities) glimmering behind the words and forms, each at a different distance from the ultimate semantic nucleus of his work, that is, the center of his own personal intentions.

The language of the prose writer deploys itself according to degrees of greater or lesser proximity to the author and to his ultimate semantic instantiation: certain aspects of language directly and unmediatedly express (as in poetry) the semantic and expressive intentions of the author, others refract these intentions; the writer of prose does not meld completely with any of these words, but rather accents each of them in a particular way—humorously,

ironically, parodically and so forth;⁹ yet another group may stand even further from the author's ultimate semantic instantiation, still more thoroughly refracting his intentions; and there are, finally, those words that are completely denied any authorial intentions: the author does not express *himself* in them (as the author of the word)—rather, he *exhibits* them as a unique speech-thing, they function for him as something completely reified. Therefore the stratification of language—generic, professional, social in the narrow sense, that of particular world views, particular tendencies, particular individuals, the social speech diversity and language-diversity (dialects) of language—upon entering the novel establishes its own special order within it, and becomes a unique artistic system, which orchestrates the intentional theme of the author.

Thus a prose writer can distance himself from the language of his own work, while at the same time distancing himself, in varying degrees, from the different layers and aspects of the work. He can make use of language without wholly giving himself up to it, he may treat it as semi-alien or completely alien to himself, while compelling language ultimately to serve all his own intentions. The author does not speak in a given language (from which he distances himself to a greater or lesser degree), but he speaks, as it were, *through* language, a language that has somehow more or less materialized, become objectivized, that he merely ventriloquates.

The prose writer as a novelist does not strip away the intentions of others from the heteroglot language of his works, he does not violate those socio-ideological cultural horizons (big and little worlds) that open up behind heteroglot languages—rather, he welcomes them into his work. The prose writer makes use of words that are already populated with the social intentions of others and compels them to serve his own new intentions, to serve a second master. Therefore the intentions of the prose writer are refracted, and refracted at *different angles*, depending on the degree to which the refracted, heteroglot languages he deals with are socio-ideologically alien, already embodied and already objectivized.

The orientation of the word amid the utterances and languages of others, and all the specific phenomena connected with this orientation, takes on *artistic* significance in novel style. Diversity of voices and heteroglossia enter the novel and organize themselves within it into a structured artistic system. This constitutes the distinguishing feature of the novel as a genre.

Any stylistics capable of dealing with the distinctiveness of the novel as a genre must be a *sociological stylistics*. The internal social dialogism of novelistic discourse requires the concrete social context of discourse to be exposed, to be revealed as the force that determines its entire stylistic structure, its "form" and its "content," determining it not from without, but from within; for indeed, social dialogue reverberates in all aspects of discourse, in those relating to "content" as well as the "formal" aspects themselves.

The development of the novel is a function of the deepening of dialogic essence, its increased scope and greater precision. Fewer and fewer neutral, hard elements ("rock bottom truths") remain that are not drawn into

9. That is to say, the words are not his if we understand them as direct words, but they are his as things that are being transmitted ironically, exhib-

ited and so forth, that is, as words that are understood from the distances appropriate to humor, irony, parody, etc. [Bakhtin's note].

dialogue. Dialogue moves into the deepest molecular and, ultimately, subatomic levels.

Of course, even the poetic word is social, but poetic forms reflect lengthier social processes, i.e., those tendencies in social life requiring centuries to unfold. The novelistic word, however, registers with extreme subtlety the tiniest shifts and oscillations of the social atmosphere; it does so, moreover, while registering it as a whole, in all of its aspects.

When heteroglossia enters the novel it becomes subject to an artistic reworking. The social and historical voices populating language, all its words and all its forms, which provide language with its particular concrete conceptualizations, are organized in the novel into a structured stylistic system that expresses the differentiated socio-ideological position of the author amid the heteroglossia of his epoch.

1934–35

MAX HORKHEIMER

1895–1973

THEODOR W. ADORNO

1903–1969

In a celebrated aphorism, the German philosopher and social critic Theodor Wiesengrund Adorno proclaimed that “To write poetry after Auschwitz is barbaric.” This terse and austere statement encapsulates Adorno’s bitterly melancholic understanding of modern art and society, which he often expressed in his highly influential writings on music, sociology, and aesthetics. For Adorno, as for some other members of the celebrated Institute for Social Research, the production of consumable, stylized mass art is complicit with a disinterested view of society that permits social atrocities such as Nazi concentration camps and genocide to go unchecked. The production of such art is also complicit with what Adorno and his fellow German social critic Max Horkheimer called the “culture industry,” meaning the constellation of entertainment businesses that produce film, television, radio, magazines, and popular music—all phenomena created by mass technology in which the lines between art, advertising, and propaganda blur. In this world of manipulation and carefree amusement, mass art serves the status quo. As Adorno would assert on many occasions, the only legitimate form of art that can do some justice to the immense suffering in the world is the autonomous art of modernism, which, through its apparent detachment from reality, critiques the world as it is, holding up the promise of a better future.

Adorno was born in Frankfurt am Main to a wealthy and assimilated Jewish wine merchant, Oskar Wiesengrund, and his Catholic wife, Maria Calvelli-Adorno, whose last name Adorno may have assumed because he flirted with embracing his mother’s faith. An important influence on Adorno’s intellectual development was his training in music, particularly because in the 1920s it enabled him to meet and study with famous Viennese expressionist composers, such as Arnold Schoenberg and his disciples Alban Berg and Anton Webern. The atonal compositions of Schoenberg inspired Adorno, providing him with models for the unsystematic methodology

of his critical work in philosophy, sociology, and aesthetics and for what art in the modern world should be. Another formative contemporary influence on Adorno was the noted film critic and social theorist Siegfried Kracauer, who introduced him to earlier German philosophy. As an anti-idealist who would become well-known for his groundbreaking sociological analyses of popular culture, Kracauer taught Adorno how to read the works of IMMANUEL KANT as symptomatic historical and social documents, which is how Adorno would later read mass art and the autonomous artworks of modernism.

At the University of Frankfurt in the 1920s, Kracauer introduced Adorno to WALTER BENJAMIN, who was also interested in sociological analyses of contemporary culture. Adorno was particularly taken with Benjamin's *Origin of German Tragic Drama* (1928), whose reflections on antisystematic philosophy helped Adorno develop his "atonal" philosophy, which, as he would explain in his *Negative Dialectics* (1966), avoids fixed concepts, much as modernist autonomous art shuns any kind of didactic or affirmative statements. With the help of Benjamin and Kracauer, Adorno's circle of associates later widened to include Ernst Bloch, whom Adorno regarded as the leading philosopher of expressionism, and Bertolt Brecht, the foremost Marxist dramatist. During this time Adorno began studying various materialist approaches to culture, falling under the influence of unorthodox Marxian texts such as Bloch's *Spirit of Utopia* (1918) and GYÖRGY LUKÁCS's *History and Class Consciousness* (1922). Bloch's utopian notion of art influenced Adorno's understanding of autonomous art, and Lukács's conception of reification informed his theory of the "mass deception" wrought by the modern culture industry.

At the University of Frankfurt, Adorno also met Max Horkheimer, a member of the now famous interdisciplinary Institute for Social Research (the so-called Frankfurt School), which was founded in 1924 and concerned initially with Marxist political economy, labor-movement history, and MARX-ENGELS scholarship. Born near Stuttgart to an upwardly mobile Jewish family, the young Horkheimer resisted his father's plans for him to run the family textile business because he could not accept the exploitation of labor on which it was based. After World War I, Horkheimer began his studies in Munich and then moved to the University of Frankfurt, which offered an exciting environment for those interested in social philosophy. He studied with the neo-Kantian philosopher Hans Cornelius, submitted his *Habilitationsschrift* (dissertation) in 1925, and became a regular lecturer in the history of philosophy. Like Adorno, Horkheimer moved away from idealist philosophy and its unhistorical approaches to Marxist materialist views. When Horkheimer assumed the directorship of the institute in 1930, he shifted its focus to cultural studies and so-called Critical Theory, a term he coined for the emerging mode of theoretical and empirical social analyses of modern culture typical of Adorno, Herbert Marcuse, and other members of the Frankfurt School.

Through his relationship with Horkheimer, Adorno would publish in the institute's journal, become a member in 1938, and ultimately succeed Horkheimer as director in 1964. Even more important, in the mid-1930s Horkheimer invited Adorno to America to do sociological work for the institute, which had been forced to relocate after being closed by the Nazis in 1933. Adorno himself had been denied the right to teach at the university level because he was Jewish. Consequently, in 1938 Adorno accepted Horkheimer's invitation and moved to New York and then, in 1941, to Los Angeles. There Adorno and Horkheimer collaborated on *Dialectic of Enlightenment* (1947), their major critique of modern culture, in which they interrogate the notion that the Western world has been progressing since the Enlightenment. In this dense polemical work, they claim that the modern West has not fulfilled the utopian promise of the Enlightenment, becoming instead a rationalized, administered world that dominates individuals through instrumental reason, monopoly capitalism, and political totalitarianism.

Appearing as a long chapter in Adorno and Horkheimer's *Dialectic of Enlightenment*, "The Culture Industry: Enlightenment as Mass Deception" argues that the administered modern world is sustained in part by technologically reproduced mass art. In contrast to Benjamin, who on occasion was optimistic about the emancipatory potential of mass art, Adorno and Horkheimer contend that the culture industry serves the totalitarian impulses of modern capitalist society, not least because the interests of leading broadcasting firms, publishing companies, and motion picture studios are economically interwoven with those of all other capitalist industries. In its attempt to produce and reproduce the social relations of a homogenized society, the culture industry contributes to the liquidation of the individual and the maintenance of the status quo. It transforms art into commodities and people into complacent consumers, depicting a "realistic" world that is really no more than a combination of stereotypes, advertising, and propaganda.

The culture industry, moreover, helps create a state of mind in which people's desires for pleasure and happiness are activated but deferred in endless entertainment. It inculcates resignation, habituating consumers to the everyday drudgery of the modern world. It does not "sublimate" the desire for happiness by providing compensatory entertainment for the life of regimentation but instead "represses" the desire for happiness, depicting the modern world in a degraded tragedy of "realistic" characters who accept the inexorable order of things. In this way the culture industry manages the psyche of its consumers, a line of thought that weds Marxian and Freudian insights—a combination often first credited to the Frankfurt School.

After World War II, Adorno and Horkheimer returned to Germany and reestablished the Institute for Social Research at the University of Frankfurt, where they also assumed professorships. Horkheimer eventually became rector of the university, serving from 1951 to 1953. During the 1960s, as he completed *Negative Dialectics* and addressed timely sociological issues, Adorno worked on a monumental and never-completed study, *Aesthetic Theory*, which was posthumously published in 1970. In numerous writings published before his death, Adorno propounded his views on the autonomous art of modernism, praising such writers as Samuel Beckett and Franz Kafka, whose difficult works he viewed as specific responses to the historical and social conditions of modernity. For Adorno, modern art resists the self-evidence of empirical reality, lends suffering a voice, and acknowledges a better future to come. In the 1960s Adorno saw his Marxist utopian position on art and his melancholic "mandarin" view of mass culture criticized by German student activists who demonstrated against him, questioned his Marxist credentials, and charged him with political quietism. While his work on the culture industry accurately portrays tendencies present in mid-twentieth-century Western societies, many later theorists would find it losing some of its point as social disaggregation and niche marketing came to characterize mass societies. But even so, Adorno still serves as a forerunner for critics concerned with the politics of popular culture and the prospects for cultural studies.

*From Dialectic of Enlightenment*¹

From *The Culture Industry: Enlightenment as Mass Deception*

The sociological view that the loss of support from objective religion and the disintegration of the last precapitalist residues, in conjunction with technical and social differentiation and specialization, have given rise to cultural chaos is refuted by daily experience. Culture today is infecting everything with sameness. Film, radio, and magazines form a system. Each branch of culture is unanimous within itself and all are unanimous together. Even the aesthetic manifestations of political opposites proclaim the same inflexible rhythm. The decorative administrative and exhibition buildings of industry differ little between authoritarian and other countries. The bright monumental structures shooting up on all sides show off the systematic ingenuity of the state-spanning combines, toward which the unfettered entrepreneurial system, whose monuments are the dismal residential and commercial blocks in the surrounding areas of desolate cities, was already swiftly advancing. The older buildings around the concrete centers already look like slums, and the new bungalows on the outskirts, like the flimsy structures at international trade fairs, sing the praises of technical progress while inviting their users to throw them away after short use like tin cans. But the town-planning projects, which are supposed to perpetuate individuals as autonomous units in hygienic small apartments, subjugate them only more completely to their adversary, the total power of capital. Just as the occupants of city centers are uniformly summoned there for purposes of work and leisure, as producers and consumers, so the living cells crystallize into homogenous, well-organized complexes. The conspicuous unity of macrocosm and microcosm confronts human beings with a model of their culture: the false identity of universal and particular. All mass culture under monopoly is identical, and the contours of its skeleton, the conceptual armature fabricated by monopoly, are beginning to stand out. Those in charge no longer take much trouble to conceal the structure, the power of which increases the more bluntly its existence is admitted. Films and radio no longer need to present themselves as art. The truth that they are nothing but business is used as an ideology to legitimize the trash they intentionally produce. They call themselves industries, and the published figures for their directors' incomes quell any doubts about the social necessity of their finished products.

Interested parties like to explain the culture industry in technological terms. Its millions of participants, they argue, demand reproduction processes which inevitably lead to the use of standard products to meet the same needs at countless locations. The technical antithesis between few production centers and widely dispersed reception necessitates organization and planning by those in control. The standardized forms, it is claimed, were originally derived from the needs of the consumers: that is why they are accepted with so little resistance. In reality, a cycle of manipulation and retroactive need is unifying the system ever more tightly. What is not mentioned is that the basis on which technology is gaining power over society is the power of those whose economic position in society is strongest. Technical

1. Translated by Edmund Jephcott.

rationality today is the rationality of domination. It is the compulsive character of a society alienated from itself. Automobiles, bombs, and films hold the totality together until their leveling element demonstrates its power against the very system of injustice it served. For the present the technology of the culture industry confines itself to standardization and mass production and sacrifices what once distinguished the logic of the work from that of society. These adverse effects, however, should not be attributed to the internal laws of technology itself but to its function within the economy today. Any need which might escape the central control is repressed by that of individual consciousness. The step from telephone to radio has clearly distinguished the roles. The former liberally permitted the participant to play the role of subject. The latter democratically makes everyone equally into listeners, in order to expose them in authoritarian fashion to the same programs put out by different stations. No mechanism of reply has been developed, and private transmissions are condemned to unfreedom. They confine themselves to the apocryphal sphere of "amateurs," who, in any case, are organized from above. Any trace of spontaneity in the audience of the official radio is steered and absorbed into a selection of specializations by talent-spotters, performance competitions, and sponsored events of every kind. The talents belong to the operation long before they are put on show; otherwise they would not conform so eagerly. The mentality of the public, which allegedly and actually favors the system of the culture industry, is a part of the system, not an excuse for it. If a branch of art follows the same recipe as one far removed from it in terms of its medium and subject matter, if the dramatic denouement in radio "soap operas" is used as an instructive example of how to solve technical difficulties—which are mastered no less in "jam sessions" than at the highest levels of jazz—or if a movement from Beethoven is loosely "adapted" in the same way as a Tolstoy² novel is adapted for film, the pretext of meeting the public's spontaneous wishes is mere hot air. An explanation in terms of the specific interests of the technical apparatus and its personnel would be closer to the truth, provided that apparatus were understood in all its details as a part of the economic mechanism of selection. Added to this is the agreement, or at least the common determination, of the executive powers to produce or let pass nothing which does not conform to their tables, to their concept of the consumer, or, above all, to themselves.

If the objective social tendency of this age is incarnated in the obscure subjective intentions of board chairmen, this is primarily the case in the most powerful sectors of industry: steel, petroleum, electricity, chemicals. Compared to them the culture monopolies are weak and dependent. They have to keep in with the true wielders of power, to ensure that their sphere of mass society, the specific product of which still has too much of cozy liberalism and Jewish intellectualism about it, is not subjected to a series of purges. The dependence of the most powerful broadcasting company on the electrical industry, or of film on the banks, characterizes the whole sphere, the individual sectors of which are themselves economically intertwined. Everything is so tightly clustered that the concentration of intellect

2. Leo Tolstoy (1828–1910), Russian author; by 1947, there were more than a dozen films based on his novels *Anna Karenina* (1875–77) and *Resurrec-*

tion (1899) alone. Ludwig van Beethoven (1770–1827), German composer.

reaches a level where it overflows the demarcations between company names and technical sectors. The relentless unity of the culture industry bears witness to the emergent unity of politics. Sharp distinctions like those between A and B films, or between short stories published in magazines in different price segments, do not so much reflect real differences as assist in the classification, organization, and identification of consumers. Something is provided for everyone so that no one can escape; differences are hammered home and propagated. The hierarchy of serial qualities purveyed to the public serves only to quantify it more completely. Everyone is supposed to behave spontaneously according to a "level" determined by indices and to select the category of mass product manufactured for their type. On the charts of research organizations, indistinguishable from those of political propaganda, consumers are divided up as statistical material into red, green, and blue areas according to income group.

The schematic nature of this procedure is evident from the fact that the mechanically differentiated products are ultimately all the same. That the difference between the models of Chrysler and General Motors is fundamentally illusory is known by any child, who is fascinated by that very difference. The advantages and disadvantages debated by enthusiasts serve only to perpetuate the appearance of competition and choice. It is no different with the offerings of Warner Brothers and Metro Goldwyn Mayer. But the differences, even between the more expensive and cheaper products from the same firm, are shrinking—in cars to the different number of cylinders, engine capacity, and details of the gadgets, and in films to the different number of stars, the expense lavished on technology, labor and costumes, or the use of the latest psychological formulae. The unified standard of value consists in the level of conspicuous production, the amount of investment put on show. The budgeted differences of value in the culture industry have nothing to do with actual differences, with the meaning of the product itself. The technical media, too, are being engulfed by an insatiable uniformity. Television aims at a synthesis of radio and film, delayed only for as long as the interested parties cannot agree. Such a synthesis, with its unlimited possibilities, promises to intensify the impoverishment of the aesthetic material so radically that the identity of all industrial cultural products, still scantily disguised today, will triumph openly tomorrow in a mocking fulfillment of Wagner's³ dream of the total art work. The accord between word, image, and music is achieved so much more perfectly than in *Tristan* because the sensuous elements, which compliantly document only the surface of social reality, are produced in principle within the same technical work process, the unity of which they express as their true content. This work process integrates all the elements of production, from the original concept of the novel, shaped by its sidelong glance at film, to the last sound effect. It is the triumph of invested capital. To impress the omnipotence of capital on the hearts of expropriated job candidates as the power of their true master is the purpose of all films, regardless of the plot selected by the production directors.

* * *

3. Richard Wagner (1813–1883), German composer who promoted the ideal of a "total artwork" (*Gesamtkunstwerk*). His operas include *Tristan und Isolde* (1859).

The whole world is passed through the filter of the culture industry. The familiar experience of the moviegoer, who perceives the street outside as a continuation of the film he has just left, because the film seeks strictly to reproduce the world of everyday perception, has become the guideline of production. The more densely and completely its techniques duplicate empirical objects, the more easily it creates the illusion that the world outside is a seamless extension of the one which has been revealed in the cinema. Since the abrupt introduction of the sound film, mechanical duplication has become entirely subservient to this objective. According to this tendency, life is to be made indistinguishable from the sound film. Far more strongly than the theatre of illusion, film denies its audience any dimension in which they might roam freely in imagination—contained by the film's framework but unsupervised by its precise actualities—without losing the thread; thus it trains those exposed to it to identify film directly with reality. The withering of imagination and spontaneity in the consumer of culture today need not be traced back to psychological mechanisms. The products themselves, especially the most characteristic, the sound film, cripple those faculties through their objective makeup. They are so constructed that their adequate comprehension requires a quick, observant, knowledgeable cast of mind but positively debars the spectator from thinking, if he is not to miss the fleeting facts. This kind of alertness is so ingrained that it does not even need to be activated in particular cases, while still repressing the powers of imagination. Anyone who is so absorbed by the world of the film, by gesture, image, and word, that he or she is unable to supply that which would have made it a world in the first place, does not need to be entirely transfixed by the special operations of the machinery at the moment of the performance. The required qualities of attention have become so familiar from other films and other culture products already known to him or her that they appear automatically. The power of industrial society is imprinted on people once and for all. The products of the culture industry are such that they can be alertly consumed even in a state of distraction. But each one is a model of the gigantic economic machinery, which, from the first, keeps everyone on their toes, both at work and in the leisure time which resembles it. In any sound film or any radio broadcast something is discernible which cannot be attributed as a social effect to any one of them, but to all together. Each single manifestation of the culture industry inescapably reproduces human beings as what the whole has made them. And all its agents, from the producer to the women's organizations, are on the alert to ensure that the simple reproduction of mind does not lead on to the expansion of mind.

The complaints of art historians and cultural attorneys over the exhaustion of the energy which created artistic style in the West are frighteningly unfounded. The routine translation of everything, even of what has not yet been thought, into the schema of mechanical reproducibility goes beyond the rigor and scope of any true style—the concept with which culture lovers idealize the precapitalist past as an organic era. No Palestrina⁴ could have eliminated the unprepared or unresolved dissonance more puristically than the jazz arranger excludes any phrase which does not exactly fit the

4. Giovanni Pierluigi da Palestrina (1525–1594), Italian composer.

jargon. If he jazzes up Mozart, he changes the music not only where it is too difficult or serious but also where the melody is merely harmonized differently, indeed, more simply, than is usual today. No medieval patron of architecture can have scrutinized the subjects of church windows and sculptures more suspiciously than the studio hierarchies examine a plot by Balzac or Victor Hugo⁵ before it receives the imprimatur of feasibility. No cathedral chapter could have assigned the grimaces and torments of the damned to their proper places in the order of divine love more scrupulously than production managers decide the position of the torture of the hero or the raised hem of the leading lady's dress within the litany of the big film. The explicit and implicit, exoteric and esoteric catalog of what is forbidden and what is tolerated is so extensive that it not only defines the area left free but wholly controls it. Even the most minor details are modeled according to this lexicon. Like its adversary, avant-garde art, the culture industry defines its own language positively, by means of prohibitions applied to its syntax and vocabulary. The permanent compulsion to produce new effects which yet remain bound to the old schema, becoming additional rules, merely increases the power of the tradition which the individual effect seeks to escape. Every phenomenon is by now so thoroughly imprinted by the schema that nothing can occur that does not bear in advance the trace of the jargon, that is not seen at first glance to be approved.

* * *

Nevertheless, this caricature of style reveals something about the genuine style of the past. The concept of a genuine style becomes transparent in the culture industry as the aesthetic equivalent of power. The notion of style as a merely aesthetic regularity is a retrospective fantasy of Romanticism. The unity of style not only of the Christian Middle Ages but of the Renaissance expresses the different structures of social coercion in those periods, not the obscure experience of the subjects, in which the universal was locked away. The great artists were never those whose works embodied style in its least fractured, most perfect form but those who adopted style as a rigor to set against the chaotic expression of suffering, as a negative truth. In the style of these works expression took on the strength without which existence is dissipated unheard. Even works which are called classical, like the music of Mozart, contain objective tendencies which resist the style they incarnate. Up to Schönberg and Picasso,⁶ great artists have been mistrustful of style, which at decisive points has guided them less than the logic of the subject matter. What the Expressionists and Dadaists attacked in their polemics,⁷ the untruth of style as such, triumphs today in the vocal jargon of the crooner, in the adept grace of the film star, and even in the mastery of the photographic shot of a farm laborer's hovel. In every work of art, style is a promise. In being absorbed through style into the dominant

5. Victor Hugo (1802–1885), French poet and novelist. Honoré de Balzac (1799–1850), French novelist.

6. Pablo Picasso (1881–1975), Spanish-born Cubist painter. Arnold Schoenberg (1874–1951), Austrian composer known for his expressionistic atonal or serial compositions (see following note).

7. Expressionism is an artistic movement that went beyond impressionism by magnifying dark inner experiences. Dadaism, a precursor to surrealism, is an artistic movement that protested the insanity of World War I by demolishing the tenets of art, philosophy, and logic.

form of universality, into the current musical, pictorial, or verbal idiom, what is expressed seeks to be reconciled with the idea of the true universal. This promise of the work of art to create truth by impressing its unique contours on the socially transmitted forms is as necessary as it is hypocritical. By claiming to anticipate fulfillment through their aesthetic derivatives, it posits the real forms of the existing order as absolute. To this extent the claims of art are always also ideology. Yet it is only in its struggle with tradition, a struggle precipitated in style, that art can find expression for suffering. The moment in the work of art by which it transcends reality cannot, indeed, be severed from style; that moment, however, does not consist in achieved harmony, in the questionable unity of form and content, inner and outer, individual and society, but in those traits in which the discrepancy emerges, in the necessary failure of the passionate striving for identity. Instead of exposing itself to this failure, in which the style of the great work of art has always negated itself, the inferior work has relied on its similarity to others, the surrogate of identity. The culture industry has finally posited this imitation as absolute. Being nothing other than style, it divulges style's secret: obedience to the social hierarchy. Aesthetic barbarism today is accomplishing what has threatened intellectual formations since they were brought together as culture and neutralized. To speak about culture always went against the grain of culture. The general designation "culture" already contains, virtually, the process of identifying, cataloging, and classifying which imports culture into the realm of administration. Only what has been industrialized, rigorously subsumed, is fully adequate to this concept of culture. Only by subordinating all branches of intellectual production equally to the single purpose of imposing on the senses of human beings, from the time they leave the factory in the evening to the time they clock on in the morning, the imprint of the work routine which they must sustain throughout the day, does this culture mockingly fulfill the notion of a unified culture which the philosophers of the individual personality held out against mass culture.

* * *

Nevertheless, the culture industry remains the entertainment business. Its control of consumers is mediated by entertainment, and its hold will not be broken by outright dictate but by the hostility inherent in the principle of entertainment to anything which is more than itself. Since the tendencies of the culture industry are turned into the flesh and blood of the public by the social process as a whole, those tendencies are reinforced by the survival of the market in the industry. Demand has not yet been replaced by simple obedience. The major reorganization of the film industry shortly before the First World War, the material precondition for its expansion, was a deliberate adaptation to needs of the public registered at the ticket office, which were hardly thought worthy of consideration in the pioneering days of the screen. That view is still held by the captains of the film industry, who accept only more or less phenomenal box-office success as evidence and prudently ignore the counterevidence, truth. Their ideology is business. In this they are right to the extent that the power of the culture industry lies in its unity with fabricated need and not in simple antithesis to it—or even in the antithesis between omnipotence and powerlessness. Entertainment

is the prolongation of work under late capitalism. It is sought by those who want to escape the mechanized labor process so that they can cope with it again. At the same time, however, mechanization has such power over leisure and its happiness, determines so thoroughly the fabrication of entertainment commodities, that the off-duty worker can experience nothing but after-images of the work process itself. The ostensible content is merely a faded foreground; what is imprinted is the automated sequence of standardized tasks. The only escape from the work process in factory and office is through adaptation to it in leisure time. This is the incurable sickness of all entertainment. Amusement congeals into boredom, since, to be amusement, it must cost no effort and therefore moves strictly along the well-worn grooves of association. The spectator must need no thoughts of his own: the product prescribes each reaction, not through any actual coherence—which collapses once exposed to thought—but through signals. Any logical connection presupposing mental capacity is scrupulously avoided. Developments are to emerge from the directly preceding situation, not from the idea of the whole. There is no plot which could withstand the screenwriters' eagerness to extract the maximum effect from the individual scene. Finally, even the schematic formula seems dangerous, since it provides some coherence of meaning, however meager, when only meaninglessness is acceptable. Often the plot is willfully denied the development called for by characters and theme under the old schema. Instead, the next step is determined by what the writers take to be their most effective idea. Obtusely ingenious surprises disrupt the plot. The product's tendency to fall back perniciously on the pure nonsense which, as buffoonery and clowning, was a legitimate part of popular art up to Chaplin and the Marx brothers,⁸ emerges most strikingly in the less sophisticated genres. Whereas the films of Greer Garson and Bette Davis⁹ can still derive some claim to a coherent plot from the unity of the socio-psychological case represented, the tendency to subvert meaning has taken over completely in the text of novelty songs, suspense films, and cartoons. The idea itself, like objects in comic and horror films, is massacred and mutilated. Novelty songs have always lived on contempt for meaning, which, as both ancestors and descendants of psychoanalysis, they reduce to the monotony of sexual symbolism. In crime and adventure films the spectators are begrudged even the opportunity to witness the resolution. Even in non-ironic examples of the genre they must make do with the mere horror of situations connected in only the most perfunctory way.

* * *

* * * This makes it doubtful whether the culture industry even still fulfils its self-proclaimed function of distraction. If the majority of radio stations and cinemas were shut down, consumers probably would not feel too much deprived. In stepping from the street into the cinema, they no longer enter the world of dream in any case, and once the use of these institutions was no longer made obligatory by their mere existence, the urge to use them

8. American comic actors: Chico (Leonard) (1887–1961), Harpo (Adolph) (1888–1964), Groucho (Julius Henry) (1890–1977), Gummo (Milton) (1893–1977), and Zeppo (Herbert) (1901–1979). Charlie (Sir Charles Spencer) Chaplin (1889–

1977), English comic actor and producer.

9. American actor (1908–1989). Garson (1904–1996), English actor. Both are best known for Hollywood roles that are dramatic, not comic.

might not be so overwhelming. Shutting them down in this way would not be reactionary machine-wrecking. Those who suffered would not be the film enthusiasts but those who always pay the penalty in any case, the ones who had lagged behind. For the housewife, despite the films which are supposed to integrate her still further, the dark of the cinema grants a refuge in which she can spend a few unsupervised hours, just as once, when there were still dwellings and evening repose, she could sit gazing out of the window. The unemployed of the great centers find freshness in summer and warmth in winter in these places of regulated temperature. Apart from that, and even by the measure of the existing order, the bloated entertainment apparatus does not make life more worthy of human beings. The idea of "exploiting" the given technical possibilities, of fully utilizing the capacities for aesthetic mass consumption, is part of an economic system which refuses to utilize capacities when it is a question of abolishing hunger.

The culture industry endlessly cheats its consumers out of what it endlessly promises. The promissory note of pleasure issued by plot and packaging is indefinitely prolonged: the promise, which actually comprises the entire show, disdainfully intimates that there is nothing more to come, that the diner must be satisfied with reading the menu. The desire inflamed by the glossy names and images is served up finally with a celebration of the daily round it sought to escape. Of course, genuine works of art were not sexual exhibitions either. But by presenting denial as negative, they reversed, as it were, the debasement of the drive and rescued by mediation what had been denied. That is the secret of aesthetic sublimation: to present fulfillment in its brokenness. The culture industry does not sublimate: it suppresses. By constantly exhibiting the object of desire, the breasts beneath the sweater, the naked torso of the sporting hero, it merely goads the unsublimated anticipation of pleasure, which through the habit of denial has long since been mutilated as masochism. There is no erotic situation in which innuendo and incitement are not accompanied by the clear notification that things will never go so far. The Hays Office merely confirms the ritual which the culture industry has staged in any case: that of Tantalus.¹ Works of art are ascetic and shameless; the culture industry is pornographic and prudish. It reduces love to romance. And, once reduced, much is permitted, even libertinage as a marketable specialty, purveyed by quota with the trade description "daring." The mass production of sexuality automatically brings about its repression. Because of his ubiquity, the film star with whom one is supposed to fall in love is, from the start, a copy of himself. Every tenor now sounds like a Caruso² record, and the natural faces of Texas girls already resemble those of the established models by which they would be typecast in Hollywood. The mechanical reproduction of beauty—which, admittedly, is made only more inescapable by the reactionary culture zealots with their methodical idolization of individuality—no longer leaves any room for the unconscious idolatry with which the experience of beauty has always been linked. The triumph over beauty is completed by humor, the malicious pleasure elicited by any

tor the film industry (precursor to the Production Code Administration, founded in 1934).

2. Enrico Caruso (1873–1921), popular Italian opera tenor.

successful deprivation. There is laughter because there is nothing to laugh about. Laughter, whether reconciled or terrible, always accompanies the moment when a fear is ended. It indicates a release, whether from physical danger or from the grip of logic. Reconciled laughter resounds with the echo of escape from power, wrong laughter copes with fear by defecting to the agencies which inspire it. It echoes the inescapability of power. Fun is a medicinal bath which the entertainment industry never ceases to prescribe. It makes laughter the instrument for cheating happiness. To moments of happiness laughter is foreign; only operettas, and now films, present sex amid peals of merriment. But Baudelaire is as humorless as Hölderlin.³ In wrong society laughter is a sickness infecting happiness and drawing it into society's worthless totality. Laughter about something is always laughter at it, and the vital force which, according to Bergson,⁴ bursts through rigidity in laughter is, in truth, the irruption of barbarity, the self-assertion which, in convivial settings, dares to celebrate its liberation from scruple. The collective of those who laugh parodies humanity. They are monads, each abandoning himself to the pleasure—at the expense of all others and with the majority in support—of being ready to shrink from nothing. Their harmony presents a caricature of solidarity. What is infernal about wrong laughter is that it compellingly parodies what is best, reconciliation. Joy, however, is austere: *res severa verum gaudium*.⁵ The ideology of monasteries, that it is not asceticism but the sexual act which marks the renunciation of attainable bliss, is negatively confirmed by the gravity of the lover who presciently pins his whole life to the fleeting moment. The culture industry replaces pain, which is present in ecstasy no less than in asceticism, with jovial denial. Its supreme law is that its consumers shall at no price be given what they desire: and in that very deprivation they must take their laughing satisfaction. In each performance of the culture industry the permanent denial imposed by civilization is once more inflicted on and unmistakably demonstrated to its victims. To offer them something and to withhold it is one and the same. That is what the erotic commotion achieves. Just because it can never take place, everything revolves around the coitus. In film, to allow an illicit relationship without due punishment of the culprits is even more strictly tabooed than it is for the future son-in-law of a millionaire to be active in the workers' movement. Unlike that of the liberal era, industrial no less than nationalist culture can permit itself to inveigh against capitalism, but not to renounce the threat of castration. This threat constitutes its essence. It outlasts the organized relaxation of morals toward the wearers of uniforms, first in the jaunty films produced for them and then in reality. What is decisive today is no longer Puritanism, though it still asserts itself in the form of women's organizations, but the necessity, inherent in the system, of never releasing its grip on the consumer, of not for a moment allowing him or her to suspect that resistance is possible. This principle requires that while all needs should be presented to individuals as capable of fulfillment by the culture industry, they should be so set up in advance that individuals experience themselves through their

ing of the Comic (1900). "Vital impulse" (*élan vital*) is a key phrase in his writing.

5. True joy is a serious thing (Latin). From Seneca the Younger (ca. 4 B.C.E.–65 C.E.), *Moral Epistles* 3.23.

needs only as eternal consumers, as the culture industry's object. Not only does it persuade them that its fraud is satisfaction; it also gives them to understand that they must make do with what is offered, whatever it may be. The flight from the everyday world, promised by the culture industry in all its branches, is much like the abduction of the daughter in the American cartoon: the father is holding the ladder in the dark. The culture industry presents that same everyday world as paradise. Escape, like elopement, is destined from the first to lead back to its starting point. Entertainment fosters the resignation which seeks to forget itself in entertainment.

* * *

The more strongly the culture industry entrenches itself, the more it can do as it chooses with the needs of consumers—producing, controlling, disciplining them; even withdrawing amusement altogether: here, no limits are set to cultural progress. But the tendency is immanent in the principle of entertainment itself, as a principle of bourgeois enlightenment. If the need for entertainment was largely created by industry, which recommended the work to the masses through its subject matter, the oleograph⁶ through the delicate morsel it portrayed and, conversely, the pudding mix through the image of a pudding, entertainment has always borne the trace of commercial brashness, of sales talk, the voice of the fairground huckster. But the original affinity between business and entertainment reveals itself in the meaning of entertainment itself: as society's apologia.⁷ To be entertained means to be in agreement. Entertainment makes itself possible only by insulating itself from the totality of the social process, making itself stupid and perversely renouncing from the first the inescapable claim of any work, even the most trivial: in its restrictedness to reflect the whole. Amusement always means putting things out of mind, forgetting suffering, even when it is on display. At its root is powerlessness. It is indeed escape, but not, as it claims, escape from bad reality but from the last thought of resisting that reality. The liberation which amusement promises is from thinking as negation. The shamelessness of the rhetorical question "What do people want?" lies in the fact that it appeals to the very people as thinking subjects whose subjectivity it specifically seeks to annul. Even on those occasions when the public rebels against the pleasure industry it displays the feebleness systematically instilled in it by that industry. Nevertheless, it has become increasingly difficult to keep the public in submission. The advance of stupidity must not lag behind the simultaneous advance of intelligence. In the age of statistics the masses are too astute to identify with the millionaire on the screen and too obtuse to deviate even minutely from the law of large numbers. Ideology hides itself in probability calculations. Fortune will not smile on all—just on the one who draws the winning ticket or, rather, the one designated to do so by a higher power—usually the entertainment industry itself, which presents itself as ceaselessly in search of talent. Those discovered by the talent scouts and then built up by the studios are ideal types of the new, dependent middle classes. The female starlet is supposed to symbolize the secretary, though in a way which makes her

6. A chromolithograph printed on cloth to imitate an oil painting.

7. Defense.

seem predestined, unlike the real secretary, to wear the flowing evening gown. Thus she appraises the female spectator not only of the possibility that she, too, might appear on the screen but still more insistently of the distance between them. Only one can draw the winning lot, only one is prominent, and even though all have mathematically the same chance, it is so minimal for each individual that it is best to write it off at once and rejoice in the good fortune of someone else, who might just as well be oneself but never is. Where the culture industry still invites naïve identification, it immediately denies it. It is no longer possible to lose oneself in others. Once, film spectators saw their own wedding in that of others. Now the happy couple on the screen are specimens of the same species as everyone in the audience, but the sameness posits the insuperable separation of its human elements. The perfected similarity is the absolute difference. The identity of the species prohibits that of the individual cases. The culture industry has sardonically realized man's species being. Everyone amounts only to those qualities by which he or she can replace everyone else: all are fungible, mere specimens. As individuals they are absolutely replaceable, pure nothingness, and are made aware of this as soon as time deprives them of their sameness. This changes the inner composition of the religion of success, which they are sternly required to uphold. The path *per aspera ad astra*,⁸ which presupposes need and effort, is increasingly replaced by the prize. The element of blindness in the routine decision as to which song is to be a hit, which extra a heroine, is celebrated by ideology. Films emphasize chance. By imposing an essential sameness on their characters, with the exception of the villain, to the point of excluding any faces which do not conform—for example, those which, like Garbo's,⁹ do not look as if they would welcome the greeting "Hello, sister"—the ideology does, it is true, make life initially easier for the spectators. They are assured that they do not need to be in any way other than they are and that they can succeed just as well without having to perform tasks of which they know themselves incapable. But at the same time they are given the hint that effort would not help them in any case, because even bourgeois success no longer has any connection to the calculable effect of their own work. They take the hint. Fundamentally, everyone recognizes chance, by which someone is sometimes lucky, as the other side of planning. Just because society's energies have developed so far on the side of rationality that anyone might become an engineer or a manager, the choice of who is to receive from society the investment and confidence to be trained for such functions becomes entirely irrational. Chance and planning become identical since, given the sameness of people, the fortune or misfortune of the individual, right up to the top, loses all economic importance. Chance itself is planned; not in the sense that it will affect this or that particular individual but in that people believe in its control. For the planners it serves as an alibi, giving the impression that the web of transactions and measures into which life has been transformed still leaves room for spontaneous, immediate relationships between human beings. Such freedom is symbolized in the various media of the culture industry by the arbitrary selection of average cases. In the detailed reports on the modestly

8. Through adversities to the stars (Latin).

9. Greta Garbo (born Greta Gustafsson, 1905–

1990), famously reclusive Swedish-born American film star.

luxurious pleasure trip organized by the magazine for the lucky competition winner—preferably a shorthand typist who probably won through contacts with local powers-that-be—the powerlessness of everyone is reflected. So much are the masses mere material that those in control can raise one of them up to their heaven and cast him or her out again: let them go hang with their justice and their labor. Industry is interested in human beings only as its customers and employees and has in fact reduced humanity as a whole, like each of its elements, to this exhaustive formula. Depending on which aspect happens to be paramount at the time, ideology stresses plan or chance, technology or life, civilization or nature. As employees people are reminded of the rational organization and must fit into it as common sense requires. As customers they are regaled, whether on the screen or in the press, with human interest stories demonstrating freedom of choice and the charm of not belonging to the system. In both cases they remain objects.

The less the culture industry has to promise and the less it can offer a meaningful explanation of life, the emptier the ideology it disseminates necessarily becomes. Even the abstract ideals of the harmony and benevolence of society are too concrete in the age of the universal advertisement. Abstractions in particular are identified as publicity devices. Language which appeals to mere truth only arouses impatience to get down to the real business behind it. Words which are not a means seem meaningless, the others seem to be fiction, untruth. Value judgments are perceived either as advertisements or as mere charter. The noncommittal vagueness of the resulting ideology does not make it more transparent, or weaker. Its very vagueness, the quasiscientific reluctance to be pinned down to anything which cannot be verified, functions as an instrument of control. Ideology becomes the emphatic and systematic proclamation of what is. Through its inherent tendency to adopt the tone of the factual report, the culture industry makes itself the irrefutable prophet of the existing order.

* * *

The emphasis on the heart of gold is society's way of admitting the suffering it creates: everyone knows that they are helpless within the system, and ideology must take account of this. Far from merely concealing the suffering under the cloak of improvised comradeship, the culture industry stakes its company pride on looking it manfully in the eye and acknowledging it with unflinching composure. This posture of steadfast endurance justifies the world which that posture makes necessary. Such is the world—so hard, yet therefore so wonderful, so healthy. The lie does not shrink back even from tragedy. Just as totalitarian society does not abolish the suffering of its members, but registers and plans it, mass culture does the same with tragedy. Hence the persistent borrowings from art. Art supplies the tragic substance which pure entertainment cannot provide on its own yet which it needs if it is to adhere to its principle of meticulously duplicating appearance. Tragedy, included in society's calculations and affirmed as a moment of the world, becomes a blessing. It deflects the charge that truth is glossed over, whereas in fact it is appropriated with cynical regret. It imparts an element of interest to the insipidity of censored happiness and makes that interest manageable. To the consumer who has seen culturally better days it offers the surrogate of long-abolished depth, and to regular moviegoers

the veneer of culture they need for purposes of prestige. To all it grants the solace that human fate in its strength and authenticity is possible even now and its unflinching depiction inescapable. The unbroken surface of existence, in the duplication of which ideology consists solely today, appears all the more splendid, glorious, and imposing the more it is imbued with necessary suffering. It takes on the aspect of fate. Tragedy is leveled down to the threat to destroy anyone who does not conform, whereas its paradoxical meaning once lay in hopeless resistance to mythical threat. Tragic fate becomes the just punishment into which bourgeois aesthetics has always longed to transform it. The morality of mass culture has come down to it from yesterday's children's books. In the first-class production the villain is dressed up as the hysteric who, in a study of ostensibly clinical exactitude, seeks to trick her more realistic rival out of her life's happiness and who herself suffers a quite untheatrical death. To be sure, only at the top are things managed as scientifically as this. Further down, the resources are scarcer. There tragedy has its teeth drawn without social psychology. Just as any honest Hungarian-Viennese operetta must have its tragic finale in the second act, leaving nothing for the third but the righting of misunderstandings, mass culture gives tragedy permanent employment as routine. The obvious existence of a formula is enough in itself to allay the concern that tragedy might still be untamed. The housewife's description of the recipe for drama as "getting into trouble and out again" encompasses the whole of mass culture from the weak-minded women's serial to its highest productions. Even the worst outcome, which once had better intentions, still confirms the established order and corrupts tragedy, whether because the irregular lover pays for her brief happiness with death or because the sad end in the picture makes the indestructibility of actual life shine all the more brightly. Tragic cinema is becoming truly a house of moral correction. The masses, demoralized by existence under the pressure of the system and manifesting civilization only as compulsively rehearsed behavior in which rage and rebelliousness everywhere show through, are to be kept in order by the spectacle of implacable life and the exemplary conduct of those it crushes. Culture has always contributed to the subduing of revolutionary as well as of barbaric instincts. Industrial culture does something more. It inculcates the conditions on which implacable life is allowed to be lived at all. Individuals must use their general satiety as a motive for abandoning themselves to the collective power of which they are sated. The permanently hopeless situations which grind down filmgoers in daily life are transformed by their reproduction, in some unknown way, into a promise that they may continue to exist. One needs only to become aware of one's nullity, to subscribe to one's own defeat, and one is already a party to it. Society is made up of the desperate and thus falls prey to rackets. In a few of the most significant German novels of the prefascistic era, such as *Berlin Alexanderplatz* and *Kleiner Mann, was nun?*,¹ this tendency was as vividly evident as in the mediocre film and in the procedures of jazz. Fundamentally, they all present the self-mockery of man. The possibility of becoming an economic subject, an entrepreneur, a proprietor, is entirely liquidated. Right down to

was published in 1929; its main character is Franz Biberkopf (mentioned below).

the small grocery, the independent firm on the running and inheriting of which the bourgeois family and the position of its head were founded, has fallen into hopeless dependence. All have become employees, and in the civilization of employees the dignity of the father, dubious in any case, ceases to be. The behavior of the individual toward the racket, whether commercial, professional, or political, both before and after admittance to it; the gestures of the leader before the masses, of the lover before the woman he woos, are taking on peculiarly masochistic traits. The attitude all are forced to adopt in order to demonstrate ever again their moral fitness for this society is reminiscent of that of boys during admission to a tribe; circling under the blows of the priest, they wear stereotypical smiles. Existence in late capitalism is a permanent rite of initiation. Everyone must show that they identify wholeheartedly with the power which beats them. This is inherent in the principle of syncopation in jazz, which mocks the act of stumbling while elevating it to the norm. The eunuch-like voice of the radio crooner, the handsome suitor of the heiress, who falls into the swimming pool wearing his tuxedo, are models for those who want to make themselves into that to which the system breaks them. Everyone can be like the omnipotent society, everyone can be happy if only they hand themselves over to it body and soul and relinquish their claim to happiness. In their weakness society recognizes its own strength and passes some of it back to them. Their lack of resistance certifies them as reliable customers. Thus is tragedy abolished. Once, the antithesis between individual and society made up its substance. Tragedy glorified "courage and freedom of feeling in face of a mighty foe, sublime adversity, a problem which awakened dread."² Today tragedy has been dissipated in the void of the false identity of society and subject, the horror of which is still just fleetingly visible in the vacuous semblance of the tragic. But the miracle of integration, the permanent benevolence of those in command, who admit the unresisting subject while he chokes down his unruliness—all this signifies fascism. Fascism lurks in the humaneness with which Döblin allows his protagonist Biberkopf to find refuge, no less than in films with a social slant. The ability to slip through, to survive one's own ruin, which has superseded tragedy, is ingrained in the new generation; its members are capable of any work, since the work process allows them to become attached to none. One is reminded of the sad pliability of the soldier returning home, unaffected by the war, of the casual laborer who finally joins the clandestine groups and the paramilitary organizations. The liquidation of tragedy confirms the abolition of the individual.

It is not only the standardized mode of production of the culture industry which makes the individual illusory in its products. Individuals are tolerated only as far as their wholehearted identity with the universal is beyond question. From the standardized improvisation in jazz to the original film personality who must have a lock of hair straying over her eyes so that she can be recognized as such, pseudoindividuality reigns. The individual trait is reduced to the ability of the universal so completely to mold the accidental that it can be recognized as accidental. The sulky taciturnity or the ele-

2. Nietzsche, *Götzendämmerung* [1888, *Twilight of the Idols*], *Werke*, vol. VIII, p. 136 [Horkheimer and Adorno's note]. FRIEDRICH NIETZSCHE (1844–1900), German philosopher.

gant walk of the individual who happens to be on show is serially produced like the Yale locks which differ by fractions of a millimeter. The peculiarity of the self is a socially conditioned monopoly commodity misrepresented as natural. It is reduced to the moustache, the French accent, the deep voice of the prostitute, the “Lubitsch touch”³—like a fingerprint on the otherwise uniform identity cards to which the lives and faces of all individuals, from the film star to the convict, have been reduced by the power of the universal. Pseudoindividuality is a precondition for apprehending and detoxifying tragedy: only because individuals are none but mere intersections of universal tendencies is it possible to reabsorb them smoothly into the universal. Mass culture thereby reveals the fictitious quality which has characterized the individual throughout the bourgeois era and is wrong only in priding itself on this murky harmony between universal and particular. The principle of individuality was contradictory from the outset. First, no individuation was ever really achieved. The class-determined form of self-preservation maintained everyone at the level of mere species being. Every bourgeois character expressed the same thing, even and especially when deviating from it: the harshness of competitive society. The individual, on whom society was supported, itself bore society’s taint; in the individual’s apparent freedom he was the product of society’s economic and social apparatus. Power has always invoked the existing power relationships when seeking the approval of those subjected to power. At the same time, the advance of bourgeois society has promoted the development of the individual. Against the will of those controlling it, technology has changed human beings from children into persons. But all such progress of individuation has been at the expense of the individuality in whose name it took place, leaving behind nothing except individuals’ determination to pursue their own purposes alone. The citizens whose lives are split between business and private life, their private life between ostentation and intimacy, their intimacy between the sullen community of marriage and the bitter solace of being entirely alone, at odds with themselves and with everyone, are virtually already Nazis, who are at once enthusiastic and fed up, or the city dwellers of today, who can imagine friendship only as “social contact” between the inwardly unconnected. The culture industry can only manipulate individuality so successfully because the fractured nature of society has always been reproduced within it. In the ready-made faces of film heroes and private persons fabricated according to magazine-cover stereotypes, a semblance of individuality—in which no one believes in any case—is fading, and the love for such hero-models is nourished by the secret satisfaction that the effort of individuation is at last being replaced by the admittedly more breathless one of imitation. The hope that the contradictory, disintegrating person could not survive for generations, that the psychological fracture within it must split the system itself, and that human beings might refuse to tolerate the mendacious substitution of the stereotype for the individual—that hope is vain. The unity of the personality has been recognized as illusory since Shakespeare’s *Hamlet*.⁴ In the synthetically manufactured

3. Ernst Lubitsch (1892–1947) was a German-American film director whose widely imitated style (“the Lubitsch touch”) brought European

elegance and irony to Hollywood cinema from the 1920s to the 1940s.

4. *Hamlet* was first staged ca. 1600.

physiognomies of today the fact that the concept of human life ever existed is already forgotten. For centuries society has prepared for Victor Mature and Mickey Rooney.⁵ They come to fulfill the very individuality they destroy.

The heroizing of the average forms part of the cult of cheapness. The highest-paid stars resemble advertisements for unnamed merchandise. Not for nothing are they often chosen from the ranks of commercial models. The dominant taste derives its ideal from the advertisement, from commodified beauty. Socrates' dictum that beauty is the useful⁶ has at last been ironically fulfilled. The cinema publicizes the cultural conglomerate as a totality, while the radio advertises individually the products for whose sake the cultural system exists. For a few coins you can see the film which cost millions, for even less you can buy the chewing gum behind which stand the entire riches of the world, and the sales of which increase those riches still further. Through universal suffrage the vast funding of armies is generally known and approved, if *in absentia*, while prostitution behind the lines is not permitted. The best orchestras in the world, which are none, are delivered free of charge to the home. All this mockingly resembles the land of milk and honey⁷ as the national community apes the human one. Something is served up for everyone. A provincial visitor's comment on the old Berlin Metropoltheater that "it is remarkable what can be done for the money" has long since been adopted by the culture industry and elevated to the substance of production itself. Not only is a production always accompanied by triumphant celebration that it has been possible at all, but to a large extent it is that triumph itself. To put on a show means to show everyone what one has and can do. The show is still a fairground, but one incurably infected by culture. Just as people lured by the fairground crier overcame their disappointment inside the booths with a brave smile, since they expected it in any case, the moviegoer remains tolerantly loyal to the institution. But the cheapness of mass-produced luxury articles and its complement, universal fraud, are changing the commodity character of art itself. That character is not new: it is the fact that art now dutifully admits to being a commodity, abjures its autonomy and proudly takes its place among consumer goods, that has the charm of novelty. Art was only ever able to exist as a separate sphere in its bourgeois form. Even its freedom, as negation of the social utility which is establishing itself through the market, is essentially conditioned by the commodity economy. Pure works of art, which negated the commodity character of society by simply following their own inherent laws, were at the same time always commodities. To the extent that, up to the eighteenth century, artists were protected from the market by patronage, they were subject to the patrons and their purposes instead. The purposelessness of the great modern work of art is sustained by the anonymity of the market. The latter's demands are so diversely mediated that the artist is exempted from any particular claim, although only to a certain degree, since his autonomy, being merely tolerated, has been attended throughout bourgeois history by a moment of untruth, which has

6. See PLATO, *Hippias Major* 295c–e; as usual in Plato's dialogues, the Greek philosopher Socrates

(469–399 B.C.E.) is the primary speaker.

7. That is, the promised land; see, e.g., Exodus 3.8, Numbers 14.8.

culminated now in the social liquidation of art. The mortally sick Beethoven, who flung away a novel by Walter Scott⁸ with the cry: "The fellow writes for money," while himself proving an extremely experienced and tenacious businessman in commercializing the last quartets—works representing the most extreme repudiation of the market—offers the most grandiose example of the unity of the opposites of market and autonomy in bourgeois art. The artists who succumb to ideology are precisely those who conceal this contradiction instead of assimilating it into the consciousness of their own production, as Beethoven did: he improvised on "Rage over a Lost Penny" and derived the metaphysical injunction "It must be," which seeks aesthetically to annul the world's compulsion by taking that burden onto itself, from his housekeeper's demand for her monthly wages. The principle of idealist aesthetics, purposiveness without purpose,⁹ reverses the schema socially adopted by bourgeois art: purposelessness for purposes dictated by the market. In the demand for entertainment and relaxation, purpose has finally consumed the realm of the purposeless. But as the demand for the marketability of art becomes total, a shift in the inner economic composition of cultural commodities is becoming apparent. For the use which is made of the work of art in antagonistic society is largely that of confirming the very existence of the useless, which art's total subsumption under usefulness has abolished. In adapting itself entirely to need, the work of art defrauds human beings in advance of the liberation from the principle of utility which it is supposed to bring about. What might be called use value in the reception of cultural assets is being replaced by exchange value; enjoyment is giving way to being there and being in the know, connoisseurship by enhanced prestige. The consumer becomes the ideology of the amusement industry, whose institutions he or she cannot escape. One has to have seen Mrs. Miniver,¹ just as one must subscribe to *Life* and *Time*. Everything is perceived only from the point of view that it can serve as something else, however vaguely that other thing might be envisaged. Everything has value only in so far as it can be exchanged, not in so far as it is something in itself. For consumers the use value of art, its essence, is a fetish, and the fetish—the social valuation which they mistake for the merit of works of art—becomes its only use value, the only quality they enjoy. In this way the commodity character of art disintegrates just as it is fully realized. Art becomes a species of commodity, worked up and adapted to industrial production, saleable and exchangeable; but art as the species of commodity which exists in order to be sold yet not for sale becomes something hypocritically unsaleable as soon as the business transaction is no longer merely its intention but its sole principle. The Toscanini performance on the radio² is, in a sense, unsaleable. One listens to it for nothing, and each note of the symphony is accompanied, as it were, by the sublime advertisement that the symphony is not being interrupted by advertisements—"This concert is brought to you as a public service." The

F. R. LEAVIS

1895–1978

By sheer strength of conviction and will, Frank Raymond Leavis became a major arbiter of British literary taste and values for four decades during the mid-twentieth century. Leavis was an indefatigable proselytizer. As a teacher at Cambridge University and as editor of the influential literary journal *Scrutiny*, he preached his vitalist doctrine and championed the writers he loved: Jane Austen, George Eliot, Gerard Manley Hopkins, and D. H. Lawrence.

Born and raised in Cambridge, Leavis, a conscientious objector, served in the ambulance corps on the Western Front during World War I. He returned to the university after the war, earning his graduate degree in 1924. In 1929, he married Queenie Dorothy Roth, whose Jewish parents disowned her for marrying the Anglo-Irish Leavis. Together, as a couple and as critics (at times, coauthors), the two took on the literary and academic establishment. Surprisingly, Leavis did not publish his first book, *New Bearings in English Poetry* (1932), until he was thirty-seven years old. In that year, he joined the editorial staff of a new journal, *Scrutiny*, which he soon was running and financing himself. Until its demise in 1954, *Scrutiny* maintained a remarkable unity of tone and outlook, spreading the Leavite outlook even more effectively than did the editor's own books. Leavis demanded unquestioning fealty; by the time the journal folded, he had quarreled with most of his contributors. His sense of embattlement was hardly assuaged by his failure to gain a full-time position at Cambridge until 1947, when he was fifty-two. In 1962, his attack on C. P. Snow's notion of the "two cultures" (science and the arts) made Leavis a public figure beyond the confines of the university, and during the remainder of his life he increasingly was called upon to comment on cultural and educational issues on radio and TV and in the popular press.

Our selection from the opening of *The Great Tradition* (1948), Leavis's most influential work, exhibits his sensibility, his style, and his contradictions. Leavis staunchly rejects modernist aestheticism, with its separation and elevation of form over content. Formal excellence is important, Leavis concedes, but what ultimately distinguishes greatness is "a kind of reverent openness before life, and a marked moral intensity." Ideally, form and content work together organically, but for Leavis it is content that dictates form, not the other way around. Leavis's general outlook is best characterized as vitalist. Art must be alive, and it has life only when the content addresses central and abiding human concerns. Criticism, likewise, must be about life, not about art alone.

Impatient with a pristine literary formalism that stands "away from life as from a leprosy," Leavis implicitly repudiates the fastidious close readings of Anglo-American New Criticism and ignores the dictum that an author must always be carefully distin-

guished from her textual persona. The great authors teach us about life, revealing their own convictions, and criticism should encapsulate those lessons. Wearing his moral and didactic purposes on his sleeve, Leavis can appear simultaneously political and naive. Certainly his work—along with that of his English contemporaries C. S. Lewis, William Empson, and Christopher Caudwell—ensured that British literary criticism never aspired to the kinds of technical methodologies, studied apoliticism, or deadpan explication that marked much American New Criticism after World War II.

Leavis's politics are complicated. In an American context, he would probably qualify as a populist with an authoritarian streak. In England, "Tory radical" best captures his outlook. He staunchly abhors the mechanization of modern life that he associates with industrial capitalism and the bureaucratic modern state, and he retains a strong faith in the common sense of the English people. But all his images of desirable community lie in the past, in the ideal world of the rural village where an enlightened noble patriarch deserves and gets the allegiance of the people. In other words, Leavis's critique of modernity is "radical," but his yearning for a hierarchical social order is conservative ("Tory").

Thus in our selection we find Leavis fighting against the "high" modernist contempt for novels with moral or political agendas, but exhibiting a T. S. ELIOT-like need to distinguish "great" works from lesser ones. On the one hand, Leavis dislikes intensely what he deems the modernist disdain (as represented by Gustave Flaubert, James Joyce, and Lytton Strachey) for ordinary human aspirations and ambitions. On the other hand, Leavis battles the would-be levelers who offer Walter Scott, Anthony Trollope, or Charlotte Brontë as novelists equal with Jane Austen, George Eliot, or HENRY JAMES. Standards must be maintained. The critic must discern true greatness and instruct the people to pay such greatness due reverence. Otherwise, we will wallow in an anarchic lack of differentiation, mistakenly rating the "minor" novelist Charlotte Yonge as highly as a recognized master like Joseph Conrad.

Leavis adapts T. S. Eliot's "Tradition and the Individual Talent" (1919; see above) for his own purposes, which are mostly didactic. Tradition is found in only the greatest writers, and it is transmuted and passed on by other great writers. To designate "the great tradition" is to identify those texts in which the formal possibilities of a genre are most fully utilized in service of moral insights. Life is too short to waste reading second-rate books, Leavis tells us. The moral genius of the tradition is embodied in its great literature.

A common objection to Leavis argues that there are various ways to designate the tradition of the English novel. Feminist critics such as SANDRA M. GILBERT and SUSAN GUBAR make a compelling case for a tradition formed from the novels written by women. Leavis's famous banishment of Charles Dickens from the great tradition demonstrates that constructions of the tradition are contestable. (Leavis tacitly withdrew his objections to Dickens, though without explaining why or how his opinion had changed, when he later coauthored with Queenie a study of Dickens.) Magisterial pronouncements from a critic who assumes the self-appointed role of distinguishing the great from the not-so-great can go only so far. Monolithic standards and once-for-all inclusions and exclusions will likely cheat us of the pleasures and insights a broader vision would afford.

Leavis plays out a dilemma of authority that has bedeviled many literary intellectuals since at least MATTHEW ARNOLD. If we want to entertain visions that run counter to dominant forms of modern life, literature does offer a rich repository of alternatives to prevailing assumptions. But how can these neglected visions gain authority or indeed any purchase in the mainstream, which ignores literary insights at no apparent cost? Richard Hoggart and RAYMOND WILLIAMS, the leftist founders of cultural studies, were directly influenced by Leavis—and they too look to literature and other cultural forms to find resources to battle the dominance of commercial culture. But LEO STRAUSS and HAROLD BLOOM, who embody an elitist attitude

toward culture as the preserve of the select few, are also Leavis's heirs, drawing on a quite different strain in his work. The choice seems stark: either the critic, like Williams, places his faith in the people and strives to keep alive the alternative visions to which the people eventually will turn. Or the critic, like Bloom or Strauss, becomes a lonely voice in the wilderness, bemoaning the general benightedness of the culture—a benightedness that he and a few others have managed to escape. The only consolation for this critic is to spend his time in the library in communion with the great writers, who are largely ignored and unread by the populace at large. While Leavis's own work fluctuates between these two positions, his pervasive personal sense of embattlement weights the role of solitary teller of the truth over the voice of a residual common sense.

The Great Tradition: George Eliot, Henry James, Joseph Conrad Keywords: The Canon/Tradition, Cultural Studies, Ethics, Modernity, The Novel, Realism

From The Great Tradition: George Eliot, Henry James, Joseph Conrad

From 1. The Great Tradition

. . . not dogmatically but deliberately . . .

—Johnson:¹ *Preface to Shakespeare*

The great English novelists are Jane Austen, George Eliot, Henry James and Joseph Conrad²—to stop for the moment at that comparatively safe point in history. Since Jane Austen, for special reasons, needs to be studied at considerable length, I confine myself in this book to the last three. Critics have found me narrow, and I have no doubt that my opening proposition, whatever I may say to explain and justify it, will be adduced in reinforcement of their strictures. It passes as fact (in spite of the printed evidence) that I pronounce Milton negligible, dismiss 'the Romantics', and hold that, since Donne, there is no poet we need bother about except Hopkins and Eliot.³ The view, I suppose, will be as confidently attributed to me that, except Jane Austen, George Eliot, James and Conrad, there are no novelists in English worth reading.

The only way to escape misrepresentation is never to commit oneself to any critical judgment that makes an impact—that is, never to *say* anything. I still, however, think that the best way to promote profitable discussion is to be as clear as possible with oneself about what one sees and judges, to try and establish the essential discriminations in the given field of interest, and to state them as clearly as one can (for disagreement, if necessary). And it seems to me that in the field of fiction some challenging discriminations are very much called for; the field is so large and offers such insidious temp-

1. SAMUEL JOHNSON (1709–1784), English critic, essayist, and lexicographer; for this quotation from his preface to *Shakespeare* (1765), see p. 405, above.

2. Leavis lists the novelists chronologically: Austen (1775–1817); Eliot (pen name of Marian Evans, 1819–1880); JAMES (1843–1916), who was

American-born; and Conrad (1857–1924), who was Polish-born.

3. T. S. ELIOT (1888–1965), American-born English poet. The other three poets—John Milton (1608–1674), John Donne (1572–1631), and Gerard Manley Hopkins (1844–1889)—are all English.

tations to complacent confusions of judgment and to critical indolence. It is of the field of fiction belonging to Literature that I am thinking, and I am thinking in particular of the present vogue of the Victorian age. Trollope, Charlotte Yonge, Mrs. Gaskell, Wilkie Collins, Charles Reade, Charles and Henry Kingsley, Marryat, Shorthouse⁴—one after another the minor novelists of that period are being commended to our attention, written up, and publicized by broadcast, and there is a marked tendency to suggest that they not only have various kinds of interest to offer but that they are living classics. (Are not they all in the literary histories?) There are Jane Austen, Mrs. Gaskell, Scott, 'the Brontës', Dickens, Thackeray,⁵ George Eliot, Trollope and so on, all, one gathers, classical novelists.

It is necessary to insist, then, that there are important distinctions to be made, and that far from all of the names in the literary histories really belong to the realm of significant creative achievement. And as a recall to a due sense of differences it is well to start by distinguishing the few really great—the major novelists who count in the same way as the major poets, in the sense that they not only change the possibilities of the art for practitioners and readers, but that they are significant in terms of the human awareness they promote; awareness of the possibilities of life.⁶

To insist on the pre-eminent few in this way is not to be indifferent to tradition; on the contrary, it is the way towards understanding what tradition is. 'Tradition', of course, is a term with many forces—and often very little at all. There is a habit nowadays of suggesting that there is a tradition of 'the English Novel', and that all that can be said of the tradition (that being its peculiarity) is that 'the English Novel' can be anything you like. To distinguish the major novelists in the spirit proposed is to form a more useful idea of tradition (and to recognize that the conventionally established view of the past of English fiction needs to be drastically revised). It is in terms of the major novelists, those significant in the way suggested, that tradition, in any serious sense, has its significance.

4. The novelist who has not been revived is Disraeli. Yet, though he is not one of the great novelists, he is so alive and intelligent as to deserve permanent currency, at any rate in the trilogy *Coningsby* (1844), *Sybil* (1845) and *Tancred* (1847): his own interests as expressed in these books—the interests of a supremely intelligent politician who has a sociologist's understanding of civilization and its movement in his time—are so mature [Leavis's note; some of Leavis's notes have been edited and others omitted]. Benjamin Disraeli (1804–1881), more successful as a Conservative politician (twice prime minister). Leavis lists the other novelists roughly in order of decreasing reputation: Anthony Trollope (1815–1882), Yonge (1823–1901), Elizabeth Gaskell (1810–1865), Collins (1824–1889), Reade (1814–1884), Charles Kingsley (1819–1875), Henry Kingsley (1830–1876), Frederick Marryat (1792–1848), and Joseph Henry Shorthouse (1834–1903).

5. William Makepeace Thackeray (1811–1863), English novelist. Sir Walter Scott (1771–1832), Emily Brontë (1818–1848), Charlotte Brontë (1816–1855), and Charles Dickens (1812–1870), all English novelists.

6. Characteristic of the confusion I am contending

against is the fashion (for which the responsibility seems to go back to VIRGINIA WOOLF and Mr. E. M. Forster) of talking of *Moll Flanders* as a "great novel." Defoe was a remarkable writer, but all that need be said about him as a novelist was said by Leslie Stephen in *Hours in a Library* (First Series). He made no pretension to practice the novelist's art, and matters little as an influence. * * * Associated with this use of Defoe is the use that was made in much the same *milieu* of Sterne, in whose irresponsible (and nasty) trifling, regarded as in some way extraordinarily significant and mature, was found a sanction for attributing value to other trifling. * * * [Leavis's note]. Daniel Defoe (1660–1731) is often credited with writing the first English novels, *Robinson Crusoe* (1719) and *Moll Flanders* (1722). The novelists and critics WOOLF (1882–1941) and Forster (1879–1970) belonged to the same artistic circle, the Bloomsbury group. Stephen (1832–1904), Woolf's father, was a Victorian man of letters. The works of the Irish-born Laurence Sterne (1713–1768) include *Tristram Shandy* (1759–67), a satirical novel that pioneers many of the techniques found in 20th-century experimental fiction.

To be important historically is not, of course, to be necessarily one of the significant few. Fielding⁷ deserves the place of importance given him in the literary histories, but he hasn't the kind of classical distinction we are also invited to credit him with. He is important not because he leads to Mr. J. B. Priestley⁸ but because he leads to Jane Austen, to appreciate whose distinction is to feel that life isn't long enough to permit of one's giving much time to Fielding or any to Mr. Priestley.

Fielding made Jane Austen possible by opening the central tradition of English fiction. In fact, to say that the English novel began with him is as reasonable as such propositions ever are. He completed the work begun by *The Tatler* and *The Spectator*,⁹ in the pages of which we see the drama turning into the novel—that this development should occur by way of journalism being in the natural course of things. To the art of presenting character and *mœurs*¹ learnt in that school (he himself, before he became a novelist, was both playwright and periodical essayist) he joined a narrative habit the nature of which is sufficiently indicated by his own phrase, 'comic epic in prose'.² That the eighteenth century, which hadn't much lively reading to choose from, but had much leisure, should have found *Tom Jones* exhilarating is not surprising; nor is it that Scott and Coleridge³ should have been able to give that work superlative praise. Standards are formed in comparison, and what opportunities had they for that? But the conventional talk about the 'perfect construction' of *Tom Jones* (the late Hugh Walpole⁴ brought it out triumphantly and you may hear it in almost any course of lectures on 'the English Novel') is absurd. There can't be subtlety of organization without richer matter to organize, and subtler interests, than Fielding has to offer. He is credited with range and variety and it is true that some episodes take place in the country and some in Town, some in the churchyard and some in the inn, some on the high-road and some in the bed-chamber, and so on. But we haven't to read a very large proportion of *Tom Jones* in order to discover the limits of the essential interests it has to offer us. Fielding's attitudes, and his concern with human nature, are simple, and not such as to produce an effect of anything but monotony (on a mind, that is, demanding more than external action) when exhibited at the length of an 'epic in prose'. What he *can* do appears to best advantage in *Joseph Andrews*. *Jonathan Wild*, with its famous irony, seems to me mere hobbledehoydom⁵ (much as one applauds the determination to explode the gangster-hero), and by *Amelia* Fielding has gone soft.

We all know that if we want a more inward interest it is to Richardson⁶ we must go. And there is more to be said for Johnson's preference, and his

7. Henry Fielding (1707–1754), English author whose novels include *Joseph Andrews* (1742), *Jonathan Wild* (1743), *Tom Jones* (1749), and *Amelia* (1751).

8. English novelist and playwright (1894–1984).

9. Two periodicals (published 1709–11, 1711–14, respectively) written by Richard Steele and JOSEPH ADDISON, often in the form of gossip letters from made-up correspondents.

1. Manners, customs (French).

2. In his preface to *Joseph Andrews*, Fielding claims that the work is a new kind of writing: "a comic epic poem in prose."

3. SAMUEL TAYLOR COLERIDGE (1772–1834),

English poet and literary critic.

4. English novelist and man of letters (1884–1941).

5. That is, adolescent, callow.

6. Samuel Richardson (1689–1761), English novelist of epistolary novels, including *Pamela* (1740)—satirized by Fielding's *Joseph Andrews*—and *Clarissa* (1748–49). Johnson famously preferred Richardson's "characters of nature" to the "characters of manners" of Fielding, whom he called "a barren rascal," declaring that "there is more knowledge of the heart in one letter of Richardson's, than in all *Tom Jones*" (James Boswell, *Life of Johnson* [1791], Spring 1768; Monday, 6 April 1772).

emphatic way of expressing it at Fielding's expense, than is generally recognized. Richardson's strength in the analysis of emotional and moral states is in any case a matter of common acceptance; and *Clarissa* is a really impressive work. But it's no use pretending that Richardson can ever be made a current classic again. The substance of interest that he too has to offer is in its own way extremely limited in range and variety, and the demand he makes on the reader's time is in proportion—and absolutely—so immense as to be found, in general, prohibitive (though I don't know that I wouldn't sooner read through again *Clarissa* than *A la recherche du temps perdu*⁷). But we can understand well enough why his reputation and influence should have been so great throughout Europe; and his immediately relevant historical importance is plain: he too is a major fact in the background of Jane Austen.

The social gap between them was too wide, however, for his work to be usable by her directly: the more he tries to deal with ladies and gentlemen, the more immitigably vulgar he is. It was Fanny Burney⁸ who, by transposing him into educated life, made it possible for Jane Austen to absorb what he had to teach her. Here we have one of the important lines of English literary history—Richardson—Fanny Burney—Jane Austen. It is important because Jane Austen is one of the truly great writers, and herself a major fact in the background of other great writers. Not that Fanny Burney is the only other novelist who counts in her formation; she read all there was to read, and took all that was useful to her—which wasn't only lessons.⁹ In fact, Jane Austen, in her indebtedness to others, provides an exceptionally illuminating study of the nature of originality, and she exemplifies beautifully the relations of 'the individual talent' to tradition. If the influences bearing on her hadn't comprised something fairly to be called tradition she couldn't have found herself and her true direction; but her relation to tradition is a creative one. She not only makes tradition for those coming after, but her achievement has for us a retroactive effect: as we look back beyond her we see in what goes before, and see because of her, potentialities and significances brought out in such a way that, for us, she creates the tradition we see leading down to her. Her work, like the work of all great creative writers, gives a meaning to the past.

* * *

The great novelists in that tradition are all very much concerned with 'form'; they are all very original technically, having turned their genius to the working out of their own appropriate methods and procedures. But the peculiar quality of their preoccupation with 'form' may be brought out by a contrasting reference to Flaubert.¹ Reviewing Thomas Mann's *Der Tod in Venedig*, D. H. Lawrence² adduces Flaubert as figuring to the world the

7. *In Search of Lost Time* (7 vols., 1913–27), by Marcel Proust (first translated from the French as *The Remembrance of Things Past*). *Clarissa*, one of the longest novels in English, is about three-quarters its length.

8. English writer (1752–1840), best-known for *Evelina* (1778), a novel of manners.

9. For the relation of Jane Austen to other writers see the essay by Q. D. Leavis, *A Critical The-*

ory of Jane Austen's Writings, in *Scrutiny*, vol. X, no. 1 [Leavis's note].

1. Gustave Flaubert (1821–1880), French novelist who was a pioneer of realism.

2. English novelist and poet (1885–1930); his comments on *Death in Venice* (1912), a short novel by the German author Mann (1875–1955), appeared in "German Books: Thomas Mann," *Blue Review* 1 (July 1913).

'will of the writer to be greater than and undisputed lord over the stuff he writes'. This attitude in art, as Lawrence points out, is indicative of an attitude in life—or towards life. Flaubert, he comments, 'stood away from life as from a leprosy'. For the later Aesthetic writers, who, in general, represent in a weak kind of way the attitude that Flaubert maintained with a perverse heroism, 'form' and 'style' are ends to be sought for themselves, and the chief preoccupation is with elaborating a beautiful style to apply to the chosen subject. There is George Moore,³ who in the best circles, I gather (from a distance), is still held to be among the very greatest masters of prose, though—I give my own limited experience for what it is worth—it is very hard to find an admirer who, being pressed, will lay his hand on his heart and swear he has read one of the 'beautiful' novels through. 'The novelist's problem is to evolve an orderly composition which is also a convincing picture of life'—this is the way an admirer of George Moore sees it. Lord David Cecil,⁴ attributing this way to Jane Austen, and crediting her with a superiority over George Eliot in 'satisfying the rival claims of life and art', explains this superiority, we gather, by a freedom from moral preoccupations that he supposes her to enjoy. (George Eliot, he tells us, was a Puritan, and earnestly bent on instruction.)

As a matter of fact, when we examine the formal perfection of *Emma*,⁵ we find that it can be appreciated only in terms of the moral preoccupations that characterize the novelist's peculiar interest in life. Those who suppose it to be an 'aesthetic matter', a beauty of 'composition' that is combined, miraculously, with 'truth to life', can give no adequate reason for the view that *Emma* is a great novel, and no intelligent account of its perfection of form. It is in the same way true of the other great English novelists that their interest in their art gives them the opposite of an affinity with Pater⁶ and George Moore; it is, brought to an intense focus, an unusually developed interest in life. For, far from having anything of Flaubert's disgust or disdain or boredom, they are all distinguished by a vital capacity for experience, a kind of reverent openness before life, and a marked moral intensity.

It might be commented that what I have said of Jane Austen and her successors is only what can be said of any novelist of unqualified greatness. That is true. But there *is*—and this is the point—an English tradition, and these great classics of English fiction belong to it; a tradition that, in the talk about 'creating characters' and 'creating worlds', and the appreciation of Trollope and Mrs. Gaskell and Thackeray and Meredith and Hardy⁷ and Virginia Woolf, appears to go unrecognized. It is not merely that we have no Flaubert (and I hope I haven't seemed to suggest that a Flaubert is no more worth having than a George Moore). Positively, there is a continuity from Jane Austen. It is not for nothing that George Eliot admired her work profoundly, and wrote one of the earliest appreciations of it to be published.⁸ The writer whose intellectual weight and moral earnestness strike

3. Irish novelist and man of letters (1852–1933).

4. English literary critic and biographer (1902–1986). The quotation is from his *Early Victorian Novelists: Essays in Revaluation* (1934).

5. Published in 1816, and often paired with *Pride and Prejudice* (1813) as the best of Austen's novels.

6. WALTER PATER (1839–1894), English aesthetic literary and art critic.

7. Thomas Hardy (1840–1928), English novelist and poet. George Meredith (1828–1909), English novelist and poet.

8. This appreciation, "The Novels of Jane Austen" (1859), was actually written by George Henry Lewes, who lived with Eliot from 1854 until his death in 1878.

some critics as her handicap certainly saw in Jane Austen something more than an ideal contemporary of Lytton Strachey.⁹

* * *

Henry James also was a great admirer of Jane Austen, and in his case too there is that obvious aspect of influence which can be brought out by quotation. And there is for him George Eliot as well, coming between. In seeing him in an English tradition I am not slighting the fact of his American origin; an origin that doesn't make him less of an English novelist, of the great tradition, than Conrad later. That he was an American is a fact of the first importance for the critic, as Mr. Yvor Winters brings out admirably in his book, *Maule's Curse*.¹ Mr. Winters discusses him as a product of the New England ethos in its last phase, when a habit of moral strenuousness remained after dogmatic Puritanism had evaporated and the vestigial moral code was evaporating too. This throws a good deal of light on the elusiveness that attends James's peculiar ethical sensibility. We have, characteristically, in reading him, a sense that important choices are in question and that our finest discrimination is being challenged, while at the same time we can't easily produce for discussion any issues that have moral substance to correspond.

It seems relevant also to note that James was actually a New Yorker. In any case, he belonged by birth and upbringing to that refined civilization of the old European America which we have learnt from Mrs. Wharton² to associate with New York. His bent was to find a field for his ethical sensibility in the appreciative study of such a civilization—the 'civilization' in question being a matter of personal relations between members of a mature and sophisticated Society. It is doubtful whether at any time in any place he could have found what would have satisfied his implicit demand: the actual fine art of civilized social intercourse that would have justified the flattering intensity of expectation he brought to it in the form of his curiously transposed and subtilized ethical sensibility.

History, it is plain, was already leaving him *déraciné*³ in his own country, so that it is absurd to censure him, as some American critics have done, for pulling up his roots. He could hardly become deeply rooted elsewhere, but the congenial soil and climate were in Europe rather than in the country of his birth. There is still some idealizing charm about his English country-house in *The Portrait of a Lady*,⁴ but that book is one of the classics of the language, and we can't simply regret the conditions that produced something so finely imagined. It is what *The Egoist*⁵ is supposed to be. Compare the two books, and the greatness of Henry James as intellectual poet-novelist of 'high civilization' comes out in a way that, even for the most innocently deferential reader, should dispose of Meredith's pretensions for ever. James's wit is real and always natural, his poetry intelligent as well as

9. English biographer and man of letters (1880–1932). Leavis implicitly contrasts Strachey's snide portraits of 19th-century luminaries in *Eminent Victorians* (1918) with the more positive satire in Austen's novels.

1. New Directions, Norfolk, Conn. (1938) [Leavis's note]. Winters (1900–1968), American poet

and literary critic.

2. Edith Wharton (1862–1937), American novelist.

3. Uprooted; an uprooted person (French).

4. Novel published in 1880–81.

5. Comic novel (1879) by Meredith.

truly rich, and there is nothing bogus, cheap or vulgar about his idealizations: certain human potentialities are nobly celebrated.

That he is a novelist who has closely studied his fellow-craftsmen is plain—and got from them more than lessons in the craft. It is plain, for instance, in *The Portrait of a Lady* that he sees England through literature. We know that he turned an attentive professional eye on the French masters. He has (in his early mature work) an easy and well-bred technical sophistication, a freedom from any marks of provinciality, and a quiet air of knowing his way about the world that distinguish him from among his contemporaries in the language. If from the English point of view he is unmistakably an American, he is also very much a European.

* * *

His own problem was to justify in terms of an intense interest in sophisticated 'civilization' his New England ethical sensibility. The author who offered a congenial study would have to be very different from Flaubert. It was, as a matter of fact, a very English novelist, the living representative of the great tradition—a writer as unlike Flaubert as George Eliot.

* * *

To say this is to have the confident wisdom of hindsight, for it can be shown, with a conclusiveness rarely possible in these matters, that James did actually go to school to George Eliot.

That is a fair way of putting the significance of the relation between *The Portrait of a Lady* and *Daniel Deronda*⁶ that I discuss in my examination of the latter book. That relation demonstrated, nothing more is needed in order to establish the general relation I posit between the two novelists. James's distinctive bent proclaims itself uncompromisingly in what he does with *Daniel Deronda* (on the good part of which—I call it *Gwendolen Harleth*⁷—*The Portrait of a Lady* is a variation; for the plain fact I point out amounts to that). The moral substance of George Eliot's theme is subtilized into something going with the value James sets on 'high civilization'; her study of conscience has disappeared. A charming and intelligent girl, determined to live 'finely', confidently exercises her 'free ethical sensibility' (Mr. Winters' phrase) and discovers that she is capable of disastrous misvaluation (which is not surprising, seeing not only how inexperienced she is, but how much an affair of inexplicitnesses, overtones and fine shades is the world of discourse she moves in). It is a tragedy in which, for her, neither remorse is involved, nor, in the ordinary sense, the painful growth of conscience, though no doubt her 'ethical sensibility' matures.

Along the line revealed by the contrast between the two novels James develops an art so unlike George Eliot's that, but for the fact (which seems to have escaped notice) of the relation of *The Portrait of a Lady* to *Daniel Deronda*, it would, argument being necessary, have been difficult to argue at all convincingly that there was the significant relation between the novelists. And I had better insist that I am not concerned to establish *indebtedness*. What I have in mind is the fact of the great tradition and the apartness

6. Novel (1876) by George Eliot.

7. A major character in *Daniel Deronda*, whose

story—more conventional than that of *Deronda*—is preferred by many readers.

of the two great novelists above the ruck of Gaskells and Trollopes and Merediths. Of the earlier novelists it was George Eliot alone (if we except the minor relevance of Jane Austen) whose work had a direct and significant bearing on his own problem. It had this bearing because she *was* a great novelist, and because in her maturest work she handled with unprecedented subtlety and refinement the personal relations of sophisticated characters exhibiting the 'civilization' of the 'best society', and used, in so doing, an original psychological notation corresponding to the fineness of her psychological and moral insight. Her moral seriousness was for James very far from a disqualification; it qualified her for a kind of influence that neither Flaubert nor the admired Turgènev⁸ could have.

* * *

When we come to Conrad we can't, by way of insisting that he is indeed significantly 'in' the tradition—in and of it, neatly and conclusively relate him to any one English novelist. Rather, we have to stress his foreignness—that he was a Pole, whose first other language was French. I remember remarking to André Chevrillon⁹ how surprising a choice it was on Conrad's part to write in English, especially seeing he was so clearly a student of the French masters. And I remember the reply, to the effect that it wasn't at all surprising, since Conrad's work couldn't have been written in French. M. Chevrillon, with the authority of a perfect bilingual, went on to explain in terms of the characteristics of the two languages why it had to be English. Conrad's themes and interests demanded the concreteness and action—the dramatic energy—of English. We might go further and say that Conrad chose to write his novels in English for the reasons that led him to become a British Master Mariner.

I am not, in making this point, concurring in the emphasis generally laid on the Prose Laureate of the Merchant Service. What needs to be stressed is the great novelist. Conrad's great novels, if they deal with the sea at all, deal with it only incidentally. But the Merchant Service is for him both a spiritual fact and a spiritual symbol, and the interests that made it so for him control and animate his art everywhere. Here, then, we have a master of the English language, who chose it for its distinctive qualities and because of the moral tradition associated with it, and whose concern with art—he being like Jane Austen and George Eliot and Henry James an innovator in 'form' and method—is the servant of a profoundly serious interest in life. To justify our speaking of such a novelist as in the tradition, that represented by those three, we are not called on to establish particular relations with any one of them. Like James, he brought a great deal from outside, but it was of the utmost importance to him that he found a serious art of fiction there in English, and that there *were*, in English, great novelists to study. He drew from English literature what he needed, and learnt in that peculiar way of genius which is so different from imitation. And for us, who have *him* as well as the others, there he is, unquestionably a constitutive part of the tradition, belonging in the full sense.

8. Ivan Turgenev (1818–1883), a Russian novelist admired by Henry James.

9. French writer (1864–1957).

As being technically sophisticated he may be supposed to have found fortifying stimulus in James, whom he is quite unlike (though James, in his old age, was able to take a connoisseur's interest in *Chance*¹ and appreciate with a professional eye the sophistication of the 'doing'). But actually, the one influence at all obvious is that of a writer at the other end of the scale from sophistication, Dickens. As I point out in my discussion of him, Conrad is in certain respects so like Dickens that it is difficult to say for just how much influence Dickens counts. He is undoubtedly there in the London of *The Secret Agent*,² though—except for the unfortunate *macabre* of the cab-journey, and one or two local mannerisms—he has been transmuted into Conrad. This co-presence of obvious influence with assimilation suggests that Dickens may have counted for more in Conrad's mature art (we don't find much to suggest Dickens in the early adjectival phase) than seems at first probable: it suggests that Dickens may have encouraged the development in Conrad's art of that extraordinary energy of vision and registration in which they are akin. ('When people say that Dickens exaggerates', says Mr. Santayana;³ 'it seems to me that they can have no eyes and no ears. They probably have only *notions* of what things and people are; they accept them conventionally, at their diplomatic value.') We may reasonably, too, in the same way see some Dickensian influence, closely related and of the same order, in Conrad's use of melodrama, or what would have been melodrama in Dickens; for in Conrad the end is a total significance of a profoundly serious kind.

The reason for not including Dickens in the line of great novelists is implicit in this last phrase. The kind of greatness in question has been sufficiently defined. That Dickens was a great genius and is permanently among the classics is certain. But the genius was that of a great entertainer, and he had for the most part no profounder responsibility as a creative artist than this description suggests. Praising him magnificently in a very fine critique,⁴ Mr. Santayana, in concluding, says: 'In every English-speaking home, in the four quarters of the globe, parents and children would do well to read Dickens aloud of a winter's evening.' This note is right and significant. The adult mind doesn't as a rule find in Dickens a challenge to an unusual and sustained seriousness. I can think of only one of his books in which his distinctive creative genius is controlled throughout to a unifying and organizing significance, and that is *Hard Times*,⁵ which seems, because of its unusualness and comparatively small scale, to have escaped recognition for the great thing it is. Conrad's views on it, supposing it to have caught his attention, would have been interesting; he was qualified to have written an apt appreciation.

It has a kind of perfection as a work of art that we don't associate with Dickens—a perfection that is one with the sustained and complete seriousness for which among his productions it is unique. Though in length it makes a good-sized modern novel, it is on a small scale for Dickens: it leaves no room for the usual repetitive overdoing and loose inclusiveness. It is plain that he felt no temptation to these, he was too urgently possessed by

1. Novel (1912) by Conrad.

2. Novel (1907) by Conrad.

3. George Santayana (1863–1952), Spanish-born American philosopher and man of letters.

4. See *Soliloquies in England* [(1922); Leavis's note]. The essay quoted is "Dickens" (1921).

5. Novel published in 1854.

his themes; the themes were too rich, too tightly knit in their variety and too commanding, Certain key characteristics of Victorian civilization had clearly come home to him with overwhelming force, embodied in concrete manifestations that suggested to him connexions and significances he had never realized so fully before. The fable is perfect; the symbolic and representative values are inevitable, and, sufficiently plain at once, yield fresh subtleties as the action develops naturally in its convincing historical way.

* * *

Though the greatness of *Hard Times* passed unnoticed, Dickens couldn't fail to have a wide influence. We have remarked his presence in *The Secret Agent*. It is there again, in a minor way, in George Eliot, in some of her less felicitous characterization; and it is there in Henry James, most patently, perhaps, in *The Princess Casamassima*, but most importantly in *Roderick Hudson*.⁶ It is there once more, and even more interestingly, in D. H. Lawrence, in *The Lost Girl*.⁷ The ironic humour, and the presentation in general, in the first part of that book bear a clear relation to the Dickensian, but are incomparably more mature and belong to a total serious significance.

* * *

To come back to Conrad and his major quality: he is one of those creative geniuses whose distinction is manifested in their being peculiarly alive in their time—peculiarly alive *to* it; not 'in the vanguard' in the manner of Shaw and Wells and Aldous Huxley,⁸ but sensitive to the stresses of the changing spiritual climate as they begin to be registered by the most conscious. His interest in the tradition of the Merchant Service as a constructive triumph of the human spirit is correlative with his intense consciousness of the dependence, not only of the distinctive humanities at all levels, but of sanity itself and our sense of a normal outer world, on an analogous creative collaboration. His Robinson Crusoe⁹ cannot bear a few days alone on his island, and blows out his brains. We are a long way from Jane Austen, for whom the problem was not to rescue the highly conscious individual from his isolation, but much the contrary. Conrad, of course, was a *déraciné*, which no doubt counts for a good deal in the intensity with which he renders his favourite theme of isolation. But then a state of something like deracination is common to-day among those to whom the question of who the great novelists are is likely to matter. Conrad is representative in the way genius is, which is not the way of those writers in whom journalist-critics acclaim the Zeitgeist. (It is relevant to note here that in the early hey-day of Wells and Shaw Conrad wrote *Nostromo*¹—a great creative masterpiece which, among other things, is essentially an implicit comment on their preoccupations, made from a very much profounder level of preoccupation than theirs. And it is also relevant to venture that in Mr. Arthur Koestler's² very distinguished novel, *Darkness at Noon*, we have the work of

6. Novels published in 1886 and 1875, respectively.

7. Novel published in 1920.

8. English novelist and critic (1894–1963). George Bernard Shaw (1856–1950), Irish playwright and critic. H. G. Wells (1866–1946), English novelist and sociologist.

9. The hero of Defoe's novel, shipwrecked for 28 years and alone for all but the last 3 or 4 years.

1. Novel published in 1904.

2. Hungarian-born British novelist and journalist (1905–1983); *Darkness at Noon* (1940) is his best-known work.

a writer—also, we note, not born to the language—who knows and admires Conrad, especially the Conrad of *Nostromo* and *Under Western Eyes*.³

* * *

Is there no name later than Conrad's to be included in the great tradition? There is, I am convinced, one: D. H. Lawrence. Lawrence, in the English language, was the great genius of our time (I mean the age, or climatic phase, following Conrad's). It would be difficult to separate the novelist off for consideration, but it was in the novel that he committed himself to the hardest and most sustained creative labour, and he was, as a novelist, the representative of vital and significant development. He might, he has shown conclusively, have gone on writing novels with the kind of 'character creation' and psychology that the conventional cultivated reader immediately appreciates—novels that demanded no unfamiliar effort of approach. He might—if his genius had let him. In nothing is the genius more manifest than in the way in which, after the great success—and *succès d'estime*—of *Sons and Lovers*⁴ he gives up that mode and devotes himself to the exhausting toil of working out the new things, the developments, that as the highly conscious and intelligent servant of life he saw to be necessary. Writing to Edward Garnett⁵ of the work that was to become *Women in Love* he says: 'It is *very* different from *Sons and Lovers*: written in another language almost. I shall be sorry if you don't like it, but am prepared. I shan't write in the same manner as *Sons and Lovers* again, I think—in that hard, violent style full of sensation and presentation.'⁶

* * *

It is a spirit that, for all the unlikeness, relates Lawrence closely to George Eliot. He writes, again, to Edward Garnett:⁷

'You see—you tell me I am half a Frenchman and one-eighth a Cockney. But that isn't it. I have very often the vulgarity and disagreeableness of the common people, as you say Cockney, and I may be a Frenchman. But primarily I am a passionately religious man, and my novels must be written from the depth of my religious experience. That I must keep to, because I can only work like that. And my Cockneyism and commonness are only when the deep feeling doesn't find its way out, and a sort of jeer comes instead, and sentimentality and purplism. But you should see the religious, earnest, suffering man in me first, and then the flip-pant or common things after. Mrs. Garnett says I have no true nobility—with all my cleverness and charm. But that is not true. It is there, in spite of all the littlenesses and commonnesses.'

It is this spirit, by virtue of which he can truly say that what he writes must be written from the depth of his religious experience, that makes him, in my opinion, so much more significant in relation to the past and future, so much more truly creative as a technical inventor, an innovator, a master

3. Novel published in 1911.

4. Novel published in 1913. *Succès d'estime*: a critical (but not commercial) success (French).

5. English man of letters (1868–1937). Lawrence finished the first version of *Women in Love* (1920)

in 1916.

6. *The Letters of D. H. Lawrence* (1932), p. 172 [Leavis's note].

7. *Letters*, p. 190 [Leavis's note].

of language, than James Joyce.⁸ I know that Mr. T. S. Eliot has found in Joyce's work something that recommends Joyce to him as positively religious in tendency (see *After Strange Gods*⁹). But it seems plain to me that there is no organic principle determining, informing, and controlling into a vital whole, the elaborate analogical structure, the extraordinary variety of technical devices, the attempts at an exhaustive rendering of consciousness, for which *Ulysses* is remarkable, and which got it accepted by a cosmopolitan literary world as a new start. It is rather, I think, a dead end, or at least a pointer to disintegration—a view strengthened by Joyce's own development (for I think it significant and appropriate that *Work in Progress—Finnegans Wake*, as it became—should have engaged the interest of the inventor of Basic English¹).

It is true that we can point to the influence of Joyce in a line of writers to which there is no parallel issuing from Lawrence. But I find here further confirmation of my view. For I think that in these writers, in whom a regrettable (if minor) strain of Mr. Eliot's influence seems to me to join with that of Joyce, we have, in so far as we have anything significant, the wrong kind of reaction against liberal idealism. I have in mind writers in whom Mr. Eliot has expressed an interest in strongly favourable terms: Djuna Barnes of *Nightwood*, Henry Miller, Lawrence Durrell² of *The Black Book*. In these writers—at any rate in the last two (and the first seems to me insignificant)—the spirit of what we are offered affects me as being essentially a desire, in Laurentian phrase, to 'do dirt' on life. It seems to me important that one should, in all modesty, bear one's witness in these matters. 'One must speak for life and growth, amid all this mass of destruction and disintegration.'³ This is Lawrence, and it is the spirit of all his work. It is the spirit of the originality that gives his novels their disconcerting quality, and gives them the significance of works of genius.

* * *

I have, then, given my hostages. What I think and judge I have stated as responsibly and clearly as I can. Jane Austen, George Eliot, Henry James, Conrad, and D. H. Lawrence: the great tradition of the English novel is *there*.

1948

8. Irish novelist (1882–1941), generally viewed as one of the great innovators of 20th-century English prose; his works include *Ulysses* (1922) and *Finnegans Wake* (1939).

9. *After Strange Gods: A Primer of Modern Heresy* (1934), a series of lectures delivered at the University of Virginia (1933).

1. C. K. Ogden (1889–1957), English writer and linguist; he developed a simplified form of English

to be used as an international language.

2. English author (1912–1990); his novel *The Black Book* was published in 1938. Miller (1891–1980), American novelist. Barnes (1892–1982), American writer; her novel *Nightwood* was published in 1936.

3. *The Letters of D. H. Lawrence*, p. 256 [Leavis's note].

ROMAN JAKOBSON

1896–1982

Roman Jakobson's role in literary theory arises out of his use of two highly suggestive sets of paired terms: "linguistics and poetics" and "metaphor and metonymy." These terms, and the thoughts behind them, profoundly shaped the structuralist movement in anthropology, philosophy, and psychoanalysis as well as literary studies, especially in France after World War II. But this groundbreaking theorist chose to characterize himself as a "Russian philologist," the phrase inscribed on his tombstone. He was a linguist who could lecture in six languages ("unfortunately, all of them Russian," joked his colleagues, referring to his pronounced accent). A large proportion of his many publications addressed minute topics in phonology, Slavic languages and literatures, and folklore. Yet that technical linguistic work grounded bold speculations about human linguistic behavior that opened up new channels for research in a number of different fields.

Born in Moscow, Jakobson entered the Lazarev Institute of Oriental Languages there in his early teens; he went on to study linguistics, literature, and folklore at Moscow University, where in 1915 he co-founded the Moscow Linguistic Circle. In this period of ferment just before the Russian Revolution, he wrote poetry and moved in avant-garde circles; like his friend the poet Vladimir Mayakovsky and others, he thought that a social revolution should include a revolution in artistic forms. At St. Petersburg University, where he studied in 1917, he worked with Victor Shklovsky and Boris Eichenbaum in the Society for the Study of Poetic Language, a group that has come to be known as the "Russian formalists."

In 1920 Jakobson moved to Prague, where he studied linguistics and Old Czech literature; in 1926 he co-founded the Prague Linguistic Circle, which included Jan Mukařovský. The work of FERDINAND DE SAUSSURE (1857–1913) was central to the group, though Jakobson moved beyond the Swiss linguist in 1927 when he realized that the Saussurean dichotomy between linguistic synchrony (a cross section of language at a given time) and diachrony (a transverse section *through* time) was too absolute: languages could be studied structurally as they changed over time. His work on poetic language also questioned the two founding Saussurean principles of language, the arbitrariness and the linearity of the sign. Nevertheless, his disagreements with Saussure helped shape his thought.

In 1938, when the Nazis invaded Czechoslovakia, Jakobson fled to Denmark, then Norway, then Sweden, before settling in the United States in 1941. He taught at the École Libre des Hautes Études (Free School of Advanced Study) in New York, where in 1942 he met CLAUDE LÉVI-STRAUSS, who had fled France; the two began attending each other's lectures. In 1943 Jakobson co-founded the Linguistic Circle of New York; he taught at Columbia University until 1949, then moved to Harvard University, where he taught first Slavic languages and literatures and then linguistics. From 1957 onward, he held a concurrent professorship at the Massachusetts Institute of Technology. He became emeritus in 1967 but never retired; he was writing letters from his hospital bed as he lay dying.

As a linguist, Jakobson clarified many important concepts. Phonemes or morphemes, for example, were once thought to be the smallest units of language, but Jakobson showed them to comprise bundles of "distinctive features" that themselves were formed by binary oppositions: voiced / unvoiced, consonant / vowel, singular / plural, and so on. Furthermore, his analysis of the tendency of binary oppositions to fall into "marked / unmarked" pairs prepared the way for later ideological analyses of structures and norms—where the "unmarked" (often the male, white, Christian, heterosexual point of view) goes unexamined, functioning as the standard against which "differences" are defined.

As a reader of poetry, Jakobson pursued two kinds of analysis that are not often found together. By studying “the poetry of grammar and the grammar of poetry,” he scrutinized linguistic patterns that contribute to the overall poetic effect but normally escape the notice of readers—leading many critics to protest that those patterns could not have been intended by the poet. At the same time, he was fascinated by the difficulty of separating a poet’s life and work, not because the life explained the work but because the life was largely structured like another work. Jakobson was similar to but profoundly different from his contemporaries, the American New Critics, in several ways. Both opposed “vulgar biographism” and the “intentional fallacy” (see WILLIAM K. WIMSATT JR. and MONROE C. BEARDSLEY, below), but Jakobson analyzed the myth of the poet as a function of cultural history, whereas the New Critics tuned their readings to a sense of the individual. Both Jakobson and the New Critics read texts closely, but the New Critics tended to frame interpretation within a working sense of imagination and mind, whereas Jakobson subjected the largest and the smallest patterns to linguistic and cultural analysis, without regard for individual craft. It was not that Jakobson did not believe in the unity of the human imagination, but precisely that he believed in it so much that he thought he was in no danger of departing from it. Jakobson welcomed the contributions of science to the work of literary studies, while the New Critics were trying to defend “humanistic” values *against* the spread of scientific “professionalism.”

In his broad position paper “Linguistics and Poetics” (our first selection)—his concluding statement to a 1958 conference on style, published as *Style in Language* (ed. Thomas Sebeok, 1960)—Jakobson argues that what he calls the “poetic function” is at work in all verbal communication. The other five major functions of language are the *emotive* (focused on the speaker), the *conative* (focused on the addressee), the *phatic* (focused on the channel of communication), the *metalingual* (focused on explanations of the code itself), and the *referential* (focused on the context).

In defining the poetic function, Jakobson cites approvingly the French poet Paul Valéry (1871–1945), who called poetry a “sustained hesitation between the sound and the sense.” He connects verbal art to the palpability (sound, sight) of signs. The poetic function consists of making connections *within the utterance* among the properties of the words, images, and sounds in a message, using those connections (“equivalences”) to generate the linguistic sequence itself. Meter, rhyme, imagery, and generic conventions are not *subsequent* to the poetic function: they *are* the poetic function. Drawing on a mathematical sense of mapping (“projecting”) one function upon another, he declares that “the poetic function projects the principle of equivalence from the axis of selection into the axis of combination.” What does this formula mean? While ordinary speakers select one of the terms they perceive as equivalent in order to convey a message, the poet combines what is perceived as equivalent. Poetry seeks to *maximize* redundancy; ordinary communication seeks to *minimize* it.

Careful to distinguish between evaluation and analytical description, Jakobson discusses the *poetic function* rather than *poetry*. His remarks about the self-reflections and sounds in the 1950s political slogan “I like Ike” is a classic analysis of the poetic function without claiming to be an analysis of poetry. In showing how the slogan verbally embodies “the loving subject enveloped by the beloved object,” he suggests the multiple uses to which the poetic function is put in everyday life, while noting that poetry employs all the “everyday” functions, too.

Literary scholars unwilling to separate function from evaluation have protested that Jakobson’s definition fails to do justice to poetry, which depends on values of meaning and creativity. Jakobson claimed that the extent to which effects of meaning and creativity could be subject to linguistic analysis could not be known in advance. This did not keep critics from charging Jakobson with annexing poetics to linguistics. It was sometimes pointed out that the poets who best illustrate Jakobson’s definition are not always those most esteemed in literary history. Here, as so often, EDGAR ALLAN POE—loved by the French, often dismissed by the Americans—stands as a test

case, perhaps suggesting a parallel to Jakobson's impact on literary studies in France and in the United States. But in the final analysis, Jakobson does not, after all, claim to define poetry. He is more interested in how the poetic function accounts for broad linguistic behavior and effectiveness both within and outside any poetic canon. For this reason, he writes about Baudelaire, Shakespeare, Pushkin, Yeats, Blake, and Hopkins with the same curiosity he applies to the linguistic mechanisms of slogans, folklore, and everyday speech.

Jakobson's distinction between metaphor and metonymy in "Two Aspects of Language and Two Types of Aphasic Disturbances" (1956; our second selection) became for him—and many others following him—a key to language itself. Derived from studies of aphasia (inability to speak), Jakobson detected two primordial principles of language use: similarity and contiguity (i.e., resemblance and nearness). In the vast array of normal verbal behavior, both operate at once. But in the early stages of language learning by children, in the late stages of language loss by aphasics (who can either provide a synonym for a word or construct a sentence around it, but not both), and to some extent in literary forms like Romanticism or realism, the outline of the two distinct principles becomes visible. Jakobson chooses to call these *metaphor* and *metonymy*, using the names of two rhetorical figures that had not previously been set in opposition.

Metaphor, which has often stood as the general name for all figures and has long been the object of philosophical and rhetorical analyses, stands in Jakobson's essay as the name for any two terms related by similarity (synonymy, analogy, comparison, even antithesis, with or without the word *like*). The opposing term, *metonymy*, has historically generated far less commentary. It is usually defined as the substitution of symbol for thing symbolized ("the throne is in danger" for "the king is in danger"), maker for thing made ("I drive a Ford" or "I read Shakespeare"), container for contained ("drink the whole glass"), part for whole ("all hands on deck"), and so on. In each case, the association is *not* based on similarity; thus all are relations of contiguity. Contiguity is observed not just in the connections among the meanings of terms but also in the very fact of sequence, syntactically relating all terms that are present in a sentence. In Jakobson's scheme there are ultimately not two principles but four: similarity, contiguity, substitution, and combination. And all verbal behavior can be analyzed along these lines. JACQUES LACAN, building on SIGMUND FREUD's opposition between "condensation" and "displacement" in the rhetoric of dreams, sees in the relation between metaphor and metonymy the general psychoanalytic laws governing symptom and desire. Other figures who see tropology as foundational to cognition and discourse include GIAMBATTISTA VICO, PAUL DE MAN, and HAYDEN WHITE.

Jakobson was criticized for the same reasons he was praised. He was less interested in where to stop than in where to go, and his bold and painstaking writings opened up many domains of study in linguistics, poetics, folklore, and in the relations among them; but the gap between his microanalyses and his broad generalizations left much room for quibbles. He was fond of loosely paraphrasing the Roman playwright Terence: "Linguista sum; linguistici nihil a me alienum esse puto"—"I am a linguist; I consider nothing linguistic to be alien to me." (Terence's original formulation was "Homo [a human] sum; humani nil a me alienum puto.") In Jakobson's work, "linguistic" often became synonymous with Terence's "human."

From Linguistics and Poetics

* * *

I have been asked for summary remarks about poetics in its relation to linguistics. Poetics deals primarily with the question, "What makes a verbal message a work of art?" Because the main subject of poetics is the *differentia specifica*¹ of verbal art in relation to other arts and in relation to other kinds of verbal behavior, poetics is entitled to the leading place in literary studies.

Poetics deals with problems of verbal structure, just as the analysis of painting is concerned with pictorial structure. Since linguistics is the global science of verbal structure, poetics may be regarded as an integral part of linguistics.

Arguments against such a claim must be thoroughly discussed. It is evident that many devices studied by poetics are not confined to verbal art. We can refer to the possibility of transporting *Wuthering Heights*² into a motion picture, medieval legends into frescoes and miniatures, or *L'Après-midi d'un faune*³ into music, ballet, and graphic art. However ludicrous the idea of the *Iliad* and *Odyssey* in comics may seem,⁴ certain structural features of their plot are preserved despite the disappearance of their verbal shape. The question of whether W. B. Yeats was right in affirming that William Blake was "the one perfectly fit illustrator for the *Inferno* and the *Purgatorio*"⁵ is a proof that different arts are comparable. The problems of the baroque or any other historical style transgress the frame of a single art. When handling the surrealist metaphor, we could hardly pass by Max Ernst's pictures or Luis Buñuel's films, *The Andalusian Dog* and *The Golden Age*.⁶ In short, many poetic features belong not only to the science of language but to the whole theory of signs, that is, to general semiotics.⁷ This statement, however, is valid not only for verbal art but also for all varieties of language, since language shares many properties with certain other systems of signs or even with all of them (pansemiotic features).

Likewise, a second objection contains nothing that would be specific for literature: the question of relations between the word and the world concerns not only verbal art but actually all kinds of discourse. Linguistics is likely to explore all possible problems of relation between discourse and the "universe of discourse": what of this universe is verbalized by a given discourse and how it is verbalized. The truth values, however, as far as they are—to say with the logicians—"extra-linguistic entities," obviously exceed the bounds of poetics and of linguistics in general.

1. Specific difference (Latin).

2. An 1847 novel by Emily Brontë; the best-known film version was directed by William Wyler (1939).

3. *The Afternoon of a Faun* (1876), a poem by Stéphane Mallarmé; it was set to music by Claude Debussy (1894), and choreographed and danced by Vaslav Nijinsky for Sergei Diaghilev's Ballets Russes (1912). Its original edition was illustrated by Édouard Manet.

4. Homer's epic poems (ca. 8th c. B.C.E.) were among the many literary works presented as comics in the American "Classics Illustrated" series (1940s–60s).

5. *Inferno* and *Purgatorio* are two of the three

books of DANTE ALIGHIERI's *Divine Comedy* (1321). Yeats (1865–1939), Irish poet and dramatist; the quotation is from "William Blake and His Illustrations to *The Divine Comedy*" (1897). Blake (1757–1827), English poet and engraver.

6. Films (1928 and 1930, respectively) on which the Spanish-born filmmaker Buñuel (1900–1983) collaborated with the surrealist painter Salvador Dalí (1904–1989). Ernst (1891–1976), German-born French painter.

7. *Semiotics*, a term derived from the work of the American philosopher C. S. Peirce (1839–1914), and *semiology*, from that of the Swiss linguist FERDINAND DE SAUSSURE (1857–1913), both name the general theory of signs.

Sometimes we hear that poetics in contradistinction to linguistics, is concerned with evaluation. This separation of the two fields from each other is based on a current but erroneous interpretation of the contrast between the structure of poetry and other types of verbal structure: the latter are said to be opposed by their "casual," designless nature to the "noncasual," purposeful character of poetic language. In point of fact, any verbal behavior is goal-directed, but the aims are different and the conformity of the means used to the effect aimed at is a problem that evermore preoccupies inquirers into the diverse kinds of verbal communication. There is a close correspondence, much closer than critics believe, between the question of linguistic phenomena expanding in space and time and the spatial and temporal spread of literary models. Even such discontinuous expansion as the resurrection of neglected or forgotten poets—for instance, the posthumous discovery and subsequent canonization of Emily Dickinson (d. 1886) and Gerard Manley Hopkins (d. 1889), the tardy fame of Lautréamont (d. 1870) among surrealist poets, and the salient influence of the hitherto ignored Cyprian Norwid (d. 1883) on Polish modern poetry—finds a parallel in the history of standard languages that tend to revive outdated models, sometimes long forgotten, as was the case in literary Czech, which toward the beginning of the nineteenth century leaned toward sixteenth-century models.

Unfortunately, the terminological confusion of "literary studies" with "criticism" tempts the student of literature to replace the description of the intrinsic values of a literary work with a subjective, censorious verdict. The label "literary critic" applied to an investigator of literature is as erroneous as "grammatical (or lexical) critic" would be applied to a linguist. Syntactic and morphologic⁸ research cannot be supplanted by a normative grammar, and likewise no manifesto, foisting a critic's own tastes and opinions on creative literature, can serve as a substitute for an objective scholarly analysis of verbal art. This statement should not be mistaken for the quietist principle of *laissez faire*; any verbal culture involves programmatic, planning, normative endeavors. Yet why is a clear-cut discrimination made between pure and applied linguistics or between phonetics and orthoepy,⁹ but not between literary studies and criticism?

Literary studies, with poetics as their focal point, consist like linguistics of two sets of problems: synchrony and diachrony.¹ The synchronic description envisages not only the literary production of any given stage but also that part of the literary tradition which for the stage in question has remained vital or has been revived. Thus, for instance, Shakespeare, on the one hand, and Donne, Marvell, Keats, and Emily Dickinson, on the other, are experienced by the present English poetic world, whereas the works of James Thomson and Longfellow,² for the time being, do not belong to viable artistic values. The selection of classics and their reinterpretation by a novel

8. Pertaining to the forms taken by words in usage (conjugations, tenses, declensions, etc.). "Syntactic": pertaining to the structure of phrases and sentences.

9. The study of correct pronunciation. "Phonetics": the study of the sounds of language.

1. Change in a system over time. "Synchrony": the relations of parts within a system arrested in time.

2. Jakobson contrasts the now highly regarded English poets John Donne (1562–1631), Andrew Marvell (1621–1678), John Keats (1795–1821), and the American Dickinson (who all, unlike Shakespeare, received relatively little attention in their lifetimes) to the once popular but now critically scorned Scottish-born English poet Thomson (1700–1748) and American poet Henry Wadsworth Longfellow (1807–1882).

trend is a substantial problem of synchronic literary studies. Synchronic poetics, like synchronic linguistics, is not to be confused with statics; any stage discriminates between more conservative and more innovative forms. Any contemporary stage is experienced in its temporal dynamics, and, on the other hand, the historical approach both in poetics and in linguistics is concerned not only with changes but also with continuous, enduring, static factors. A thoroughly comprehensive historical poetics or history of language is a superstructure to be built on a series of successive synchronic descriptions.

Insistence on keeping poetics apart from linguistics is warranted only when the field of linguistics appears to be illicitly restricted, for example, when the sentence is viewed by some linguists as the highest analyzable construction, or when the scope of linguistics is confined to grammar alone or uniquely to nonsemantic questions of external form or to the inventory of denotative devices with no reference to free variations. Voegelin has clearly pointed out the two most important and related problems that face structural linguistics, namely, a revision of "the monolithic hypothesis about language" and a concern with "the interdependence of diverse structures within one language."³ No doubt, for any speech community, for any speaker, there exists a unity of language, but this over-all code represents a system of interconnected subcodes; every language encompasses several concurrent patterns, each characterized by different functions.

Obviously we must agree with Sapir that, on the whole, "ideation reigns supreme in language,"⁴ but this supremacy does not authorize linguistics to disregard the "secondary factors." The emotive elements of speech, which, as Joos is prone to believe, cannot be described "with a finite number of absolute categories," are classified by him "as nonlinguistic elements of the real world." Hence, "for us they remain vague, protean, fluctuating phenomena," he concludes, "which we refuse to tolerate in our science."⁵ Joos is indeed a brilliant expert in reduction experiments, and his emphatic demand for the "expulsion" of emotive elements "from linguistic science" is a radical experiment in reduction—*reductio ad absurdum*.

Language must be investigated in all the variety of its functions. Before discussing the poetic function we must define its place among the other functions of language. An outline of these functions demands a concise survey of the constitutive factors in any speech event, in any act of verbal communication. The ADDRESSER sends a MESSAGE to the ADDRESSEE. To be operative the message requires a CONTEXT referred to (the "referent" in another, somewhat ambiguous, nomenclature), graspable by the addressee, and either verbal or capable of being verbalized; a CODE fully, or at least partially, common to the addresser and addressee (or in other words, to the encoder and decoder of the message); and, finally, a CONTACT, a physical channel and psychological connection between the addresser and the addressee, enabling both of them to enter and stay in communication. All

these factors inalienably involved in verbal communication may be schematized as follows:

| | | |
|-----------|---------|-----------|
| | CONTEXT | |
| ADDRESSER | MESSAGE | ADDRESSEE |
| | CONTACT | |
| | CODE | |

Each of these six factors determines a different function of language. Although we distinguish six basic aspects of language, we could, however, hardly find verbal messages that would fulfill only one function. The diversity lies not in a monopoly of some one of these several functions but in a different hierarchical order of functions. The verbal structure of a message depends primarily on the predominant function. But even though a set (*Einstellung*) toward the referent, an orientation toward the context—briefly, the so-called REFERENTIAL, “denotative,” “cognitive” function—is the leading task of numerous messages, the accessory participation of the other functions in such messages must be taken into account by the observant linguist.

The so-called EMOTIVE or “expressive” function, focused on the addresser, aims a direct expression of the speaker’s attitude toward what he is speaking about. It tends to produce an impression of a certain emotion, whether true or feigned; therefore, the term “emotive,” launched and advocated by Marty,⁶ has proved to be preferable to “emotional.” The purely emotive stratum in language is presented by the interjections. They differ from the means of referential language both by their sound pattern (peculiar sound sequences or even sounds elsewhere unusual) and by their syntactic role (they are not components but equivalents of sentences). “*Tut! Tut!* said McGinty”: the complete utterance of Conan Doyle’s⁷ character consists of two suction clicks. The emotive function, laid bare in the interjections, flavors to some extent all our utterances, on their phonic, grammatical, and lexical level. If we analyze language from the standpoint of the information it carries, we cannot restrict the notion of information to the cognitive aspect of language. A man, using expressive features to indicate his angry or ironic attitude, conveys ostensible information, and evidently this verbal behavior cannot be likened to such nonsemiotic, nutritive activities as “eating grapefruit” (despite Chatman’s bold simile).⁸ The difference between [big] and the emphatic prolongation of the vowel [bi:ɡ] is a conventional, coded linguistic feature like the difference between the short and long vowel in such Czech pairs as [vi] “you” and [vi:] “knows,” but in the latter pair the differential information is phonemic and in the former emotive. As long as we are interested in phonemic invariants, the English /i/ and /i:/ appear to be mere variants of one and the same phoneme, but if we are concerned with emotive units, the relation between the invariants and variants is reversed: length and shortness are invariants imple-

6. Anton Marty, *Untersuchungen zur Grundlegung der allgemeinen Grammatik und Sprachphilosophie*, I (Halle, 1908) [Jakobson’s note]. Marty (1847–1914), Austrian linguist.

7. Sir Arthur Conan Doyle (1859–1930), English novelist, best known for his tales featuring Sherlock Holmes; the quotation is from *The Valley of Fear* (1915).

8. Seymour Chatman (1928–2015) was another American participant in the *Style* conference. No reference to grapefruit occurs in his paper, which discusses the metrical contrasts between the poets John Donne and ALEXANDER POPE. Perhaps there was some connection between “segmental sound” and grapefruit segments.

mented by variable phonemes. Saporta's surmise that emotive difference is a nonlinguistic feature, "attributable to the delivery of the message and not to the message,"⁹ arbitrarily reduces the informational capacity of messages.

A former actor of Stanislavskij's¹ Moscow Theater told me how at his audition he was asked by the famous director to make forty different messages from the phrase *Segodnja večerom* (This evening), by diversifying its expressive tint. He made a list of some forty emotional situations, then emitted the given phrase in accordance with each of these situations, which his audience had to recognize only from the changes in the sound shape of the same two words. For our research work in the description and analysis of contemporary Standard Russian (under the auspices of the Rockefeller Foundation) this actor was asked to repeat Stanislavskij's test. He wrote down some fifty situations framing the same elliptic sentence and made of it fifty corresponding messages for a tape recording. Most of the messages were correctly and circumstantially decoded by Moscovite listeners. May I add that all such emotive cues easily undergo linguistic analysis.

Orientation toward the addressee, the CONATIVE function, finds its purest grammatical expression in the vocative and imperative, which syntactically, morphologically, and often even phonemically deviate from other nominal and verbal categories. The imperative sentences cardinaly differ from declarative sentences: the latter are and the former are not liable to a truth test. When in O'Neill's² play *The Fountain*, Nano "(in a fierce tone of command)" says "Drink!"—the imperative cannot be challenged by the question "is it true or not?" which may be, however, perfectly well asked after such sentences as "one drank," "one will drink," "one would drink." In contradistinction to the imperative sentences, the declarative sentences are convertible into interrogative sentences: "did one drink?," "will one drink?," "would one drink?"

The traditional model of language as elucidated particularly by Bühler³ was confined to these three functions—emotive, conative, and referential—and the three apexes of this model—the first person of the addresser, the second person of the addressee, and the "third person" properly (someone or something spoken of). Certain additional verbal functions can be easily inferred from this triadic model. Thus the magic, incantatory function is chiefly some kind of conversion of an absent or inanimate "third person" into an addressee of a conative message. "May this sty dry up, *tfu, tfu, tfu, tfu*" (Lithuanian spell).⁴ "Water, queen river, daybreak! Send grief beyond the blue sea, to the sea bottom, like a gray stone never to rise from the sea bottom, may grief never come to burden the light heart of God's servant, may grief be removed and sink away" (North Russian incantation).⁵ "Sun, stand thou still upon Gibeon; and thou, Moon, in the valley of Ajalon. And the sun stood still, and the moon stayed" (Joshua 10.12). We observe,

5. P. N. Rybnikov, *Pesni* (Moscow, 1910), III, 217–18 [Jakobson's note].

however, three further constitutive factors of verbal communication and three corresponding functions of language.

There are messages primarily serving to establish, to prolong, or to discontinue communication, to check whether the channel works ("Hello, do you hear me?"), to attract the attention of the interlocutor or to confirm his continued attention ("Are you listening?" or in Shakespearean diction, "Lend me your ears!"⁶—and on the other end of the wire "Um-hum!"). This set for contact, or in Malinowski's terms PHATIC function,⁷ may be displayed by a profuse exchange of ritualized formulas, by entire dialogues with the mere purport of prolonging communication. Dorothy Parker⁸ caught eloquent examples: "'Well!' the young man said. 'Well!' she said. 'Well, here we are,' he said. 'Here we are,' she said, 'Aren't we?' 'I should say we were,' he said, 'Eeyop! Here we are.' 'Well!' she said. 'Well!' he said, 'well.'" The endeavor to start and sustain communication is typical of talking birds; thus the phatic function of language is the only one they share with human beings. It is also the first verbal function acquired by infants; they are prone to communicate before being able to send or receive informative communication.

A distinction has been made in modern logic between two levels of language: "object language" speaking of objects and "metalanguage" speaking of language.⁹ But metalanguage is not only a necessary scientific tool utilized by logicians and linguists; it plays also an important role in our everyday language. Like Molière's Jourdain¹ who used prose without knowing it, we practice metalanguage without realizing the metalingual character of our operations. Whenever the addresser and/or the addressee need to check up whether they use the same code, speech is focused on the code: it performs a METALINGUAL (i.e., glossing) function. "I don't follow you—what do you mean?" asks the addressee, or in Shakespearean diction, "What is't thou say'st?"² And the addresser in anticipation of such recapturing question inquires: "Do you know what I mean?" Imagine such an exasperating dialogue: "The sophomore was plucked." "But what is *plucked*?" "*Plucked* means the same as *flunked*." "And *flunked*?" "*To be flunked is to fail an exam*." "And what is *sophomore*?" persists the interrogator innocent of school vocabulary. "A *sophomore* is (or means) a *second-year student*." All these equational sentences convey information merely about the lexical code of English; their function is strictly metalingual. Any process of language learning, in particular child acquisition of the mother tongue, makes wide use of such metalingual operations; and aphasia may often be defined as a loss of ability for metalingual operations.

I have brought up all the six factors involved in verbal communication except the message itself. The set (*Einstellung*) toward the message as

6. See Shakespeare, *Julius Caesar* (1599), 3.2.70.

7. Bronislaw Malinowski, "The Problem of Meaning in Primitive Languages," in *The Meaning of Meaning*, ed. C. K. Ogden and I. A. Richards, 9th ed. (New York, 1953), pp. 296–336 [Jakobson's note]. Malinowski (1884–1942), Polish-born American anthropologist.

8. American writer of light verse and short stories (1893–1967); the quoted dialogue is from the story "Here We Are" (1931).

9. Term introduced by Alfred Tarski, *Pojęcie prawdy w językach nauk dedukcyjnych* (Warsaw,

1933), and "Der Wahrheitsbegriff in den formalisierten Sprachen," *Studia Philosophica* 1 (1936) [Jakobson's note].

1. M. Jourdain is the protagonist of *Le Bourgeois gentilhomme* (1670, *The Would-be Gentleman*), a play by Molière (pen name of Jean-Baptiste Poquelin, 1622–1673); he is surprised to learn that he has been speaking prose all his life without knowing it.

2. See Shakespeare, *Antony and Cleopatra* (1606–07), 5.1.2; *King Lear* (1605), 5.3.246.

such, focus on the message for its own sake, is the POETIC function of language. This function cannot be productively studied out of touch with the general problems of language, and, on the other hand, the scrutiny of language requires a thorough consideration of its poetic function. Any attempt to reduce the sphere of the poetic function to poetry or to confine poetry to the poetic function would be a delusive oversimplification. The poetic function is not the sole function of verbal art but only its dominant, determining function, whereas in all other verbal activities it acts as a subsidiary, accessory constituent. This function, by promoting the palpability of signs, deepens the fundamental dichotomy of signs and objects. Hence, when dealing with the poetic function, linguistics cannot limit itself to the field of poetry.

"Why do you always say *Joan and Margery*, yet never *Margery and Joan*? Do you prefer Joan to her twin sister?" "Not at all, it just sounds smoother." In a sequence of two coordinate names, so far as no problems of rank interfere, the precedence of the shorter name suits the speaker, unaccountably for him, as a well-ordered shape for the message.

A girl used to talk about "the horrible Harry." "Why horrible?" "Because I hate him." "But why not *dreadful, terrible, frightful, disgusting*?" "I don't know why, but *horrible* fits him better." Without realizing it, she clung to the poetic device of paronomasia.³

The political slogan "I like Ike"/ay layk ayk/,⁴ succinctly structured, consists of three monosyllables and counts three diphthongs /ay/, each of them symmetrically followed by one consonantal phoneme, / .. l .. k .. k /. The makeup of the three words presents a variation: no consonantal phonemes in the first word, two around the diphthong in the second, and one final consonant in the third. A similar dominant nucleus /ay/ was noticed by Hymes in some of the sonnets of Keats.⁵ Both cola⁶ of the trisyllabic formula "I like / Ike" rhyme with each other, and the second of the two rhyming words is fully included in the first one (echo rhyme), /layk/ — /ayk/, a paronomastic image of a feeling which totally envelops its object. Both cola alliterate with each other, and the first of the two alliterating words is included in the second: /ay/ — /ayk/, a paronomastic image of the loving subject enveloped by the beloved object. The secondary, poetic function of this campaign slogan reinforces its impressiveness and efficacy.

As I said, the linguistic study of the poetic function must overstep the limits of poetry, and, on the other hand, the linguistic scrutiny of poetry cannot limit itself to the poetic function. The particularities of diverse poetic genres imply a differently ranked participation of the other verbal functions along with the dominant poetic function. Epic poetry, focused on the third person, strongly involves the referential function of language; the lyric, oriented toward the first person, is intimately linked with the emotive function; poetry of the second person is imbued with the conative function and is either supplicatory or exhortative, depending on whether the first person is subordinated to the second one or the second to the first.

3. A play on words that sound alike.

4. The 1952 campaign slogan of Dwight D. Eisenhower (U.S. president, 1953–61).

5. Dell H. Hymes, "Phonological Aspects of Style: Some English Sonnets," in *Style in Language*, pp.

123–26 [Jakobson's note]. Hymes (1927–2009), American anthropologist and linguist.

6. Sections of a sentence or rhythmical period (the plural of *colon*).

Now that our cursory description of the six basic functions of verbal communication is more or less complete, we may complement our scheme of the fundamental factors with a corresponding scheme of the functions:

What is the empirical linguistic criterion of the poetic function? In particular, what is the indispensable feature inherent in any piece of poetry? To answer this question we must recall the two basic modes of arrangement used in verbal behavior, *selection* and *combination*. If “child” is the topic of the message, the speaker selects one among the extant, more or less similar nouns like child, kid, youngster, tot, all of them equivalent in a certain respect, and then, to comment on this topic, he may select one of the semantically cognate verbs—sleeps, dozes, nods, naps. Both chosen words combine in the speech chain. The selection is produced on the basis of equivalence, similarity and dissimilarity, synonymy and antonymy, while the combination, the build-up of the sequence, is based on contiguity. *The poetic function projects the principle of equivalence from the axis of selection into the axis of combination*. Equivalence is promoted to the constitutive device of the sequence. In poetry one syllable is equalized with any other syllable of the same sequence; word stress is assumed to equal word stress, as unstress equals unstress; prosodic long is matched with long, and short with short; word boundary equals word boundary, no boundary equals no boundary; syntactic pause equals syntactic pause, no pause equals no pause. Syllables are converted into units of measure, and so are morae⁷ or stresses.

It may be objected that metalanguage also makes a sequential use of equivalent units when combining synonymic expressions into an equational sentence: A = A (“*Mare is the female of the horse*”). Poetry and metalanguage, however, are in diametrical opposition to each other: in metalanguage the sequence is used to build an equation, whereas in poetry the equation is used to build a sequence.

1960

From Two Aspects of Language and Two Types of Aphasic Disturbances

V. The Metaphoric and Metonymic Poles

The varieties of aphasia¹ are numerous and diverse, but all of them lie between the two polar types just described. Every form of aphasic disturbance consists in some impairment, more or less severe, of the faculty either

7. Short (unstressed) syllables.

1. Loss of the ability to use or understand speech.

for selection and substitution or for combination and contexture. The former affliction involves a deterioration of metalinguistic operations, while the latter damages the capacity for maintaining the hierarchy of linguistic units. The relation of similarity is suppressed in the former, the relation of contiguity in the latter type of aphasia. Metaphor is alien to the similarity disorder, and metonymy to the contiguity disorder.

The development of a discourse may take place along two different semantic lines: one topic may lead to another either through their similarity or through their contiguity. The metaphoric way would be the most appropriate term for the first case and the metonymic way for the second, since they find their most condensed expression in metaphor and metonymy respectively. In aphasia one or the other of these two processes is restricted or totally blocked—an effect which makes the study of aphasia particularly illuminating for the linguist. In normal verbal behavior both processes are continually operative, but careful observation will reveal that under the influence of a cultural pattern, personality, and verbal style, preference is given to one of the two processes over the other.

In a well-known psychological test, children are confronted with some noun and told to utter the first verbal response that comes into their heads. In this experiment two opposite linguistic predilections are invariably exhibited: the response is intended either as a substitute for or as a complement to the stimulus. In the latter case the stimulus and the response together form a proper syntactic construction, most usually a sentence. These two types of reaction have been labeled *substitutive* and *predicative*.

To the stimulus *hut* one response was *burnt out*; another is *a poor little house*. Both reactions are predicative; but the first creates a purely narrative context, while in the second there is a double connection with the subject *hut*: on the one hand, a positional (namely, syntactic) contiguity and, on the other, a semantic similarity.

The same stimulus produced the following substitutive reactions: the tautology *hut*; the synonyms *cabin* and *hovel*; the antonym *palace*; and the metaphors *den* and *burrow*. The capacity of two words to replace one another is an instance of positional similarity, and, in addition, all these responses are linked to the stimulus by semantic similarity (or contrast). Metonymical responses to the same stimulus, such as *thatch*, *litter*, or *poverty*, combine and contrast the positional similarity with semantic contiguity.

In manipulating these two kinds of connection (similarity and contiguity) in both their aspects (positional and semantic)—selecting, combining, and ranking them—an individual exhibits his personal style, his verbal predilections and preferences.

In verbal art the interaction of these two elements is especially pronounced. Rich material for the study of this relationship is to be found in verse patterns which require a compulsory *parallelism* between adjacent lines, for example in biblical poetry or in the Finnic and, to some extent, the Russian oral traditions. This provides an objective criterion of what in the given speech community acts as a correspondence. Since on any verbal level—morphemic, lexical, syntactic, and phraseological²—either of these

2. That is, pertaining respectively to the smallest meaningful sound, to individual words, to the structure of phrases and sentences, and to the organization of phrases into larger elements.

two relations (similarity and contiguity) can appear—and each in either of two aspects, an impressive range of possible configurations is created. Either of the two gravitational poles may prevail. In Russian lyrical songs, for example, metaphoric constructions predominate, while in the heroic epics the metonymic way is preponderant.

In poetry there are various motives which determine the choice between these alternants. The primacy of the metaphoric process in the literary schools of Romanticism and Symbolism has been repeatedly acknowledged, but it is still insufficiently realized that it is the predominance of metonymy which underlies and actually predetermines the so-called Realist trend, which belongs to an intermediary stage between the decline of Romanticism and the rise of Symbolism and is opposed to both. Following the path of contiguous relationships, the Realist author metonymically digresses from the plot to the atmosphere and from the characters to the setting in space and time. He is fond of synecdochic details. In the scene of Anna Karenina's suicide Tolstoj's³ artistic attention is focused on the heroine's handbag; and in *War and Peace* the synecdoches "hair on the upper lip" and "bare shoulders" are used by the same writer to stand for the female characters to whom these features belong.

The alternative predominance of one or the other of these two processes is by no means confined to verbal art. The same oscillation occurs in sign systems other than language. A salient example from the history of painting is the manifestly metonymical orientation of Cubism, where the object is transformed into a set of synecdoches; the Surrealist painters⁴ responded with a patently metaphorical attitude. Ever since the productions of D. W. Griffith,⁵ the art of the cinema, with its highly developed capacity for changing the angle, perspective, and focus of shots, has broken with the tradition of the theater and ranged an unprecedented variety of synecdochic close-ups and metonymic set-ups in general. In such motion pictures as those of Charlie Chaplin and Eisenstein,⁶ these devices in turn were overlaid by a novel, metaphoric montage with its lap dissolves—the filmic similes.

The bipolar structure of language (or other semiotic systems) and, in aphasia, the fixation on one of these poles to the exclusion of the other require systematic comparative study. The retention of either of these alternatives in the two types of aphasia must be confronted with the predominance of the same pole in certain styles, personal habits, current fashions, etc. A careful analysis and comparison of these phenomena with the whole syndrome of the corresponding type of aphasia is an imperative task for joint research by experts in psychopathology, psychology, linguistics, poetics, and semiotics, the general science of signs. The dichotomy discussed

3. Leo Tolstoy (1828–1910), Russian novelist and moral philosopher; his works include *Anna Karenina* (1873–76) and *War and Peace* (1864–69).

4. Members of an experimental literary and artistic movement founded in France in 1924; inspired in part by SIGMUND FREUD (1856–1939), surrealists sought to express subconscious thought and feeling. Cubism: early 20th-century art movement that attempted to present objects from all

points of view.

5. American film director and producer (1875–1948), a pioneer in motion pictures.

6. Cf. his striking essay "Dickens, Griffith, and We": Sergej Eisenstein, *Izbrannye stat'i* [Selected Articles] (Moscow, 1950) [Jakobson's note]. Chaplin (1889–1977), English actor and film director. Eisenstein (1898–1948), Russian film director, an early innovator in cinematic technique.

here appears to be of primal significance and consequence for all verbal behavior and for human behavior in general.⁷

To indicate the possibilities of the projected comparative research, I choose an example from a Russian folktale which employs parallelism as a comic device: "Thomas is a bachelor; Jeremiah is unmarried" (*Fomá xólost; Erjóma neženát*). Here the predicates in the two parallel clauses are associated by similarity: they are in fact synonymous. The subjects of both clauses are masculine proper names and hence morphologically similar, while on the other hand they denote two contiguous heroes of the same tale, created to perform identical actions and thus to justify the use of synonymous pairs of predicates. A somewhat modified version of the same construction occurs in a familiar wedding song in which each of the wedding guests is addressed in turn by his first name and patronymic: "Gleb is a bachelor; Ivanovič is unmarried." While both predicates here are again synonyms, the relationship between the two subjects is changed: both are proper names denoting the same man and are normally used contiguously as a mode of polite address.

In the quotation from the folktale, the two parallel clauses refer to two separate facts, the marital status of Thomas and the similar status of Jeremiah. In the verse from the wedding song, however, the two clauses are synonymous: they redundantly reiterate the celibacy of the same hero, splitting him into two verbal hypostases.⁸

The Russian novelist Gleb Ivanovič Uspenskij (1840–1902) in the last years of his life suffered from a mental illness involving a speech disorder. His first name and patronymic, *Gleb Ivanovič*, traditionally combined in polite intercourse, for him split into two distinct names designating two separate beings: Gleb was endowed with all his virtues, while Ivanovič, the name relating a son to his father, became the incarnation of all Uspenskij's vices. The linguistic aspect of this split personality is the patient's inability to use two symbols for the same thing, and it is thus a similarity disorder. Since the similarity disorder is bound up with the metonymical bent, an examination of the literary manner Uspenskij had employed as a young writer takes on particular interest. And the study of Anatolij Kamegulov, who analyzed Uspenskij's style, bears out our theoretical expectations. He shows that Uspenskij had a particular penchant for metonymy, and especially for synecdoche, and that he carried it so far that "the reader is crushed by the multiplicity of detail unloaded on him in a limited verbal space, and is physically unable to grasp the whole, so that the portrait is often lost."⁹

7. For the psychological and sociological aspects of this dichotomy, see Gregory Bateson's views on progression and selective integration and Talcott Parsons on the conjunction-disjunction dichotomy in child development: J. Ruesch and G. Bateson, *Communication, the Social Matrix of Psychiatry* (New York, 1951); T. Parsons and R. F. Bales, *Family Socialization and Interaction Process* (Glencoe, Ill., 1955) [Jakobson's note].

8. Concepts to which real identity is attributed. 9. A. Kamegulov, *Stil' Gleba Uspenskogo* (Leningrad, 1930), pp. 65, 145. One of such disintegrated portraits cited in the monograph: "From underneath an ancient straw cap, with a black

spot on its visor, peeked two braids resembling the tusks of a wild boar; a chin, grown fat and pendulous, had spread definitively over the greasy collar of the calico dicky and lay in a thick layer on the coarse collar of the canvas coat, firmly buttoned at the neck. From underneath this coat to the eyes of the observer protruded massive hands with a ring which had eaten into the fat finger, a cane with a copper top, a significant bulge of the stomach, and the presence of very broad pants, almost of a muslin quality, in the wide bottoms of which hid the toes of the boots" [Jakobson's note].

To be sure, the metonymical style in Uspenskij is obviously prompted by the prevailing literary canon of his time, late nineteenth-century "realism"; but the personal stamp of Gleb Invanovič made his pen particularly suitable for this artistic trend in its extreme manifestations and finally left its mark upon the verbal aspect of his mental illness.

A competition between both devices, metonymic and metaphoric, is manifest in any symbolic process, be it intrapersonal or social. Thus in an inquiry into the structure of dreams, the decisive question is whether the symbols and the temporal sequences used are based on contiguity (Freud's metonymic "displacement" and synecdochic "condensation")¹ or on similarity (Freud's "identification and symbolism"). The principles underlying magic rites have been resolved by Frazer² into two types: charms based on the law of similarity and those founded on association by contiguity. The first of these two great branches of sympathetic magic has been called "homoeopathic" or "imitative," and the second, "contagious" magic.³ This bipartition is indeed illuminating. Nonetheless, for the most part, the question of the two poles is still neglected, despite its wide scope and importance for the study of any symbolic behavior, especially verbal, and of its impairments. What is the main reason for this neglect?

Similarity in meaning connects the symbols of a metalanguage with the symbols of the language referred to. Similarity connects a metaphorical term with the term for which it is substituted. Consequently, when constructing a metalanguage to interpret tropes, the researcher possesses more homogeneous means to handle metaphor, whereas metonymy, based on a different principle, easily defies interpretation. Therefore nothing comparable to the rich literature on metaphor can be cited for the theory of metonymy. For the same reason, it is generally realized that Romanticism is closely linked with metaphor, whereas the equally intimate ties of Realism with metonymy usually remain unnoticed. Not only the tool of the observer but also the object of observation are responsible for the preponderance of metaphor over metonymy in scholarship. Since poetry is focused upon the sign, and pragmatical prose primarily upon the referent, tropes and figures were studied mainly as poetic devices. The principle of similarity underlies poetry; the metrical parallelism of lines or the phonic equivalence of rhyming words prompts the question of semantic similarity and contrast; there exist, for instance, grammatical and antigrammatical but never agrammatical rhymes. Prose, on the contrary, is forwarded essentially by contiguity. Thus for poetry, metaphor—and for prose, metonymy—is the line of least resistance and consequently the study of poetical tropes is directed chiefly toward metaphor. The actual bipolarity has been artificially replaced in these studies by an amputated, unipolar scheme which, strikingly enough, coincides with one of the two aphasic patterns, namely with the contiguity disorder.

FRIEDRICH A. HAYEK

1899–1992

As the intellectual godfather of neoliberalism, the political economist Friedrich A. Hayek fought tirelessly for the supremacy of the market in Western liberal democracies and against what he deemed socialism's dire threat to individual freedom. Hayek was a skilled polemicist and tireless organizer as well as an original thinker. He almost single-handedly created the "Chicago school" of economic thought after World War II. His work and that of the Chicago "boys" (as they are sometimes called) directly influenced both the Thatcherite revolution in 1980s Britain and the heavy-handed tactics employed by the International Monetary Fund between 1970 and 2000 to move Latin American and Eastern European economies away from protectionist and social welfare policies and toward "liberalization."

Hayek was born in Vienna, Austria, to an academically inclined family. He served in the Austrian artillery on the Italian front during World War I. After the war, he returned to Vienna to complete his education, studying with the economist Ludwig von Mises. Hayek spent the 1923–24 academic year at New York University. Upon returning to Vienna, Hayek and Mises worked together to found the "Austrian school" of economics, shaped by Mises's influential arguments against the possible success of planned economies. In 1931, Hayek was invited to spend a year as a visiting professor at the London School of Economics, then assumed a permanent post in 1932. All of his subsequent work was written in English, and he became a British citizen in 1938. In 1944, alarmed by the leftward turn of British politics (which brought the Labour Party to power in 1945), Hayek published his most famous and influential work, *The Road to Serfdom*. He argues that any form of socialism that involves state regulation or control of the economy must both lead to a drastic loss of liberty and prove economically disastrous. In 1947, Hayek formed the Mont Pelerin Society to help promulgate his free market ideas, and he accepted a teaching position at the University of Chicago in 1950. Among his most important American disciples, both based in Chicago, were Milton Friedman and Gary Becker. Hayek moved back to Europe permanently in 1962, teaching first at the University of Freiburg in Germany and then, following his retirement, as honorary professor at the University of Salzburg in his native Austria. He was awarded the Nobel Memorial Prize in Economics in 1974.

Our selection highlights two of Hayek's foundational positions: the identification of liberty as the primary, perhaps the only, political good, and the hostility to any notion of "social justice" tied to ideas of equal access to economic goods. Hayek insists that material equality cannot be achieved except at the intolerably high price of extensive governmental coercion. Like most postmodern thinkers, he understands differences among individual human subjects as inevitable and irreducible. He argues that the most benefit to any given society will result from letting those differences flourish. If individuals are free to develop their own talents and pursue their own interests, then society will be prosperous and stable. This argument constitutes Hayek's "liberalism"—his continuity with the work of Adam Smith (1723–1790) and John Stuart Mill (1806–1873). From Mill, we get the insistence that the *raison d'être* of government is to protect individual freedom; from Smith comes the notion that the untrammelled pursuit of individual interest redounds to the general benefit of all.

But Hayek, unlike Smith and Mill, has to deal with the leftist critique (first found in KARL MARX) that the freedoms offered by liberalism are only nominal, not substantial. For example, having the liberty to develop talents is worthless if one does not have enough to eat. Economic necessity often denies individuals the opportunity

to choose their professions or even the ability to avoid taking work that is hazardous to their health. Proponents of regulation are quick to point out the various coercions characteristic of nineteenth-century capitalism—child labor, subsistence wages, and long working hours in unsanitary conditions, as well as the periodic depressions that brought massive unemployment—that made government regulation of the economy and government provision of basic “safety net” benefits (social security, unemployment insurance, workmen’s compensation, minimum wage laws) standard practice in twentieth-century Western societies. Neoliberalism is the name for the attempt, which has gathered political momentum since 1970, to roll back those government programs in order to return to a more fully laissez-faire economy, as DAVID HARVEY details below. Hayek explains why citizens would not be much worse off in a neoliberal regime than they are in the post–World War II welfare state.

His explanation is rather surprising because it only partly aligns with the ideas of the politicians who have claimed him as their inspiration. Basically, Hayek asserts that markets, through a kind of “crowd wisdom,” provide knowledge about society’s needs along with incentives to meet those needs. In other words, the process of supply and demand, which is registered by fluctuations in prices, indicates desires; producers can then make money by working to service those desires. No individual or institution can access that knowledge. The attempt to control or command social production will necessarily lead to inefficiencies as too many unneeded things and too few needed things are produced. This epistemological argument is Hayek’s most important contribution to political economy. It is the basis for Margaret Thatcher’s famous assertion that “there is no alternative”: the market is the one and only way to meet society’s needs. For that reason, everything from health care to the supply of water to cities should be handed over to the market. Neoliberalism advocates the “privatization” of state-run services like the National Health Service in Britain or the public transportation and public schools in the United States. In our selection Hayek argues that distorting the market in order to increase economic equality will only hamper the production of goods and, thus, make everyone poorer. As he puts it elsewhere, “social justice is a mirage,” because all attempts to achieve it will only lessen economic well-being while also severely hampering liberty.

Hayek, however, takes his epistemological argument in a surprising direction. He tells us that justice is a moral term that points to our desire to reward merit and punish those who lack it. But we cannot know merit. It is a hidden, subjective thing. Only value is apparent, where “value” means the price set by the market for a particular good. Consumers pay for a commodity because it answers to a need or a desire. They have no interest in whether the person who made that commodity was a good person who worked hard or a talented ne’er-do-well. In short, Hayek acknowledges that the market is unjust; its results do not align in any predictable way with merit. There is no meritocracy, if the measure of merit remains people’s incomes or wealth. Furthermore, if we as a society decide that we want to provide health insurance to everyone, as Hayek suggests in *The Road to Serfdom*, we should do so. He simply states that such a decision has nothing to do with justice (the motive is more like charity) and, most importantly, that no citizen (as a matter of justice) is “entitled” to health care. The moral issues of justice and the functioning of markets have nothing to do with one another.

Hayek does, however, believe that justice requires what we today call “equal opportunity.” He always called himself a “liberal,” because he was a firm adherent of equality before the law. The law should treat everyone equally—and the inevitable result, he claims, is that people’s different abilities will gain them unequal economic outcomes. But that stance leads him to struggle with the issue of the extent to which those different outcomes are the result of different starting places. Today, a person born in America to a prosperous family has immensely better chances in life than someone born to an impoverished family in rural India. Even within the

United States, how is the law treating everyone equally if one child goes to an underfunded public school while another attends a much better one? In our selection, Hayek addresses the objection that differential access to education undercuts the notion that individual differences are the cause of unequal outcomes. His response is to argue that all societies depend on their best and brightest, on their elites, to produce the innovations that most benefit all members of those societies. Therefore, we should not do anything that curtails the production of elites. And he accuses those who wish to level the playing field of being motivated by envy, not by a sense of justice.

The stringent amorality of Hayek's view of the market complicates efforts to place him on the political spectrum. Those who label themselves neoliberals (especially in Europe) generally take this amoral position, simply calling on society to face up to the grim realities of the market, which at least gives us freedom even as its whims create winners and losers. But in the United States especially, conservatives (who tend to extol the free market) are much more moralistic, more likely to seek stricter government control of individual behavior (e.g., sexuality, drugs, immigration) and to see success in the market as proof of virtue. In other words, such conservative politicians believe fervently in meritocracy, which is why they can see the poor as deserving their destitution. As a matter of justice, the lazy and unproductive should suffer.

Criticisms of Hayek usually begin from his refusal to consider trade-offs. For him, every single instance of government regulation places us on the road to serfdom. But it is hardly obvious that child labor laws are an outrageous limitation on freedom—or that the limitation they represent is not far outweighed by the benefits. His addiction to either/or dichotomies similarly gets him into trouble when he discusses education. Inherited advantages clearly give some people access to a better education than others enjoy—a disparity that suggests some need for state action to right the balance, if everyone is to have equality of opportunity. But Hayek does not support any such action. Liberty as an absolute value, never to be limited in relation to other goods, produces an unjust (by Hayek's own admission) market-driven world that does not seem very attractive to critics of the market. The political dividing line is drawn, in many contemporary debates, between those who wish to mobilize political or state power to temper market outcomes and those who agree with Hayek that all interference in market processes not only hampers economic productivity but jeopardizes freedom.

From The Constitution of Liberty

Chapter 6. Equality, Value, and Merit

I have no respect for the passion for equality, which seems to me merely idealizing envy.

—Oliver Wendell Holmes Jr.¹

1. The great aim of the struggle for liberty has been equality before the law. This equality under the rules which the state enforces may be supplemented by a similar equality of the rules that men voluntarily obey in their

1. The quotation is taken from *The Holmes–Laski Letters*, ed. Mark DeWolfe Howe (Cambridge, Mass.: Harvard University Press, 1953), 2:942. Holmes (1841–1935), American legal historian

and Supreme Court justice. Except as indicated, all subsequent notes are Hayek's; some of his notes have been edited.

relations with one another. This extension of the principle of equality to the rules of moral and social conduct is the chief expression of what is commonly called the democratic spirit—and probably that aspect of it that does most to make inoffensive the inequalities that liberty necessarily produces.

Equality of the general rules of law and conduct, however, is the only kind of equality conducive to liberty and the only equality which we can secure without destroying liberty. Not only has liberty nothing to do with any other sort of equality, but it is even bound to produce inequality in many respects.² This is the necessary result and part of the justification of individual liberty: if the result of individual liberty did not demonstrate that some manners of living are more successful than others, much of the case for it would vanish.

It is neither because it assumes that people are in fact equal nor because it attempts to make them equal that the argument for liberty demands that government treat them equally. This argument not only recognizes that individuals are very different but in a great measure rests on that assumption. It insists that these individual differences provide no justification for government to treat them differently. And it objects to the differences in treatment by the state that would be necessary if persons who are in fact very different were to be assured equal positions in life.

Modern advocates of a more far-reaching material equality usually deny that their demands are based on any assumption of the factual equality of all men.³ It is nevertheless still widely believed that this is the main justification for such demands. Nothing, however, is more damaging to the demand for equal treatment than to base it on so obviously untrue an assumption as that of the factual equality of all men. To rest the case for equal treatment of national or racial minorities on the assertion that they do not differ from other men is implicitly to admit that factual inequality would justify unequal treatment; and the proof that some differences do, in fact, exist would not be long in forthcoming. It is of the essence of the demand for equality before the law that people should be treated alike in spite of the fact that they are different.

2. The boundless variety of human nature—the wide range of differences in individual capacities and potentialities—is one of the most distinctive facts about the human species. Its evolution has made it probably the most variable among all kinds of creatures. It has been well said that “biology, with variability as its cornerstone, confers on every human individual a unique set of attributes which give him a dignity he could not otherwise possess. Every newborn baby is an unknown quantity so far as potentialities are concerned because there are many thousands of unknown interrelated genes and gene patterns which contribute to his makeup. As a result of nature and nurture the newborn infant may become one of the greatest men or women ever to have lived. In every case he or she has the making of a distinctive individual. . . . If the differences are not very important, then freedom is not very important and the idea of individual worth is not very

2. Hayek's note here quotes the German legal scholar Gerhard Leibholz (1901–1982): “Freedom necessarily creates inequality and equality necessarily creates unfreedom” [editor's note].

3. See, e.g., Richard Henry Tawney, *Equality* (London: Allen and Unwin, 1929), pp. 47–70. [Tawney (1880–1962), English economic historian and Christian socialist—editor's note.]

important.”⁴ The writer justly adds that the widely held uniformity theory of human nature, “which on the surface appears to accord with democracy . . . would in time undermine the very basic ideals of freedom and individual worth and render life as we know it meaningless.”⁵

It has been the fashion in modern times to minimize the importance of congenital differences between men and to ascribe all the important differences to the influence of environment.⁶ However important the latter may be, we must not overlook the fact that individuals are very different from the outset. The importance of individual differences would hardly be less if all people were brought up in very similar environments. As a statement of fact, it just is not true that “all men are born equal.” We may continue to use this hallowed phrase to express the ideal that legally and morally all men ought to be treated alike. But if we want to understand what this ideal of equality can or should mean, the first requirement is that we free ourselves from the belief in factual equality.

From the fact that people are very different it follows that, if we treat them equally, the result must be inequality in their actual position,⁷ and that the only way to place them in an equal position would be to treat them differently. Equality before the law and material equality are therefore not only different but are in conflict with each other; and we can achieve either the one or the other, but not both at the same time. The equality before the law which freedom requires leads to material inequality. Our argument will be that, though where the state must use coercion for other reasons, it should treat all people alike, the desire of making people more alike in their condition cannot be accepted in a free society as a justification for further and discriminatory coercion.

We do not object to equality as such. It merely happens to be the case that a demand for equality is the professed motive of most of those who desire to impose upon society a preconceived pattern of distribution. Our objection is against all attempts to impress upon society a deliberately chosen pattern of distribution, whether it be an order of equality or of inequality. We shall indeed see that many of those who demand an extension of equality do not really demand equality but a distribution that conforms more closely to human conceptions of individual merit and that their desires are as irreconcilable with freedom as the more strictly egalitarian demands.

If one objects to the use of coercion in order to bring about a more even or a more just distribution, this does not mean that one does not regard these as desirable. But if we wish to preserve a free society, it is essential that we recognize that the desirability of a particular object is not sufficient justification for the use of coercion. One may well feel attracted to a community in which there are no extreme contrasts between rich and poor and may welcome the fact that the general increase in wealth seems gradually to reduce those

5. Williams, *Free and Unequal*, p. 152.

6. See the description of this fashionable view in Horace Mever Kallen’s article “Behaviorism,” in

Encyclopedia of the Social Sciences, ed. Edwin R. A. Seligman and Alvin Johnson (New York: Macmillan, 1930), 2:498: “At birth human infants, regardless of their heredity, are as equal as Fords.”

7. Cf. Plato, *Laws* 7.757a: “To unequals equals become unequal.” [PLATO (ca. 427–ca. 347 B.C.E.), Greek philosopher—editor’s note.]

differences. I fully share these feelings and certainly regard the degree of social equality that the United States has achieved as wholly admirable.

There also seems no reason why these widely felt preferences should not guide policy in some respects. Wherever there is a legitimate need for government action and we have to choose between different methods of satisfying such a need, those that incidentally also reduce inequality may well be preferable. If, for example, in the law of intestate succession one kind of provision will be more conducive to equality than another, this may be a strong argument in its favor. It is a different matter, however, if it is demanded that, in order to produce substantive equality, we should abandon the basic postulate of a free society, namely, the limitation of all coercion by equal law. Against this we shall hold that economic inequality is not one of the evils which justify our resorting to discriminatory coercion or privilege as a remedy.

3. Our contention rests on two basic propositions which probably need only be stated to win fairly general assent. The first of them is an expression of the belief in a certain similarity of all human beings: it is the proposition that no man or group of men possesses the capacity to determine conclusively the potentialities of other human beings and that we should certainly never trust anyone invariably to exercise such a capacity. However great the differences between men may be, we have no ground for believing that they will ever be so great as to enable one man's mind in a particular instance to comprehend fully all that another responsible man's mind is capable of.

The second basic proposition is that the acquisition by any member of the community of additional capacities to do things which may be valuable must always be regarded as a gain for that community. It is true that particular people may be worse off because of the superior ability of some new competitor in their field; but any such additional ability in the community is likely to benefit the majority. This implies that the desirability of increasing the abilities and opportunities of any individual does not depend on whether the same can also be done for the others—provided, of course, that others are not thereby deprived of the opportunity of acquiring the same or other abilities which might have been accessible to them had they not been secured by that individual.

Egalitarians generally regard differently those differences in individual capacities which are inborn and those which are due to the influences of environment, or those which are the result of "nature" and those which are the result of "nurture." Neither, be it said at once, has anything to do with moral merit.⁸ Though either may greatly affect the value which an individual has for his fellows, no more credit belongs to him for having been born with desirable qualities than for having grown up under favorable circumstances. The distinction between the two is important only because the former advantages are due to circumstances clearly beyond human control, while the latter are due to factors which we might be able to alter. The important question is whether there is a case for so changing our institutions as to eliminate as much as possible those advantages due to environment. Are we to agree that "all inequalities that rest on birth and inherited

8. Cf. Frank Hyneman Knight, *Freedom and Reform: Essays in Economics and Social Philosophy* (New York: Harper and Brothers, 1947), p. 151: "There is no visible reason why anyone is more or

less entitled to the earnings of inherited personal capacities than to those of inherited property in any other form."

property ought to be abolished and none remain unless it is an effect of superior talent and industry?"⁹

The fact that certain advantages rest on human arrangements does not necessarily mean that we could provide the same advantages for all or that, if they are given to some, somebody else is thereby deprived of them. The most important factors to be considered in this connection are the family, inheritance, and education, and it is against the inequality which they produce that criticism is mainly directed. They are, however, not the only important factors of environment. Geographic conditions such as climate and landscape, not to speak of local and sectional differences in cultural and moral traditions, are scarcely less important. We can, however, consider here only the three factors whose effects are most commonly impugned.

So far as the family is concerned, there exists a curious contrast between the esteem most people profess for the institution and their dislike of the fact that being born into a particular family should confer on a person special advantages. It seems to be widely believed that, while useful qualities which a person acquires because of his native gifts under conditions which are the same for all are socially beneficial, the same qualities become somehow undesirable if they are the result of environmental advantages not available to others. Yet it is difficult to see why the same useful quality which is welcomed when it is the result of a person's natural endowment should be less valuable when it is the product of such circumstances as intelligent parents or a good home.

The value which most people attach to the institution of the family rests on the belief that, as a rule, parents can do more to prepare their children for a satisfactory life than anyone else. This means not only that the benefits which particular people derive from their family environment will be different but also that these benefits may operate cumulatively through several generations. What reason can there be for believing that a desirable quality in a person is less valuable to society if it has been the result of family background than if it has not? There is, indeed, good reason to think that there are some socially valuable qualities which will be rarely acquired in a single generation but which will generally be formed only by the continuous efforts of two or three. This means simply that there are parts of the cultural heritage of a society that are more effectively transmitted through the family.¹ Granted this, it would be unreasonable to deny that a society is likely to get a better elite if ascent is not limited to one generation, if individuals are not deliberately made to start from the same level, and if children are not deprived of the chance to benefit from the better education and material environment which their parents may be able to provide. To admit this is merely to recognize that belonging to a particular family is part of the individual personality, that society is

9. This is the position of Richard Henry Tawney as summarized by John Petrov Plamenatz, "Equality of Opportunity," in *Aspects of Human Equality: Fifteenth Symposium*, ed. Lyman Bryson (New York: distributed by Harper, 1956), p. 100.

1. See William Graham Sumner, *Andrew Jackson* (Boston: Houghton Mifflin, 1899), pp. 24–45: "True honor, truthfulness, suppression of individual personal feelings, self-control and courtesy are inculcated best, if not exclusively, by the constant precept and example, in earliest childhood

of high-bred parents and relatives. There is nothing on earth which it costs more labor to produce than a high-bred man. It is also indispensable that home discipline and training ingrain into the character of men the most solid and valuable elements and that, without such training, more civilization means better food and clothes rather than better men." [Sumner (1840–1910), American economist and influential sociologist whose views were libertarian, social Darwinist, and anti-imperialist—editor's note.]

made up as much of families as of individuals, and that the transmission of the heritage of civilization within the family is as important a tool in man's striving toward better things as is the heredity of beneficial physical attributes.

4. Many people who agree that the family is desirable as an instrument for the transmission of morals, tastes, and knowledge still question the desirability of the transmission of material property. Yet there can be little doubt that, in order that the former may be possible, some continuity of standards, of the external forms of life, is essential, and that this will be achieved only if it is possible to transmit not only immaterial but also material advantages. There is, of course, neither greater merit nor any greater injustice involved in some people being born to wealthy parents than there is in others being born to kind or intelligent parents. The fact is that it is no less of an advantage to the community if at least some children can start with the advantages which at any given time only wealthy homes can offer than if some children inherit great intelligence or are taught better morals at home.

We are not concerned here with the chief argument for private inheritance, namely, that it seems essential as a means to preserve the dispersal in the control of capital and as an inducement for its accumulation. Rather, our concern here is whether the fact that it confers unmerited benefits on some is a valid argument against the institution. It is unquestionably one of the institutional causes of inequality. In the present context we need not inquire whether liberty demands unlimited freedom of bequest. Our problem here is merely whether people ought to be free to pass on to children or others such material possessions as will cause substantial inequality.

Once we agree that it is desirable to harness the natural instincts of parents to equip the new generation as well as they can, there seems no sensible ground for limiting this to non-material benefits. The family's function of passing on standards and traditions is closely tied up with the possibility of transmitting material goods. And it is difficult to see how it would serve the true interest of society to limit the gain in material conditions to one generation.

There is also another consideration which, though it may appear somewhat cynical, strongly suggests that if we wish to make the best use of the natural partiality of parents for their children, we ought not to preclude the transmission of property. It seems certain that among the many ways in which those who have gained power and influence might provide for their children, the bequest of a fortune is socially by far the cheapest. Without this outlet, these men would look for other ways of providing for their children, such as placing them in positions which might bring them the income and the prestige that a fortune would have done; and this would cause a waste of resources and an injustice much greater than is caused by the inheritance of property. Such is the case with all societies in which inheritance of property does not exist, including the Communist. Those who dislike the inequalities caused by inheritance should therefore recognize that, men being what they are, it is the least of evils, even from their point of view.

5. Though inheritance used to be the most widely criticized source of inequality, it is today probably no longer so. Egalitarian agitation now tends

to concentrate on the unequal advantages due to differences in education. There is a growing tendency to express the desire to secure equality of conditions in the claim that the best education we have learned to provide for some should be made gratuitously available for all and that, if this is not possible, one should not be allowed to get a better education than the rest merely because one's parents are able to pay for it, but only those and all those who can pass a uniform test of ability should be admitted to the benefits of the limited resources of higher education.

The problem of educational policy raises too many issues to allow of their being discussed incidentally under the general heading of equality. We shall have to devote a separate chapter to them at the end of this book. For the present we shall only point out that enforced equality in this field can hardly avoid preventing some from getting the education they otherwise might. Whatever we might do, there is no way of preventing those advantages which only some can have, and which it is desirable that some should have, from going to people who neither individually merit them nor will make as good a use of them as some other person might have done. Such a problem cannot be satisfactorily solved by the exclusive and coercive powers of the state.

It is instructive at this point to glance briefly at the change that the ideal of equality has undergone in this field in modern times. A hundred years ago, at the height of the classical liberal movement, the demand was generally expressed by the phrase *la carrière ouverte aux talents*.² It was a demand that all man-made obstacles to the rise of some should be removed, that all privileges of individuals should be abolished, and that what the state contributed to the chance of improving one's conditions should be the same for all. That so long as people were different and grew up in different families this could not assure an equal start was fairly generally accepted. It was understood that the duty of government was not to ensure that everybody had the same prospect of reaching a given position but merely to make available to all on equal terms those facilities which in their nature depended on government action. That the results were bound to be different, not only because the individuals were different, but also because only a small part of the relevant circumstances depended on government action, was taken for granted.

This conception that all should be allowed to try has been largely replaced by the altogether different conception that all must be assured an equal start and the same prospects. This means little less than that the government, instead of providing the same circumstances for all, should aim at controlling all conditions relevant to a particular individual's prospects and so adjust them to his capacities as to assure him of the same prospects as everybody else. Such deliberate adaptation of opportunities to individual aims and capacities would, of course, be the opposite of freedom. Nor could it be justified as a means of making the best use of all available knowledge except on the assumption that government knows best how individual capacities can be used.

When we inquire into the justification of these demands, we find that they rest on the discontent that the success of some people often produces in those that are less successful, or, to put it bluntly, on envy. The modern

2. The career open to the talents (French), a phrase attributed to Napoleon (1769–1821), emperor of the French, and associated with the

rise of the middle class following the French Revolution [editor's note].

tendency to gratify this passion and to disguise it in the respectable garment of social justice is developing into a serious threat to freedom. Recently an attempt was made to base these demands on the argument that it ought to be the aim of politics to remove all sources of discontent.³ This would, of course, necessarily mean that it is the responsibility of government to see that nobody is healthier or possesses a happier temperament, a better-suited spouse or more prospering children, than anybody else. If really all unfulfilled desires have a claim on the community, individual responsibility is at an end. However human, envy is certainly not one of the sources of discontent that a free society can eliminate. It is probably one of the essential conditions for the preservation of such a society that we do not countenance envy, not sanction its demands by camouflaging it as social justice, but treat it, in the words of John Stuart Mill, as “that most anti-social and odious of all passions.”⁴

6. While most of the strictly egalitarian demands are based on nothing better than envy, we must recognize that much that on the surface appears as a demand for greater equality is in fact a demand for a juster distribution of the good things of this world and springs therefore from much more creditable motives. Most people will object not to the bare fact of inequality but to the fact that the differences in reward do not correspond to any recognizable differences in the merits of those who receive them. The answer commonly given to this is that a free society on the whole achieves this kind of justice.⁵ This, however, is an indefensible contention if by justice is meant proportionality of reward to moral merit. Any attempt to found the case for freedom on this argument is very damaging to it, since it concedes that material rewards ought to be made to correspond to recognizable merit and then opposes the conclusion that most people will draw from this by an assertion which is untrue. The proper answer is that in a free system it is neither desirable nor practicable that material rewards should be made generally to correspond to what men recognize as merit and that it is an essential characteristic of a free society that an individual's position should not necessarily depend on the views that his fellows hold about the merit he has acquired.

This contention may appear at first so strange and even shocking that I will ask the reader to suspend judgment until I have further explained the distinc-

4. John Stuart Mill, “On Liberty” [1859], in *On Liberty and Considerations on Representative Government*, ed. Ronald Buchanan McCallum (Oxford: Blackwell, 1946), p. 70. [Mill (1806–1873), English philosopher and economist—editor's note.]

5. Cf. Walter Bryce Gallie, “Liberal Morality and Socialist Morality,” in *Philosophy, Politics, and Society*, ed. Peter Laslett (Oxford: Blackwell, 1956), pp. 123–35. The author represents it as the essence of “liberal morality” that it claims that rewards are equal to merit in a free society. This was the position of some nineteenth-century liberals which often weakened their argument. A characteristic example is William Graham Sumner, *What Social Classes Owe to Each Other* (New York: Harper and Brothers, 1883), p. 164. Sumner argued that if all “have equal chances so far as chances are provided or limited by society,” this

will “produce inequal results—that is, results which shall be proportioned to the merits of individuals.” This is true only if “merit” is used in the sense in which we have used “value,” without any moral connotation, but certainly not if it is meant to suggest proportionality to any endeavor to do the good or right thing, or to any subjective effort to conform to an ideal standard. But, as we shall presently see, Mr. Gallie is right that, in the Aristotelian terms he uses, liberalism aims at commutative justice and socialism at distributive justice. But, like most socialists, he does not see that distributive justice is irreconcilable with freedom in the choice of one's activities: it is the justice of a hierarchic organization, not of a free society. [“Commutative justice” refers to the determinate rules governing the relation of one individual to another (e.g., criminal laws or laws enforcing contracts), while “distributive justice” refers to the broader and less exact question of what a community (whether figured as state, society, church, or family) owes to its members—editor's note.]

tion between value and merit.⁶ The difficulty in making the point clear is due to the fact that the term “merit,” which is the only one available to describe what I mean, is also used in a wider and vaguer sense. It will be used here exclusively to describe the attributes of conduct that make it deserving of praise, that is, the moral character of the action and not the value of the achievement.⁷

As we have seen throughout our discussion, the value that the performance or capacity of a person has to his fellows has no necessary connection with its ascertainable merit in this sense. The inborn as well as the acquired gifts of a person clearly have a value to his fellows which does not depend on any credit due to him for possessing them. There is little a man can do to alter the fact that his special talents are very common or exceedingly rare. A good mind or a fine voice, a beautiful face or a skilful hand, and a ready wit or an attractive personality are in a large measure as independent of a person’s efforts as the opportunities or the experiences he has had. In all these instances the value which a person’s capacities or services have for us and for which he is recompensed has little relation to anything that we can call moral merit or deserts. Our problem is whether it is desirable that people should enjoy advantages in proportion to the benefits which their fellows derive from their activities or whether the distribution of these advantages should be based on other men’s views of their merits.

Reward according to merit must in practice mean reward according to assessable merit, merit that other people can recognize and agree upon and not merit merely in the sight of some higher power. Assessable merit in this sense presupposes that we can ascertain that a man has done what some accepted rule of conduct demanded of him and that this has cost him some pain and effort. Whether this has been the case cannot be judged by the result: merit is not a matter of the objective outcome but of subjective effort. The attempt to achieve a valuable result may be highly meritorious but a complete failure, and full success may be entirely the result of accident and thus without merit. If we know that a man has done his best, we will often wish to see him rewarded irrespective of the result; and if we know that a most valuable achievement is almost entirely due to luck or favorable circumstances, we will give little credit to the author.

We may wish that we were able to draw this distinction in every instance. In fact, we can do so only rarely with any degree of assurance. It is possible only where we possess all the knowledge which was at the disposal of the

6. Although I believe that this distinction between merit and value is the same as that which Aristotle and Thomas Aquinas had in mind when they distinguished “distributive justice” from “commutative justice,” I prefer not to tie up the discussion with the difficulties and confusions which in the course of time have become associated with these traditional concepts. That what we call here “reward according to merit” corresponds to the Aristotelian distributive justice seems clear. The difficult concept is “commutative justice,” and to speak of justice in this sense seems always to cause a little confusion. [ARISTOTLE (384–322 B.C.E.), Greek philosopher. THOMAS AQUINAS (1225–1274), Italian-born medieval theologian and philosopher—editor’s note.]

7. The terminological difficulties arise from the fact that we use the word merit also in an objective sense and will speak of the “merit” of an

idea, a book, or a picture, irrespective of the merit acquired by the person who has created them. Sometimes the word is also used to describe what we regard as the “true” value of some achievement as distinguished from its market value. Yet even a human achievement which has the greatest value or merit in this sense is not necessarily proof of moral merit on the part of him to whom it is due. It seems that our use has the sanction of the philosophical tradition. Cf., for instance, David Hume, *A Treatise of Human Nature* [1739], ed. Thomas Hill Green and Thomas Hill Green (London: Longmans, Green, 1880), [bk. 3, pt. 2, sec. 1.] 2:252: “The external performance has no merit. We must look within to find the moral quality. . . . The ultimate object of our praise and approbation is the motive that produced them.” [HUME (1711–1776), Scottish philosopher—editor’s note.]

acting person, including a knowledge of his skill and confidence, his state of mind and his feelings, his capacity for attention, his energy and persistence, etc. The possibility of a true judgment of merit thus depends on the presence of precisely those conditions whose general absence is the main argument for liberty. It is because we want people to use knowledge which we do not possess that we let them decide for themselves. But insofar as we want them to be free to use capacities and knowledge of facts which we do not have, we are not in a position to judge the merit of their achievements. To decide on merit presupposes that we can judge whether people have made such use of their opportunities as they ought to have made and how much effort of will or self-denial this has cost them; it presupposes also that we can distinguish between that part of their achievement which is due to circumstances within their control and that part which is not.

7. The incompatibility of reward according to merit with freedom to choose one's pursuit is most evident in those areas where the uncertainty of the outcome is particularly great and our individual estimates of the chances of various kinds of effort very different.⁸ In those speculative efforts which we call "research" or "exploration," or in economic activities which we commonly describe as "speculation," we cannot expect to attract those best qualified for them unless we give the successful ones all the credit or gain, though many others may have striven as meritoriously. For the same reason that nobody can know beforehand who will be the successful ones, nobody can say who has earned greater merit. It would clearly not serve our purpose if we let all who have honestly striven share in the prize. Moreover, to do so would make it necessary that somebody have the right to decide who is to be allowed to strive for it. If in their pursuit of uncertain goals people are to use their own knowledge and capacities, they must be guided, not by what other people think they ought to do, but by the value others attach to the result at which they aim.

What is so obviously true about those undertakings which we commonly regard as risky is scarcely less true of any chosen object we decide to pursue. Any such decision is beset with uncertainty, and if the choice is to be as wise as it is humanly possible to make it, the alternative results anticipated must be labeled according to their value. If the remuneration did not correspond to the value that the product of a man's efforts has for his fellows, he would have no basis for deciding whether the pursuit of a given object is worth the effort and risk. He would necessarily have to be told what to do, and some other person's estimate of what was the best use of his capacities would have to determine both his duties and his remuneration.⁹

8. Cf. the important essay by Armen Albert Alchian, "Uncertainty, Evolution, and Economic Theory," *Journal of Political Economy* 58 (1950): 211–21, esp. 213–14, sec. 2, headed "Success Is Based on Results, Not Motivation."

9. It is often maintained that justice requires that remuneration be proportional to the unpleasantness of the job and that for this reason the street cleaner or the sewage worker ought to be paid more than the doctor or office worker. This, indeed, would seem to be the consequence of the principle of remuneration according to merit (or "distributive justice"). In a market such a result would come about only if all people

were equally skillful in all jobs so that those who could earn as much as others in the more pleasant occupations would have to be paid more to undertake the distasteful ones. In the actual world those unpleasant jobs provide those whose usefulness in the more attractive jobs is small an opportunity to earn more than they could elsewhere. That persons who have little to offer their fellows should be able to earn an income similar to that of the rest only at a much greater sacrifice is inevitable in any arrangement under which the individual is allowed to choose his own sphere of usefulness.

The fact is, of course, that we do not wish people to earn a maximum of merit but to achieve a maximum of usefulness at a minimum of pain and sacrifice and therefore a minimum of merit. Not only would it be impossible for us to reward all merit justly, but it would not even be desirable that people should aim chiefly at earning a maximum of merit. Any attempt to induce them to do this would necessarily result in people being rewarded differently for the same service. And it is only the value of the result that we can judge with any degree of confidence, not the different degrees of effort and care that it has cost different people to achieve it.

The prizes that a free society offers for the result serve to tell those who strive for them how much effort they are worth. However, the same prizes will go to all those who produce the same result, regardless of effort. What is true here of the remuneration for the same services rendered by different people is even more true of the relative remuneration for different services requiring different gifts and capacities: they will have little relation to merit. The market will generally offer for services of any kind the value they will have for those who benefit from them; but it will rarely be known whether it was necessary to offer so much in order to obtain these services, and often, no doubt, the community could have had them for much less. The pianist who was reported not long ago to have said that he would perform even if he had to pay for the privilege probably described the position of many who earn large incomes from activities which are also their chief pleasure.

8. Though most people regard as very natural the claim that nobody should be rewarded more than he deserves for his pain and effort, it is nevertheless based on a colossal presumption. It presumes that we are able to judge in every individual instance how well people use the different opportunities and talents given to them and how meritorious their achievements are in the light of all the circumstances which have made them possible. It presumes that some human beings are in a position to determine conclusively what a person is worth and are entitled to determine what he may achieve. It presumes, then, what the argument for liberty specifically rejects: that we can and do know all that guides a person's action.

A society in which the position of the individuals was made to correspond to human ideas of moral merit would therefore be the exact opposite of a free society. It would be a society in which people were rewarded for duty performed instead of for success, in which every move of every individual was guided by what other people thought he ought to do, and in which the individual was thus relieved of the responsibility and the risk of decision. But if nobody's knowledge is sufficient to guide all human action, there is also no human being who is competent to reward all efforts according to merit.

In our individual conduct we generally act on the assumption that it is the value of a person's performance and not his merit that determines our obligation to him. Whatever may be true in more intimate relations, in the ordinary business of life we do not feel that, because a man has rendered us a service at a great sacrifice, our debt to him is determined by this, so long as we could have had the same service provided with ease by somebody else. In our dealings with other men we feel that we are doing justice if we recompense value rendered with equal value, without inquiring what it might have cost the particular individual to supply us with these services.

What determines our responsibility is the advantage we derive from what others offer us, not their merit in providing it. We also expect in our dealings with others to be remunerated not according to our subjective merit but according to what our services are worth to them. Indeed, so long as we think in terms of our relations to particular people, we are generally quite aware that the mark of the free man is to be dependent for his livelihood not on other people's views of his merit but solely on what he has to offer them. It is only when we think of our position or our income as determined by "society" as a whole that we demand reward according to merit.

Though moral value or merit is a species of value, not all value is moral value, and most of our judgments of value are not moral judgments. That this must be so in a free society is a point of cardinal importance; and the failure to distinguish between value and merit has been the source of serious confusion. We do not necessarily admire all activities whose product we value; and in most instances where we value what we get, we are in no position to assess the merit of those who have provided it for us. If a man's ability in a given field is more valuable after thirty years' work than it was earlier, this is independent of whether these thirty years were most profitable and enjoyable or whether they were a time of unceasing sacrifice and worry. If the pursuit of a hobby produces a special skill or an accidental invention turns out to be extremely useful to others, the fact that there is little merit in it does not make it any less valuable than if the result had been produced by painful effort.

This difference between value and merit is not peculiar to any one type of society—it would exist anywhere. We might, of course, attempt to make rewards correspond to merit instead of value, but we are not likely to succeed in this. In attempting it, we would destroy the incentives which enable people to decide for themselves what they should do. Moreover, it is more than doubtful whether even a fairly successful attempt to make rewards correspond to merit would produce a more attractive or even a tolerable social order. A society in which it was generally presumed that a high income was proof of merit and a low income of the lack of it, in which it was universally believed that position and remuneration corresponded to merit, in which there was no other road to success than the approval of one's conduct by the majority of one's fellows, would probably be much more unbearable to the unsuccessful ones than one in which it was frankly recognized that there was no necessary connection between merit and success.¹

It would probably contribute more to human happiness if, instead of trying to make remuneration correspond to merit, we made clearer how uncertain is the connection between value and merit. We are probably all much too ready to ascribe personal merit where there is, in fact, only superior value. The possession by an individual or a group of a superior civilization or education certainly represents an important value and constitutes an

1. Cf. Crosland, *The Future of Socialism*, p. 235: "Even if all the failures could be convinced that they had an equal chance, their discontent would still not be assuaged; indeed it might actually be intensified. When opportunities are known to be unequal, and the selection clearly biased towards wealth or lineage, people can comfort themselves for failure by saying that they never had a proper

chance—the system was unfair, the scales too heavily weighted against them. But if the selection is obviously by merit, this source of comfort disappears, and failure induces a total sense of inferiority, with no excuse or consolation; and this, by a natural quirk of human nature, actually increases the envy and resentment at the success of others."

asset for the community to which they belong; but it usually constitutes little merit. Popularity and esteem do not depend more on merit than does financial success. It is, in fact, largely because we are so used to assuming an often non-existent merit wherever we find value that we balk when, in particular instances, the discrepancy is too large to be ignored.

There is every reason why we ought to endeavor to honor special merit where it has gone without adequate reward. But the problem of rewarding action of outstanding merit which we wish to be widely known as an example is different from that of the incentives on which the ordinary functioning of society rests. A free society produces institutions in which, for those who prefer it, a man's advancement depends on the judgment of some superior or of the majority of his fellows. Indeed, as organizations grow larger and more complex, the task of ascertaining the individual's contribution will become more difficult; and it will become increasingly necessary that, for many, merit in the eyes of the managers rather than the ascertainable value of the contribution should determine the rewards. So long as this does not produce a situation in which a single comprehensive scale of merit is imposed upon the whole society, so long as a multiplicity of organizations compete with one another in offering different prospects, this is not merely compatible with freedom but extends the range of choice open to the individual.

9. Justice, like liberty and coercion, is a concept which, for the sake of clarity, ought to be confined to the deliberate treatment of men by other men. It is an aspect of the intentional determination of those conditions of people's lives that are subject to such control. Insofar as we want the efforts of individuals to be guided by their own views about prospects and chances, the results of the individual's efforts are necessarily unpredictable, and the question as to whether the resulting distribution of incomes is just has no meaning.² Justice does require that those conditions of people's lives that are determined by government be provided equally for all. But equality of those conditions must lead to inequality of results. Neither the equal provision of particular public facilities nor the equal treatment of different partners in our voluntary dealings with one another will secure reward that is proportional to merit. Reward for merit is reward for obeying the wishes of others in what we do, not compensation for the benefits we have conferred upon them by doing what we thought best.

It is, in fact, one of the objections against attempts by government to fix income scales that the state must attempt to be just in all it does. Once the principle of reward according to merit is accepted as the just foundation for the distribution of incomes, justice would require that all who desire it should be rewarded according to that principle. Soon it would also be demanded that the same principle be applied to all and that incomes not in proportion to recognizable merit not be tolerated. Even an attempt merely to distinguish between those incomes or gains which are "earned" and those which are not will set up a principle which the state will have to try

2. See the interesting discussion in Robin George Collingwood, "Economics as a Philosophical Science," *International Journal of Ethics* 36 (1926), who concludes (p. 174): "A just price, a just wage, a just rate of interest, is a contradiction in terms. The question what a person ought to get in return

for his goods and labor is a question absolutely devoid of meaning. The only valid questions are what he *can* get in return for his goods or labor, and whether he ought to sell them at all." [Collingwood (1889–1943), English historian and philosopher—editor's note.]

to apply but cannot in fact apply generally.³ And every such attempt at deliberate control of some remunerations is bound to create further demands for new controls. The principle of distributive justice, once introduced, would not be fulfilled until the whole of society was organized in accordance with it. This would produce a kind of society which in all essential respects would be the opposite of a free society—a society in which authority decided what the individual was to do and how he was to do it.

10. In conclusion we must briefly look at another argument on which the demands for a more equal distribution are frequently based, though it is rarely explicitly stated. This is the contention that membership in a particular community or nation entitles the individual to a particular material standard that is determined by the general wealth of the group to which he belongs. This demand is in curious conflict with the desire to base distribution on personal merit. There is clearly no merit in being born into a particular community, and no argument of justice can be based on the accident of a particular individual's being born in one place rather than another. A relatively wealthy community in fact regularly confers advantages on its poorest members unknown to those born in poor communities. In a wealthy community the only justification its members can have for insisting on further advantages is that there is much private wealth that the government can confiscate and redistribute and that men who constantly see such wealth being enjoyed by others will have a stronger desire for it than those who know of it only abstractly, if at all.

There is no obvious reason why the joint efforts of the members of any group to ensure the maintenance of law and order and to organize the provision of certain services should give the members a claim to a particular share in the wealth of this group. Such claims would be especially difficult to defend where those who advanced them were unwilling to concede the same rights to those who did not belong to the same nation or community. The recognition of such claims on a national scale would in fact only create a new kind of collective (but not less exclusive) property right in the resources of the nation that could not be justified on the same grounds as individual property. Few people would be prepared to recognize the justice of these demands on a world scale. And the bare fact that within a given nation the majority had the actual power to enforce such demands, while in the world as a whole it did not yet have it, would hardly make them more just.

There are good reasons why we should endeavor to use whatever political organization we have at our disposal to make provision for the weak or infirm or for the victims of unforeseeable disaster. It may well be true that the most effective method of providing against certain risks common to all citizens of a state is to give every citizen protection against those risks. The level on which such provisions against common risks can be made will necessarily depend on the general wealth of the community.

3. It is, of course, possible to give the distinction between "earned" and "unearned" incomes, gains, or increments a fairly precise legal meaning, but it then rapidly ceases to correspond to the moral distinction which provides its justification. Any serious attempt to apply the moral distinction in practice soon meets the same insuperable difficulties in any attempt to assess subjective merit. How little these difficulties are generally understood by philosophers (except in rare instances, as that

quoted in the preceding note) is well illustrated by a discussion in Lizzie Susan Stebbing, *Thinking to Some Purpose* (Harmondsworth, UK: Penguin, 1939), p. 184, in which, as an illustration of a distinction which is clear but not sharp, she chooses that between "legitimate" and "excess" profits and asserts: "The distinction is clear between 'excess profits' (or 'profiteering') and 'legitimate profits,' although it is not a sharp distinction."

It is an entirely different matter, however, to suggest that those who are poor, merely in the sense that there are those in the same community who are richer, are entitled to a share in the wealth of the latter or that being born into a group that has reached a particular level of civilization and comfort confers a title to a share in all its benefits. The fact that all citizens have an interest in the common provision of some services is no justification for anyone's claiming as a right a share in all the benefits. It may set a standard for what some ought to be willing to give, but not for what anyone can demand.

National groups will become more and more exclusive as the acceptance of this view that we have been contending against spreads. Rather than admit people to the advantages that living in their country offers, a nation will prefer to keep them out altogether; for, once admitted, they will soon claim as a right a particular share in its wealth. The conception that citizenship or even residence in a country confers a claim to a particular standard of living is becoming a serious source of international friction. And since the only justification for applying the principle within a given country is that its government has the power to enforce it, we must not be surprised if we find the same principle being applied by force on an international scale. Once the right of the majority to the benefits that minorities enjoy is recognized on a national scale, there is no reason why this should stop at the boundaries of the existing states.

1960

LEO STRAUSS

1899–1973

Leo Strauss is one of the most interesting, complex, and controversial American philosophers and intellectuals of the mid-twentieth century. He wrote many important books and essays on major thinkers and topics in classical political philosophy; he developed and practiced a compelling theory of close reading and textual interpretation; and, through his seminars and lectures at the University of Chicago and elsewhere, he exercised a charismatic influence on many students who went on to prominent careers inside and outside the academy.

One of his best-known students, Allan Bloom, who wrote the best-seller *The Closing of the American Mind* (1987), observed that "those of us who knew him saw in him such a power of mind, such a unity and purpose of life, such a rare mixture of the human elements resulting in a harmonious expression of the virtues, moral and intellectual, that our account of him is likely to evoke disbelief or ridicule from those who have never experienced a man of this quality." Harry Jaffa, who over the span of seven years took nineteen courses with Strauss and who later became a renowned scholar of Abraham Lincoln's political thought, said that in a course taught by Strauss, "you felt that you had Plato or Aristotle or Cicero or Hobbes as your personal tutor. . . . Reading great books with Strauss was never an end in

itself, but part of the larger quest—the unfinished and unfinishable quest, for the crucial truth about the highest things.”

Leo Strauss was born in 1899 in the town of Kirchhain in central Germany. Raised in what he termed “a conservative, even orthodox Jewish home,” by age seventeen he was a fervent believer in Zionism, the movement begun in 1897 to establish a Jewish nation in Palestine. Strauss attended the gymnasium (an advanced secondary school) in nearby Marburg, completing his studies in spring 1917; after serving in the German army from July 1917 through World War I’s end in 1918, he pursued further academic work at the University of Hamburg, receiving his Ph.D. under the direction of the German-Jewish philosopher Ernst Cassirer in 1921. Strauss then did a postgraduate year at the University of Freiburg in southwest Germany, where his instructors included Edmund Husserl and MARTIN HEIDEGGER and where the students in Heidegger’s circle included Hans-George Gadamer and HANNAH ARENDT. Soon thereafter, Strauss met the Jewish scholar and philosopher Franz Rosenzweig, and in his early work he focused on Jewish themes and topics; he was a researcher for the Academy for the Science of Judaism in Berlin from 1925 to 1932. Strauss’s first book, written in German and published in 1930, was a study of the seventeenth-century Dutch philosopher BARUCH SPINOZA, whose radical theological views had led to his censure by and expulsion from Amsterdam’s Jewish community at age twenty-three.

In 1932–34, Strauss was a Rockefeller fellow and researcher in France and England. In June 1933, while in Paris, he married Mirjam Bernsohn, a widow with a young son; in 1946 they would adopt the daughter of Strauss’s deceased sister Bettina. Among Strauss’s intellectual connections during this period of his life were the German political theorist and jurist Carl Schmitt (who later became notorious as the legal philosopher of the Nazi movement), the German-born Israeli philosopher and historian Gershom Scholem, and the cultural critic and theorist WALTER BENJAMIN. But as the power and popularity of National Socialism rose under the leadership of Hitler, who put an end to parliamentary democracy shortly after becoming chancellor in January 1933, Strauss concluded that it was too dangerous for a Jewish philosopher to return to Germany. (Indeed, in 1942 all of his relatives still living in Germany were sent to a concentration camp, where they died.) No permanent academic position was available for him in England, so when his research fellowship at Cambridge University ended in 1937, he left for New York City. After spending a year at Columbia University as a research fellow, he joined the faculty of New York’s New School for Social Research, teaching political philosophy from 1938 to 1949; he became a U.S. citizen in 1944. During this time, Strauss published on Xenophon, PLATO, and classical philosophy. He also wrote on Jewish and Islamic thinkers, including the twelfth-century Jewish philosopher and rabbinic scholar MAIMONIDES, whose *Guide for the Perplexed* (1190) sought to reconcile Talmudic scripture with the philosophy of ARISTOTLE.

Strauss’s first book written in English, *On Tyranny: An Interpretation of Xenophon’s “Hiero”* (1948), was an eighty-page close commentary on a minor work by the ancient Greek historian. In this dialogue, Hiero, tyrant of Syracuse, and the lyric poet Simonides discuss legitimate and illegitimate rule, government by fear and coercion, and the prospects for human happiness. The contemporary context for Strauss’s book was charged, but he focused—as he did in most of his writings—on detailed exegesis of the text. Despite gesturing toward the “modern tyrannies,” as he called them, of Hitler’s Germany and Stalin’s Soviet Union in his introduction, Strauss nowhere in the text or notes refers to the dictators by name. In the 1950s he did express his understanding of tyranny in the period during and after the war more openly in his response to an essay on his book by Alexandre Kojève, France’s leading HEGEL scholar, and in letters that the two exchanged. Strauss wrote and taught about political issues, but he was by vocation and training an interpreter of texts, not a cultural critic or historian or journalist. His aim in the seminar room

and in publications, he often said, was to understand writers and philosophers as they understood themselves.

In 1949, Strauss moved to the University of Chicago, where he remained until 1968. During this phase of his career, he became widely known through two books, *Persecution and the Art of Writing* (1952) and *Natural Right and History* (1953). Many other books and essays followed, which often took the form of lengthy, rigorous textual explication. Strauss's final years were spent at Claremont Men's College in California and at St. John's College in Annapolis, Maryland, where—fittingly for Strauss—the curriculum is based on the study of the “great books,” the classic texts in all fields of the Western tradition.

For Strauss, philosophy was even more than a subject or a discipline—it was a way of life, of being in the world, and he was especially attracted to Plato and to the figure of Socrates. Strauss acknowledged the virtues and strengths of modern liberal democracy; he was writing while witnessing the murderous rise of fascism, Nazism, and Stalinism. But he was ambivalent about aspects of life and work in modern democracies, including mass education, which, in his view, overemphasized career training and moneymaking at the expense of philosophical inquiry and reflection. Strauss valued the idea and ideal of higher education for all, yet at the same time he was skeptical of it, for in his judgment it did not promote the study of the best that has been thought and said and did not foster excellence. Strauss believed that liberalism and mass culture leveled downward, thereby reducing commitment to the highest aspirations and to permanent truths. His student Allan Bloom noted that Strauss in his work as a scholar and teacher “was dedicated to intransigent seriousness as opposed to popularization.”

In his writing and teaching, Strauss approached texts meticulously and from a perspective that captivated many students and readers even as it baffled, and sometimes angered, many others, who found his claims unconvincing. Strauss emphasizes—as his central interpretive principle—that most of the great philosophers wrote in the midst of censorship and persecution, with free speech restricted or denied; they therefore were obliged to present truth indirectly, implicitly, through metaphor, parable, allusion, story, and myth. In addition, they often had to express their views in a deliberately obscure or flawed form: they trusted that readers—more specifically, an elite readership possessing deep knowledge—would perceive that the writer-philosopher in fact believed the opposite of what he stated. The great thinkers of the past, says Strauss, could have written plainly and simply, yet often in their work they chose not to, for by doing so they would have placed themselves in peril. When we read the texts of classical and political philosophy, we therefore must be attentive to the meanings between the lines, and give a special notice to passages that are abstruse, evasive, puzzling, ambiguous, for there the writer may be conveying to us his most important teaching.

This, for Strauss, is “esoteric writing,” intended for or likely to be understood by only a small number of people with specialized knowledge or interest. For readers in general, the writer of a philosophical text presents an “exoteric” political or religious argument that accords in large measure with religious or political orthodoxy. Subtle, perceptive readers will sense and see that this same text presents esoterically, in concealed form, a private unorthodox teaching. The text is not what it seems or what most readers take it to be. It must be this way, Strauss maintains, not only because of the perils of censorship and persecution (suffered by Socrates and Spinoza, among others) but also because the writers themselves realize that to be socially and politically responsible they must, in the short term, preserve the stability of the regime. Though political philosophers raise challenging questions and make provocative arguments, they do not want to incite disorder, chaos, or even revolution. Doing philosophy hence is very demanding and perhaps paradoxical, for both writers and readers. Philosophy is not for everyone, as its practitioners must exercise extreme concentration and discipline as they, in effect, write two texts

simultaneously, ensuring that one is properly interpreted by the few, highly trained readers capable of absorbing its lessons.

Strauss describes this approach to textual interpretation in essays, most notably "Persecution and the Art of Writing" (1941), and in his seminars. Such interpretive work is intricate and dense, and even devoted so-called Straussians differ about his views. Some have maintained that Strauss surely must have sought in his own work to practice the esoteric writing that he described in the texts of the great philosophers—placing his real meanings not on the surface but between the lines, visible only to highly attentive and aware readers.

Strauss was critical of historicism and relativism, which for him convey the erroneous belief that truth is conditional (i.e., dependent on context, time, and place) and that all value judgments are subjective. In *Natural Right and History*, he says that people in the United States have become too complacent and tolerant, unable or unwilling to speak on behalf of truth: "The majority among the learned who still adhere to the principles of the Declaration of Independence interpret these principles not as expressions of natural right but as an ideal, if not as an ideology or a myth." So absorbed have people become in the pursuit of material well-being and prosperity that they have forgotten what the permanent values are; as a result, they cannot argue for the superiority of the principles upon which the nation was founded and which they profess to believe. The way is open, says Strauss, for rule by force: might makes right. He stresses that our easy affirmations of freedom and tolerance can and will lead to indifference, cynicism, nihilism—the unprincipled notion that one regime, culture, or civilization is as good as any other.

Strauss's commitment to the permanent truths of justice and freedom have prompted some left and liberal critics to link him to the contemporary American neo-conservative movement and some of its leading figures, such as William J. Bennett, Irving Kristol, William Kristol, Robert Kagan, and Norman Podhoretz, and to advocates of an aggressive American foreign policy. Writers, intellectuals, and policy makers on the right are said to have taken to heart Strauss's critique of relativism, interpreting him as offering philosophical sanction and support for the claim that government leaders have the right, the duty, to wage relentless war against international enemies, terrorists, and nihilists and, if necessary for that end, to mislead and deceive the public. But while it is true that Plato speaks of the philosopher-king, and Machiavelli of the philosopher as an adviser to the prince, Strauss was not a political figure and he did not take part in political activity. He focused on textual commentary and pedagogy—when asked what he taught, he replied, "Old books"—and he should not be held responsible for the abuses and misuses of his interpretive work. As Gregory Bruce Smith has noted: "When one looks at Strauss's own large and complicated corpus, one primarily sees a great number of novel thought experiments. One sees a questioning of accepted orthodoxies and a desire to try to approach the phenomena of human existence afresh. . . . Philosophic questioning manifests itself in a refusal either to be dogmatic or to give in to a skepticism that is dogmatically relativist."

Our selection below, "What Is Liberal Education?," is a concise introduction to Strauss's views and values as a philosopher and teacher. Originally delivered in 1959 at the tenth annual graduation exercises of the University of Chicago's Basic Program of Liberal Education for Adults, it was printed by the University of Chicago Press and reprinted first in C. Scott Fletcher's collection *Education for Public Responsibility* (1961) and later in Strauss's *Liberalism Ancient and Modern* (1968), the source of our text. When first encountered, "What Is Liberal Education?" might seem familiar—yet another call for the study of the great books. In this respect it could bring to mind the Harvard Classics (1909), a fifty-one-volume collection of major works from world literature, compiled and edited by Harvard University president Charles W. Eliot and William A. Neilson, a professor of English. Even more strongly, it seems to resonate with curricular reforms in the 1920s and later—most

notably at Columbia University and the University of Chicago—led by University of Chicago president Robert M. Hutchins, the American philosopher and educator Mortimer Adler, the literature professor John Erskine, and others. Troubled by the increasing specialization they perceived in the kinds of courses taken by students, these reformers countered by stressing a common core of great books: a liberal arts education in Western culture's central texts, particularly but not exclusively in philosophy and literature. For readers (and book buyers) outside the academy, Hutchins and Adler also prepared *Great Books of the Western World*, published in 1952 as a fifty-four-volume set and expanded to sixty volumes in 1990. The authors in the 1952 edition range from Homer to FREUD, and among the figures in between are Aeschylus, Sophocles, Euripides, Plato, Aristotle, DANTE, Shakespeare, Descartes, KANT, HEGEL, Melville, and Darwin. What Strauss counsels in "What Is Liberal Education?" both does and does not align with these curricular innovations and publications.

Strauss, too, emphasizes "the great books" and "the greatest minds." But with the exception of Socrates, Plato, and Aristotle, who are touched on or alluded to briefly, he does not list names or titles. He acknowledges that his emphasis is on Western culture—seemingly leaving him open to the charge frequently made against great books programs, then and now, that they undervalue women, minority, and non-Western authors. But he does not present an argument for Western primacy, saying only that we cannot deal, for example, with works from India or China because we do not know the languages. Nor does Strauss make clear what the relationship is between liberal education and democracy. Is he recommending that everybody in a democracy should receive a liberal education? Or does he believe that such an education should be reserved only for a select group who can truly profit from it? In a key passage, he notes: "Liberal education is the necessary endeavor to found an aristocracy within democratic mass society. Liberal education reminds those members of a mass democracy who have ears to hear, of human greatness." Strauss does not speak about visual art and music and the many forms through which the arts are widely experienced. He is silent as well about the significance of liberal education for the challenges and demands of work, family, and social and political activity.

Another limitation of the essay is its too-condensed reference to evil. "All evils are in a sense necessary," Strauss says, "if there is to be understanding." We should "accept all evils which befall us and which may well break our hearts in the spirit of good citizens of the city of God." But are there evils that members of a society should oppose and fight against, in a spirit of resistance rather than acceptance? This question becomes all the more pertinent when we recognize that not all citizens define themselves within a religious framework, in relation to "the city of God." In other writings, Strauss deals more directly with the problem of evil; for example, in *The City and Man* (1962), he states: "No bloody or unbloody change of society can eradicate the evil in man: as long as there will be men, there will be malice, envy and hatred, and hence there cannot be a society which does not have to employ coercive restraint." Here, Strauss's claim is that evil is inherent in the human condition, which leads him to insist, in a disquieting phrase, on the necessity for a "coercive restraint" that he neither elaborates on nor justifies.

Strauss could have been more explicit in "What Is Liberal Education?" but his intention here, as in his work in general, is to prompt and provoke questions. This is, after all, a curious choice of topic for a graduation address. Someone reading the essay without knowing its original context might have guessed that Strauss had delivered it to students just beginning their college careers. Who are "the greatest minds"? Strauss could identify them, for as he indicates they are relatively few in number; he even says that in our time there might not be a single one. However, he does not identify them, because—we can read this between the lines, esoterically—he believes that we should already know the names; if we do not, then we are obliged to ask why we do not—and,

furthermore, to ask what it means for liberal education and for culture that we are uncertain (or at odds) about who the great authors, the greatest minds, are. Strauss also dismisses “mass culture”; if we think better of it than he does, then it is up to us to make a strong case for it. “The dignity of the mind,” the “experience in things beautiful”: if these phrases seem vague and superficial to us, perhaps the fault is in us, because we do not possess the insight and understanding to know their full and deep meanings. Strauss’s title is a question, and he points to an answer to it and expects one from us. This is the same question—abiding and permanent—that many theorists and critics address explicitly or implicitly in their work.

“What Is Liberal Education?” Keywords: The Canon/Tradition, Defense of Criticism, Institutional Studies, Interpretation Theory, Print Culture

What Is Liberal Education?

Liberal education is education in culture or toward culture. The finished product of a liberal education is a cultured human being. “Culture” (*cultura*) means primarily agriculture: the cultivation of the soil and its products, taking care of the soil, improving the soil in accordance with its nature. “Culture” means derivatively and today chiefly the cultivation of the mind, the taking care and improving of the native faculties of the mind in accordance with the nature of the mind. Just as the soil needs cultivators of the soil, the mind needs teachers. But teachers are not as easy to come by as farmers. The teachers themselves are pupils and must be pupils. But there cannot be an infinite regress: ultimately there must be teachers who are not in turn pupils. Those teachers who are not in turn pupils are the great minds or, in order to avoid any ambiguity in a matter of such importance, the greatest minds. Such men are extremely rare. We are not likely to meet any of them in any classroom. We are not likely to meet any of them anywhere. It is a piece of good luck if there is a single one alive in one’s time. For all practical purposes, pupils, of whatever degree of proficiency, have access to the teachers who are not in turn pupils, to the greatest minds, only through the great books. Liberal education will then consist in studying with the proper care the great books which the greatest minds have left behind—a study in which the more experienced pupils assist the less experienced pupils, including the beginners.

This is not an easy task, as would appear if we were to consider the formula which I have just mentioned. That formula requires a long commentary. Many lives have been spent and may still be spent in writing such commentaries. For instance, what is meant by the remark that the great books should be studied “with the proper care”? At present I mention only one difficulty which is obvious to everyone among you: the greatest minds do not all tell us the same things regarding the most important themes; the community of the greatest minds is rent by discord and even by various kinds of discord. Whatever further consequences this may entail, it certainly entails the consequence that liberal education cannot be simply indoctrination. I mention yet another difficulty. “Liberal education is education in cul-

ture.” In what culture? Our answer is: culture in the sense of the Western tradition. Yet Western culture is only one among many cultures. By limiting ourselves to Western culture, do we not condemn liberal education to a kind of parochialism, and is not parochialism incompatible with the liberalism, the generosity, the openmindedness, of liberal education? Our notion of liberal education does not seem to fit an age which is aware of the fact that there is not *the* culture of *the* human mind, but a variety of cultures. Obviously, culture is susceptible of being used in the plural is not quite the same thing as culture which is a *singulare tantum*,¹ which can be used only in the singular. Culture is now no longer, as people say, an absolute, but has become relative. It is not easy to say what culture susceptible of being used in the plural means. As a consequence of this obscurity people have suggested, explicitly or implicitly, that culture is any pattern of conduct common to any human group. Hence we do not hesitate to speak of the culture of suburbia or of the cultures of juvenile gangs, both nondelinquent and delinquent. In other words, every human being outside of lunatic asylums is a cultured human being, for he participates in a culture. At the frontiers of research there arises the question as to whether there are not cultures also of inmates of lunatic asylums. If we contrast the present-day usage of “culture” with the original meaning, it is as if someone would say that the cultivation of a garden may consist of the garden’s being littered with empty tin cans and whisky bottles and used papers of various descriptions thrown around the garden at random. Having arrived at this point, we realize that we have lost our way somehow. Let us then make a fresh start by raising the question: what can liberal education mean here and now?

Liberal education is literate education of a certain kind: some sort of education in letters or through letters. There is no need to make a case for literacy; every voter knows that modern democracy stands or falls by literacy. In order to understand this need we must reflect on modern democracy. What is modern democracy? It was once said that democracy is the regime that stands or falls by virtue: a democracy is a regime in which all or most adults are men of virtue, and since virtue seems to require wisdom, a regime in which all or most adults are virtuous and wise, or the society in which all or most adults have developed their reason to a high degree, or *the* rational society. Democracy, in a word, is meant to be an aristocracy which has broadened into a universal aristocracy. Prior to the emergence of modern democracy some doubts were felt whether democracy thus understood is possible. As one of the two greatest minds among the theorists of democracy put it, “If there were a people consisting of gods, it would rule itself democratically. A government of such perfection is not suitable for human beings.”² This still and small voice has by now become a high-powered loudspeaker.

There exists a whole science—the science which I among thousands profess to teach, political science—which so to speak has no other theme than the contrast between the original conception of democracy, or what one may call the ideal of democracy, and democracy as it is. According to an extreme view, which is the predominant view in the profession, the ideal of

1. Singular only (Latin), a grammatical term.
2. From *The Social Contract* (1762), 3.4, by the

Swiss-born French philosopher and political theorist Jean-Jacques Rousseau (1712–1778).

democracy was a sheer delusion, and the only thing which matters is the behavior of democracies and the behavior of men in democracies. Modern democracy, so far from being universal aristocracy, would be mass rule were it not for the fact that the mass cannot rule, but is ruled by elites, that is, groupings of men who for whatever reason are on top or have a fair chance to arrive at the top; one of the most important virtues required for the smooth working of democracy, as far as the mass is concerned, is said to be electoral apathy, viz., lack of public spirit; not indeed the salt of the earth,³ but the salt of modern democracy are those citizens who read nothing except the sports page and the comic section. Democracy is then not indeed mass rule, but mass culture. A mass culture is a culture which can be appropriated by the meanest capacities without any intellectual and moral effort whatsoever and at a very low monetary price. But even a mass culture and precisely a mass culture requires a constant supply of what are called new ideas, which are the products of what are called creative minds: even singing commercials lose their appeal if they are not varied from time to time. But democracy, even if it is only regarded as the hard shell which protects the soft mass culture, requires in the long run qualities of an entirely different kind: qualities of dedication, of concentration, of breadth, and of depth. Thus we understand most easily what liberal education means here and now. Liberal education is the counterpoison to mass culture, to the corroding effects of mass culture, to its inherent tendency to produce nothing but "specialists without spirit or vision and voluptuaries without heart."⁴ Liberal education is the ladder by which we try to ascend from mass democracy to democracy as originally meant. Liberal education is the necessary endeavor to found an aristocracy within democratic mass society. Liberal education reminds those members of a mass democracy who have ears to hear, of human greatness.

Someone might say that this notion of liberal education is merely political, that it dogmatically assumes the goodness of modern democracy. Can we not turn our backs on modern society? Can we not return to nature, to the life of preliterate tribes? Are we not crushed, nauseated, degraded by the mass of printed material, the graveyards of so many beautiful and majestic forests? It is not sufficient to say that this is mere romanticism, that we today cannot return to nature: may not coming generations, after a man-wrought cataclysm, be compelled to live in illiterate tribes? Will our thoughts concerning thermonuclear wars not be affected by such prospects? Certain it is that the horrors of mass culture (which include guided tours to integer⁵ nature) render intelligible the longing for a return to nature. An illiterate society at its best is a society ruled by age-old ancestral custom which it traces to original founders, gods, or sons of gods or pupils of gods; since there are no letters in such a society, the late heirs cannot be in direct contact with the original founders; they cannot know whether the fathers or grandfathers have not deviated from what the original founders meant, or have not defaced the divine message by merely human additions or subtractions; hence an illiterate society cannot consistently act on its principle that the best is the oldest. Only letters which have come down

5. Untouched, whole.

from the founders can make it possible for the founders to speak directly to the latest heirs. It is then self-contradictory to wish to return to illiteracy. We are compelled to live with books. But life is too short to live with any but the greatest books. In this respect as well as in some others, we do well to take as our model that one among the greatest minds who because of his common sense is *the* mediator between us and the greatest minds. Socrates⁶ never wrote a book, but he read books. Let me quote a statement of Socrates which says almost everything that has to be said on our subject, with the noble simplicity and quiet greatness of the ancients. "Just as others are pleased by a good horse or dog or bird, I myself am pleased to an even higher degree by good friends. . . . And the treasures of the wise men of old which they left behind by writing them in books, I unfold and go through them together with my friends, and if we see something good, we pick it out and regard it as a great gain if we thus become useful to one another." The man who reports this utterance adds the remark: "When I heard this, it seemed to me both that Socrates was blessed and that he was leading those listening to him toward perfect gentlemanship."⁷ This report is defective since it does not tell us anything as to what Socrates did regarding those passages in the books of the wise men of old of which he did not know whether they were good. From another report we learn that Euripides once gave Socrates the writing of Heraclitus⁸ and then asked him for his opinion about that writing. Socrates said: "What I have understood is great and noble; I believe this is also true of what I have not understood; but one surely needs for understanding that writing some special sort of a diver."⁹

Education to perfect gentlemanship, to human excellence, liberal education consists in reminding oneself of human excellence, of human greatness. In what way, by what means does liberal education remind us of human greatness? We cannot think highly enough of what liberal education is meant to be. We have heard Plato's suggestion that education in the highest sense is philosophy.¹ Philosophy is quest for wisdom or quest for knowledge regarding the most important, the highest, or the most comprehensive things; such knowledge, he suggested, is virtue and is happiness. But wisdom is inaccessible to man, and hence virtue and happiness will always be imperfect. In spite of this, the philosopher, who, as such, is not simply wise, is declared to be the only true king;² he is declared to possess all the excellences of which man's mind is capable, to the highest degree. From this we must draw the conclusion that we cannot be philosophers—that we cannot acquire the highest form of education. We must not be deceived by the fact that we meet many people who say that they are philosophers. For those people employ a loose expression which is perhaps necessitated by administrative convenience. Often they mean merely that they are members of philosophy departments. And it is as absurd to expect members of philosophy departments to be philosophers as it is to expect members of

6. Greek philosopher (469–399 B.C.E.), who is the main speaker in most of the dialogues of his student PLATO (ca. 427–ca. 347 B.C.E.).

7. Quoted by the Greek historian Xenophon (ca. 428/27–ca. 354 B.C.E.), one of Socrates' students, in *Memorabilia* 1.6.14.

8. Pre-Socratic Greek philosopher (active ca. 500 B.C.E.), whose writings exist only in fragments.

Euripides (ca. 485–ca. 406 B.C.E.), Greek tragedian. 9. This story is told in Diogenes Laertius (ca. early 3d c. C.E.), *Lives and Opinions of Eminent Philosophers* 2.5.22.

2. See *Republic* 5.473c–d.

art departments to be artists. We cannot be philosophers, but we can love philosophy; we can try to philosophize. This philosophizing consists at any rate primarily and in a way chiefly in listening to the conversation between the great philosophers or, more generally and more cautiously, between the greatest minds, and therefore in studying the great books. The greatest minds to whom we ought to listen are by no means exclusively the greatest minds of the West. It is merely an unfortunate necessity which prevents us from listening to the greatest minds of India and of China: we do not understand their languages, and we cannot learn all languages.

To repeat: liberal education consists in listening to the conversation among the greatest minds. But here we are confronted with the overwhelming difficulty that this conversation does not take place without our help—that in fact we must bring about that conversation. The greatest minds utter monologues. We must transform their monologues into a dialogue, their “side by side” into a “together.” The greatest minds utter monologues even when they write dialogues. When we look at the Platonic dialogues, we observe that there is never a dialogue among minds of the highest order: all Platonic dialogues are dialogues between a superior man and men inferior to him. Plato apparently felt that one could not write a dialogue between two men of the highest order. We must then do something which the greatest minds were unable to do. Let us face this difficulty—a difficulty so great that it seems to condemn liberal education as an absurdity. Since the greatest minds contradict one another regarding the most important matters, they compel us to judge of their monologues; we cannot take on trust what any one of them says. On the other hand, we cannot but notice that we are not competent to be judges.

This state of things is concealed from us by a number of facile delusions. We somehow believe that our point of view is superior, higher than those of the greatest minds—either because our point of view is that of our time, and our time, being later than the time of the greatest minds, can be presumed to be superior to their times; or else because we believe that each of the greatest minds was right from his point of view but not, as he claims, simply right: we know that there cannot be *the* simply true substantive view, but only a simply true formal view; that formal view consists in the insight that every comprehensive view is relative to a specific perspective, or that all comprehensive views are mutually exclusive and none can be simply true. The facile delusions which conceal from us our true situation all amount to this: that we are, or can be, wiser than the wisest men of the past. We are thus induced to play the part, not of attentive and docile listeners, but of impresarios or lion-tamers. Yet we must face our awesome situation, created by the necessity that we try to be more than attentive and docile listeners, namely, judges, and yet we are not competent to be judges. As it seems to me, the cause of this situation is that we have lost all simply authoritative traditions in which we could trust, the *nomos*³ which gave us authoritative guidance, because our immediate teachers and teachers’ teachers believed in the possibility of a simply rational society. Each of us here is compelled to find his bearings by his own powers, however defective they may be.

3. Law, custom (Greek).

We have no comfort other than that inherent in this activity. Philosophy, we have learned, must be on its guard against the wish to be edifying—philosophy can only be intrinsically edifying. We cannot exert our understanding without from time to time understanding something of importance; and this act of understanding may be accompanied by the awareness of our understanding, by the understanding of understanding, by *noesis noeseos*,⁴ and this is so high, so pure, so noble an experience that Aristotle could ascribe it to his God.⁵ This experience is entirely independent of whether what we understand primarily is pleasing or displeasing, fair or ugly. It leads us to realize that all evils are in a sense necessary if there is to be understanding. It enables us to accept all evils which befall us and which may well break our hearts in the spirit of good citizens of the city of God.⁶ By becoming aware of the dignity of the mind, we realize the true ground of the dignity of man and therewith the goodness of the world, whether we understand it as created or as uncreated, which is the home of man because it is the home of the human mind.

Liberal education, which consists in the constant intercourse with the greatest minds, is a training in the highest form of modesty, not to say of humility. It is at the same time a training in boldness: it demands from us the complete break with the noise, the rush, the thoughtlessness, the cheapness of the Vanity Fair⁷ of the intellectuals as well as of their enemies. It demands from us the boldness implied in the resolve to regard the accepted views as mere opinions, or to regard the average opinions as extreme opinions which are at least as likely to be wrong as the most strange or the least popular opinions. Liberal education is liberation from vulgarity. The Greeks had a beautiful word for “vulgarity”; they called it *apeirokalia*, lack of experience in things beautiful. Liberal education supplies us with experience in things beautiful.

4. Thought of thought (Greek).

5. See *Metaphysics* 12.9, 1074a. For the Greek philosopher ARISTOTLE (384–322 B.C.E.), see above.

6. An allusion to *The City of God* (413–426/27), by Saint AUGUSTINE: it describes two societies that are in contention with one another, that of

the elect (“The City of God”), or the faithful, and that of the damned (“The City of Man”), or the unbelievers.

7. A place of frivolity and idle amusement, as described in John Bunyan’s allegory *The Pilgrim’s Progress* (1678).

JACQUES LACAN

1901–1981

Difficult, polemical, and ironic, organized in sometimes baffling ways, and dotted with strange syntax, foreign words, wordplay, obscure allusions, personality, and mathematical formulas, Jacques Lacan’s writings genuinely stretch the reader’s resources. He writes psychoanalytic theory as if it were poetry, philosophy, and symbolic logic. In writing, Lacan says that he tries “to leave the reader no other way out than the way in, which I prefer to be difficult.” The reader cannot simply pick

up a “meaning” and carry it away. And that is the point. It is not the fact of difficulty, but the experience and path of difficulty that are significant. Lacan demystifies as a fantasy of omniscience the objective, impersonal, external position often associated with science and theory. But to analyze the consequences of *wanting it anyway* is at the heart of Lacanian psychoanalysis. Insofar as most psychoanalytic theory is today Lacanian or post-Lacanian, there is no way around Jacques Lacan, the French Freud.

Lacan is known for his larger-than-life persona, but his description of his career sounds distinctly unrevolutionary: it consists of a return to the discoveries of his predecessor. For more than thirty years, Lacan analyzed a single case: the writings of SIGMUND FREUD. Thus, what was revolutionary in his work was a reading—a reading that, he claimed, returned to what was radical about “the Freudian discovery” (which he always refers to in the singular). Lacan’s return and its radicality were made possible by the development in his lifetime of modern linguistics: Lacan read Freud through the theories of FERDINAND DE SAUSSURE and ROMAN JAKOBSON, and, in the process, they all were changed. Like CLAUDE LÉVI-STRAUSS (by whose work he was also influenced), he found that the structuralist models opened up by Saussure made possible a sea change in theoretical thinking.

Born to middle-class Parisian Catholic parents who named him Jacques-Marie, he was the first of four children (the second child did not survive). His father worked for a soap and oil manufacturer. While Jacques renounced religion and dropped the “-Marie” from his name, his brother Marc-François entered a monastery. Though the celibacy of one brother was more than counterbalanced by the active sexual life of the other, it can be argued that both remained profoundly marked by the church.

In the 1920s Lacan studied medicine in Paris, beginning clinical training in psychiatry (which requires a medical degree) in 1927. Interested in paranoia (delusions of persecution) and erotomania (delusions of love), he connected his work with surrealism, particularly with that of the Spanish painter Salvador Dali, a contemporary whose theory of “paranoid criticism” resonated strongly with Lacan’s research. In 1932 Lacan published his doctoral dissertation, *On Paranoiac Psychosis in Its Relations with the Personality*, and sent a copy to Freud. Although Freud lived another seven years and passed through Paris when escaping Nazi-occupied Austria in 1938, the two men never met. Freud acknowledged receipt of the thesis by postcard.

Lacan married Marie-Louise Blondin in 1934 (one month before the birth of their child) and pursued his training analysis with Rudolph Loewenstein, who later became, after emigrating to the United States, one of the founders of American “ego psychology,” which was often a target of Lacan’s critique. Like others of his generation, he was deeply affected by a famous series of lectures given on G. W. F. HEGEL by Alexandre Kojève in the 1930s. Lacan was particularly inspired by Kojève’s interpretation of the Master-Slave dialectic and of the dynamics of recognition. But he was also struck by Kojève’s ability to revolutionize a text by reading it against its critical reception. His reading of Freud would do nothing less. And for twenty years Lacan’s weekly seminars played, for the next generation of French intellectuals, the role that Kojève’s lectures had played for his.

In 1938 Lacan became a member of the Société Psychanalytique de Paris (SPP), the official French branch of the International Psychoanalytical Association (IPA) founded by Freud in 1910. During World War II, the SPP was forced to suspend its operations. Lacan’s personal life was also in flux; the birth in 1941 of Judith Bataille, Lacan’s daughter with Sylvia Bataille (the estranged wife of the celebrated critic and novelist Georges Bataille; their separation was not made public until the end of the war), led Marie-Louise to seek a divorce. In 1953 Lacan became president of the SPP and married Sylvia.

Relations between the Freudian establishment and Lacan were always fraught. The prominent psychoanalyst Marie Bonaparte, who had apparently had an affair

with Lacan's analyst, was particularly suspicious of him. His practice of seeing patients for variable lengths of time (the so-called short sessions) rather than for the prescribed fifty minutes led the commission on instruction to demand that he regularize his practice. He never did so. His intuitive brilliance as a clinician was often incompatible with institutional rules and safeguards, yet his charismatic personality seemed to call for new institutions. He resigned from the SPP and joined the newer Société Française de Psychanalyse (SFP)—which, upon being told in 1963 that it could join the IPA if Lacan were not included, tried to ban his teaching and his practice. This episode is what Lacan called his “excommunication.” Unwilling to conform to the existing rules and excluded from the official organizations, Lacan decided to set up on his own. He founded L'École Freudienne de Paris (the Freudian School of Paris), and with the support of LOUIS ALTHUSSER he moved his weekly seminar, which had been held at the Sainte-Anne hospital, to the prestigious École Normale.

In 1966 Lacan published a legendary 900-page collection of his essays and conference papers titled *Écrits* (*Writings*). Despite its difficulty, the book was a sensation. Crowds began filling his weekly seminar. Along with other French thinkers, Lacan spoke that same year at Johns Hopkins University at a conference—“The Languages of Criticism and the Sciences of Man”—that launched structuralism and poststructuralism in the United States. And together with Althusser, JACQUES DERRIDA, JULIA KRISTEVA, HÉLÈNE CIXOUS, and many others, Lacan became very closely associated with the intellectual ferment that helped lead to the student demonstrations in May 1968 in Paris. Indeed, some of his students became so disruptive that the director of the École Normale made it known to Lacan that he would have to seek another venue. In 1969 he began holding his seminars at the Faculté de Droit (Law School). Meanwhile, at the just-opened branch of the University of Paris at Vincennes, the first university department of psychoanalysis in France was created by people sympathetic to Lacan. Among them was Jacques-Alain Miller, a student of Althusser who later became important as Lacan's editor and son-in-law.

In 1975 Lacan visited the United States again, lecturing at Yale University and MIT. But controversy raged at the École Freudienne de Paris over two developments: the influence of Miller (who was not a medical doctor and preferred Lacan-the-logician to Lacan-the-clinician) and the new pedagogical procedure (called “la passe”) that Lacan had introduced into his school to certify those who would receive the title “Analyste de l'École” (Analyst of the Freudian School). The controversy became so fierce that in 1980, the aging Lacan announced the closing of the school he had founded (and, in effect, his own impending death), saying, “Je dissous . . .” (I dissolve). But many members of the Freudian School felt the school was not his to dissolve. As he created a new school (“La Cause Freudienne”), they fought the legality of his dissolution of the old one, but lost. He died of cancer a little more than a year later.

Lacan published only one “book”—his 1932 dissertation; *Écrits* was a collection of assorted papers. But his name is attached to the many articles he published in the numerous journals of the Freudian School, and transcripts of all twenty-six of his annual book-length seminars were and still are being edited and published by Jacques-Alain Miller. His speaking style resembled writing in its “poetic” richness and its need for active listening, but he did not consider his *Écrits* to be quite worthy of their name (“writings”). He jokingly referred to publication as poubellication (*poubelle* means “wastebasket”).

The most influential seminar from the literary point of view is his 1955 seminar on EDGAR ALLAN POE's “Purloined Letter” (1844); parts were published as the opening texts in the French *Écrits*, but they are not included in the much shorter English translation of the book. (The entire seminar was published in English in 1988 as *The Ego in Freud's Theory and in the Technique of Psychoanalysis*.) In his “Seminar

on "The Purloined Letter" Lacan shows how a text can be read even when a major piece of information is not disclosed, a lesson important for psychoanalysis. The *path* of the desired or feared letter in Poe's story does not depend on knowledge of its contents; and the behavior of those who seek it creates a story around their presumptions about the contents, whether or not the letter is ever opened. In this seminar, Lacan is commenting on Freud's concept of the "repetition compulsion," which he translates as "repetition automatism." The story is composed of two different scenes in which the same letter is stolen: the two scenes are repetitions of each other with the set roles being played by different characters. Like the lights on a news strip showing streaming headlines (the analogy is Lacan's), the individual characters are like the light bulbs that go on and off according to the structure being repeated, and not according to their individual volition or characteristics. The repetition is *unconscious*. For Lacan, in other words, Poe's story illustrates the fact that the letter's position among the characters, and not the psychology of the individuals, determines what each will do: "Their displacement is determined by the place which a pure signifier—the purloined letter—comes to occupy." Lacan calls this mechanism "symbolic determination." Like a "free cell" in the solitaire of that name (included in the software of many computers) that allows the other cards to be moved, the "pure" signifier functions as the point of articulation whether or not anything is known about it. Although the story's reader never gains access to the text of the letter, the story's characters do read it; like the analyst, the reader has to understand the functioning of the repetition without necessarily knowing its content.
